We further respectfully ask your influence with the commission to grant the proposed 5 per cent advance in freight rates, except where such proposed advance seems unfair, and that the tariff in such cases be suspended for further hearing.

We believe the advance will generally improve business conditions, but think prompt action desirable.

Thanking you in anticipation of an early reply to this letter, we remain,

Yours, very truly,

MANUFACTURERS' ASSOCIATION,
C. T. MULLEN, *Secretary.*

—

HOUSE OF REPRESENTATIVES,
Washington, March 28, 1914.

INTERSTATE COMMERCE COMMISSION,
City.

DEAR SIRS: I am inclosing herewith petition signed by shippers, merchants, investors, and citizens of Essex County, N. J., requesting your honorable body to hasten action in granting relief to the railroads in the matter of increasing transportation rates to conform to the higher cost of everything entering into railroad transportation, which I trust will receive your careful consideration.

Yours, very truly,

E. F. KINKEAD.

—

NEWARK, N. J., *March 16, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

The undersigned, shippers, merchants, investors, and citizens of all classes, respectfully petition your honorable body to hasten its action in granting relief to the railroads in the matter of increasing transportation rates to conform to the higher cost of everything entering into railroad transportation. We desire particularly to call your attention to the fact that prompt action at this time, even thought it would not grant all the roads asked for, would be of immeasurable benefit to the country at large.

As investors in railroad securities, we view with apprehension the continued decline in railroad securities and credit, due largely to the uncertainty caused by the long delay in reaching a decision on the rate question, together with continued baiting of railroad companies by State and National legislators of high and low degree.

We believe your honorable body recognizes that the interests of the great railroads of the United States are inseparably bound up with the interest of the people at large.

This petition is not initiated and has no connection with any railroad corporation, directly or indirectly.

Again urging prompt action, we are,

Yours, respectfully,

Louis A. Gartz, Elizabeth, N. J.; H. B. Bowers, Newark, N. J.; H. V. Downel, South Orange, N. J.; J. W. Katz, Newark, N. J.; Geo. L. Gilery, Elizabeth, N. J.; Edward C. Reusch, Philip Stone, Benj. Meyer, Chas. A. Olmsted, Jos. E. Meyer, Leopold Meyer, American Undergarment Co., N. B. Meyers, president, Andrew W. McCahey, Newark, N. J.; Geo. F. James, East Orange, N. J.; S. Harrison, Newark, N. HOUSE OF REPRESENTATIVES,
Washington, May 24, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Inclosed you will find communication received by me from Mr. George Brereton, 8 Baldwin Place, New Haven, Conn., in regard to application of the Pennsylvania Railroad to be given permission to increase its freight rates, which I respectfully refer to you for consideration.

Yours, respectfully,

THOS. L. REILLY.

NEW HAVEN, CONN., *May 21, 1913.*

Hon. THOMAS L. REILLY,
Member of Congress for Connecticut.

SIR: Pursuant to my own advice in the attached letter to appeal to the Government through the Representatives at Washington, I now beg leave to do so, and to point out the facts therein for consideration, as I am the writer of the letter.

I have been told that the high rate charged by Adams Express Co. is sometimes paid by merchants to get goods on quickly; therefore the small advance of 5 per cent, or 5 cents per ton, would not be felt by the shippers and the general public. Please note the two letters herewith and kindly return them. I presume that overanxiety and overstrain let President McCreg in the grave.

I am, very truly, yours,

G. BRERETON.

—

PENNSYLVANIA RAILROAD STOCKHOLDERS.

NEW HAVEN, *May 16, 1913.*

[To the editor of The Forum.]

On May 5 the number of Pennsylvania Railroad stockholders was 78,747, which is 3,288 more than on February 5 last.

Nearly half of these stockholders are women, and many of the men are old, or infirm, and depending on what they receive quarterly from this well-managed company; therefore the Government has a right to consider these and many other such stockholders and not force the railroads to reduce their dividends, which would work hardship on many who are owners of a few shares.

The increased cost of supplies and labor makes it reasonable for the railroads to want to make a small increase in freight rates of even 5 cents per ton which the general public would not feel, and which would enable the railroads to keep up their working plants, and to keep up their dividends and not cause distress to a multitude of poor stockholders who are now in dread of their small incomes from dividends being reduced, and who ought to speak their mind on the subject now and not wait until harm might be done.

These stockholders have their Representatives in Washington, through whom they can speak to the Government, and they are as worthy of consideration as the large shippers who are objecting to the small advance of 5 cents per ton that the railroads ask.

STOCKHOLDER.

—

HOUSE OF REPRESENTATIVES, UNITED STATES,
COMMITTEE ON EXPENDITURES IN THE STATE DEPARTMENT,
Washington, D. C., April 6, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Inclosed please find a copy of preamble and resolution adopted by the executive committee of the Sedalia Boosters' Club, Sedalia, Mo.

I have been requested to file this with you. Will you kindly acknowledge receipt of this?

Very truly, yours,

C. W. HAMLIN.

[Inclosure.]

SEDALIA, MO.

To the INTERSTATE COMMERCE COMMISSION:

The following preamble and resolution, adopted by the executive committee of the Sedalia Boosters' Club, are respectfully submitted for your consideration:

Whereas for the past several months the managements of most of the prominent systems of steam railways throughout this country have been reducing their working forces and shortening the working hours of the men retained in their employ, thus imposing a hardship on those employees and their dependents and at the same time seriously lessening the business of all classes of tradesmen; and

Whereas the managements of the railways insistently contend that because of the enhanced cost of labor and every item of material entering into the construction, maintenance, and operation of railways renders it impossible to pay interest on their indebtedness and any profit to their stockholders without the most rigid economy and a retrenchment of operating expenses, and that in the face of existing conditions with enhancing costs and diminishing revenues, unless permitted to increase freight rates so as to yield additional revenue, they will be compelled to still further lessen their working forces: Therefore be it

Resolved by the executive committee of the Sedalia Boosters' Club (an organization representing all classes of commercial, professional, industrial, and agricultural callings, in session on this 2d day of April, 1914), That we favor the granting by your honorable commission of the privilege requested by railroad managements for a 5 per cent increase in existing freight rates, believing that such increase will not impose a hardship on any citizen of this country, and that the resultant increased revenue will enable the railroad managements to maintain efficiency and afford employment to a larger working force.

—

COMMITTEE ON EXPENDITURES ON PUBLIC BUILDINGS,
HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., February 9, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: I am asked to transmit the inclosed communication to your honorable commission for consideration.

Very respectfully,

CYRUS CLINE.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Garrett, Ind., is a railroad town depending on the Baltimore & Ohio Railroad for its welfare and prosperity, and any conditions that affect the railroad touches Garrett.

At a mass meeting of the Business Men's Assocation held recently it was resolved to petition your honorable body to grant the railroads' request for the 5 per cent increase in freight rates. We have a splendid opportunity here to observe the continued increase in wages and other advances that serve to make the operating expenditures higher, and indicate that the railroads are justified in the endeavor to offset the increased expense.

Very truly, yours,

GARRETT BUSINESS MEN'S ASSOCIATION,
MONTE L. GREEN, *President.*

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., January 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: By direction of the board of directors of the chamber of commerce of Oil City, Pa., I herewith present for your consideration a resolution passed by the board in favor of the 5 per cent increase in freight rates.

Sincerely, yours,

WILLIS J. HULINGS.

[Extracts from minutes of a meeting of the board of directors of the chamber of commerce of Oil City, Pa., held on January 6, 1914.]

Resolved, That the sentiment of this board favors the Interstate Commerce Commission granting the application of the railroads for a 5 per cent increase in freight rates, and that, if necessary, a representative of the chamber of commerce go to Washington to testify to that fact.

IRA L. WALES.

—

HOUSE OF REPRESENTATIVES,
Washington, March 23, 1914.

Honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Permit me to hand you herewith letter from the secretary of the Beech-Nut Packing Co., of Canajoharie, N. Y., in my congressional district, relative to switching charges on private sidings by railroad companies. Mr. Barbour is a gentleman well qualified by experience and training to speak on this subject, and I therefore bespeak for his communication your attention.

With thanks and great respect, I am,

Very truly, yours,

SAMUEL WALLIN.

[Inclosure.]

BEECH-NUT PACKING CO.,
Canajoharie, N. Y., March 21, 1914.

Hon. SAMUEL WALLIN,
House of Representatives, Washington, D. C.

DEAR SIR: We understand that a proposition is now before the Interstate Commerce Commission which will permit the railroads to charge an extra amount of $2 per car for "spotting" cars or switching them onto private sidings. This would be in addition to the regular rate, and our belief is that this is already contemplated and provided for in the rates, and always has been since the inauguration of railroad service in the United States.

While we have no objection to the general advance of 5 per cent in all railroad rates applying throughout the United States, we do object to an additional tax of $2 per car for switching onto private sidings.

The Interstate Commerce Commission should not lose sight of the fact that the shipper or consignee using a private siding loads and unloads his own cars at no expense to the railroad company, thus saving them the labor charge for this work, which ordinarily would take place at the freight house.

We ask your consideration of this question, and when it comes before you we trust you will find it consistent to object to this extra switching charge.

Yours, very truly,

BEECH-NUT PACKING CO.,
F. E. BARBOUR.

—

NEW YORK, *March 21, 1914.*

Hon. HENRY BRUCKNER,
House of Representatives, Washington, D. C.

DEAR SIR: May I, as one of several hundred thousand small railroad stock investors, ask you to kindly peruse the inclosed open letter published in the New York American, addressed to the Interstate Commerce Commission, and which is sent you for the purpose of asking your best and earnest efforts in behalf of the small investor, to urge an early determination by this commission of the question now before it as to permitting the railroads in our section of the country to increase the freight rates 5 per cent?

It is generally conceded that the prosperity of the railroads of our country is conducive to general prosperity. It is needless for me to argue, and you, as the representative of the leading commercial city of the world, know that the expenditures of the railroads for operating expenses, repairs, and maintenance involve millions yearly, resulting in giving employment to hundreds of thousands throughout the land; and from personal knowledge you know that the shippers would cheerfully increase their expense of transportation, feeling it is but a trifle, and that it would enure to the general welfare of all concerned.

We are approaching prosperous times in the manufacturing interests throughout the country, but are being harassed and annoyed by legislation having no valuable purpose, in addition to having the Interstate Commerce Commission delay their determination of questions of vital importance, and by so doing retarding and preventing the growth and prosperity of the country.

Won't you, as one of the Representatives of this State, do something to bring about the much desired result?

Yours, respectfully,

LEON LEWIN.

—

HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., February 2, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Within please find telegram from L. H. Collett, representing Locomotive Engineers' and Conductors' Protective Association, living in Bakersfield, Cal.—in my district.

Yours, very truly,

D. S. CHURCH, *Member of Congress.*

BAKERSFIELD, CAL., *January 25, 1914.*

Hon. DENVER S. CHURCH,
United States Congressman, Washington, D. C.:

In behalf of the railroad men that I represent throughout the United States, and principally in California, we urge upon you to take up with the Interstate Commerce Commission the proposed increase of freight rates of the eastern roads. That said increase be granted. From the number of railroad men coming from the East out of position, and

the number taken out in California is reaching appalling figures. Construction work is being closed down at many points.

L. H. COLLETT,
Representing Locomotive Engineers and Conductors' Protective Association.

—

HOUSE OF REPRESENTATIVES,
COMMITTEE ON EDUCATION,
Washington, April 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The inclosed communication is respectfully referred to the Interstate Commerce Commission.

Very truly,

S. D. FESS.

LEBANON, OHIO, *April 22, 1914.*

To Hon. S. D. FESS,
Washington, D. C.

DEAR SIR: The "Men of Lebanon," in executive session, passed the following resolution:

Whereas the railroads operating in the United States are petitioning the Interstate Commerce Commission for permission to increase the rates on freight transportation not to exceed 5 per cent; and

Whereas the profitable operation of the Nation's transportation facilities is being seriously retarded by reason of the railroads not receiving such rates for freight transportation as would insure the profitable operation of the railroads of the country; and

Whereas the railroads of the Nation are the highways of commerce, and when such highways of commerce are burdened by unprofitable operation the effect is felt in every line of commercial endeavor: Therefore be it

Resolved, That the executive committee of the "Men of Lebanon," organized for the purpose of promoting, protecting, and fostering mercantile interests in the village of Lebanon, Ohio, and surrounding territory, do hereby indorse and recommend that the petition for the increased rates be granted.

EXECUTIVE COMMITTEE OF MEN OF LEBANON,
By GEO. O. MARCH, *Chairman.*
O. K. BROWN, *Secretary.*

—

UNITED STATES SENATE,
COMMITTEE ON THE CENSUS,
Washington, March 23, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I beg leave to inclose for your consideration a letter from Messrs. Hagen, Ratcliff & Co., which I have recently received.

Very respectfully,

W. E. CHILTON.

—

HUNTINGTON, W. VA., *March 11, 1914.*

Senator W. E. CHILTON, *Washington, D. C.*

DEAR SIR: You are doubtless familiar with the proceedings of the Interstate Commerce Commission regarding suggestion which has been made by certain parties that railroads charge for certain services for which no charge is now made. This service refers to spotting of cars, trap service, etc. Our chamber of commerce, as well as similar bodies all over the country, is protesting against this proposition, and we trust that you will use your good offices in opposing such charges.

The chamber of commerce here, as well as all business interests, has gone on record as being favorable to the 5 per cent increase in the freight rates, but we would be just as heartily opposed to this charge as suggested as a substitute for the increase.

Your usual attention is earnestly asked in this direction.

Yours, very truly,

HAGEN, RATCLIFF & CO.

—

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 26, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I have the honor to transmit herewith a letter from Mr. Herb Lewis, of Gravette, together with a letter from Mr. W. E. Rogers, a former railroad employee, giving his views and making certain suggestions in regard to the proposed raise in freight rates. I respectfully refer the same to you for such consideration as you deem it entitled to, without any suggestion as to the merits or demerits of suggestions proposed by Mr. Rogers.

Yours, respectfully,

J. C. FLOYD.

—

THE GRAVETTE NEWS HERALD,
Gravette, Ark., April 20, 1914.

Hon. J. C. FLOYD, *Washington, D. C.*

DEAR SIR AND FRIEND MR. FLOYD: It is my pleasure to commend to you most sincerely Mr. W. E. Rogers, and I certainly voice his sentiments and am inclined to believe he is offering a splendid solution to one of the most serious problems now before the American people, especially the millions out of work.

Do anything you consistently can along this line. I know your heart is right, from your antilobby bill—hope it passes.

Yours, sincerely,

HERB LEWIS.

—

GRAVETTE, ARK., *April 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: After reading so much agitation of late, both pro and con, in regard to allowing the railroads an increase of freight rates, I thought I would write you and make a few suggestions on the subject. While I know that my views won't have much weight either way, I do know there will have to be something done right away to give the idle men of this country work, and it seems to me that it could be settled and every idle man in the country put to work in 10 days if you would adopt a standard for every department of railroading.

Say that a first-class road should have first-class track; state just how much ballast should be put under it and just how many ties should be used under each rail, and the condition the line and surface of it should be kept in; also what per cent of wear should make a rail unfit for first class; then class all bridges and rolling stock, such as passenger coaches and engines, and all depots, and condition they should be kept in; and when a road comes up to this standard allow them the increase (or first-class rate) asked for; and when they fall, say, 10 per cent below the standard, cut their rates 10 per cent; if they fall 20 or 50 per cent below the standard, cut the rates 20 or 50 per cent.

If you will do that, you will see every road in the United States putting men to work, and it is nothing but right that it should be done. I know a certain road in this country that is only a little over 700 miles long; one of the officials on it told me yesterday that it cleared $1,000,000 in the month of March this year. I will state right here that I ran a steam shovel for this road 13 years, up to 18 months ago, when that work was suspended for lack of funds (so claimed). They have never done any more work since, only just enough to hold it together. Their road is in an awful condition—ties rotten, track all out of surface, and line rails in most places with the ball worn into the web of rail. I have seen the section men pulling the spikes and gauging the rails in to keep the wheels from dropping in between the rails on account of the rails being so badly worn. Their passenger trains are dirty—even filthy. I rode about 50 miles on it a few days ago and couldn't even get standing room in the coaches; there were women sitting on their suit cases in the vestibules between the coaches on account of the crowded condition of the coaches. This doesn't look like poor business, does it? Now, if you were to walk over about 10 miles of their track you would never ride over it, even in a solid steel car. This road is doing the biggest business in the history of the road. Why allow them to charge as much as some other road that has good track and furnishes good accommodations for the traveling public? It is just as reasonable to say that it is as good to travel in an ox wagon as it is in an automobile. And this particular road is not by itself—nine out of every ten are just as bad, and there are millions of idle men in the country to-day, looking for work and begging for bread. It is not their fault—it is the fault of those railroads now trying to get an increase of freight rates and trying to make you believe that they are not earning anything. I say, for God's sake, allow to them, if for no other reason than to put these men to work; but don't allow it until they come up to your standard. I sat on my doorstep yesterday, in a little town of about 800 population, and counted five men in less than an hour "hitting back doors" for something to eat; they are called "hoboes"; but what is a hobo? Nothing more nor less than an American citizen out of a job, tramping the country looking for work. I don't know whether you gentlemen ever experienced it or not, but it is an awful hard job to be patriotic on an empty stomach. I have had 5 months' work in the past 18 months, and have a family to support; and if I couldn't get credit at the stores we would all suffer; and I couldn't blame the merchants to stop my credit any day, as I can't tell them when I will be able to pay them, as I don't know when I will get work—and there are millions in my fix, and I only mention my case as an example—and the merchants can not stand it much longer; they have got to pay for their goods, and how are they going to do it unless we pay them?

Things are getting serious with the working man; there are only two things open to him—he can steal or starve to death.

I don't believe that one shipper out of fifty would object to increased rates if the idle men were put to work, as their business would increase in proportion to the number of men put to work; and if you don't allow them the increase they will cut the wages—can do it any day they see fit, for they now have the men starved to it. I would be glad of a job to-day at one-half the wages I got two years ago.

Another thing to which I want to call your attention is the practice of some railroad officials employing Italians, Greeks, and all kinds of foreign laborers and taking $1 per month for each of them for their jobs. They hire American laborers as long as this is permitted; and one American is worth as much as three "Dagoes."

I would suggest, if my plans could be adopted, that the Interstate Commerce Commission appoint inspectors and have them walk, not ride, over every mile of railroad in the United States at least every 90 days and make a report to the commission of the condition of every mile walked over and make the railroads pay for this service. Use practical men, and not office men that don't know a bad piece of track when they see it.

To you gentlemen this may all seem foolish, but it is a very serious matter to myself and thousands of others that have no employment and starvation staring us in the face; it makes us sometimes feel like going to Mexico and taking out citizenship papers; and it is not because there is no work to be done, but because the moneyed interests or railroads want to force you to grant an increase of the freight rates or starve the labor to where they will be compelled to accept whatever the railroads see fit to pay them.

I would also suggest that they be required to keep their machinery in first-class condition. One inspector that knows his business can get over several hundred miles every 90 days and have time to make his reports.

When the railroads fail to furnish passengers with seats, the road should be compelled to refund one-third of the fare. I believe in giving them all that is due them, but, at the same time, let the roads give the public the worth of their money and give the idle men employment in keeping the roads up to your standard, which would mean "safety first" for the people as well, and I am sure there will result a vastly different condition of affairs in America.

If I can do you any good in any way in helping to work out such a standard, I will be indeed glad to do so to the utmost of my ability. I have been in the railroad business for 30 years, having had experience in different departments of railroading.

Trusting that my suggestions may have a fair consideration, gentleman, I desire to subscribe myself,

Very truly, W. E. ROGERS.

MY DEAR MR. FLOYD: I am asking you to give this matter your consideration and, if thought worthy, use your influence for such before the commission.

Sincerely, W. E. ROGERS.

—

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., March 16, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Langeland Manufacturing Co., of Muskegon, Mich., engaged in the lumber business, writes as follows in regard to proposed change of railroad freight rates and of reclassification of lumber by which that commodity is advanced to the sixth class:

"We have technically consented that a 5 per cent advance in freight rates will be agreeable, as we feel that railroads are entitled to a small raise as well as manufacturers on account of the higher cost of operating, labor, etc.; but when they began to figure to advance lumber to the sixth class, we realized that this would mean a much greater advance than 5 per cent on shipments from some points, particularly upper Michigan. This caused the lumbermen of Michigan to protest against this proposed raise, with the result that they succeeded in having the effective date of the proposed advance suspended for 45 days. It now appears that the entire matter of canceling the commodity rate on lumber and advancing it to the sixth class is up to the Interstate Commerce Commission, which is to have a hearing regarding the matter on March 17 in Washington.

"It came to the writer's mind this morning that possibly you might be in Washington and could attend this hearing. Our main point of protest is that upper Michigan hardwood lumber is of an inferior grade; in fact, where we operated last year our cut was about 60 per cent No. 3 common hardwood, which is the lowest grade possible. The rates in effect to points in the Pittsburgh district range from 18 to 21 cents, and if the commodity rate on lumber is advanced to sixth class, it will average an advance of about 15 per cent, while the railroads are asking a 5 per cent horizontal advance. If the measure goes through and the Interstate Commerce Commission consents to put lumber in sixth-class rate, it will simply put us out of business in shipping lumber from upper Michigan, where we have considerable holdings. This year we have contracted for about 4,000,000 feet, which means about 300 carloads. You can, therefore, see that we are vitally interested not to allow the railroads to disturb the commodity rates."

Inclosed herewith is also a letter to the Langeland Manufacturing Co. from the Michigan Railroad Commission in relation to this matter.

Very truly, yours,

J. C. MCLAUGHLIN.

—

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., March 16, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am inclosing you herewith communication in re increased freight rates, placing of cars on industrial tracks, etc., for which I urge your careful consideration.

In this connection, I want to express to the commission my personal view, that the commission should consider carefully the effect of granting an increase of 5 per cent, or any other rate, in the freight rates of the railways of this country. In my view of it, an order of that kind by the Interstate Commerce Commission will have the effect of placing the Government's stamp of approval upon all of the wildcat stocks and bonds which are now floating about the several market places in this country.

In the last analysis, a bond issue upon any public utility is an obligation of the people served by the utility and which is issued without their knowledge, consent, or approval, and in many instances without any reasonable excuse whatever. This fact is beautifully illustrated by the bond issue which is now being carried by the Chicago & Alton Railroad Co., and which is such a burden to the property as to seriously embarrass the efficiency of that railroad in the performance of its public duty.

Yours, respectfully,

LOUIS FITZHENRY.

HOUSE OF REPRESENTATIVES,
Washington, November 4, 1913.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Inclosed please find a letter and a copy of resolutions passed by the Southern Hardwood Traffic Bureau. These resolutions explain themselves. I am not prepared to express an opinion about it. I am content to back up your views and action. With much respect, I am,

Very truly, yours,

K. D. MCKELLAR.

—

SOUTHERN HARDWOOD TRAFFIC BUREAU.
Memphis, Tenn., November 1, 1913.

Hon. K. D. MCKELLAR,
House of Representatives, Washington, D. C.

DEAR SIR: For your information, I am inclosing herewith copy of resolutions adopted by the members of this bureau.

Respectfully, yours,

J. H. TOWNSHEND,
Secretary and Manager.

Resolutions presented by special committee of the Southern Hardwood Traffic Bureau.

Whereas the railroads operating north of the Ohio River have filed with the Interstate Commerce Commission tariff naming 5 per cent increase on practically all freight rates and such increase portends similar advances throughout the United States, based on the assumption that it is imperative that additional revenue be raised to meet their increased operating expenses and cost of labor, it seems proper for the Southern Hardwood Traffic Bureau, the largest lumber traffic organization in the United States, whose members handle in the aggregate over 80,000 cars of hardwood products annually, to express collectively its views on the subject, which is vitally connected with the success and prosperity of the lumber industry.

It is a well-known fact that railroad rates of this country have not been constructed, as a rule, upon any scientific basis. Traffic officials who have established these rates have generally done so without any special inquiry as to the total amount of revenue which ought to be produced or as to the part of that burden which a particular commodity should bear or discriminations between different localities, and we maintain that the rates charged on lumber are now higher and out of proportion with rates assessed on certain other commodities. Recognizing this fact, especially as regards rates on lumber and forest products, we maintain that existing inequalities should be eliminated through readjustment of freight rates on a scientific basis, making each class of freight and each commodity stand its proper proportionate rate, based on distance transported and the conditions governing the transportation. We also recognize the broad principle that carriers are entitled to a reasonable return on their investment above cost of operation and maintenance, and we believe that the necessity for readjustment in rates should not be permitted to prevent the carriers from increasing their revenue through change in present rates, provided there is an actual necessity for such increase: Therefore be it

Resolved, That the Southern Hardwood Traffic Bureau's attitude toward the 5 per cent horizontal increase in freight rates, as proposed, is not in opposition nor approval, but one of open-mindedness; that the question whether or not the carriers need the forty-two millions of additional revenue, which they claim will be produced by this advance, more than the general public needs it is, of course, a question which can only be determined by a scientific inquiry, such as we feel confident the Interstate Commerce Commission will make; and that we are willing to adopt its decision in the matter and to furnish to that important body such information as we can which will enable them to arrive at a just decision; be it further

Resolved, That we reserve the right to make protest against any inequalities in freight rates which now exist or which may arise affecting our interests; and be it further

Resolved, That a copy of these resolutions be sent to the Secretary of the Interstate Commerce Commission for their information.

—

UNITED STATES SENATE,
COMMITTEE ON EXPENDITURES IN THE WAR DEPARTMENT,
Washington, January 16, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Inclosed find copy of letter just received from Mr. E. P. Triol, 1033 Henry Building, Seattle, Wash., suggesting that the holdings of the railroads in the stocks of other railroads, and the distribution of the same among stockholders or otherwise, should be taken into account in connection with the application of railroads for permission to increase rates.

Very truly, yours,

MILES POINDEXTER.

—

SEATTLE, WASH., *January 9, 1914.*

Hon. MILES POINDEXTER,
Washington, D. C.

DEAR SENATOR: Referring to the large amount of Baltimore & Ohio Railway stock held by the Union Pacific Railway Co., who are now trying to divide the same among their stockholders, why should this be permissible when the railroads are all trying to secure advanced freight rates, because of their inability, so claimed, to make proper returns from rates now in force? If the Union Pacific Co. were to apply these holdings against outstanding indebtedness, instead of being allowed to divide to the stockholders, and thereby permanently reduce their debts as well as carrying charges, why would it not be the right and only thing to be allowed?

Has not the Government a right to intervene and require that stock holdings like these should be given first call against outstanding obligations, rather than for stockholders' dividends? The public is interested, because the railroads want to assess higher freight rates than now exist, and this, in the face of a contemplated division of the assets of a railroad system like the Union Pacific, does not look to be an action that the Government should allow.

Respectfully, yours,

E. P. TRIOL.

EXHIBIT C4.

DEROGATORY AND ABUSIVE LETTERS RECEIVED BY THE INTERSTATE COMMERCE COMMISSION.

Many derogatory letters and communications have been received by the commission. Some of the worst of these are anoymous. Other letters, while not abusive, are, to say the least, unmindful of the duty of the Interstate Commerce Commission to decide the present controversy on evidence submitted, and not on the grounds of political expediency.

DENVER, *February 18, 1914.*

Chairman HARLAN,
Interstate Commerce Commission, Washington, D. C.:

Kindly decide rate increase promptly or resign; your delay killing business.

R. W. JOHNSON.

—

ALTOONA, PA., *December 4, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Care Hon. James S. Harlan, Interstate Commerce Commissioner,
Washington, D. C.

GENTLEMEN: The roof of the Nation's prosperity building is now burning, as you well know. Permit me, I beg, to suggest an immediate method for the extinguishing of the fire. The necessity of the moment is a restoration of public confidence. It would seem to be a serious trifling with the fate of our Nation's prosperity for the next six years to allow the hundred-ton rock of adversity to obtain more momentum in its roll down the hill toward the miserable goal of a panic. Under such circumstances I earnestly appeal, in behalf of the citizens of this section and the country in general, that your honorable body waive the merit and demerit of all discussions for the time being, and save our burning home. To that end I beg to suggest that a grantal of the 5 per cent freight advance could be made, with the understanding that the few exceptions among shippers who had real grievance could be taken up and adjudicated separately by your honorable body in such manner. If your decision is given immediately in favor of the 5 per cent advance, you would undoubtedly restore the confidence now so essential to ward off serious national financial disaster, and at the same time grant a desired boon to tens of thousands of manufacturers who see the wisdom of the said freight advance under all the present economic conditions.

It is to be hoped that your honorable body can find such action consistent with your wish to serve the best interests of the great body of the people of our Nation. I beg to state, as published heretofore in my article of November 14 in the Altoona Times, copies of which were sent to your body, that your petitioner is not nor has been official nor employee nor security holder of any railroad, and this appeal is made for the interest of the people, so as to permit the railroads to issue immediate orders for the needed rolling stock and extensions and other large expenditures necessarily held up by the suspense as to the future.

Kindly permit me to say that the present rush of holiday traffic, even in prosperous times, is succeeded by a slump in freight business at the commencement of the new year. Such a slump, if January or February

of 1914, means a cruel onrush toward a panic stage, with all its horrors; and to defer until after the holidays the action requested herein is allowing the fire to gain such a headway that extinguishing would be practically impossible.

Respectfully submitted.

A. E. RUSSELL.

HUDSON TERMINAL STATION,
New York, March 14, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Now that you have put the United States Express Co. out of business and made another 15,000 men idle, why not again "knock" the railways? You can do a whole lot of work if you will, but how old man Wilson will "get it" in the end.

SOAK'EM.

MERCANTILE TRUST CO.,
St. Louis, March 9, 1914.

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Your rather unique reply to my letter of the 3d received. I do not want you to follow "sentiment" and certainly (least of all) do not want you to closely follow "statistics and reports," as they will break any business concern, whether it be commercial, industrial, or financial. The old doctrine commonly known as "horse sense" seems more necessary to apply now.

I expect to be in Washington shortly, and shall do myself the honor of calling upon you.

Yours, very truly, FESTUS J. WADE.

THE STEIN DRY GOODS CO.,
East Liverpool, Ohio, April 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As a merchant and one who is in favor of paying the increase in freight, I desire to file my protest against your board for dillydallying with such a serious question.

As to the railroad's demand, are you gentlemen looking after the interests of our country or are you blind to the situation? Can not you see that the country demands that you act and act promptly in your decision? Is it better for the public, for the railroads to retrench and curtail the purchasing power by not buying equipments or laying off thousands of men for economy's sake? We certainly should be anxious to help any enterprise that employs labor and be in favor of assisting them when they show a decrease in earnings and are not able to earn fixed charges.

It is our duty as loyal citizens to encourage every industry and not antagonize. It is better for the community and the public at large to have the railroads prosper. As an individual I have a right to express my opinion and I think you are making a mistake by holding the railroads up. In fact every industry and every business man feels that the railroads should have an increase in rates. Have you stopped to consider that if the railroads continue to lay off thousands of men it will be a hardship to these people? Have you figured what will become of the unemployed? Are you trying to find a way whereby these people can get work elsewhere? For no doubt they have families depending on them.

If you want this country to have a boom and feel that everybody should have work here, all you have to do is allow the railroads to have a 5 per cent increase and you will find conditions better than ever before.

Very truly, yours, JACOB STEIN.

MILLBROOK, N. Y., *April 4, 1914.*

INTERSTATE COMMERCE COMMISSION:

GENTLEMEN: When are you going to let up your strangle hold on the railroads?

With thousands of men being laid off, needed repairs and improvements delayed or prevented, prosperity put off because men and railroads can not buy what they can not pay for, railroads compelled to do extra work on parcel post with insufficient pay, wages and supplies costing more, stockholders and employees on short time or wages and dividends and you continue the cheeseparing and it seems to me short-sighted and almost cruel policy of refusal of the little advance which is asked.

I have almost no railroad stock and am a shipper, but it seems to me their request is too little rather than too much, and I earnestly hope you will grant it quickly.

Yours, truly, HENRY H. SWIFT.

THE RICHMOND MICA CO.,
Richmond, Va., December 20, 1913.

Hon. C. C. MCCHORD,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: As large shippers of freight we desire to call your attention to the absolute necessity of the railroads being granted a good increase in freight rates.

It is of far greater importance for us to receive orders and keep our business going at full blast than it is for us to be able to continue shipping and receiving our goods at low freight rates.

You will readily recognize that the railroads are the largest buyers of material and employers of labor in the United States, outside of the farmers.

This country will not only go forward, but, on the contrary, it will go into a serious depression unless the railroads can secure a good increase in freight rates.

Ten per cent would not be excessive.

To quote one of the largest payers of freight in the United States, we would call your attention to a statement issued recently by Mr. John Chaflin, of the United Dry Goods Co., in which he says:

"It is hard to tell much about the future. It all depends on Washington. If they permit the railroads to advance their freight rates a little everything will be all right. There is no trouble with the money situation at present."

We would call your attention to the following facts in regard to the recent application to your commission for an increase of 5 per cent in freight rates:

There is no let-up in the increase of taxes our railroads are compelled to pay. The taxes of 49 railroads now petitioning for an increase in freight rates increased 111.43 per cent from 1903 to 1913, in the face of an increase of only 40.5 per cent in net operating revenue. From 1910 to 1913 gross earnings of these roads increased only 15 per cent, net earnings fell off seven-tenths of 1 per cent, but notwithstanding this the companies had to bear an increase in taxes of 26.9 per cent, or at the rate of $3,800,000 per annum. A large part of the lifeblood of our Government bodies is contributed by the railroads. In the face of an expenditure of $659,000,000 for additions and improvements since 1910, the expenses and taxes increased to such extent ($203,000,000) that there was a falling off in net income, from which ultimately the increased interest on the capital invested had to come, of $16,311,000.

Above petitioning railroads, to effect more economical operation, have been constantly increasing the size of locomotives; average tractive power per locomotive increased nearly 34 per cent between 1903 and 1912. Average capacity per freight car increased 28 per cent between 1903 and 1912. The average trainload increased 30 per cent. Railway revenues per unit of service rendered decreased. Average receipts per ton-mile decreased from 5.5 per cent from 1903 to 1912. Aggregate compensation to employees—excluding general officers—increased from $364,000,000 in 1903 to $567,000,000 in 1912, or 56 per cent.

Even the newspapers are now commencing to see a great light, and recognize that the campaign against the railroads has gone entirely too far. The conclusive array of figures presented by the railroads and clearly illustrating the process of starvation to which they have been subjected in recent years, can not fail to impress every fair-minded judge. "We may gratefully appreciate," to quote a prominent journal, "that a change is visible in the temper of the people toward the servant, capital. They have begun to realize that under perpetual beating or starving it is sure to sulk or to soldier or be unable to work efficiently. The railroads, for example, are being accorded a juster recognition both for their service and for their needs. The demagogues who would exult in their misfortunes are now fewer; corporation baiting is more generally recognized as a boomerang sport. That the gravity of the transportation problem is more commonly appreciated and that the problem of railway relief has been brought to a head is in itself a negative blessing." As one judge of the situation said some time ago: "The public wants better service, we are trying to give it, but they refuse to pay for it."

We believe you will be doing your country a great service in granting all of the railroads in the United States at least a 10 per cent increase in freight rates.

Our company can much better afford to live and pay a 10 per cent increase in freight rates than it can afford to go out of business, and we are satisfied that a tremendous number of concerns in the United States will go out of business or become absolutely idle within the next 12 months unless the railroads are immediately granted a large increase in rates.

The locomotive works here are now employing about 110 men instead of 3,000 employed when they run full blast. This is due to low freight rates.

It is no good to me to have low rates if I only run half blast as a result of low rates.

Yours, respectfully,

L. M. WILLIAMS,
Secretary and Treasurer.

THE RICHMOND MICA CO.,
Richmond, Va., December 20, 1913.

Hon. JAMES S. HARLAN,
Interstate Commerce Commission,
Washington, D. C.

—

THE RICHMOND MICA CO.,
Richmond, Va., December 23, 1913.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter of the 23d instant received. We are justified in calling your attention to this freight-rate matter, as we are large shippers and receivers of freight. Some of our raw material we bring from as far west as Nebraska, as far north as the mountains of New Hampshire, and as far south as the mountains of North Carolina, and we ship east as far as Berlin. So you will see that we know something about freight rates.

Yours, very truly,

L. M. WILLIAMS,
Secretary and Treasurer.

—

THE RICHMOND MICA CO.,
Richmond, Va., December 26, 1913.

Hon. JUDSON C. CLEMENTS,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter of the 23d instant received. We are justified in calling your attention to this freight-rate matter, as we are large shippers and receivers of freight. Some of our raw material we bring from as far west as Nebraska, as far north as the mountains of New Hampshire, and as far south as the mountains of North Carolina, and we ship east as far as Berlin. L. M. WILLIAMS,
Secretary and Treasurer.

—

THE RICHMOND MICA CO.,
Richmond, Va., January 14, 1914.

M. B. H. MEYER,
Commissioner, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter of 26th ultimo received, in which you say: "You doubtless realize that the question of freight rates is primarily one of testimony and investigation. If you desire your letter to be construed as an application for opportunity to take the witness stand, I apprehend there will be little difficulty in making arrangements with that end in view."

I inclose herewith a memorandum in regard to the industrial depression, showing over 1,000,000 men idle. Right here in Richmond we have the Richmond Locomotive Works, who, under normal conditions, employ about 3,000 men or more, but to-day I am informed that there are about 150 men only at work, owing to inability to get orders, and this condition has existed for some time past. In my opinion it is almost solely due to the inability on the part of the railroads to get the rates raised in the past year or two, whilst the price of conducting transportation in almost every detail of the business has largely increased.

In your suggestion that you can arrange for me an opportunity to appear before your commission to give testimony why railroad rates should be raised, I am reminded of the story of Lazarus and Dives. You have received the overwhelming evidence of Mr. Daniel Willard and others, and I inclose herewith memorandum of certain statements made by Mr. Willard, cut from a paper-trade journal. Our company sells our product largely to the paper manufacturers.

Now, you will recall that when Dives reached hell and petitioned for a cup of cold water for himself, and it was denied to him, he asked that some messenger be sent to his brothers on earth that they might avoid coming to hell. Dives then received the reply that if his brothers on earth were not willing to hear Moses and the prophets, neither would they be persuaded, "though one arose from the dead." Now, if you and your associates are not convinced by such a learned operator as Mr. Willard and others, neither can you be persuaded, though an ordinary layman, like myself, appeared before you.

You well know that any factory can produce goods much cheaper running continuously every day in the year than running one-half or three-fourths time. Now, you can't have general prosperity in this country when our largest industry outside of agriculture is prostrated or paralyzed by a hidebound low-freight-rate scheme that does not permit this railroad industry to expand with the expanding country.

Tens of thousands of people in this country are to-day begging for an opportunity to work for their daily bread, and it is denied them because the Interstate Commerce Commission has not permitted the railroads to have a fair, reasonable, and living rate on their freight and passenger business.

Yours, truly,

LANGBOURNE M. WILLIAMS.

P. S.—You commissioners are standing this depression far better than those whom your acts have thrown out of employment, and you are taking your leisure whilst the idle unemployed are increasing.

L. M. W.

(Mr. L. M. Williams is treasurer of Halifax Paper Co.)

—

MILLION METAL MEN IDLE—CLEVELAND TRADE JOURNAL FIGURES 270,000 MINERS ALSO OUT OF WORK.

(Special to the New York Times.)

CLEVELAND, *January 9.*

One million workingmen of the metal trades are idle in the United States to-day. The wage loss, due to unemployment and short time, is estimated at $50,000,000 a month. Two hundred and seventy thousand miners are also idle. The wage loss to these is computed at $12,000,000 a month.

According to figures given in the Daily Iron Trade, 123 blast furnaces are idle. These have an annual capacity for producing 12,958,000 tons of pig iron. On March 11, 1913, 306 blast furnaces were in active operation. To-day only 183 furnaces are active.

The Steel Corporation plants are working at 50 per cent of capacity, and have laid off 40,000 to 50,000 employees. In the Pittsburgh district 75,000 have been laid off by Steel Trust and independent plants.

In trades allied to metal industries the Daily Iron Trade figures that reduction of shop forces has probably thrown out of employment or put into effect reduced time to the equivalent of another 1,000,000 men.

DAILY MARKET LETTERS.

RICHMOND, VA., *January 12, 1914.*

Stocks: The overnight news was favorable and the market responded by a general advance, with Steel the feature. Elsewhere the advance was quite orderly, except in some specialties like Texas oil, which rose some 7 points. The market after the opening moved within narrow limits, showing a generally strong tone, but buyers refused to follow prices up. New York Central was an exception, and declined to the lowest price touched on this move. The decline was helped by reports from Washington of a proposed investigation into the interlocking directorates of the New York Central and controlled lines. Actual trade conditions are bad. There are 1,200,000 men out of work in the iron and steel trades alone. Railroads are laying men off daily and railroad net earnings are decreasing with alarming rapidity. The hopeful part of the situation is that these conditions most maintain before things can get better, and always mark the approach of the end of a cycle. The first evidence of financial improvement is in the bond market, which is now with us and can not be denied. Another is the superabundance of funds owing to business contraction. In a word, the outlook seems to favor better and not worse financial conditions.

—

THE RICHMOND MICA CO.,
Richmond, Va., February 19, 1914.

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington.

DEAR SIR: I have your notice, dated February 4, 1914, suspending the increase in rates on certain articles in certain sections until September 12, 1914.

With all proper respect to your commission, I want to say that you are doing this whole country a very serious and large injustice in prohibiting the railroads from advancing rates. People are out of employment and begging for an opportunity to make an honest living because your commission is calling for unusual and unnecessary information.

Our company has recently stood an increase in freight rates by the Southern Railway and others, from Asheville to Richmond, from 18 cents per hundredweight to 22 cents per hundredweight on crude mica, or about 25 per cent increase over what we have been paying for years past; and yet we have not entered any protest, because we believe the railroads are entitled to a larger rate, and we are willing to pay our portion of the increased burden in order to see the whole country go into an era of prosperity.

When you consider that in face of an expenditure of $659,000,000 for additions and improvements since 1910 the expenses and taxes have increased to such an extent—say, $203,000,000—that there was a falling off in net income, from which the interest on capital invested has to come, of $16,311,000, the people of this country are justified in expecting your commission to increase the rates of the railroads in order to permit this country to move forward.

The time for action has arrived, and, as you will readily recognize, it is very much easier to keep this country moving and increase the speed of industrial activity while there is some motion to it than it would be to start such activity up again after it has come to a severe standstill through unusual and unnecessary burdens put upon the railroads simultaneously with the refusal of your commission to give them a chance to extricate themselves by increasing freight rates.

Your commission appears to be willing to put upon others burdens which they themselves are not willing to stand one second.

You are well aware that there is not a man in your commission who would undertake to haul freight at as cheap rates as those which you are compelling the railroads to receive, and a continuation of these low rates by your commission is, in my humble opinion, nothing more nor less than the seizure by the Government of private property representing the ownership of railroad securities and the distribution of same among the large shippers.

Yours, very truly,

L. M. WILLIAMS.

—

THE RICHMOND MICA CO.,
Richmond, Va., March 24, 1914.

Hon. JAMES S. HARLAN,
Interstate Commerce Commissioner, Washington, D. C.

DEAR SIR: I inclose copy of my letters, dated January 14 and February 19, to Mr. B. H. Meyer, which kindly do me the favor to read, and oblige,

Yours, very truly,

L. M. WILLIAMS,
Secretary-Treasurer.

—

RICHMOND, VA., *January 14, 1914.*

Mr. B. H. MEYER,
Commissioner, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter 26th ultimo received, in which you say:

"You doubtless realize that the question of freight rates is primarily one of testimony and investigation. If you desire your letter to be construed as an application for opportunity to take the witness stand, I apprehend there will be little difficulty in making arrangements with that end in view."

I inclose herewith a memorandum in regard to the industrial depression, showing over 1,000,000 men idle. Right here in Richmond we have the Richmond Locomotive Works, who under normal conditions employ about 3,000 men or more; but to-day I am informed that there are about 150 men only at work, owing to inability to get orders, and this condition has existed for some time past. In my opinion, it is almost solely due to the inability on the part of the railroads to get the rates raised in the past year or two, whilst the price of conducting transportation in almost every detail of the business has largely increased.

In your suggestion that you can arrange for me an opportunity to appear before your commission to give testimony why railroad rates should be raised, I am reminded of the story of Lazarus and Dives. You have received the overwhelming evidence of Mr. Daniel Willard, and I inclose herewith memorandum of certain statements made by Mr. Willard, cut from a paper trade journal. Our company sells our product largely to the paper manufacturers. L. M. Williams is treasurer of the Halifax Paper Co.

Now, you will recall that when Dives reached hell and petitioned for a cup of cold water for himself, and it was denied to him, he asked that some messenger be sent to his brothers on earth, that they might avoid coming to hell. Dives then received the reply that if his brothers on earth were not willing to hear Moses and the prophets, neither would they be persuaded though one arose from the dead. Now, if you and your associates are not convinced by such a learned operator as Mr. Willard and others, neither can you be persuaded, though an ordinary layman like myself appeared before you.

You well know that any factory can produce goods much cheaper running continuously every day in the year than running one-half or three-fourths time. Now, you can't have general prosperity in this country when our largest industry outside of agriculture is prostrated or paralyzed by a hidebound low freight-rate scheme, that does not permit this railroad industry to expand with the expanding country.

Tens of thousands of people in this country are to-day begging for an opportunity to work for their daily bread; and it is denied them, because the Interstate Commerce Commission has not permitted the railroads to have a fair, reasonable, and living rate on their freight and passenger business.

Yours, truly,

L. M. WILLIAMS.

P. S.—You commissioners are standing this depression far better than those whom your acts have thrown out of employment, and you are taking your leisure whilst the idle unemployed are increasing.

—

RICHMOND, VA., *February 19, 1914.*

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington.

DEAR SIR: I have your notice, dated February 4, 1914, suspending the increase in rates on certain articles in certain sections until September 12, 1914.

With all proper respect to your commission, I want to say that you are doing this whole country a very serious and large injustice in prohibiting the railroads from advancing rates. People are out of employment and begging for an opportunity to make an honest living because your commission is calling for unusual and unnecessary information.

Our company has recently stood an increase in freight rates by the Southern Railway and others from Asheville to Richmond from 18 cents per hundredweight to 22 cents per hundredweight on crude mica, or about 25 per cent increase over what we have been paying for years past, and yet we have not entered any protest, because we believe the railroads are entitled to a larger increase, and we are willing to pay our portion of the increased burden in order to see the whole country go into an era of prosperity.

When you consider that in face of an expenditure of $659,000,000 for additions and improvements since 1910 the expenses and taxes have increased to such an extent, say, $203,000,000, that there was a falling off in net income—from which the rate of capital invested has to come—of $16,311,000, the people of this country are justified in expecting your commission to increase the rates of the railroads in order to permit this country to move forward.

The time for action has arrived; and as you will readily recognize, it is very much easier to keep this country moving and increase the speed of industrial activity while there is some motion to it than it would be to start such activities up again after it has come to a severe standstill through unusual and unnecessary burdens put upon the railroads simultaneously with the refusal of your commission to give them a chance to extricate themselves by increasing freight rates.

Your commission appears to be willing to put upon others burdens which they themselves are not willing to stand one second.

You are well aware that there is not a man in your commission who would undertake to haul freight at as cheap rates as those which you are compelling the railroads to receive, and a continuation of these low rates by your commission is, in my humble opinion, nothing more nor less than the seizure by the Government of private property, representing the ownership of railroad securities and the distribution of same among the large shippers.

Yours, very truly,

L. M. WILLIAMS.

—

HALIFAX PAPER CORPORATION,
Richmond, Va., April 28, 1914.

Hon. JUDSON C. CLEMENTS,
Washington.

DEAR SIR: I am treasurer of the Halifax Paper Corporation, which ships over $300,000 worth of paper per annum in ordinary normal times, and our freight bills amount to over $62,000 per annum.

I am also treasurer of the Richmond Mica Co., which buys material as far West as Nebraska and South Dakota, and ships the finished material as far East as Berlin, Germany.

I am also president of the Southern Investment Co., having extensive lumber interests as far South as about 80 miles south of Tampa, Fla., and some of my companies buy material from a point as far North as New Hampshire.

I am also an official of the Kingsdale Lumber Corporation of North Carolina and a member of the directory of the Richmond Trust & Savings Co. (capital $1,000,000); hence I am in very sensitive touch with the manufacturing and construction interests of this country.

I desire to say to you and to each member of the Interstate Commerce Commission that, in my opinion, your commission appears to be exercising the power of strangulation rather than the right of regulation of the railroads of this country.

'Tis excellent to have giant's strength, but it is tyrranous to use it like a giant.

Several industries in which I am interested are suffering severely to-day because the railroads have not sufficient revenue to justify them in carrying on any liberal scheme of maintenance or development, consequently the railroads are not buying any more lumber and crossties than they can avoid buying—resulting in the shutting down of lumber mills throughout the country, thereby throwing out of employment a large number of laborers, who they are prevented from buying goods from the stores; and the country storekeeper, being unable to sell his goods, stops ordering additional goods, and the credit of the country storekeeper becomes weakened and he is unable to pay his bank, and the bank being unable to collect its money from the storekeeper ceases to make new loans to other parties in his community, and then business is absolutely stagnant, and the railroads are further afflicted by a heavy shrinkage in volume of business.

This is about the present condition of the country, due, in my opinion, almost entirely to your commission having refused to grant the railroads a 10 per cent increase in rates about two years ago, when you were advised by the railroads that if you did not grant them the 10 per cent increase asked at that time that there would be trouble.

This trouble is now upon this country and you are asked to make a small increase of 5 per cent; and although a very large number of the largest merchants and shippers in this country have indicated a willingness to pay a larger freight rate in order to have the industries of this country revived and put into full operation, yet your commission has so far persistently neglected to grant any material increase in rates, and have employed a lawyer from New England, thoroughly prejudiced against the railroads, to argue before you "Why the railroads should not receive an increase in rates."

It seems to me that this was grossly unfair treatment to the railroads, and your commission, which is supposed to occupy a somewhat judicial or neutral position, would have been just as much justified in employing the attorney of the New York Central Railway to represent the Government in this rate matter, as you were justified in employing Mr. Brandeis, who has shown by his whole course before the public in the last three years the most violent prejudice against the railroads.

I seriously doubt whether Mr. Brandeis has ever constructed or built an *industry*, either manufacturing or transportation line, that is to-day giving employment to 50 men, but he appears to be using these attacks on the railroads as a text or means to advertise himself.

I firmly believe that if each one of you gentlemen, who may have the real, true welfare of the country at heart, should be in actual touch with the conditions existing in the manufacturing, mining, lumbering, and railroad situation you would immediately grant not only the 5 per cent increase in freight rates but a 10 per cent increase in freight rates.

The industries which I am actively engaged in operating, and which are paying freight on goods moving from Florida and from New England and from South Dakota to a point as far East as Berlin, Germany, would be only too glad to pay a 10 per cent increase in freight rates, for then they would have the opportunity of running full blast 12 months in the year.

Yours, very respectfully,

L. M. WILLIAMS, *Treasurer.*

HALIFAX PAPER CORPORATION,
Richmond, Va., April 28, 1914.

Hon. C. C. MCCHORD, *Washington.*

DEAR SIR: I am treasurer of the Halifax Paper Corporation, which ships over $300,000 worth of paper per annum in ordinary normal times, and our freight bills amount to over $62,000 per annum.

I am also treasurer of the Richmond Mica Co., which buys material as far west as Nebraska and South Dakota, and ships the finished material as far east as Berlin, Germany.

L. M. WILLIAMS, *Treasurer.*

Mr. CLARK:

For goodness' sake read this and do not spend so much time listening to such beings as Brandeis and David Lamar.

J. S.

[From the New York Times, New York, Thursday, March 26, 1914.]

RAILWAY RATE CASE DELAY.

The Interstate Commerce Commission is so sorry that it was unable to hear the testimony of Clifford Thorne regarding the application of the railways to advance their rates that it has asked him to repeat it "in substance." If the railways desire to rebut this testimony the commission will give them opportunity next month. If adjournments were what the railways wanted, how happy they would be. They first asked for this advance some years ago. The commission refused it for reasons since shown to be bad. Months ago the railways renewed their request, and the commissioners still want to be shown how to change their minds. To assist them they employ as their counsel the counsel whose argument they should regret accepting on the first application. As a friend of the court they admit to argument Mr. Thorne, chairman of the Railway Commission of Iowa and authorized spokesman for the commissions of the States of Iowa, Kansas, Nebraska, North Dakota, South Dakota, Arkansas, Oklahoma, and Missouri.

The list of States sufficiently indicates the sort of decision which would result from crediting the arguments advanced by Mr. Thorne. There is a double impropriety in hearing him as the representative of State commissions. The Interstate Commerce Commission has constitutional support in advising or even directing the State commissions, but the State commissions have no such standing before the Federal commission. The State commissions represent neither shippers nor railways, and as commissioners they have antagonized the Federal commission, presuming to reduce the rates in their States which the Federal commission has declared to be reasonable in interstate commerce. The Interstate Commerce Commission is forgetful of the proprieties if not of the legalities of the case when it listens to such spokesmen. The Supreme Court listens to counsel representing liti-

gants in the courts of the various States, but the Supreme Court never listens to State courts to plead in the person of its judges what the law ought to be, and particularly not to challenge the decisions of the Federal court.

The record of Mr. Thorne's original testimony ought to be available for the commission to read in its leisure, but he is asked to repeat it "in substance." Perhaps his revised version may be less insulting to the commission than his first insisting that the records of the Federal commission were worthless. Commissioner Thorne's allegation was that the railways were padding their expense accounts. President Willard denied it on the spot. President Rea gave an indignant denial, which the interstate commissioners would do well to paste in the tops of their hats. This charge which the commission wants to hear repeated concerns the commission even more intimately than the railways. The country has more confidence in the Federal commission than in the State commissions, whose spokesman is asked to repeat his slurs. But the country can not defend the Interstate Commerce Commission against itself. If it wishes to be regarded as a judicial body it should act judicially, know when it is treated with contempt, and protect itself otherwise than by compliments to its traducers.

If the Interstate Commerce Commission has any confidence in itself, or in its accounts of the railways' condition, it is in a better position than any other authority to decide for itself forthwith, asking for no arguments. The official figures show that the commission has heretofore misjudged and acted in error upon the reports to it. That is the substance and the merit of the railways' appeal. The railways now are suffering one of the most serious reverses in their history. Their suffering is so severe that it is reflected among industrial investments. It can not be long before the country in general must suffer from the reductions of dividends in both railways and industrial corporations. The Supreme Court itself has flinched from the results of the rigor of its law, and has reconsidered judgments which were impolitic. The interstate commission need not fear the country's reproaches for a retreat from its untenable position that it is infallible, and must refuse advances of rates because it has been accustomed to do so.

This is a case where to give quickly is to give twice. It still seems probable that an advance of rates would increase revenues, but there will come a time when the reduction of the volume of traffic will nullify an advance of rates. The time to have advanced rates was when the railways first asked. Then trade was so robust that it could have paid and not missed the money. Now trade is in a decline, and an advance of rates is burdensome. No more could be asked of the commission than that its administrative acts should be as nearly right as its judicial decisions. More than half of them resist challenge. It is a good administrator who is right half the time, provided he knows his own mind, and gives decisions with reasonable quickness after they are asked and the case is sufficiently presented. This case has been talked to death.

—

[From the New York Sun.]

HARD TIMES AND THE CASE OF THE RAILROADS.

Next to agriculture the greatest industry in the United States is railroading. In the country's transportation system, with 250,000 miles of track and an investment of fully $18,000,000,000 of capital, is most strikingly expressed the American genius for economic expansion. Railroad development has been the peculiar contribution of the United States to the material progress of the race. Nowhere else in the world have the science and art of moving passengers and goods by rail been carried to such a pitch of perfection.

Next also to agriculture railroad enterprise has been the greatest single factor in American prosperity. Indeed, it is not too much to say that railroad extension has transcended every other influence in its stimulus to prosperous activity. Yet to-day there is an appalling public indifference to the danger which threatens the whole business fabric of the United States as the result of an overloaded political tendency to subject the railroads to an oppressive degree of governmental regulation which practically constitutes denial of the right of private capital to a living wage.

Very recently there have been hopeful signs of a public awakening to the disaster which impends if the railroad factor in American prosperity is eliminated, but it is a question if there is an adequate public appreciation of the real crisis. Do American citizens understand what is meant by the accounts which are being published daily of reduction of working forces on the railroads and curtailment of train service?

Statements of falling earnings may seem only a matter of bookkeeping concern to stockholders—commonly thought of as rich persons who can afford a decrease of income. How about the 40,000 employees who have been laid off on the New York Central and Pennsylvania lines alone in the last four months, with every certainty that in a few weeks the number will be increased? How about the trains which have been dropped from schedules?

Are not these facts which strike home the truth that hard times have come again in the United States and that they have come to stay a long while unless the railroad situation is relieved in the manner asked by the eastern carriers in their supplication to the Interstate Commerce Commission for permission to make an average advance of 5 per cent in their freight rates? Is the lesson of hard times going to be needed before it is understood what issues of economic life and death are involved in this matter of freight-rate advances? Do the American people court disaster or do they fail to comprehend the situation?

It has been shown to the Interstate Commerce Commission that 35 railroads—the principal petitioners in the eastern rate case—have since 1910 added $659,000,000 to their property investment. Last year, after paying operating expenses and taxes, their net earnings were $16,311,000 less than in 1910, although their gross earnings were $186,775,000 greater. They not only earned nothing on the new capital sunk in the three-year period, which at a reasonable rate of return should have yielded about $32,500,000 last year, but they obtained a diminished return on their investment as it was in 1910. How long can it be supposed that private capital will go into the railroads under such circumstances? How long will it stay there?

Who wants to put money into a losing venture? The railroads are to-day a losing venture, unless their future contains more assurance of profit than politics has been willing to vouchsafe in recent years. Where is the money to come from to build the 100,000 additional miles of track which will be needed in the next generation? Not only must there be more mileage, with its incidental increase of labor and equipment, but the whole railroad system has to be rebuilt and replaced every so often. Where is the money coming from to do it?

In the eastern rate case it has been shown that railroad dividends of late years have averaged a small fraction over 5 per cent. Returns on capital invested in manufacturing enterprise of corresponding importance have been more than twice that. Something like $9,000,000,000 of investment is represented in the bonds, notes, and stock of the eastern lines. This money came from the public. How much more will come from the public if investors can see ahead of them only shrinking returns and an increasing certainty that the railroads will not be permitted to earn adequate wages on invested capital? There is tremendous competition all over the world to-day for capital, and the railroads have to obtain their share in a more highly competitive market than the world has ever known.

It is conceded that the railroads must make money enough for all necessary purposes. It has been demonstrated—and only the fatuous deny it—that they are not making enough money. Why should there be hesitation in the circumstances? No consideration of past mistakes and abuses by the railroads and no effort to redress them will make any difference in the consequences of starving them now. The country is not confronted by a matter of history but by a present fact, and so far as history goes it can be dismissed from the reckoning anyway.

How little the public has to fear from a repetition of the evils of the past is strikingly and even alarmingly illustrated by the state of terrorism which exists in railroad circles. Railroad executives will not say publicly what they say privately about the desperate prospect which looms before the transportation system if the courses of politics are not speedily changed. This is one of the special features of menace in the present situation. It is akin to the menace which offered a year ago, when fear spread through the whole banking community on account of the demagogic uproar politically excited against bankers. Railroad officers of the new order have done their best to establish friendly relation with the people, but experience with all political contact has taught them that every measure of railroad management is likely to be misrepresented. The eastern railroads have been wildly accused of padding their expense accounts in order to strengthen their case, and nothing which the railroads do seems to save them from the unreasoning suspicions of political campaigners who have been living for years off the capitalization of hostility to the railroads, for which there is no longer a shadow of excuse.

Argument is made that the railroad conditions denoted by heavy declines in earnings, reduced and passed dividends, defaulted interest, diminished employment for labor, curtailed train service and the like, are largely the result of general business impairment. This is true; but how much of the depression of general business has been caused by compelling the railroads to engage in a struggle for their very existence?

There are 1,700,000 employees on American railroad pay rolls, who, with their families, represent about 7½ per cent of the country's population. The buying and consuming power which the railroads create by their disbursements throughout the land is enormous. Direct purchases of materials by the railroads themselves make a vast contribution to the country's total volume of business. Nor is railroading a millionaire enterprise.

On the contrary, millionaire interest therein has been steadily dwindling, judging from the steady lengthening of stockholders' lists and the steady lowering of the average of shares held—conclusive proof that large holdings have been in process of liquidation. In the Pennsylvania Railroad system alone there are 100,000 stockholders. Never have the railroads been so popularly owned as now. The reserves of life insurance companies and the funds of savings banks are heavily invested in them, and thereby millions of individuals are directly concerned with the welfare of the railroads without realizing it, because they own no railroad securities themselves.

And what is the railroad system which has been brought to its present evil pass? It pays the highest wages in the world and pays more taxes in proportion to invested capital than the railroads of any other land. It not only does more work on its capital, but it does this work upon less capital than any other railroad system. One of the favorite charges of politicians against the railroads is that they are inefficient. How have they manifested this inefficiency?

They have increased enormously their train schedules, enlarged terminals, and built commodious stations. They have increased the hauling power of locomotives and the carrying capacity of cars. They have steadily increased trainloads and have relaid tracks with ever heavier rails. They have steadily reduced grades, straightened lines, and built stronger bridges. It is a question if there is any industry in any land which has given such an exhibition of progressive efficiency as the American railroad system. The wonder is that with all their improvement in methods and service, at a steadily decreasing cost to the public and a steadily diminishing return to themselves, the railroads have not already gone into bankruptcy instead of being at the verge of it.

A great question has been asked in the eastern rate case. If a wrong answer is given the signs of hard times in the United States to-day are only a foretaste of what is in store.

—

BROOKLYN, N. Y., *April 2, 1914*.

Hon. JAS. S. HARLAN.

DEAR SIR: If there are any on the Interstate Commerce Commission that have brains enough to understand this clipping, pass it on to them.

If three or four that I know of that are doing so much talking in Washington would only die overnight, it would be a godsend to the laboring men, also to all business men, and I do not think their homes would miss them. I hope over 500,000 more are thrown out of employment during the next 30 days, but even that would not furnish brains to some that have a "presidential bee" in their head.

UNSIGNED.

A GIANT RAILROAD HOBBLED.

We know no figure that so well fits the struggle of the Pennsylvania Railroad against untoward conditions as the conception of Gulliver tied up and for a time at the mercy of the Lilliputians. The Pennsylvania is a giant railroad. Pigmies are the demagogues who are paralyzing its activities. Slender is each of the cords used, but altogether their number gives effectiveness. State supervision by politicians, national supervision by politicians, refusal of rate increases, new wage demands from the unions, temporary depression of commerce in many lines, refusal of the Government to pay honestly for the carrying work of its Parcel Post System, high prices for material and labor on improvements that can not be erratically abandoned—all have conspired to bind and hobble the giant.

The Pennsylvania's showing for February is a loss of 13 per cent of gross operating revenue, a loss of 75 per cent net operating revenue. From passengers and freight, $24,310,208 came in on all lines. For operating costs, $23,464,941 was paid out, or 97 per cent of all. If

the proportionate losses were to be shown for all the year, about $5,000,000 would have to be saved on dividends or on improvement appropriations to make both ends meet. It is not a good thing for the public when dividends are cut on a widely distributed stock. It is not a good thing for the public to have improvements checked. And it is a very bad thing for the community to have such enterprise as the Pennsylvania has shown rebuked, slapped in the face, by unjust use of Government powers. It puts the notion of the ingratitude of republics in a new and concrete form.

The sooner nagging stops, the sooner justice is done; the sooner demagogy is compelled to take a back seat, the better it will be for industry and commerce, for labor, and for capital. The cords of the Lilliputians must be cut or loosened, or the vast usefulness of a kindly and beneficent giant will be lost to a Lilliputian community.

HOTEL METROPOLE,
Fargo, N. Dak., April 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Why the American people will stand for their greatest business being attacked—the railroads—by demagogues and politicians, who make this their chief stock in trade. I do not believe they will stand it much longer. They are fast finding out who is to be believed—the demagogues and politicians or the railroads, who are wisely and able managed, more so than any other railroads under the sun. Of course, it would be fine to have them managed by politicians, and unless the rates are raised I think the public might as well demand the abolishment of the Interstate Commission as having failed to grasp the situation from all sides. No large, fair-minded man can say that the railroads do not need an increase in rates to pay the increased cost of material and labor to make extensions and improvements. I am not a railroad man, never had a railroad job in my life, but I see ruin for the country and the railroads if rates are not allowed to advance.

Wishing you success and hoping you may be guided wisely in your task, I am,

Respectfully, yours, CHAS. MCCARTHY.
512 West Twenty-second Street, Minneapolis, Minn.

["Read, ponder, and inwardly digest" the inclosed leader from the Democratic New York Times.]

HOW LONG, O LORD! HOW LONG?

RAILWAY REGULATION—IDEAL AND THE ACTUAL.

Nobody objects, or would be heard to object, to railway regulation of the sort described by those who provide it. The sort of regulation actually provided must be condemned with equal unanimity. Take yesterday's news, for example. The Supreme Court heard argument upon appeal regarding the tap-line cases. These cases, it will be remembered, cover the so-called "free services," for which the railways were to charge hereafter, and thereby collect $15,000,000 to stay their stomachs while the commission was thinking about allowing the 5 per cent advance. But that installment on account seems indefinitely distant. It is disputed before the Supreme Court that the commission has power to forbid the making of rates which it is the commission's duty to regulate when made. The commission's order was annulled by the Commerce Court, and the commission, instead of submitting, made as a recommendation what it did not venture to put into an order while its procedure was under an appeal. The Supreme Court's decision lies in the distant future, and the commission itself, on the day that the court heard argument, suspended a tariff filed by several leading railways in accordance with the commission's recommendation. The commission itself runs away from its own plan on the day that the Supreme Court hears it denounced.

The Interstate Commerce Commission's proposal of procedure regarding the 5 per cent advance was also published yesterday. This has been pending for several years, in one form or another, but the commission always begins at the beginning, as though nothing had occurred previously. The commission's sole duty is watching the railways and telling them what to do or not to do, and it might be supposed that it had a mind of its own. On the contrary, it lets somebody else write for it 78 questions which had never occurred to the commission. The blanks necessary to answer one of the 78 questions weigh 15 pounds, but not all are so weighty. The answer of all the railways to all the questions would fill a freight train. The answers and the arguments must all be in by April 27. And then the railways will soon get their decision.

Not in the least. That is only on the first division of the subject. When the commission has digested these tons of information it will be in position only to say whether rates ought to be raised. It will then begin an inquiry as to how they should be raised. Under this head will come a rediscussion of the propriety of stopping expenses instead of raising rates. It is clear that if the railways spend less money upon "free services" they will not need to collect more money. By that time the commission perhaps will be clear in its own mind about allowing the railways to do what it has recommended, while the Supreme Court is hearing argument about whether the commission has the power it has assumed to exercise. No dates are set to this second division of the argument, so there can be no disappointment about it.

This is a sample of actual regulation. If the investigation and suspension files of the commission were to be searched most of the questions now disturbing business men would be found buried there. Its indecisions and idealities are only one of the handicaps in the obstacle race which legislators have set for business men to run. If business can not go ahead, it must go backward.

—

SCHENECTADY, N. Y., *March 29, 1914.*

LOUIS L. BRANDEIS:

I was reading in to-day's paper that you claimed the railroads gave service free. That is none of your business; it is their own property they are giving, not yours. The best element of American population wants the railroads and all other industries treated fairly. We do not propose to permit to let a gang of foreign criminals run this country.

They have done it long enough. It matters less if the whole populations pays a few cents more for their living than if half the population starve for want of employment.

I suppose you are giving strict attention to the European bums who are howling of the wealth they created in New York City. That wealth was there before the idiots were born.

If you politicians had one grain of common sense you would know that the labor union has no more right to destroy their employer's property or run his business than the employer has to go into the employee's home and destroy said employee's personal property.

It is no wonder the women are fighting for the votes, as the present generation of men have not a grain of common sense.

All you are thinking of is a fat salary. You do not care that millions of honest people's money is involved and many poor men's little savings would go in the crash if our industries are driven into bankruptcy by your idiotic policy.

If you want to lower the cost of living, put the labor unions out of business. It is the extortion of the labor union that is increasing the cost of production, and you have not brains to see it, or if you do see it, are too cowardly to place the blame where it belongs and are trying to drive business men into bankruptcy.

The Government has not paid the railroads one cent for carrying the parcel post, and the railroads are compelled to lay off men by the thousands to cut down expenses because a gang of political fools allowed that gang of extortioners an increase of wages they did not need and another band of idiots at Albany and other State capitals passed full-crew bills to make travel safe when it is that same gang of labor-union bandits who are making travel unsafe. The engineers have been known to run by three danger signals in succession, then the railroads are blamed for the wrecks when they have not the right to discharge a drunken engineer after he has caused a wreck.

Extortion is illegal, and you have not sense enough to put a stop to it.

You permit that drunken rabble that calls itself the labor union to tie up their employer's business and destroy his property, and dare not stop it.

You are a brave lot to be the head of a government. You are not fit to be at the head of a band of street cleaners.

HELEN HUNTINGTON.

NEW YORK, *April 4, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: The cartoon in this morning's New York Herald, which I inclose herewith, represents the opinion of all fair-minded and thinking people.

The only suggestion that I have is that the artist should have added longer whiskers to it.

Compliments.

THE PICTORIAL REVIEW CO.,
W. PALMER, *President.*

(Cartoon pictures Interstate Commerce Commission as blind engine driver running the railroads of America into danger. "The blind engine driver." "There may be danger ahead, but what recks he?")

—

NEW YORK YACHT CLUB.

Knowing, as your commission must, that the general prosperity of our country is waiting on your decision to allow an increase of rates to railroads, why delay?

The poor as well as the rich need it and ask for it—not only for the railroads, but for our general prosperity.

—

[From the New York Herald.]

H. C. FRICK SAYS 5 PER CENT INCREASE WILL ADD TO PROSPERITY—STEEL OUTLOOK BRIGHT—IN PITTSBURGH INTERVIEW CAPITALIST TELLS OF IMPROVED OUTLOOK ALSO FOR COKE AND COAL.

(Special dispatch to the Herald).

PITTSBURGH, PA., *Friday.*

If the Interstate Commerce Commission will grant the railroads an increase in freight rates there will be still more prosperity the country over, according to Henry Clay Frick, who is spending a few days in this city closing up several big real estate and coal-land deals.

"Do you believe that the railroads should get an increase of 5 per cent in rates?" Mr. Frick was asked to-day.

"That would undoubtedly help greatly, but it should be more than that," he replied. "An advance at this time certainly would help business materially, and the railroads are entitled to it. The steel trade shows signs of improvement, as also does the coke and coal trade, but if the railroads are allowed to advance their rates it will help general conditions very materially.

"Business and financial conditions with the railroads certainly justify such an advance. When it is taken into consideration that wages have steadily increased during the last years and other necessary expenditures also have advanced without the roads being allowed to raise their rates, the justice of the demand can be readily understood. Unless there is some provision made in the way of increased rates to offset the steadily increasing expenditures, the roads ultimately will be forced into a policy of retrenchment that is bound to affect their service and efficiency.

"With the granting of a 5 per cent increase in rates, practically all the big railroad systems in the country will be able to see their way clear to go ahead with contemplated improvements and the purchase of rolling stock and other equipment, which will mean much to industrial and business conditions."

—

THE UNION LEAGUE CLUB,
New York.

IF WE HAVE WAR.

The probability of Government financing will make it more difficult for the railroads to obtain their capital requirements. Here is an added reason for an increase of rates. Will the Interstate Commerce Commission consider it? It should do so.

Pray cease your quibbling and give the railroads what every sensible man knows they ought to have—an increase.

ANOTHER RAILROAD FORCED TO PASS DIVIDEND ON STOCK—POOR EARNINGS AND HEAVY OPERATING EXPENSES WERE THE REASONS THAT INFLUENCED DIRECTORS OF MISSOURI, KANSAS & TEXAS TO OMIT PAYMENT.

EMPHASIZES POVERTY OF RAILROADS.

That officials of railroads operating in the southwest have the same problem on their hands as have those operating in the East and other parts of the country is indicated by the action of the board of directors of the Missouri, Kansas & Texas Railroad in passing the dividend on the company's $13,000,000 preferred stock outstanding.

HEAVY SHRINKAGE IN EARNINGS.

The action of the board was not unexpected, as business in the section of the country in which the road operates has been known to have been bad for a long time, and as the property had suffered severely from floods, but the fact that it was necessary to omit the payment of the dividend emphasizes the poverty of railroads throughout the country, for it follows similar action by other companies, and the underlying cause is the same in all cases, inability of the carriers to provide for their needs under the restrictions imposed by the Interstate Commerce Commission.

DIVIDEND JUST ABOUT EARNED.

Up to April 14 the Missouri, Kansas & Texas Railroad reported a shrinkage in gross earnings of $561,926. In the eight months ended February 28 the company's expenses exceeded those of the corresponding period a year ago by $800,000. For the six months ended December 31 the surplus after charges was $913,000, or $393,000 in excess of the dividend requirements of 4 per cent on the $13,000,000 preferred stock for the entire year. In January and February the fixed charges were not earned, but this is not unusual, as the company ordinarily depends largely upon the results of the first half of the year for its final surplus over all charges. In the second six months of the last fiscal year, which was an excellent one from a traffic standpoint, the road failed to earn charges by approximately $330,000.

Since December 31, Missouri, Kansas & Texas gross earnings have decreased $213,784. January was a good month, but February showed a shrinkage; March gross fell off $159,000, and in the first two weeks of April gross was $25,000 less than last year. At the beginning of January the company had a surplus of $393,000 in excess of the full year's dividends. It is likely that most of this will be absorbed in the remaining four months, and that the dividend of $520,000 will just about be earned, but if so it will be by the narrowest of margins.

The company's financial position is not one of great strength, and it is natural the directors preferred to conserve resources rather than risk the probability of using all of the present year's income for dividends, and perhaps even having to call upon profit and loss to make up the payment.

On May 1, 1915, there are $19,000,000 notes maturing, and while the meeting of that obligation is over a year away still its existence will need consideration. Obviously the stronger the system's position the better chance there will be for taking care of the maturities on favorable terms.

BLAME PUT ON INTERSTATE COMMERCE COMMISSION.

While the southwestern railroads are not parties to the petition now being considered by the Interstate Commerce Commission for an advance of 5 per cent in freight rates in eastern territory, the delay of the commission in acting favorably on that request has undoubtedly affected business in the part of the country they traverse as it has in the East, and the railroads, of course, suffer along with other interests. The question of higher freight rates has been pending in one form or another for so long and has been so thoroughly thrashed out that it would seem it could have been decided months ago.

DELAY HAS BEEN COSTLY.

Had the commission measured up to the emergency the business of the country would not be in the depressed state it is; there would have been no occasion for able-bodied men walking the streets for want of employment; instead of closed mills and factories we would be witnessing industrial activity; confidence would have been strengthened and enterprise would have had incentive to move forward; railroads would have an abundance of tonnage at profitable rates, be in position to raise needed capital at reasonable rates, and business of every description would be sharing in the era of prosperity which would have swept the land following the enactment of the law providing for an adequate currency system, but the commission was deaf to these considerations.

BUSINESS HALTS WHILE COMMISSION TAKES ITS OWN TIME.

It took and continues to take its own time in putting an end to a condition that is halting business and causing want and misery to hundreds of thousands of men, women, and children who are denied the right to make a living because that autocratic body can not or will not see that its course more than anything else is responsible for holding back enterprise.

HANDS OF RAILROADS ARE TIED.

The hands of the railroads are tied. They can not retrench further without impairing their service and dismissing more employees. They can not raise capital through the sale of stock or bonds except at a sacrifice. Carriers have only one commodity to sell—transportation—and if they are prevented from realizing a reasonable price for that commodity, as they are now, then they must resort to the drastic course of taking off trains and reducing wages of those fortunate enough to be still retained in service. It is a serious matter for the whole country, for railroads can not be made to suffer without the whole country suffering too. It is high time for the commission to stop quibbling and order the advance in freight rates.

THE PENNSYLVANIA RAILROAD STOCK AND BONDHOLDERS' PROTECTIVE ASSOCIATION OF BROOKLYN, N. Y.,
February 28, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: On November 24, 1913, Mr. C. M. Bunting, comptroller of the Pennsylvania Railroad Co., stated before your commission that the Pennsylvania system had increased the amount of wages about $36,000,000 since 1910, approximately $15,000,000 of which was due to increased rates of pay. The return on the property investment of the Pennsylvania system showed a declining tendency since 1903, and a steady decline since 1910. Between 1903 and 1913, said Mr. Bunting, there has been an increase in property investment account of $530,750,073, and an increase in net operating income of $11,860,533, or only 2.23 per cent on the increased property investment. Indeed, between 1910 and 1913 there was an increase of $207,186,919 in the property investment of the Pennsylvania, and a decrease in the net operating income of $11,485,511. In other words, the Pennsylvania system was $11,485,511 short of even receiving 1 cent additional return on its enlarged investment.

No thoughtful investor in the securities of this railroad can read the above statement without experiencing serious misgivings in regard to the future stability of his investment under present conditions, nor can he fail to recognize that the continued lessening of the gap between the gross and the net earnings will eventually deprive him of his dividends. This railroad claims that the Government has aided and abetted in fixing on the road enormous new charges for wages, material, equipment, and taxes, and that your commission refuses to allow it an increase in income to offset these burdens. The members of this association are common everyday men and women security holders of the Pennsylvania, who realize that much of the past mismanagement of railroads is due to the proverbial apathy of the average stockholder. We are trying to find the light, believing that now is the time for frankness and truth in the matter. We desire a square deal for labor, the Government, the security holder, and the railroad, but we will energetically protest against oppression of any one interest over the other. We want your commission to frankly tell us why you do not allow the Pennsylvania to increase its freight rates. We do not want an answer dealing in generalities, but we want you to point out specific instances, if any, in the management of this railroad upon which you base your refusal. This we claim you should do, not only in justice to us but also to those who may be contemplating investing in the property. Without any intentional discourtesy to you, gentlemen of the commission, whom as far as we know may be actuated in this matter by a lofty patriotism and a sincere desire to be just to all, still it seems to us the deferring of your decision from time to time gives the impression that you are not sure of your ground. If there is uncertainty in the minds of you gentlemen as to whether this railroad is entitled to what it asks, you should give it the benefit of the doubt and not ruin its credit in order to secure time to complete your studies. There is a vast number of people directly and indirectly depending upon the prosperity of this railroad for their living, and the crippling of their purchasing power is surely not going to help the business of the great body of tradesmen. The so-called shippers who are daily appearing before you to protest against an increase in rates we believe are pursuing a short-sighted policy, inasmuch as they will lose a hundred times any possible saving in freight by loss of trade. The saving of a cent or two on a package of freight will avail the shipper little when the price of his goods drops 10 per cent. Although your commission has given numerous hearings to railroads and shippers on the rate question, we have never heard it express any desire to hear from the actual owners of the roads—the stockholder.

THOMAS DIXON, *President.*

ATLANTIC HOTEL,
Bridgeport, Conn., February 10, 1914.

INTERSTATE RAILROAD COMMISSION.

GENTLEMEN: Keep up the good work. Do not allow any increase in freight rates. Force all the railroads into hands of receivers. Then the Government can buy them cheap and put needy politicians in office.

WELL WISHER.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Keep up the good work. N. Y. C. & H. R. R. Co. will soon pass or reduce their dividends. Pennsylvania Railroad—death. Force the railroad companies into hands of receivers. New Haven Railroad will soon be there—in receivers' hands.

Give no increase in railroad rates. Send stockholders and bondholders to the poorhouse and place professional politicians in charge of railroads under Government ownership.

WELL WISHER.

MANSFIELD CENTER, CONN., *March 31, 1914.*

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: Please read clipping from Hartford Courant. You see what should be on your conscience—your refusal of allowing the railroads a 5 per cent or more advance of rates. It seems strange to me that you, two or three men, can block a needed advance of rates and oblige railroads to throw out thousands of men they employ to starve.

Men and railroads know their own needs best. Don't you best know your own needs?

Very truly,

CHAS. H. LEARNED.

PENNSYLVANIA ROAD LAYS OFF 15,000 MEN.

PHILADELPHIA, *March 26.*

Confirmation was had from the office of the Pennsylvania Railroad to-day on the report that the company within the last three months had laid off about 15,000 employees on the lines east of Pittsburgh, in carrying out its policy of general retrenchment. It is said that about 40,000 of the remaining 125,000 employees have been put on short time. Two hundred clerks in the general offices in this city have been laid off within a day of two.

BALTIMORE, *March 27, 1914.*

Say, Brandeis, it looks like you are doing your level best to put the country and the workingmen on the bum. I am a workman in one of the largest steel mills in this country, with a wife and seven children to support. This is the first time out of a job for 12 years, and all on account of your hypocrisy before the Interstate Commerce Commission. Posing as a friend to the people, when really you are an enemy to the people and to the working people, you and your confederates must have that bunch you are giving so much chin music to hypnotized, or they are a lot of fools; else they would do the right thing to the railroads and give work to the many thousands out of work. Many of my fellow workmen are now close on to their last dollar, with their innocent children depending on them for their bread and

butter. But look out, Brandeis, your time with the other fellow will come yet, and that soon if you don't soon have that rate case settled. Our work depends much on railroad work. We don't care a snap how it is fixed up, just so we are back on our jobs.

FRANK BORDENLOCH.

EXHIBIT C5.

AGITATION BY BANKERS FOR THE RATE INCREASE.

White & Kemble, 56 Pine Street, New York, sent a lengthy communication to the Interstate Commerce Commission. This letter was printed and mailed out to banking houses. They, in turn, addressed the commission, asking for the rate increase. These letters appear below.

NEW YORK, *February 10, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The reports for the year 1912 of the savings-bank commissioners of the States of New York, Massachusetts, and Connecticut show that the savings banks of those three States at that time had 5,871,964 *open* accounts, and that their total deposits were $2,826,600,515.49, and that the value of the railroad securities at that time held for investments was $539,625,029.75.

In 1904 the New York Savings Bank Association employed us to assist in revising the laws of the State in relation to the investments of savings banks. The present laws of the State are the results of that labor.

On February 14, 1905, we addressed a letter to the chairman of the executive committee of the association, from which the following is a quotation:

"According to your request, we have the honor to submit herewith our opinion of the proposed amendment and the application thereof to the banking laws relating to the railroad securities in which deposits of savings banks may be invested.

"In our opinion, there are two points to be considered in framing such a law: First, what is a savings bank? Is it a corporation created for the purpose of making money for those that intrust their savings to its care? If so, then such a corporation would be justified in taking ordinary business risks in making their investments. Or is it a corporation created by the State for the sole purpose of receiving and caring for the hard-earned savings of the people that are by the force of circumstances unable to take care of such savings themselves? The latter, in our judgment, was the intention of the State in authorizing these corporations, and this should be constantly kept in mind in legalizing investments in which such savings may be invested.

"Second. Are railroad bonds as safe an investment as a bond and mortgage on productive real property? We think they are, if the same rule is applied to a railroad mortgage bond as that applied to bond and mortgage on unencumbered productive property, in determining the value of the property securing the investment. The value of productive real property is determined largely upon its rental value (gross earnings) and, in our opinion, the same is the case with railroad property.

"The first principle of the proposed amendment is that the corporation issuing, assuming, or guaranteeing the bonds made legal shall have maintained a certain standard for at least five years.

"The standard is as follows:

"First. That the corporation shall not own less than 500 miles of standard-gauge railway, exclusive of sidings.

"Second. That the total amount of all debts of such corporation shall not exceed three times the outstanding capital stock.

"Third. That such corporation shall for the past five years have punctually paid at maturity the principal and interest of all their mortgage indebtedness and also paid in dividends to their stockholders each year during said five years an amount at least equal to 4 per cent upon all their outstanding capital stock.

"Fourth. That during said five years the gross earnings of such corporation each year, including therein the gross earnings of all railroads leased and operated or controlled and operated, shall not have been less in amount than five times the amount necessary to pay the interest payable during that year upon the entire outstanding indebtedness and rentals for said year of all leased lines.

"This standard, in our opinion, makes a basis upon which the value of the property of a railroad corporation may be determined. The principal feature that determines this valuation is that of gross earnings, required by this standard to be five times the interest charges and rentals. This, we presume, is adopted for the convenience of more readily computing a more scientific method.

	Per cent.
Gross earnings	100
Operating expenses and taxes	70
Interest and rentals	20
Dividends	4
Surplus	6
	100

"It will be seen from the following example that it makes no difference what amount the mortgage indebtedness of a corporation is, as the basis of arriving at the value of the property of such corporation compels it to show gross earnings equal to an amount that will make the value of its property sufficient to justify such mortgage indebtedness.

"Take a corporation that has a mortgage indebtedness that averages $20,000 per mile; this, at 4 per cent, would be $800 interest; and that its rentals of leased lines, interest on bonds, and dividends on stock at 4 per cent averaged $30,000 per mile. This would be $1,200 rental. Therefore the gross earnings of such a corporation should be each year five times $800 and $1,200, or $10,000. Dividing this, we have the following:

Gross earnings, 100 per cent	$10,000
Operating expenses and taxes, 70 per cent	7,000
Interest and rentals, 20 per cent	2,000
Dividends, 4 per cent	400
Surplus, 6 per cent	600
Total	10,000

From the foregoing analysis it can be seen that the mortgage bonds of a corporation that acquires this standard and maintains the same for five years deserves the credit to justify their bonds to be considered a safe investment for the funds in question.

In 1908 we were employed by the Massachusetts savings-bank commissioner to revise the laws of that State, and the result was the passing of the present law, which adopted the above standard.

In 1911 the State of Vermont revised their laws and also adopted the above standard, and last year, at the request of the Savings Bank Association of the State of Connecticut, we assisted in amending the savings-bank laws of that State, and the present laws are based on that standard.

Under the above circumstances we consider ourselves justified in stating that we were instrumental in the adoption of this standard by the above-mentioned States. Therefore we feel it our duty to call the attention of your honorable association to the following facts, especially (as stated above) as the 5,871,964 depositors of the savings banks had invested in railroad securities, $539,625,029.75, their legality as investments depending upon the railroads maintaining the standard established.

Prior to the adoption of this standard by the State of New York in 1905 the operating expenses and taxes of only two of the principal railroads of the United States equaled or exceeded 70 per cent of their gross earnings, and it was due to this fact that the basis of the standard was adopted.

Since then the operating expenses and taxes of all the railroads that had complied with the standard have steadily increased, so that for 1912 and 1913 they exceed the 70 per cent, as shown by the figures of the three leading eastern railroads that are now before your honorable association asking for the authority to advance rates.

Summary of the three roads, No. 2.

Machinery.	1901	1912–13
Miles of road	10,250.42	12,061.17
Miles of track	20,327.85	27,819.35
Locomotives	4,979	8,292
Passenger cars	4,800	6,257
Freight cars	210,650	303,412
Company's cars	6,319	10,056
Floating equipment	603	735
Total units of machinery	247,678.85	356,571.35

Service performed.	1901	1912–13
Tons of freight carried 1 mile	26,461,413,814	46,729,872,356
Passengers carried 1 mile	2,654,479,979	4,519,583,666
Total units of service	29,115,893,793	51,249,456,022
Services per unit of machinery	117,555	143,728
Net earnings per unit of services	$0.0024	$0.0017
Net earnings per unit of machinery	$283	$243
Value of each unit of machinery based on net earnings on 4 per cent basis	$7,075	$6,075

Summary No. 1 of the three roads shows that the margin of safety for the period has declined from plus 3.7 per cent to minus 0.3 per cent, due to the fact that operating expenses and taxes for that period have increased from plus 2.7 per cent to minus 8.3 per cent, not to the increase of interest and rentals, as that item shows an increase in the margin of safety from plus 1 per cent to plus 8 per cent. Summary No. 2 of the three roads shows that although the amount of services performed per unit of machinery has increased from 117,555 to 143,728, or 22 per cent, the net amount received per unit of services has decreased from 0.0021 to 0.0017, or 19 per cent. Net earnings per unit of machinery has decreased from $283 to $243, and the value of each unit of machinery, based on net eanings on 4 per cent basis, has decreased from $7,075 to $6,075.

This margin of safety can be restored in but two ways—either by reducing the percentage of operating expenses and taxes, or by increasing the amount received for performing the same amount of services. It is evident from the above that an increase of service, with no increase in the price, will not restore the margin of safety. The above figures do not show the effect of the advance of wages granted to the trainmen by the late arbitration commission.

Feeling as we do that this tendency, unless checked, will become serious in endangering the safety of this class of securities for savings-bank funds, we feel it our duty to take the liberty of addressing this communication to you.

Any other information that we can supply in relation to the savings-bank laws of the above-mentioned States we will very gladly furnish.

Very truly, yours,

WHITE & KEMBLE.

—

LONG ISLAND CITY, *February 18, 1914.*

We fully indorse the facts and figures presented in this statement, and earnestly request your honorable body to give this matter your serious consideration.

Most respectfully, yours,

WM. J. BURNETT, *President.*
[SEAL.] J. H. SMEDLEY, *Secretary.*

—

THE NEW CANAAN SAVINGS BANK,
New Canaan, Conn., February 18, 1914.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: We have read a letter of White & Kemble, of New York, date of February 10, 1914, in relation to railroad bonds as savings bank investments.

We agree with the sense of the letter and trust your honorable board will keep before you the thought of the savings of the poor but thrifty people so largely invested in railroad securities.

Yours, truly,

G. F. LOCKWOOD, *Treasurer.*

WINSTED, CONN., *February 18, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have seen a copy of letter dated February 10, from White & Kemble, New York, to you, in re "Increase of earnings of railroads."

We are a purely mutual savings bank and owners of the bonds of many railroads and we thoroughly agree with White & Kemble in their presentation of the matter.

Yours, respectfully,

MECHANICS' SAVINGS BANK,
CHAS. S. JOPP, *Treasurer.*

—

CITIZENS' SAVINGS BANK,
Stamford, Conn., February 18, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I have read with approval a letter of White & Kemble addressed to your honorable body. As a savings bank officer, I bespeak for the savings banks consideration of the White & Kemble letter and also the need of the railroads for a rate increase.

Yours, very truly,

WALTER E. HOUGHTON, *Treasurer.*

—

BROOKLYN, *February 18, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: My attention has been called to a letter addressed to your commission by Messrs. White & Kemble, of New York, regarding the condition of railroads and their earnings and the effect of the decreased earning power of the roads upon the security of the many millions of bonds held by the savings banks of this and other States.

As a former officer, and now a trustee, of one of the large savings bank of this city, I am concerned about the security behind these bonds, which is undoubtedly very seriously affected by the roads' earnings.

It is hardly necessary for me to request a most careful consideration of this phase of the subject of railroad rates in this connection, as I am sure it will receive most careful attention at your hands.

Very respectfully, yours,

E. P. MAYNARD.

—

THE MARINERS' SAVINGS BANK,
New London, Conn., February 18, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to indorse the letter sent to you under date of February 10 by Messrs. White & Kemble, of No. 56 Pine Street, New York. Messrs. White & Kemble are attorneys for the Savings Banks' Association in this State and assisted in drafting our present laws relating to investments and railroad securities. We believe that their position is such that their opinion would be carefully considered by you.

Respectfully, yours,

P. LE ROY HARWOOD,
Treasurer Savings Banks' Association of Connecticut.

—

UNION TRUST CO. OF NEW YORK,
New York, February 18, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As a trustee of the Greenwich Savings Bank, of this city, I have received from Messrs. White & Kemble a copy of a letter which they have addressed to you under date of February 10, 1914.

The Greenwich Savings Bank on January 1, 1914, had more than 98,000 depositors, with total deposits of over $67,000,000. Of these deposits more than $15,000,000 were invested in railroad mortgage bonds.

The Union Trust Co. of New York, of which I am president, holds as trustee for a large number of widows and orphans many millions of railroad bonds, and while the number of people affected is small in comparison with the large number of wage earners who have deposited their money in the savings bank, the sufferings of this class of people would be keen and far-reaching in case of any general disaster to railroads due to restrictions of their earning power, and might in turn have almost as undesirable an effect upon the wage earners as would the shrinkage in the securities held by the savings bank.

The Greenwich Savings Bank is merely a typical instance of the conditions so clearly shown in Messrs. White & Kemble's letter, and I beg to indorse most heartily the position that they have taken in this matter, which I hope will commend itself to your honorable body.

Very truly, yours,

EDWIN G. MERRILL, *President.*

—

CONNECTICUT TRUST & SAFE DEPOSIT CO.,
OFFICE OF THE PRESIDENT,
Hartford, Conn., February 18, 1914.

The honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As an interested person, or rather in the interest of clients of this company who are the beneficiaries of funds held in trust, I take the liberty to commend to your special consideration the letter addressed to you under date of February 10, 1914, by Messrs. White & Kemble, of 56 Pine Street, New York City. In the State of Connecticut the investment of trust funds is limited to and concurrent with the legal investment of the funds of savings banks. To a considerable extent these consist of railroad funded securities. And as stated and explained by Messrs. White & Kemble in the letter above referred to, these securities have suffered a very serious decline in their quoted market value. The effect of this has been exceedingly detrimental to the interests of savings depositors and of the beneficiaries of trust funds; and it would appear that the causes of such detriment and decline in market value has been considerably for the reasons stated in their letter—increase in operating expenses and taxes, and wages of employees as granted by the late arbitration commission.

We desire to remind you that as to savings banks in the New England States and in New York State, and possibly some others, that they are mutual institutions, without capital stock, and whose profits, less necessary expenses of management, are divided among the depositors, who are practically the stockholders. Many of these institutions showed a decline in market value of securities during the past year to such an extent as to considerably wipe out their surplus, and to reduce their estimated value of their assets below their amount of deposits. This reduction in value has been so serious that in several cases the commissioners have been obliged to prohibit the savings banks from paying a dividend until their assets are restored to an equal value with their deposits. This is also true of funds held in trust by trust companies and also by private trustees. And the situation occasioned undoubtedly by the action of various commissions appointed by the Government has become almost intolerable.

The effects of these reductions in values is also apparent in most other lines of business, as, for instance, the investment in railroad securities by insurance companies. In the city of Hartford alone the depreciation in the market value of securities in several of the life insurance companies amount to many millions of dollars. And the same is true of the fire insurance companies.

And it further affects, of course, the fortunes of innocent stockholders, whether of large or small amount. And there are many small stockholders whose entire little fortune is locked up in these railroad investments, upon which they pin their faith as being capable of producing a reasonable income.

In view of all these facts, I take the extreme liberty of again urging upon your attention the suggestions contained in the letter which Messrs. White & Kemble, already quoted, and in view of the fact that under present conditions that it seems almost impossible to reduce operating expenses, and that there is little hope of a decrease in taxes, that the only method of restoring reasonable value to railroad securities, which are legitimately issued, is by approving a reasonable advance in railroad rates, which should in some sense correspond with the increase in taxation and with the arbitrary increase in wages.

Yours, respectfully,

MEIGS H. WHAPLES, *President.*

—

THE OSWEGO COUNTY SAVINGS BANK,
Oswego, N. Y., February 18, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to a letter addressed to you by Messrs. White & Kemble, New York, dated February 14, 1914, we beg to state to you that we heartily concur in the ideas therein expressed.

We believe that the railroads are entitled to have your permission to increase their rates to shippers, and as we are large holders of railroad bonds, we feel that we are entitled to some consideration.

Thanking you for giving your favorable consideration to the request of the railroads to increase their rates, we are,

Yours, very truly,

W. B. COUCH, *President.*

—

THE SOUTH BROOKLYN SAVINGS INSTITUTION,
Brooklyn, N. Y., February 18, 1914.

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Our attention has been called to a letter addressed to you under date of February 10 by White & Kemble, of 56 Pine Street, in relation to the necessity of permission being given to railroads throughout the country to increase their rate of compensation for services rendered.

As the president of a savings bank having deposits of over 36,000 poor people I have, of course, a very large interest that the bonds of the railroads in which we have, under the laws governing bank presidents, placed over $4,000,000 of our funds shall be allowed every reasonable opportunity to not only pay the interest on those bonds, but to pay their dividends to stockholders, as a decrease in dividends of course decreases the value of the bonds.

It can not be denied that the expense of conducting all business, including railroads, has within the last few years enormously increased, and in private enterprises that increase in expense has been met by increased profits. I know no good reason why railroads should be put upon a different footing.

I was at one time Government director of the Union Pacific Railroad, and in that capacity collected $125,000,000 due the Government from various continental railroads. In the performance of that duty I became familiar with the operations of railroads and their necessities, therefore I do not speak without some practical knowledge.

Any embarrassment to the railroads of the country which would lead to insufficient transportation facilities would effect the country more seriously than any other cause.

I am sure that public sentiment would warrant any action on the part of the commission which would relieve the burden of anxiety now weighing so heavily upon institutions of this kind which have invested in their bonds.

Very truly, yours,

WILLIAM J. COOMBS,
President.

P. S.—You will see by the inclosed statement that this institution holds, at par value, first-class railroad bonds amounting to $4,382,500, which cost us $4,645,664.45, on which market value on the 1st of January, 1914, was only $3,911,182.50. The loss we have had to deduct from our earnings previous to making our dividends to our depositors, showing a decline in market value of 15.81 per cent.

—

THE STAMFORD SAVINGS BANK,
Stamford, Conn., February 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Our attention has been called to a letter of Messrs. White & Kemble, of 56 Pine Street, New York City, to your honorable commission, pursuant to the present tendency of decline in the net earnings in relation to the gross earnings of many of the railroads of the United States. We have read this letter very carefully, and beg to express our hearty approval of same.

In the above-mentioned letter, in regard to the deposits and number of accounts in savings banks, it refers to the States of New York, Massachusetts, and Connecticut. Without in any way wishing to intrude or burden with voluminous data, we would like to supplement the information contained therein by acquainting your honorable commission with the conditions as they exist in the United States as a whole.

We learn from a reliable source that the total number of savings banks in 1912 was estimated at 2,000, and the amount on deposit four and one-quarter billions, and the number of depositors 9,800,000,

or practically 10 per cent of the entire population of the United States. These four and a quarter billions of dollars of savings banks deposits were distributed as follows:

Six New England States	$1,375,000,000
Eastern States, New York, Pennsylvania, and New Jersey	1,980,000,000
Southern States	95,000,000
Middle West States	360,000,000
Western States	15,000,000
Pacific States	395,000,000
Total	4,220,000,000

These statistics show that 80 per cent of all the deposits are in the eastern banks and 20 per cent scattered over a vast territory. The savings banks of the country legitimately hold many millions of railroad securities for investment, and it is a question whether the Government will better serve the very best interests of its subjects by not permitting increases in the rates of many deserving railroads and thereby lessen materially the security of the savings bank depositors, who represent 10 per cent of the population and are the bone and sinew of the Government.

We believe if the Interstate Commerce Commission fails to allow many of the railroads to increase their rates it will jeopardize the best interests of practically all the savings banks of the country. In a spirit of justice, therefore, to the 9,196 depositors of this institution, the majority of whom we believe are humble toilers, whose hard-earned savings, as well as the funds of the frugal depositor who resists temptation to indulgences, we beg your thoughtful consideration of the foregoing.

With the hope that your honorable commission can consistently allow many of the railroads an increase in rates, we beg to remain,

Very truly, yours,

THE STAMFORD SAVINGS BANK,
By J. H. BOGARDUS, *Treasurer.*

THE DERBY SAVINGS BANK,
Derby, Conn., February 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have at hand a copy of a letter written by White & Kemble, of No. 56 Pine Street, New York City, dated February 10, 1914, addressed to the Interstate Commerce Commission, in which that firm submits for the consideration of your honorable body an argument favoring the proposed advance in railroad-freight rates. This argument we heartily indorse, because, looking at the matter from the viewpoint of the savings banks, we feel that a reasonable advance in freight rates would prove of incalculable value primarily to the savings banks and through them to the people at large. The main purpose for which all savings banks are organized, as you may well know, is to take care of and invest the savings of that majority of our people known as the "horny-handed wage earners," who, by force of circumstances, are unable to properly look after the investing of their own funds. Consequently, the healthy financial condition of a savings bank means the healthy financial condition of the vast majority of our people. It is a fact that 30 per cent or more of the deposits of Connecticut savings banks are invested in railroad securities, for the reason that this class of securities pays a higher rate of interest than other securities which they are permitted by law to invest in. Should the financial condition of the railroads become further impaired, which would seem inevitable if the present condition of affairs is allowed to exist for a much longer period, a greater depreciation in their securities seems reasonably sure to take place. We urge that in considering this matter you make all other points secondary to the consideration of the good of the people. As matters stand, the prosperity of the railroad means the prosperity of the savings banks, and the prosperity of the savings banks means the prosperity of the general public.

Very respectfully, THOS. S. BIRDSEYE, *Treasurer.*

BRIDGEPORT SAVINGS BANK,
Bridgeport, Conn., February 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to express our approval of the letter written to your honorable body by Messrs. White & Kemble relative to the importance of a favorable decision regarding increased rates for the railroads.

The welfare of the depositors in the mutual savings banks is largely dependent upon the solvency and prosperity of the railroads.

In the interests of these depositors we wish to respectfully urge an early decision and one favorable to the railroads asking this small increase.

Respectfully, yours, SAMUEL M. HAWLEY,
Treasurer.

ERIE COUNTY SAVINGS BANK,
Buffalo, N. Y., February 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am the president of the Erie County Savings Bank, of Buffalo, N. Y. This bank is organized under the laws of this State providing for the organization of savings institutions. It has no capital stock. It is permitted to receive deposits not exceeding over $3,000 from any one depositor, and the entire earnings of the bank are returned to the depositors in the way of interest on their deposits, after deducting the actual expenses of running the bank and a reasonable sum set aside as a surplus fund to guard against possible losses. The securities in which the bank can invest are strictly limited by law.

The bank is under the control of a board of 15 directors, who serve without pay and are self-perpetuating; upon the death or resignation of any director the balance of the board selecting his successor. In fact, this bank in every sense is a charitable institution, being intended to provide a place where poor people can deposit their small savings and have them perfectly safe. The trustees are men of the highest character and standing here, who are proud to serve upon the board, just as they would be glad to serve on any hospital or other charitable board, because they feel that thereby they are performing a service of value to the community.

The Erie County Savings Bank on January 1 of this year had on deposit $54,113,000. The number of depositors was 91,131, and the average deposit was $593.80. The total number of savings-bank deposits in the county of Erie, in which county our bank is located, is at the present time about 50 per cent greater than the entire number of votes cast in said county. The aggregate deposits in the savings banks of this State (all being banks similar to the Erie County Savings Bank) is about $1,500,000,000, representing over 3,000,000 depositors, the average deposit being about $500. The population of the State is about 9,000,000, so that the number of savings-bank deposits is equal to about one-third of the entire population of the State.

Until about the year 1898 the laws of this State were very strict in regulating the securities which savings banks could purchase in investing the funds so deposited with them. Up to that time they were limited to United States bonds, State bonds, city and county bonds, village and town bonds, and bonds secured by mortgage on real estate. About the year 1898 the State adopted the policy of allowing the savings banks to invest in certain classes of first-mortgage bonds of railroad corporations. Pursuant to the laws of the State permitting such class of investment, the Erie County Savings Bank has now invested in various classes of securities about $54,000,000, and of this sum $10,175,000 is invested in railroad mortgage bonds.

On January 1, 1913 (that being the last published report of the banking department of the State of New York), the savings banks of the State had investments in securities aggregating about $1,685,000,000, of which $269,000,000 was invested in railroad bonds.

It will be seen from the above figures that the financial soundness of the railroads in whose bonds these savings bank deposits are invested is a matter of the gravest importance to the masses of the people and even to the very poor people of this State. There are in other States savings institutions with similar charters that have also invested in railroad bonds; hence the financial welfare of the masses of the people in other States is also largely dependent upon the welfare of the railroads of the country.

I consider it my duty as president of this bank to call your particular attention to these facts as a most potent factor to be considered by you upon the present application of the railroads for permission to increase their freight rates, and I therefore take the liberty of sending this communication to your honorable body, and trust that it will receive the serious consideration which the importance of the subject merits.

Respectfully, yours, R. S. DONALDSON.

WATERBURY SAVINGS BANK,
Waterbury, Conn., February 26, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Messrs. White & Kemble, of New York City, have sent me a copy of the statement submitted by them to your commission. I write to say that said statement meets with my hearty approval. I believe it to be a very moderate statement of the situation in which the savings banks now are. In this State the savings banks have over a hundred million dollars invested in railroad bonds, and consequently our 600,000 depositors are also interested. For a considerable time it has been a source of considerable anxiety to the managing officers of our savings banks to observe the constantly increasing operating expenses of the railroads, which, united with their inability to increase their rates, has been year after year making our investments less secure.

As far as my observation has gone, the investor seems to have been very little heard from at Washington. It seems to me that it is high time that more consideration should be given to the interests of that very large portion of our population which by thrift and economy has accumulated enough money to have investments in the savings bank or perhaps in some security. A very slight charge on the general public which enjoys the railroad facilities will make a very great difference to the investor.

The feeling at the present time is very strong that investments in railroad securities should be avoided if any other good investment can be found. Little stress in the past seems to have been laid on the fact that railroads have made very large expenditures in recent years for the improvement of the service to the public.

Here in Connecticut very large and necessary expenditures have been made during the last 10 years by the New Haven Railroad to improve the facilities, all for the benefit of the public, and yet that railroad has not been allowed to increase its rates to meet these large additional charges. Whatever may be the fact about the managing of that railroad, there can be no doubt that these expenditures for such purposes are a very large element contributing to its present condition—an element which should be given adequate consideration, which, it seems to me, has not been done heretofore.

I believe that an increase of the rates on the New Haven Railroad would meet with thorough approval in this State. If it is to be done, I hope it will not be done in such a halfway and reluctant manner as to leave many of our railroads still in a doubtful position. I do not believe that the interests of the general public can be advanced by hazarding the investments of the thrifty.

Yours, very respectfully, EDWIN S. HUNT.

THE SAVINGS BANK OF NEW LONDON, CONN.,
New London, February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have before us a letter under date of February 10, 1914, addressed to you at Washington, and we wish to express our entire approval of its contents.

The mutual savings banks of New England, New York, and New Jersey are, to a certain extent, eleemosynary institutions. They were originally solely for the benefit of the depositor, intending to provide for the person whose earnings were somewhat scanty a safe investment, where their money could be easily withdrawn if needed, and where a fair amount of interest could be paid. That was the original intent and is the chief reason for their existence to-day.

All legislation should tend to enhance the safety of the deposits and the readiness with which they can be withdrawn when needed. The officers should watch with a zealous eye anything that tends to lower the limit of safety or threaten the payment of deposits on demand, and it is for these reasons that we find ourselves thoroughly in accord

with the letter which has been addressed to you by Messrs. White & Kemble.

Yours, very truly, WALTER LEARNED, *Treasurer.*

—

THE SCHENECTADY SAVINGS BANK,
Schenectady, N. Y., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We are impressed with the reasonable request of Messrs. White & Kemble, 59 Pine Street, New York, in their letter to you, a copy of which we have seen, in regard to sustaining the standard of railroad securities in which under the present laws the savings banks of New York State have invested for the past few years.

While this bank holds comparatively few of railroad bonds, yet we can readily see the bad effects which would fall to the mutual savings banks of this State should actual depreciation to any great extent occur in railroad securities.

We are by no means advocates of estimated market values for determining surplus of savings banks, but believe the securities of savings banks should be valued by the amortized or investment value.

Very truly, yours,

ALLEN W. JOHNSTON, *Treasurer.*

—

GERMAN SAVINGS BANK OF BROOKLYN,
Brooklyn, N. Y., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: A copy of the letter presented to your honorable body by Messrs. White & Kemble, dated February 14, 1914, in reference to the laws of our State covering investments by savings banks in railroad bonds has been submitted to us, and we most heartily indorse the statements contained therein. Furthermore, we would direct the attention of your commission to the necessity of permitting the railroads to increase their earnings, so as to bring about a proper margin of safety in order to protect the deposits of the inhabitants of our State, whose savings are so largely invested in railroad bonds.

Unless the railroads are permitted to increase their rates, we feel that the safety of this class of securities will be seriously endangered.

Very truly, yours,

CHARLES FROEB, *President.*
HENRY STUMPF, *Cashier.*

—

THE POUGHKEEPSIE SAVINGS BANK,
Poughkeepsie, N. Y., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We, with the majority of savings banks, are holders of railway mortgages. The depreciation in the case of this bank has been from a cost price of $2,786,000 and over to the market value to-day of $1,667,635, showing a difference of $411,000.

As a savings bank can only invest in such railroad mortgages as are declared legal by the superintendent of banks of this State, and as their special purpose is to conserve the earnings of the poor, we think it only reasonable to ask that the commission allow the railroads to increase their rates, so they may be able to meet the many increases in wages granted their employees and the enormous outlays demanded by the present-day needs of transportation, and by doing this put the securities back on a fair business basis.

Yours, very truly,

F. M. JOHNSTON, *President.*

—

THE CHESTER SAVINGS BANK,
Chester, Conn., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We desire to express our approval of the position taken by White & Kemble in their letter to you, dated February 10, 1914, regarding the earnings of railroads and the effect of same upon the value of railroad bonds.

Yours, truly, CHAS. E. SMITH, *Treasurer.*

—

THE LITCHFIELD SAVINGS SOCIETY,
Litchfield, Conn., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I have read with a good deal of care White & Kemble's letter to you, dated February 10, 1914, and beg to say that I entirely agree with its contents.

Possibly some information about our own institution would be of interest to you in this connection. I inclose herewith some figures comparing our condition October 1, 1909, with our condition January 1, 1914.

Between October 1, 1909, and January 1, 1914, we have, fortunately, decreased our bond holdings about $200,000, and have increased our deposits about $200,000. This increase of $400,000 has been largely invested in real estate loans and other loans on demand.

Very respectfully, yours,

CHARLES H. COIT, *Treasurer.*

—

October 1, 1909.

	Par value.	Excess market value over book value.
Municipal bonds	$410,000	$11,290
Railroad bonds	477,000	28,860

Bank stocks	94,500	27,559
Net excess		4,444

[1] Deficit.

THE NORWICH SAVINGS SOCIETY,
Norwich, Conn., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to communication of Messrs. White & Kemble, of 56 Pine Street, New York, to you under date of February 10, 1914, we beg to say:

It has the fullest indorsement of this society, having been referred to our board of directors for that purpose. It would be in the highest degree presuming were I to go into further discussion of the matter, inasmuch as without doubt every argument in the case has already been submitted to you.

Very truly, yours,

COSTELLO LIPPITT,
Treasurer and Member of New England Governors' Commission.

—

THE LEICESTER SAVINGS BANK,
Leicester, Mass., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I am in receipt this morning of a letter from White & Kemble, 56 Pine Street, New York, inclosing a copy of their letter dated February 10, 1914, to your board.

I wish to state that I am very much in accord with the sentiments expressed in this letter, and certainly hope that your board will take under consideration its contents and do something to preserve the value of these railroad bonds in which the savings banks, "the depositories of the people's money," have so much invested.

This can be done in a large measure, I feel assured, by allowing them in most cases to raise their rates.

Very truly, yours,

ALONZO B. DAVIDSON, *President.*

—

ESSEX SAVINGS BANK,
Lawrence, Mass., February 20, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As the representative of a Massachusetts savings bank, I take the liberty of addressing your honorable board on the subject of allowing the railroads the privilege of increasing their rates, a matter of vital importance to the savings banks, as they are large holders of railroad bonds.

I have before me a copy of a communication addressed to your board by Messrs. White & Kemble, of New York, under date of February 10, 1914. I have carefully read the letter, and I believe their argument is a valid one, and I am heartily in accord with their conclusions. I would respectfully urge upon your honorable board an early and favorable consideration of the communication, to the end that the desired, and, I believe, merited relief, may be afforded the railroads in the interest of a multitude of innocent depositors in our savings banks.

The institution which I represent, the Essex Savings Bank, of Lawrence, Mass., situated as it is in a manufacturing city, is typical to a marked degree of the purpose for which the savings bank was originally founded, namely, to care for the savings of the small wage earners, who by the very nature of their occupation and environment are not competent to invest their earnings safely and profitably themselves. It has always been assumed that our State legislation regulating savings bank investments has been friendly to the depositors, and has been prompted by a desire to safeguard their interests. For this reason our savings institutions have become holders of railroad bonds, as allowed by law, to an enormous amount. The present condition of such securities is therefore alarming.

The figures contained in the letter above referred to show that operating expenses of the railroads have increased vastly out of proportion to the increase in gross income. The summary shows an increase, from 1901 to 1912, inclusive, of 86 per cent in gross income, and an increase of 117 per cent in operating expenses, and the margin of safety has become a minus quantity.

During all these years the purchasing power of the dollar has been steadily declining, or rather the thing purchased has been steadily increasing in price wherever it has been in the power of the seller to so fix the price of his product as to cover the increase in the cost of its production; and in all fairness it would seem that the railroads, whose labor costs have increased so enormously, should be given the right to so adjust their rates as to reimburse themselves for such increase in cost.

The prosperity of our railroads and the general prosperity of our country go hand in hand. We can not expect a prosperous country while the railroads serving our most populous districts are on the verge of bankruptcy.

In the interests of the depositors in our savings banks, I would respectfully urge favorable action without undue delay.

Very truly, yours,

ALBERT I. COUCH, *Treasurer.*

—

SOUTH BOSTON SAVINGS BANK,
Boston, February 20, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We write in approval of the letter of February 10, 1914, from Messrs. White & Kemble, of New York, to your good selves

relating to the investment of savings banks in railroad securities and trust that it may receive your favorable consideration.

Yours, truly,

GEORGE A. TYLER,
President.

—

WOODBURY, CONN., *February 21, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Relative to the letter sent your commissioner by White & Kemble, of New York, on the 10th instant regarding the decrease in earning of the railroads of the United States, this is to give our hearty approval of the ideas therein set forth.

Yours, truly,

The WOODBURY SAVINGS BANK,
By S. C. MORRISON,
Assistant Treasurer.

—

THE BOSTON HARNESS CO.,
Concord Junction, Mass., February 21, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: As president of the Middlesex Institution for Savings, of Concord, Mass., I approve of purpose of letter of February 10, instant, of White & Kemble, of New York City, in such action as will safeguard large investments of our institution.

Very truly, yours,

HARVEY WHEELER.

—

THE OTTAUQUECHEE SAVINGS BANK,
Woodstock, Vt., February 21, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Allow me to most emphatically indorse letter addressed to you by Messrs. White & Kemble on the 10th instant.

The situation is such as to give grave concern to all investors. I trust it may have your attention.

Very truly, yours,

F. S. MACKENZIE, *President.*

—

HAVERHILL SAVINGS BANK,
Haverhill, Mass., February 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Copy of a letter addressed to the Interstate Commerce Commission and signed by White & Kemble, of New York, has fallen under my notice.

The Haverhill (Mass.) Savings Bank, of which I have the honor to be president, as well as chairman of the investment committee, is a considerable holder of railroad bands, and the present low market values of these bonds is a matter of grave concern.

We believe it to be a matter of first importance that the net income of the railroads of this section of the country be largely increased, and we are of the opinion that this improvement can be secured only by increased rates for freight and passenger service, although we believe also that large economies are practicable in many cases in current management.

Hoping that the necessity for higher rates may become fully evident to your honorable body, I am,

Very respectfully, yours,

W. W. SPAULDING.

EXHIBIT C6.

RAILWAY JOURNALS WERE DRAFTED INTO THE CAMPAIGN.

The Railway Record, a leading railway journal published in Chicago, issued a special "Raise the rates" edition on January 24, 1914. The following circular letter shows the real purpose of the special edition:

THE RAILWAY RECORD CO.,
Chicago, January 16, 1914.

INTERNATIONAL HARVESTER CO.,
Chicago, Ill.

DEAR SIR: At its present pace the Interstate Commerce Commission will be a long time in granting or refusing the 5 per cent freight-rate increase asked by roads in official classification territory.

Meanwhile your business is suffering. Relief will only come when the rates question is settled and the railroads are adjusted to the situation and ready to buy much-needed supplies. Therefore anything that can be done to hasten a decision in the matter will be greatly to your advantage.

The Railway Record proposes to issue a powerful special "Raise the rates" edition January 24. It will be sent to every railroad commissioner, State and national; to Members of both Houses of Congress; to hundreds of newspapers; and to thousands of influential men. It will recapitulate the needs of the railroads, emphasize the necessity of a prompt decision from the Interstate Commerce Commission, and start an irresistible wave of opinion in favor of increased rates, favorable legislation, and fair treatment for the railroads.

This will mean a lot to you, and the better it is done the more it will mean. We are doing our level best. We expect editorial cooperation from scores of railroad presidents, editors, railroad economists, etc. We must have business cooperation from the railroad advertisers. Whether or not you advertise with us regularly or ever intend to, we earnestly ask your support in this instance; help us to help you. The way to do it is to hand this over to your advertising man with a notation to supply us with copy for an ad of one-sixteenth page at $5, one-eighth page at $8.50, one-fourth page at $15, one-half page at $27.50, or one page at $50; back cover page, $100. (Four columns, 2¼ by 14 inches, to the page.)

We should like to have your early and favorable reply, including a statement for publication of your views on the railroad situation.

Very truly, yours,

F. JUSTICE, *Manager.*

[From the Railway Record, Chicago, Saturday, January 24, 1914.]

RAISE THE RATES.

THE RAILWAY RECORD:

To deny the railroad a living rate would be like clipping a carrier's wings and then tying on its neck a peace message to Huerta.

CY WARMAN.

—

RAISE THE RATES.

So general is the feeling that there should be no unnecessary delay in granting the eastern roads a 5 per cent increase in freight rates that the Record feels that it is well justified in gathering together some of the more striking evidence of favorable public opinion and offering it for the perusal of members of the Interstate Commerce Commission and other interested persons.

There is a true old saying that sometimes one "can not see the forest for the trees." So, perhaps, surrounded on all sides by statistics it may be that the men in whose hands the decision rests have been unable to ascertain the state of public opinion. For while the railways themselves have been trying by every means in their power to convince the commission that a raise is justified, the case has been on trial on the editorial pages of thousands of newspapers, in churches, in schools, in clubs, in forums—everywhere that men congregate and discuss the public weal. And the verdict has been:

"Grant the 5 per cent increase in freight rates. The railroads need it; business asks it; prosperity depends upon it."

It is to call the attention of the Interstate Commerce Commission to the verdict of the people that this issue of the Record is devoted so largely to the question of increasing the freight rates. While the sentiment of the newspapers all over the country has been overwhelmingly "proincrease," yet by reason of their varied constituency no one of them could devote an entire issue to a summing up of public opinion. This, by reason of its frankly "railway character," The Railway Record upon this occasion does, despite the feeling of some that the most effective medium for the publication of such material would be a general and not a class journal. In fact, the president of one of the largest of the eastern roads involved wrote the Record, on hearing of its plans that he was "not in favor of putting the case of the railroads before the people" through the Record. "The matter of an advance in rates is a public question, not altogether a railroad one," he wrote. "Your plan makes it a railroad issue, which, in my opinion, is not a good method of procedure."

Admitting that the Record is "prorailroad," yet no one can deny that the facts it herewith presents do honestly reflect the attitude of the general public as well as of railway men toward the rate question. When chambers of commerce, commercial clubs, traffic leagues, and like organizations of the men who "pay the freight" favor the increase; when Democratic, Republican, Progressive, and Socialistic newspapers come out for it; when no one, not even Mr. Brandeis, can make statistics, notorious fickle, espouse anything but the railway side of the question—then it would be strange indeed for a railway newspaper to attempt to steer a difficult course through neutral waters.

Nor can anyone be neutral who is in possession of the facts and of a disposition to be fair.

The net operating income of eastern railroads for 1913 was $16,311,000 less than in 1910, despite the fact that additional investments to the extent of over $650,000,000 had been put into railroads in the years between. And in the interval, too, the railroads had been practicing unheard of economies and were being operated with the greatest possible efficiency. The discrepancy in net revenue was due to the constant growth of the demands of labor for increased wages and of the public for increased facilities and more safeguards. The Journal of Political Economy said that it was evident that the contest would narrow down to an analysis of railroad revenue and its adequacy to maintain existing obligations and dividends. It has; and the justice of the railways' position has been convincingly established. It is for the Interstate Commerce Commission to accede at once to reason, evidence, and the judgment of the people by granting the proposed increase.

—

AMERICAN RAILROADS NEED RATE INCREASE—EXPERT SEES RIGHT ON SIDE OF RAIL CARRIERS.

(By Francis A. Bonner, associate director Bureau of Railway News and Statistics.)

American railways, a portion of them, for the second time are before a Government tribunal asking permission to make slight advances in their freight rates, having failed in one request through popular deafness to their plea. For their present success happily the subsidence of public agitation augurs well. So general is the claim, in fact, that the Government tribunal, to insure a jealous scrutiny of its petitioners' claims, has retained for itself legal talent formerly engaged by erstwhile belligerent shippers for themselves. Yet readjustment of tariffs in a limited portion of the East and for the first time in a generation of persistently receding rates is not to be a solution for all space and all time. Conditions change; attendant circumstances must follow.

In our judgment of these railways, placed like all of us at the mercy of fickle economic surroundings, are we to be content with human achievement?

If not, and we would exact of them what, as can be shown, no railways the world over have been able to accomplish, may we chafe at disappointment? Perhaps the fault lies not in the wool but in our yardstick.

One hardly need recall these accusations heaped upon our railways with such reiterated finality in explanation of their ills; overcapitalization; dividends on water stock; mismanagement; waste in operation; lack of efficiency. Such always has been, such probably always will be, the cry among a goodly portion of the populace.

WORLD FACES SAME PROBLEM.

The fence along our coast line is too high for our vision. Beyond our confines we fail to see the railways, great and small, public and private, from Canada to South America, from Great Britain and France across Europe, struggling with the selfsame rise in cost of labor and materials which cuts ever farther into the unit revenue for performing a unit service; which spares even smaller moieties for the net which must pay ever-advancing interest rates and yet attract new capital for vital growth.

Despite occasional taunts at the provincialism of the "tight little island," few people, perhaps, more than the American are blessed with a stubborn inability to peer beyond the borders of their own land. Perhaps the vastness of the Nation's resources aids in fostering this

self-centered sufficiency. Akin in its provincial haziness on "Weltpolitik" is this placid disregard of world-wide railway conditions.

It would be interesting to understand upon what theory American railway managers are exalted far above the rest of mankind, that practically impossible achievement is expected from them. Is it not like conjuring the capacities of supermen if we deny additional revenue when economic conditions have changed and call upon our own railways alone in all the world for an omnipotence in combating without the aid of higher freight rates that universal advance in costs of production which has respected no national boundaries.

WASTES ARE INEVITABLE.

We can not with reason condemn the railway for those inevitable wastes which attend all human effort, while taking them for granted elsewhere. With much less reason can we condemn it for inability to cope with rising expenses, when other nations everywhere under lower wages, lower costs, and already higher railway rates have assisted their carriers over the same shoals. To blame the situation solely on American railways as self-inflicted is to be blind to universal experience.

Having thus through broadened vision discovered that nothing inherently diabolical in the American railroad per se entails that suffering from economic maladjustment from which it is asking relief, it will require little further elevation to remove us completely from that nose-to-the-grindstone attitude in which, in our reaction from the abuses of a past ethical code, we have been dealing with the railway question. Great as may be one's respect for the impartiality, the judicial abstraction of our railway commissions, being Government bodies they must reflect the popular state of mind. Given a people seething with hostility toward railways, we shall have legislatures busily harassing them and in the end even appointive judicial bodies whose province is determination of fact alone leaning with the attraction of popular prejudice.

POPULAR VIEWS CHANGING.

Until now popular opinion has been hostile. It has been reflected in laws and in the application of laws by constant additions to expense of railway operation, by constant paring of revenues from railway operation through reductions of rates. Rates first were attacked and reduced for their own sake; more recently they have been whittled, not because of opposition to them in and of themselves, but because of dissatisfaction over relationships with others applying to competing communities. It has been but a logical step further in this progress toward an era of better feeling toward the railways to arrive at such a happy condition as now is discovered in the Eastern States, where shippers, almost with unanimity, have expressed themselves favorable to a general advance in freight rates, provided only present relationships between competitive centers are not disturbed.—(Investment News.)

—

[Editorials from other pens.]

Let the Government by all means supervise the issue of securities. That will help investors as well as patrons, for such supervision will make the securities sounder and safer. Practically all the railroads, we believe, would be glad of the governmental O. K. on their securities. But an important corollary of this policy is that the roads must be permitted to establish such rates as will insure their own prosperity under proper restrictive conditions. For not otherwise can the prosperity of the country be assurred.—(Minneapolis Journal.)

—

Cheap demagogues that capitalized the hatred for railway corporations are discovering that this no longer works. The railways generally have also discovered that it is not necessary to pay vast sums to lobbyists, sometimes euphemistically styled attorneys, to represent them in an improper way before legislatures. There is hardly a legislature of any State whose committees will not give fair hearings to responsible officials of any railway, whether in support or opposition of pending legislation. The newspapers have gladly welcomed the change in attitude of railway companies, and there has never been a time when both sides of any disputed matter affecting railways have been given more space in the news columns or treated more fairly in editorial comment. The practical unanimity of the press in favor of permitting such increase of railroad rates as the Interstate Commerce Commission deems justifiable could not have been secured under the old "public-be-damned" attitude. The only jarring note has arisen not from the operation of the railways, but from the revelations of financial juggling concerning the extent of which there is still much doubt.—(St. Louis Globe-Democrat.)

—

Many engineers of note are confident that electricity will take the place of steam as the motive power on all railroads where the traffic is dense. Once the feasibility and economy of electric traction is fully proven, public sentiment will demand the abolition of the steam locomotive, because it is noisy, dirty, and more dangerous than electric motors would be. Even the best locomotives are liable to throw out sparks and set fire to adjacent property, and the smoke and cinders they emit are a nuisance to passengers and a detriment to all residential and business property within a considerable distance of the tracks. If the English railroads were compelled to electrify their lines to-day, most of them would be thrown into bankruptcy.

American railroads are in much better shape, and were the test made it is probable that their credit would prove to be better than that of the old country lines, though the talk about overcapitalization heard to-day would lead the unthinking to a different conclusion. At the same time a well-advised and well-administered law to regulate capitalization might improve the credit of the railroads and make it easier for them to gain additional capital. Bonds and stocks, sold with the approval of the Interstate Commerce Commission, would have to be taken into account in years to come when readjusting transportation rates. Like the price of wheat, the cost of railroad transportation never will be permanently settled. It must fluctuate in accordance with economic laws.—(New York Commercial.)

—

Interlocking directorates became customary in the United States when the whole country was prostrated in 1896, at the time of the railway receiverships and when over $1,000,000,000 worth of railway securities was in the custody of receivers. The whole country then was under the oppression of widely broken credit, thousands of firms having failed in the three years previous, beginning with 1893. This was the situation when the leaders in finance, looking around for some method of reviving the stricken industry of the country, were compelled to place their own credit back of the dead properties in order to give them a going value. Bankers naturally were the strongest element in the community, and only the strongest forces could be effectual in that time of widespread prostration. So the bankers were placed in control of the companies whose securities they must bring out and back up in a strenuous endeavor to interest investors to the extent that they would risk their conservatively held funds in rehabilitating the broken properties. And so it came that the directorates of railroads were filled up with such strong names, and as the lateral and depending companies must also be placed upon their feet, and there were not enough of these strong names to go around more than once, the same names were placed in the lists of directors of these other companies and the era of interlocking directorates began. The effort was a success and soon the country once more was running on new wheels, becoming more and more accelerated toward prosperity. A vast amount of good was done in this way, because the country was lifted out of the swamps of destruction. In the process, and as a part of the process, there came also some evils, such as the turning over of contracts, without competition, to the allied companies, all with the same directors. It was the operation in another way of the same principle of tariff protection to build up infant industries, which also had its bad results, but the good ones at the time far outweighed the others.

The time came at last to remake the tariff, whch had created enormous fortunes, and now also has come, apparently, the time to separate controls, or at any rate the public thinks so, and from now on the process of disintegration in this direction, which has begun at the head, will go on. Laws may or may not be made to make the process obligatory, but no law is so strong as public opinion.

Credits, it is true, especially railroad credits, need boosting now, not as much as in 1896, but the incentive to railroad investments must now come, not from the names in the directorates, but through the ability of the roads themselves to show earnings sufficient as a margin of safety to assure the investor that his dividends will be regular and that the action of directors' meetings need not be watched for fear of reduction, because earnings will be ample to make certain this regularity.—(The Bache Review.)

—

RAILOGRAMS.

"No matter how a railroad on this continent manages its finances, it is bound to displease some element in the community."

—

Funny, isn't it, that the Iowan (we forget his name) who threw sand in the gear box when the railroads were asking a much-needed raise in rates in 1908 should bob up right now with his populistic views when the freight-rate increase question is again getting attention?

—

Valuation of the railroads has actually started; engineers are in the field and the real facts are going to be brought out. All of which will bring nothing but joy to 90 per cent of the railroads in the United States, for they are only too anxious to be judged and regulated by the real facts.

—

A reader sends a clipping describing the Christmas "feed" given 700 homeless men at Portland, Oreg., by the O. W. R. & N., and suggesting that we make the incident the theme of an editorial on "The heart of a corporation." In time we will; meanwhile we are waiting for some paper to discover an ulterior motive on the part of the railroad.

—

STRAWS SHOWING HOW THE WIND BLOWS.

The railroads should be permitted to earn upon their investment a return that will be fair and that will enable them to serve without handicap or delay the needs of the country's expanding traffic.—(Atlanta Journal.)

—

FAVOR RATE INCREASE.

Ten thousand circulars are being distributed by John M. Glenn, secretary of the Illinois Manufacturers' Association, among shippers throughout Illinois urging them to wire President Wilson, both Senators, and all Congressmen from this State, to use their influence in favor of the 5 per cent advance in freight rates that is being sought by railroads operating in eastern territory.

"Make business boom," says the circular. "Do not suggest selfish exceptions as to lake and rail rates. Closed plants mean idleness and suffering to the entire country. With the industries shut down all business will be at a standstill. Act and act promptly. The Interstate Commerce Commission should be impressed with the importance of a quick decision."

"Hundreds of telegrams already have been sent in conformity with this report," said Mr. Glenn. "Many hundreds of others, I expect, will be forwarded soon. Public opinion in matters of this kind has a powerful influence."

—

Shoe manufacturers from all over the country gathered at the annual convention of the National Boot and Shoe Manufacturers' Association, at New York City, January 14, adopted a resolution in favor of increased freight rates for railroads.

—

The New York Chamber of Commerce favors the proposed increase in freight rates on eastern roads.

—

The Traffic Club, of St. Louis, went on record in favor of a 5 per cent increase in railroad rates recently, after Charles Nagel, formerly Secretary of Commerce and Labor, had urged an equitable compensation for common carriers at a banquet of the club.

—

Increased railroad freight rates are favored by the National Business League of America. A special meeting of the board of directors of the league was held at the Hotel La Salle, Chicago, January 15, and resolutions calling upon the Interstate Commerce Commission to permit an increase of not less than 5 per cent were adopted.

—

"It is true that some roads do not need higher freight rates to insure prosperity," says the Baltimore News, "but it is unquestionably true that the great majority of them do need help, and if it is not forthcoming they will be unable to provide the increased facilities so necessary to promote the material prosperity of the country."

—

We strongly believe that the most important step of all toward immediate business prosperity is the granting of the request of the railroads for increased freight rates.—(Baltimore Sun.)

—

ADVANCE OF 5 PER CENT WOULD HELP SOME.

"You ask me for a summary of my reasons why freight rates should be advanced," writes Slason Thompson, director of the bureau of railway news and statistics, in a letter to the Record. "My reasons are

embodied in the following table of the ratio of expenses and taxes to the gross earnings of the railways of the United States during the period it covers:

	Coefficient.
1902	67.81
1903	69.20
1904	70.91
1905	69.82
1906	69.29
1907	70.63
1908	73.20
1909	69.86
1910	70.06
1911	72.54
1912	73.54
1913	73.49

"The difference of 5.68 per cent in the ratios of 1902 and 1913 would account for a loss of $180,000,000 on the net revenues of 1913. Of this $150,000,000 was due to the increase in the proportion of wages paid out of gross earnings. A decrease of fourteen one-thousandths of a cent in average freight rates contributed $36,000,000 to putting the railways to the bad in 1913.

"Under the present system of accounting that excludes many items for betterments and improvements formerly included in expenses, the margin of safety is reached, about 69 per cent. An advance of 5 per cent in average freight receipts would not overtake the advance in wages and general expenses during the past decade, but it would help some materially and more sentimentally."

—

HEAVY EXPENSES CUT NOVEMBER NET.

In five months ended with November, 1913, 182 of the most important railways of the United States reporting to the Interstate Commerce Commission, in spite of a gain in gross revenues amounting to more than $17,000,000, lost in net more than $44,000,000. The showing was the result of a rise of $61,000,000 in expenses required to do the business.

What havoc is being played with railway operating returns as a result of steadily climbing expenses in the face of now decreasing transportation revenues is thus shown in figures for November just published by the Interstate Commerce Commission, which are analyzed by the bureau of railway news and statistics. The figures are based on reports received from 182 railways with annual revenues of $1,000,000 or more, operating this year over 224,000 miles of line.

Though this mileage for November represented a gain of more than 2,000 miles over the same month the year before, gross operating revenues for the month fell almost $9,000,000, or from $270,124,786 to $261,299,074. In the same time expenses of carrying on the lessened volume of business rose over $5,000,000, from $179,460,948 to $185,084,834, leaving a drop in the remaining net from $90,663,838 to $76,214,240, or over $14,000,000.

How "earnings may come and earnings may go but expense climbs on forever" is best shown by a three-year comparison on a per mile of line basis which these latest figures make possible. Taking the month of November in each of the last three years the comparison is as follows:

Per mile.	1911	1912	1913
Earnings	$1,093	$1,218	$1,165
Expenses	734	809	825
Net	359	409	340

While earnings per mile rose in 1912 and then fell in 1913 to a net gain of only $72, expenses climbed steadily in both years to a total gain of $91, so that net per mile, after a temporary gain in 1912, was $19 below November, 1911.

Similarly for five months:

Per mile.	1911	1912	1913
Earnings	$5,545	$6,081	$6,085
Expenses	3,630	3,592	4,178
Net	1,915	2,129	1,907

Five months' earnings per mile thus have shown a continued, though slackened, gain of $540. In the same time corresponding expenses, however, have risen $548, so that the losses of the more recent months bring about a net loss for the series of $8 per mile.

Reports thus far received from only 37 roads for December show a contraction in gross earnings of some $3,000,000, compared with the November loss for 182 reads of $9,000,000.

—

RESULTS OF OPERATIONS IN CENTRAL WEST.

To set forth the needs of the railroads in the Central West, in the application for advanced freight rates, J. L. Minnis, attorney for the Central Freight Association lines, has just filed with the Interstate Commerce Commission a digest of the evidence submitted by W. C. Maxwell, on behalf of the Central Freight Association companies.

Quotations from the digest prepared by Mr. Minnis follow:

"The date therefore covers a total mileage of 34,866 miles, arranged in groups.

"Group 1 contains the mileage of 38 companies aggregating 31,937 miles—28,186 miles, or 78.6 per cent of the total mileage in the territory, and the 3,751 'outside mileage'—and includes all the mileage in the territory except 13.8 per cent of the mileage of the territory; and except also, the mileage of 46 short roads owned by 46 companies, aggregating 2,729 miles, or 7.6 per cent of the total mileage in the territory, whose aggregate gross revenue for the year 1911 was less than $8,000,000.

"(a) Prior to the fiscal year 1911 the carriers were free to promulgate their interstate rates and substantially the body of their intrastate rates, and to adjust them from time to time to ever-changing conditions, and were, in a practical sense, unhampered in the management of their properties.

"(b) The ratio of operating expenses and taxes to operating revenues of Central Freight Association territory lines reached the low point of a descending period in 1910, and began to ascend in 1911—for instance, the ratio of group 1 was:

	Per cent.
1908	75.11
1909	73.28
1910	72.40
1911	76.49
1912	77.25
1913	78.56

"(c) Beginning with the year 1911, the power of the carriers to promulgate their interstate rates and substantially the body of their intrastate rates was placed under the supervision of the National and State Governments, so they could not adjust their rates to the increasing ratio of expenses and taxes to earnings; and other governmental regulatory laws have been enacted affecting the management, expenses, and revenues of the carriers.

"The lines of group 1 increased their mileage, 1913 over 1910, first main track owned 684 miles, operated 828; all tracks owned 3,320 miles, operated 3,568; and increased their property investment $225,503,220.

"Operating revenue, 1913 over 1910, increased $71,398,933; operating expenses and taxes increased $84,934,336; operating revenue, after deducting operating expenses and taxes, decreased $13,535,403; or, after deducting operating expenses, taxes, and rentals, decreased $13,893,910; or, after deducting operating expenses, taxes, and hire of equipment, decreased $15,133,257; or, after deducting operating expenses, taxes, rentals, and hire of equipment, decreased $15,491,764. The decrease in net corporate income was $23,207,414.

"The increase in operating revenue, $71,398,933, measures an additional service rendered the public—increase, 1913 over 1910, in tons carried 1 mile, approximately 10,000,000,000, or an increase of 16.43 per cent; and in passengers carried 1 mile, 400,000,000, or an increase of 7.32 per cent.

"Notwithstanding the much larger volume of business enjoyed in 1913 over 1910 the power of the carriers to earn a return on their property declined substantially.

"While the showing of group 1 indicates that the carriers as a whole in the territory are rapidly approaching financial disaster, it is believed the showing of that group is far above the average railroad situation in the territory.

"Group 3 embraces 28 companies which operate 19,416 miles, or 54.1 per cent, of the entire mileage of the territory. It includes all the mileage in the territory except that of the "four main trunk-line connections,' the 'coal and ore roads,' the '46 short roads,' and the 'excluded mileage' (the Baltimore & Ohio and Erie, Chilago, Burlington & Quincy, etc.), and embraces all the mileage which serves generally the people of the territory, and whose prosperity is dependent upon the territory.

"Obviously, the reasonable needs of the lines embraced in group 3—54.1 per cent of the entire mileage of the territory, to say nothing of the 46 short roads—must control in determining the reasonableness of rates in the territory, if the people in that section are to have adequate transportation facilities and prosper measurably with other sections of the country.

"The lines in group 3 increased their mileage, 1913 over 1910—of first main track owned, 543 miles; operated, 604 miles; of all track owned, 2,020 miles; operated, 2,106 miles; and increased their property investment $99,570,844.

"Operating revenue, 1913 over 1910, increased $33,025,190, but the operating expenses and taxes increased $43,724,956, resulting in a decrease in operating revenue, after expenses and taxes, of $10,699,766; or a decrease in operating revenue, after operating expenses and taxes and rentals, of $10,271,473; or a decrease in operating revenue, after operating expenses and taxes and hire of equipment, of $13,526,961; or a decrease in operating revenue, after operating expenses and taxes, rentals and hire of equipment, of $13,098,668; and a decrease in net corporate income of $15,987,445.

"The increase in operating revenue of $33,025,190 measures an increase, 1913 over 1910, in tons carried 1 mile of four and one-half billion; passengers carried 1 mile, one hundred and forty-five million.

"It will be observed that after swelling the volume of business by this increased traffic and increasing the property investment approximately $100,000,000, group 3 had remaining, after deducting operating expenses and taxes, above $10,000,000 less money than in 1910.

"Dividends paid by the lines in group 3 decreased, 1913 as compared with 1910, $5,943,035. The companies paying dividends in 1910 include the Grand Rapids & Indiana—which has not paid subsequent dividends—and the Chicago & Alton and Toledo, St. Louis & Western, who ceased paying dividends in 1913. In 1911 four companies reduced their dividends; in 1912 five companies reduced their dividends; and in 1913 six companies reduced their dividends.

"Only nine companies out of the 28 in group 3 paid dividends in 1913."

—

INTER OCEAN FAVORABLE.

In a letter to the Record H. H. Kohlsaat, editor of the Inter Ocean, Chicago, January 17 gives this paper permission to reprint an editorial, as follows:

The directors of the National Business League of America at their meeting in Chicago Thursday unanimously adopted resolutions asking the Interstate Commerce Commission to permit the railways to make "an immediate uniform increase of not less than 5 per cent" in freight rates.

The National Business League is a nation-wide association of prominent business men, mostly merchants and manufacturers. That is, their interest is that of the shipper—the buyer of railway service. While many of its directors are residents in and near Chicago these resolutions do not express merely a local opinion, but also that of the affiliated organizations in 30 States, ascertained through their vice presidents of the national association.

This is probably the first time that any large number of shippers has asked that freight rates be increased. The reasons for this about face on the part of so many representative shippers are clearly shown by the resolutions adopted, of which we present the substance:

"Sufficient and efficient transportation is necessary to the prosperity of the whole country. * * * We believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property, resulting also in curtailment of purchases from dependent industries, which seriously cripples the general business of the country."

Therefore, the grant of permission to increase rates is asked "as a necessary measure, imperative to the prosperity of carrier, shipper, and business interests generally."

The logic of this is conclusive. The reaching of a conclusion so logical is a gratifying sign of a renewed perception of the truth that in the long run all material interests of the American people must go up or down together, and of emergence from the delusion that it is possible to impoverish and pull down the transportation industry without all of us suffering in the end and paying for the folly.

Theoretical "railway economists," such as Louis D. Brandeis, will continue to argue, of course, that what the railways need is not higher rates but "more efficiency." Here and there a prominent business man will still insist on what is, under existing conditions, putting the cart before the horse. We note that John Wanamaker is quoted as so doing.

These gentlemen seem to forget that before improvements can be made there must be means, or a good prospect of means, with which to pay for them. Efficiency must often wait for income to support it. If Mr. Wanamaker will look back, he will doubtless remember days when he had to get along with poorer equipment and less competent help than he wanted, because he could not yet afford to buy better.

That is, broadly speaking, the position of the railways. Under pressure of public sentiment which too long remembered injuries and forgot benefits they have been brought by governmental power to semistarvation. It is absurd to ask that a half-starved man or industry show the highest efficiency.

The Interstate Commerce Commission and the Wilson administration will do well to heed the counsel of the shippers. No administration can be popular or party retain power whose name has become a synonym for industrial depression and business paralysis.

—

CHICAGO TRANSPORTATION ASSOCIATION RESOLUTIONS.

In a letter to President Wilson under date of January 20 the Chicago Transportation Association transmitted the following resolutions:

"Whereas the railroads east of the Illinois-Indiana State line have petitioned the Interstate Commerce Commission for an advance of 5 per cent in their freight rates; and

"Whereas we feel that the immediate granting of this said advance would restore the confidence of trade, spur business on to greater prosperity in this country, improve commercial conditions generally; and

"Whereas everything has had an advance in its price in recent years, especially labor, material, etc., which directly affects the railroads, and railroad freight rates have remained practically unchanged, the railroads therefore being entitled to this advance, we, the Chicago Transportation Association, an association of more than 1,200 railroad and industrial representatives in the city of Chicago, have

"*Resolved*, at a meeting held to-day, to impress upon you and the Interstate Commerce Commission the importance of the granting of this 5 per cent advance in freight rates, and place ourselves on record as indorsing the petition of the railroads for the good of business, for the good of the railroads, for the good of the country generally."

—

A RAILROAD EXECUTIVE'S REASONS WHY RATES SHOULD BE ADVANCED.

[By James F. Holden, vice president Kansas City Southern Ry.]

There are so many reasons why the railroads should receive greater remuneration for the handing of freight that I hardly know where to start, the principal ones occurring to me now being:

FIRST—INCREASE IN WAGES.

Wages paid railroad employees in the United States for the year ended June 30, 1912, as compared with June 30, 1902, increased $567,085,580, or 87 per cent. The number of employees during the same period increased 509,903, or 43 per cent; in other words, wages paid employees increased double the amount of the increase in the number of employees, with freight rates going down.

SECOND—TAXES.

For the year ended June 30, 1912, from compilations made by the Interstate Commerce Commission as compared with the fiscal year ending June 30, 1902, the taxes of the railroads of the United States have increased $58,657,072, or 107 per cent.

THIRD—DEMAND OF THE PUBLIC FOR INCREASED FACILITIES AND SERVICE.

It is not to be denied that the public generally are clamoring for faster time and better service, which costs the railroads a large amount annually to furnish.

FOURTH—THE NATURAL INCREASE IN BUSINESS OFFERING REQUIRES EXTENSIVE IMPROVEMENTS AND LARGE INVESTMENTS TO PROVIDE FACILITIES FOR TAKING CARE OF.

FIFTH—STATE AND FEDERAL LEGISLATION.

Heavy expenditures have been necessary, owing to the large number of different laws gotten up by State and Federal Governments with respect to different matters in connection with the operation of railroads, such as the full-crew bill and matters of a similar nature.

SIXTH—THE PRICE OF SUPPLIES, FUEL, EQUIPMENT, ETC., HAS CONSTANTLY BEEN INCREASING, REQUIRING HEAVY ADDITIONAL OUTLAYS TO TAKE CARE OF.

I read a short story not long ago, entitled "Keeping up With Lizzie." Lizzie had just returned home from college, and had ideas far in advance of her father's pocketbook. The father, being indulgent, endeavored to gratify his daughter's every wish. The neighbors in the little town in which Lizzie lived attempted to "keep up" with Lizzie, with the result that not only did Lizzie's father "go broke," but a large part of the community of that town as well, but finally Lizzie settled down and started life anew in keeping with her financial station. This is just what is happening to the railroads to-day. They are working on a frail and unstaple basis. The roads are ordered to do things they can ill afford, and the result, unless more funds are brought into the treasuries, will be the same as in the case of Lizzie and her neighbors, although much more far-reaching, for the reason that there are in the United States 1,699,218 persons employed by railroads, or about 1.8 per cent of our total population, according to the last census, who received $1,243,113,172, which represents 44.17 per cent of the gross earnings of the railways for 1912. However, counting families of employees, I should say fully 5,000,000 people are dependent on the railroads for support.

Unless revenues are increased commensurate with expenditures made, forces will of necessity have to be reduced, which means not only the throwing out of employment of a large number of men, but untold suffering on the part of families of those men dependent upon the railroads for their livelihood. I think some one should come forward with an unrefutable argument as to why the railroads should not be granted an increase in freight rates—certainly those that are the heavy shippers and who use the railroads the most are not the ones that are contending the railroads should not receive more revenue for their service, and those that are opposing the increases asked for are not now and will not be the ones to administer to the needs of the unemployed should the railroads be compelled to reduce forces.

—

EDITOR FAVORS ADVANCE.

The editor of the Baltimore Sun, in a telegram to the Record, thus gives his chief reason why freight rates should be advanced:

"Figures show that money invested in railways in the last three years has not earned a fair rate of interest, that under these conditions railroads can not get money for needed extensions and betterments, and that until they do get that money the public will suffer."

—

Officials close to the White House assert their belief that ere long President Wilson will express himself as favoring the proposed increase in freight rates.

—

W. D. Baldwin, of the Otis Elevator Co., New York City, declares that the increase in freight rates is needed to restore normal conditions of prosperity in this country.

—

In response to many requests, the members of the Central Passenger Association have decided to restore homeseekers' rates.

—

THE RAILWAY RECORD:

This important question of "raising freight rates," a short phrase of three words, means considerably more to the railroads than is generally surmised at a glance; in fact, much more to them than the high cost of living does to each individual employee. The continuous clamor for increase in salary by all classes of railroad employees, the thousands of losses occasioned by careless employees, and an inconsiderate general public, and the steady rise of interest on money that the railroads must have to tide them over difficulties or to enable them to undertake new propositions, will soon make increased rates an absolute necessity.

It is with pleasure that I look upon articles in the Record telling that the New York Chamber of Commerce and the National Boot & Shoe Manufacturers' Association favor the proposed increase in freight rates, and with regret and disgust upon the numerous cancellations of tariffs that were to have brought us an increase in freight rates this month. But, like many other important proposals, the increase question is confronted with barriers in form of men, many of whom know little or absolutely nothing about the railroads and who do not stop to consider the other fellow's side of the story. I sincerely hope that the proposed increase in freight rates will be granted.

J. B. JISKRA, Jr.,
Agent Chicago & Alton Railroad.

Coal City, Ill., January 21, 1914.

—

A DIVISION FREIGHT AGENT GIVES HIS VIEWS ON THE RATE QUESTION.

[By R. M. Bacheller, division freight agent, A., T. & S. F. Ry., St. Joseph, Mo.]

"A change comes o'er the spirit of our dreams."

A wise man from the east has waved his wand and worked wondrous changes in our political economy. The American manufacturers and business men have quickly adjusted themselves to these sudden changes—some of which are of a fundamental nature.

In no country in the world, and certainly never before in our own history, has such adjustment been so rapid.

It takes no prophet nor son of a prophet to predict that soon every obstacle to progress of business will have been removed, and then nothing can stop the most wonderful expansion of business except a poor system of distribution of our natural and manufactured products.

A poor circulation in the individual, a poor system of circulation of our currency, goes to the heart of matters and cripples our energies. When the great arteries of trade are clogged and congested by improper facilities our industrial progress is halted.

It is a waste of time to dwell on the unfair treatment meted out to the transportation lines.

For instance, suppose it may be admitted that a few railroads have done some things they ought not to have done and left undone some things they should have done, the guilty ones have suffered severely, but why punish all the railroads for the acts of the few.

Laws safeguarding the public against similar acts of commission or omission have been passed or are in process of passage, so that the time has arrived for making it possible for the carriers to secure money with which to extend and improve, so that when the big rush of business comes (and it is nearly in sight) they may be able to handle it with reasonable dispatch and not be compelled to put a crimp in business.

If this is not done speedily I have vision of factory products all over this country piled high in the back yards; of wheat and corn and hay left adjacent to the railroad track, all waiting for transportation; of fruit rotting on the trees and of delays to meat and provisions sufficient to cause famine and distress in some isolated communities.

Where will the responsibility rest? Who will be blamed?

"A change comes o'er the spirit of our dreams," and I can see some States offering every possible encouragement for extensions and improvements of railroad facilities.

They will realize only too late that slight raises in rates affects nobody appreciably, but it will take time to make the needed changes and then the mistakes will loom big upon the horizon.

EXHIBIT C7.

AGITATION BY BUSINESS ASSOCIATIONS, BOARDS OF TRADE.

Various business associations and boards of trade have been very active in spurring on their members to action. The Illinois Manufacturers' Association is a very good example. The Greater Dayton Association, of Dayton, Ohio, was also active in this kind of work, and following this sheet is a letter from that association to the Interstate Commerce Commission inclosing au-

swers which they had received from members of their organization with reference to the 5 per cent rate advance. There are many examples like this which might be cited, but this is a typical illustration.

DAYTON, OHIO, *February 17, 1914.*

RE 5 PER CENT ADVANCE IN FREIGHT RATES.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The application on the part of the carriers in official classification territory for permission to advance their rates horizontally 5 per cent has been the subject of much thought by a number of our members. Some seem to be of the opinion that the association should go on record as favoring the advance; others incline to the opinion that as an association this should not be done; and as a solution of the matter and to secure some definite information as to the general sentiment toward the proposed 5 per cent advance, 56 letters were addressed to as many of our local interests representing the various lines of trade. In our inquiry we stated that, inasmuch as Dayton parties had not applied to the commission for leave to appear at any of the hearings, the Interstate Commerce Commission might be pleased to know what this particular industrial community thought of the situation.

To the 56 letters we received but 17 replies, 13 of which approved of the advance, 2 opposed it, setting forth their reasons, and 1 is noncommittal. These replies are submitted in the original for such use as the commission may deem fit and proper.

Very truly, yours,

THE GREATER DAYTON ASSOCIATION,
R. M. ROBINSON, *Traffic Manager.*

—

PIQUA, OHIO, *February 9, 1914.*

Mr. R. M. ROBINSON,
Dayton, Ohio.

DEAR SIR: Replying to your circular letter of January 28, regarding 5 per cent advance in freight rates, we are free to admit that in a great many cases the railroads are entitled to the 5 per cent advance in rates, but on the other hand, we also feel that there should be some readjustment of classifications, and this stands out very prominently in our business, for the reason that hardwood logs and hardwood lumber come under the same classification, yet there is a vast difference in the value, and, as an illustration, we might say, in shipping a carload of walnut or mahogany lumber the value is such that the sixth-class rate does not work any hardship on us, while, on the other hand, when we ship a carload of small, rough walnut logs and have to pay the same sixth-class rate it is quite a hardship, and in a great many cases makes it prohibitive for us to do business in certain localities, so we should say that we really favor revisions in classifications, on some commodities up and on others down, so as to put the business on a more equal basis.

Yours, truly,

GEO W. HARTZELL,
Per J. C. RODAHAFFER,
Sales Manager.

—

DAYTON, OHIO, *January 31, 1914.*

The GREATER DAYTON ASSOCIATION,
Traffic Department, Dayton, Ohio.

GENTLEMEN: We have your letter of the 28th, referring to an advance in freight rates. We are absolutely opposed to any advance in freight rates. We believe the railroads can earn a fair return on actual investments and still have money left to make needed improvements. If we are mistaken in this, we believe it is up to the railroads to show us where we are wrong. If this 5 per cent increase is granted, what guarantee have we that the interest charges of the roads will not be increased by some method of high finance?

If any industrial concern wants to borrow money, they usually produce a statement showing their actual assets and liabilities. About all anyone can get from the railroad is a statement of their outstanding obligations in shape of stocks and bonds and other indebtedness.

If any railroad is so water-logged that it can not pay operating expenses, we think a receivership would be better in the long run than to merely put off the day of reckoning by increasing freight rates.

Very truly, yours,

THE CAPPEL FURNITURE CO.,
H. F. CAPPEL, *Secretary.*

—

DAYTON, OHIO, *January 29, 1914.*

Mr. R. M. ROBINSON,
Traffic Manager, Greater Dayton Association, Dayton, Ohio.

DEAR SIR: We have your favor of the 28th instant referring to the 5 per cent advance in freight rates in certain territory now under consideration by the Interstate Commerce Commission and asking for expressions from members of your department on the subject.

In view of the recent change in the classification of bicycles, which amounts to practically a 5 per cent advance in cost of transportation over the previous classification, a further advance of 5 per cent on the freight rate of this commodity, which represents quite a large proportion of our outgoing shipments, would virtually place upon us a burden of a 10 per cent advance on this part of our business, and on this account we are naturally strongly opposed to the increase.

In our sewing-machine business we are forced by competition to very small margins, and are compelled to make deliveries to customers on a large percentage of our sales. If our margins should be cut by a further increase of 5 per cent on the cost of such deliveries, and, in addition, the same increase must be paid by us on all our incoming shipments of raw materials, etc., the effect will be serious. We have no means of protecting ourselves or increasing our profits to cover such advances and have already used all possible means for reduction of the production cost, so that it seems to be out of the question to expect that we will be able to make any changes in that direction that will assist in taking care of this advance.

We feel, therefore, that instead of the railroads being permitted by the Interstate Commerce Commission to make a horizontal advance in all freight rates, and thus imposing a serious burden upon manufacturers who are situated as we are, the railroads should be required to deal with the problem which it is claimed they have to meet by inaugurating methods of greater economy and efficiency, and thereby restore their working profits to the proper point where this condition does not now exist.

We believe that a comparison between the efficiency and economical operation of the American railroads with those of other countries shows that there is great opportunity for improvements in these respects and that it is entirely within the power of the railroads themselves to obtain an increase in their net earnings fully equal to the amount that would be represented by the recent increase asked for without imposing a further burden upon manufacturers and shippers.

Very truly, yours,

THE DAVIS SEWING MACHINE CO.,
J. B. PARMELEE, *Secretary.*

—

DAYTON, OHIO, *February 7, 1914.*

The GREATER DAYTON ASSOCIATION,
Dayton, Ohio.

GENTLEMEN: Re 5 per cent advance in freight rates, the writer is optimistic at all times, but it can not be denied that when the railroads cease buying a depression of business exists throughout the country.

That this condition exists now goes without saying. The railroads are not buying, and while many of them need new and additional equipment, it is evident they are playing a waiting game. In the meantime many concerns are suffering for business, and while an increase in freight rates will no doubt work a hardship on some, the writer can not see how it will greatly affect the manufacturer and merchant in general.

It appears to be the general opinion that business will start booming the minute the 5 per cent advance takes place, and unless the Interstate Commerce Commission can find good and a sufficient number of reasons why the request should not be met, we heartily indorse the advance and will cheerfully pay the increase.

Yours, very truly,

THE GRAVES & MARSHALL CO.,
Per GEO. W. MARSHALL,
Secretary and Treasurer.

—

DAYTON, OHIO, *February 4, 1914.*

R. M. ROBINSON,
Traffic Manager, The Greater Dayton Association,
Dayton, Ohio.

DEAR SIR: Re 5 per cent advance in freight rates, in view of the demands that are being made on the railroads, both from a legislative and service standpoint—in view of the increased cost of labor—we are of the opinion that the application made by the steam carriers operating in the territory east of the Mississippi and north of the Ohio for permission to make a 5 per cent advance in freight rates, should receive not only the indorsement of the Interstate Commerce Commission but also of the shippers.

In so doing the railroads will be warranted to make the improvements which they have underway, to complete those which they have started, to improve their facilities and likewise their service, and by so doing the public will be directly benefited.

While it may be true that it will in some instances create a hardship on the part of some shippers, yet by the large majority it will not be felt, while to the railroads it will prove of wonderful assistance.

Briefly, we are in favor of giving the railroads permission which they seek in the above request.

Yours, very truly,

THE EGRY REGISTER CO.,
MILTON STERN,
General Manager.

—

DAYTON, OHIO, *January 31, 1914.*

Mr. R. M. ROBINSON,
Traffic Manager the Greater Dayton Association, City.

DEAR SIR: Your favor of January 28, relative to the 5 per cent increase in official classification rates. We would not object so much to the increase if the service was improved accordingly. We have the misfortune to be located on the Cincinnati, Hamilton & Dayton tracks, which is enough to leave a question in our minds if the world is really growing better.

Yours, truly,

THE W. P. CALLAHAN CO.,
S. V. HOLMES.

—

DAYTON, OHIO., *January 30, 1914.*

Mr. R. M. ROBINSON,
Traffic Manager the Greater Dayton Association,
Dayton, Ohio.

DEAR SIR: Acknowledging your communication of the 28th with regard to the 5 per cent advance in freight rates, we beg to state that from our viewpoint we are heartily in favor of this increase. It is true it is 5 per cent, and 5 per cent counts for something, but distributed, as it will be, to ever so many different industries, it surely can not work a hardship on anyone, and may afford the railroad companies much needed relief. We must admit that material costs have advanced, that labor costs have advanced, and the construction of proper terminals in large cities is an expensive proposition, and this slight increase can only help them to bear this increased burden.

We must, therefore, lend our indorsement in this direction.

Yours, very truly,

THE COMPUTING SCALE CO.,
GEO. W. KEPLER,
General Manager.

—

DAYTON, OHIO, *Friday, January 30, 1914.*

The TRAFFIC DEPARTMENT.
GREATER DAYTON ASSOCIATION,
Dayton, Ohio.

GENTLEMEN: Your letter of the 28th is received, and in reply would say that it is our conviction that the railroad companies are entitled to an advance of 5 per cent as asked for.

We feel that the railroad companies are entitled to the same consideration that other interests enjoy, and that they should be permitted to keep abreast of the continued advance of all kinds of commodities and the advanced cost of labor, in the same manner as any manufacturer is obliged to do.

The country should encourage the investment of money in railroad securities at a reasonable return. Unless there is a profit, railroad support would be withdrawn, and we feel that this would be a serious calamity to all lines of business in the United States.

Yours, truly,

THE DAYTON LUMBER & MFG. CO.

—

DAYTON, OHIO, *January 29, 1914.*

TRAFFIC DEPARTMENT, GREATER DAYTON ASSOCIATION,
Dayton, Ohio.

GENTLEMEN: Answering your letter of January 28, 1914, in reference to the application of the railroads to the Interstate Commerce Commission for an increase in freight rates, will say that while we appreciate all that may be said concerning extravagance and overcapitalization of the railroads, we believe that after taking all arguments and phases of the proposition into consideration that this increase should be granted. At the same time the rate of increase is granted there should be regulations enacted absolutely eliminating watering of stock and overcapitalization. Also regulations so that we may have no recurrence of acquisitions of subproperties at inflated prices, as in the case of the Frisco Railroad.

Very truly,

THE RIKE-KUMLER CO.,
F. H. RIKE, *President.*

—

FIVE PER CENT ADVANCE IN FREIGHT RATES.

DAYTON, OHIO, *January 29, 1914.*

R. M. ROBINSON,
Traffic Manager Greater Dayton Association, Dayton, Ohio.

DEAR SIR: We are heartily in favor of this advance, believing that if this advance would go into effect it would encourage the railroads, and they would place large orders for material, thus stimulating the trade of the whole country. We believe they are entitled to this advance, and believe the association should go on record at an early date favoring same.

Yours, very truly,

BUCKEYE IRON & BRASS WORKS,
W. B. ANDERSON, *Secretary.*

—

DAYTON, OHIO, *January 29, 1914.*

The GREATER DAYTON ASSOCIATION,
Mr. R. M. Robinson, Traffic Manager, Dayton, Ohio.

GENTLEMEN: Answering your letter of the 28th instant in reference to the 5 per cent advance in freight rates asked by steam carriers, we wish to go on record as being in favor of this advance and sincerely hope that it will be granted by the Interstate Commerce Commission at a very early date.

It is our belief that if this concession is granted the railroads it will have a most desirable effect on business and the money market.

Trusting this information is satisfactory, we are,

Yours, very truly,

THE BROWNELL CO.,
L. C. ALCOKE, *Treasurer.*

—

DAYTON, OHIO, *January 29, 1914.*

R. M. ROBINSON,
Traffic Manager, Greater Dayton Association,
Dayton, Ohio.

DEAR SIR: We have your circular letter of the 28th and note its contents, and in reply will say, we think that the transportation companies should be allowed to advance their rate in the district specified in your communication 5 per cent, as they have been compelled to advance the compensation to their laborers, trainmen, engineers, and firemen, and we believe it is no more than right that they should be made this slight difference in rate of freight in order to even up for their extra expense as stated above.

Very truly,

THE FLETCHER MANUFACTURING CO.

—

DAYTON, OHIO, *January 29, 1914.*

R. M. ROBINSON,
Traffic Manager, Greater Dayton Association,
Dayton, Ohio.

We do not go into any extended explanation of our position at this time, as we suppose that a brief expression is all you desire.

Very truly,

THE DAYTON SPICE MILLS CO.,
F. W. DYE, *Secretary-Treasurer and General Manager.*

—

DAYTON, OHIO, *January 29, 1914.*

Mr. R. M. ROBINSON,
Traffic Manager, Greater Dayton Association, City.

DEAR SIR: Increase in price on Hocking, West Virginia, and Pocahontas coal from summer to winter prices is from 25 to 75 cents per net ton, very largely caused from scarcity of cars at mines.

If the 5 per cent advance in freight rates will put cars and motive power on a 100 per cent basis we are in favor of it.

Very truly, yours,

THE OTIS F. LAKE COAL & ICE CO.

—

ADVANCE IN FREIGHT RATES.

DAYTON, OHIO, *January 29, 1914.*

Mr. R. M. ROBINSON,
Traffic Manager, Greater Dayton Association,
Dayton, Ohio.

DEAR SIR: Yours 28th. We are not sufficiently well informed upon the subject. We know, of course, there has been more or less agitation, but have paid little attention.

We have no information concerning the railways' side of the question—the reasons for an advance—except their contention that the cost of transportation is much greater than when the present schedules went into effect.

Upon general principles, and particularly at this time, when business of all kinds is much below normal, we would not favor advances of any kind.

Yours, very truly,

THE CRAWFORD MCGREGOR & CANBY CO.,
W. J. BLAKENEY, *Secretary-Treasurer.*

EXHIBIT C8.

LABOR ORGANIZATIONS ALSO PETITIONED FOR THE RATE INCREASE.

Several petitions were received from labor organizations dependent directly or indirectly upon the railroads for employment. This sort of agitation is not so pronounced as was to be expected, considering frequent press reports as to the hundreds of thousands out of employment.

GALETON, POTTER COUNTY, PA., *December 8, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am inclosing you a petition of the employees of the Buffalo & Susquehanna Railroad, praying that this railroad be allowed to increase their freight rates.

Hoping that our petition may be granted,

Yours, very truly,

E. P. WALKER,
Sec.-Treas. B. & S. System Federation.

We, the undersigned employees of the Buffalo & Susquehanna Railroad shops at Galeton, Pa., do most earnestly petition the Interstate Commerce Commission that the Buffalo & Susquehanna Railroad, H. I. Miller, receiver, be allowed to increase the local freight and class rates, also rates on coal and coke. We do this of our own volition and with the hope that our petition may be granted.

Arthur Seal, C. G. Ambrose, L. Davis, Thomas A. Casey, Thomas Pearson, John F. Lyons, E. P. Walker, Geo. F. Avery, Fred Hagmann, D. C. Parry, George Fowler, W. E. Jones, R. G. Brownell, B. G. APRIL 16, 1914.

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The following organizations, representing the industries in the printing trades in the city of Chicago and vicinity—

Typographical Union No. 16;
Pressmen's Union No. 3;
Franklin Union, No. 4, I. P. & A. U.;
Photo Engravers' Union No. 5;
Blank Book Binders' and Paper Cutters' Union No. 25;
Electrotypers' Union No. 3—

in joint conference assembled, respectfully submit to your honorable body that—

"Whereas an unprecedented depression has thrown out of employment large numbers of workers in the printing industry here, which represents 22,300 wage earners, and has otherwise depressed the printing trade; and

"Whereas this depression is directly traceable to the restriction in railway service, due, it is declared, to the inability of the railroads to maintain their normal service under present freight rates; and

"Whereas individual physical suffering on the part of a large number of wage earners and mental anxiety, due to uncertainty of the future, demands immediate relief: It is, therefore,

"*Resolved*, That we, as wage earners, respectfully represent to you the honorable Interstate Commerce Commission the loss and suffering entailed by withholding the authorization for increase in freight rates requested by the railroads is destructive and demoralizing, and that whatever causes may have urged the withholding of the authorization to advance railroad rates 5 per cent, the burden now falls heavily upon the printing industry workers in this city and among the vast number of workers in other industries, and earnestly urge relief from distresses from which we and the workers in other industries are suffering."

Respectfully submitted,

Typographical Union No. 16, Walter W. Barrett, president; Michael Colbert, secretary; Pressmen's Union No. 3, Chas. E. Sangwin, president; Franklin Union, No. 4; I. P. & A. U., Harry Muss, jr., president; L. S. Mills, secretary; Photo Engravers' Union No. 5, Rudolph Clemens, president; J. H. Schussler, secretary; Blank Book Binders' and Paper Cutters' Union No. 25, John R. Fitzgibbon, president; C. J. Pickthall, secretary; Electrotypers' Union No. 3, Henry D. Frank, president.

—

ALBANY, N. Y., *January 30, 1914.*

INTERSTATE COMMERCE COMMISSION,

GENTLEMEN: The following resolutions were adopted at the twenty-fifth annual session of the Congress of the Knights of Labor, held at

Albany, N. Y., January 13, 14, and 15, 1914, and a copy thereof ordered transmitted to your commission:

"Whereas through the operation of full-crew laws, the recent decision of the arbitration board, and the increase awarded the engineers and firemen in 1913 has increased railroad expenses more than $10,000,000 annually; and

"Whereas it is impossible for the railroads to increase freight and passenger rates without the authority of the Interstate Commerce Commission or of the railroad commissions of the various States; and

"Whereas to meet increased expenses the railroads must have more money, and they can get that only through earning it, and they can not earn it unless they are permitted to advance rates: Therefore be it

"*Resolved*, That we believe the Interstate Commerce Commission should treat the railroads fairly, and that the 5 per cent freight rate increase asked for by the railroads is fair and should be granted.

"*Resolved*, That the secretary be, and he is hereby, directed to transmit a copy of these resolutions to the Interstate Commerce Commission."

Respectfully, yours,

THE CONGRESS OF THE KNIGHTS OF LABOR.
[SEAL.] J. R. MANSION, *Secretary-Treasurer.*

EXHIBIT D.

BOARDS OF TRADE, CHAMBERS OF COMMERCE, MANUFACTURERS' ASSOCIATIONS, AND SIMILAR BODIES SENT HUNDREDS OF RESOLUTIONS SEEKING TO INFLUENCE THE INTERSTATE COMMERCE COMMISSION IN THESE CASES.

Most of the resolutions which I now present express a clear and emphatic desire for the rate advance, and present a series of arguments why the signers should be allowed to pay increased freight rates. These arguments are merely a repetition of those advanced by the railroad officials and publicity bureaus. Most of these resolutions come from bodies which will be able to shift the advance rates to the consuming public and which now receive much free service from the railroads. In many cases copies of the resolutions were sent to each member of the commission to make sure of their influence being felt.

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, January 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Your attention is respectfully called to the action of the directors of the Illinois Manufacturers' Association taken at the regular monthly meeting held in Chicago January 2. Inclosed is a copy of the preamble and resolutions adopted at the meeting.

Very truly, yours,

JOHN M. GLENN, *Secretary.*

Resolutions.

Whereas the Interstate Commerce Commission is now giving consideration to the request of the railroads in official-classification territory that they be permitted to advance their rates uniformly 5 per cent;

Whereas your committee has given very careful consideration to the attitude which the Illinois Manufacturers' Association should adopt respecting this request;

Whereas your committee has after thorough investigation found: First, that conditions with the railroads have changed materially since our association successfully opposed the request for an advance in 1910; second, that the increase in wages granted through arbitration, the increase in taxes, the increased expenditure to insure greater safety to both the men and the public, and the increase caused by legislation of the full-crew type have so increased the operating expenses of the railroads in general that the net revenues are insufficient to provide for that degree of rehabilitation and extension of facilities which prompt and efficient service to the shipper demands; and

Whereas your committee is convinced that shippers can better afford to pay a uniform advance of 5 per cent than suffer in the future any impairment of railroad service: Now therefore be it

Resolved, That the Illinois Manufacturers' Association, through its board of directors, declare themselves in favor of granting the request for a uniform increase of 5 per cent of all rates in official-classification territory.

Resolved, That this increase be applied not to further wage advances, but to the rehabilitation and extension of facilities so that the present service to the shipper be maintained and improved.

Resolved, That a copy of these resolutions be sent to the members of the Interstate Commerce Commission, and that it be requested to reach a final determination of the question as speedily as possible.

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, January 3, 1914.

Hon. EDGAR E. CLARK,
Interstate Commerce Commission, Washington, D. C.

—

CHAMBER OF COMMERCE,
Birmingham, Ala., January 3, 1914.

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: Inclosed is a resolution adopted by the directors of the Birmingham Chamber of Commerce.

You will note that this resolution asks the Interstate Commerce Commission to grant the proposed increase in railroad freight rates in eastern territory.

Will you kindly see that this resolution is brought before the commission?

Thanking you, I am,
Sincerely, yours,

WM. C. RADCLIFFE,
General Secretary.

INCREASE IN RAILROAD FREIGHT RATES.

A resolution adopted by the directors of the Chamber of Commerce of Birmingham, Ala., December, 1913.

Whereas the railroads are the largest employers of labor and the largest purchasers of material in this country; and
Whereas the price of labor and material has been steadily advancing, and in all apparent probability will continue to advance; and
Whereas the demands of the public and the necessities of commerce are constantly calling for additional facilities and extensions, as well as the construction of new lines into undeveloped territory; and
Whereas the margin of profit has been steadily decreasing, owing to the causes above enumerated; and
Whereas the eastern railroads have united in a request for an increase in freight rates of 5 per cent; and
Whereas we believe that this request is reasonable and warranted, and that the granting of the request will greatly revive and stimulate trade and commerce and will at the same time give additional credit to the railroad interests, so that they will be able to adequately finance contemplated betterments and extensions: Now therefore be it

Resolved by the board of directors of the Chamber of Commerce of the city of Birmingham, Ala., That we do respectfully petition and recommend to the Interstate Commerce Commission that the pending petition for an increase in railroad freight rates be granted.

—

THE LIMA PROGRESSIVE ASSOCIATION,
Lima, Ohio, January 3, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At the regular meeting of this organization, held last evening, the following resolution was adopted:

"*Resolved*, That the Lima Progressive Association, of Lima, Ohio, wishes to be placed on record as in favor of a reasonable increase of railroad freight rates, same being warranted by the increased cost of operation, and advisable because it will result in more railroad construction, better accommodation, and safer transportation."

Yours, very respectfully,

W. M. COONEY, *Secretary.*

—

BOARD OF TRADE OF THE CITY OF CHICAGO,
Chicago, January 14, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR MR. CLARK: Inclosed please find a copy of resolution adopted by the directory of this board at its regular meeting held yesterday.

It was voted that the secretary mail a copy of the same to the Interstate Commerce Commission.

Respectfully, J. C. F. MERRILL, *Secretary.*

The following action was taken by the board of directors of the Board of Trade of the city of Chicago at its meeting held on January 13, 1914:

The transportation committee unanimously recommends to the honorable board of directors the adoption of the following resolution and its transmission to the honorable Interstate Commerce Commission:
Whereas this committee recommend that the carriers be allowed a uniform advance of 5 per cent in rates for the purpose of furnishing increased transportation facilities and more adequate service; and
Whereas the honorable board of directors adopted such resolutions on November 25, 1913, and transmitted same to the honorable Interstate Commerce Commission: Therefore be it

Resolved, That this committee now recommend to the honorable board of directors that it invite the attention of the honorable Interstate Commerce Commission to the resolutions hereinbefore referred to and respectfully urge that a decision of the question be rendered at the earliest possible date, because the uncertainty has the effect of unsettling business, and an early determination of this question will remove the uncertainty and aid the resumption of normal business conditions.

—

BOARD OF TRADE,
Lancaster, N. Y., January 14, 1914.

Hon. E. F. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The following resolution was adopted at the meeting of the Lancaster Board of Trade held January 13, 1914:

"*Resolved*, That the Lancaster Board of Trade records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that in our opinion such increase is necessary on ac-

count of business conditions and increased cost of operation, and that it is advisable because it will result in better railroad accommodations, more railroad construction, and safer transportation."

Yours, very truly,

E. GURSELL, *Secretary.*

—

ROANOKE, VA., *January 14, 1914.*

SECRETARY OF INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: At a regular meeting of the Retail Merchants' Association of Roanoke, Va., January 13, 1914, the inclosed resolution, which explains itself, was unanimously passed.

Yours, respectfully,

M. M. RAMSEY,
President Retail Merchants' Association.

Whereas the public are demanding, and should demand, of railroads the highest standard of efficiency and safety for both passenger and freight traffic by adding the very latest appliances and providing modern equipment for the comfort and convenience of the public; and

Whereas there has been in the past few years a general advance in the prices of all commodities, including materials, labor, etc., used in the operation and maintenance of said railroads: Therefore be it

Resolved by the Retail Merchants' Association of the city of Roanoke in meeting assembled, That it is our opinion that the railroads should be permitted to advance rates 5 per cent in official classification territory, as asked for, and that we believe it would be to the mutual advantage of both the carriers and the public.

Resolved further, That a copy of this resolution be given to the public press and the Interstate Commerce Commission, Washington, D. C.

—

ROANOKE, VA., *January 15, 1914.*

SECRETARY OF INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The undersigned has been directed to transmit to you a copy of the inclosed resolution, which we trust will receive due consideration at the hands of the commission.

Yours, very truly,

JOBBERS AND MFRS. ASSOCIATION,
By JAS. F. LEE, *President.*

Whereas railroads must maintain a high state of efficiency for the safety of both passenger and freight traffic by adding appliances and improved equipment; and

Whereas there has been in the past few years a general advance in the price of all commodities, including material, labor, etc., used in the operation and maintenance of said railroads: Therefore be it

Resolved by the Jobbers and Manufacturers' Association of Roanoke, Va., That the petition of the carriers in official classification territory to advance freight rates 5 per cent be granted, and that a copy of this resolution be given the public press, as well as sent to the secretary of the Interstate Commerce Commission at Washington.

JOBBERS AND MFRS. ASS'N OF ROANOKE, VA.,
By JAS. F. LEE, *President.*

—

CHAMBER OF COMMERCE,
Lynchburg, Va., January 16, 1914.

Secretary INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Beg to attach herewith copy of a resolution unanimously adopted by the chamber of commerce of this city at the last meeting of the board of directors, held Tuesday, January 13, for your information.

Yours, very truly, ERNEST WILLIAMS, *President.*

Realizing fully the great importance of having the railroads of the country operating on a basis consistent with sound business principles, and feeling that the request made by the railroads of the country for a 5 per cent advance in freight rates to be fair and just, in consideration of existing conditions, the board of directors of the chamber of commerce, after a full discussion of the matter in a recent meeting, passed unanimously the following resolution:

"Whereas railroads must maintain a high state of efficiency for the safety of both passenger and freight traffic by adding appliances and improved equipment; and

"Whereas there has been a general advance in the price of all commodities and an increase in the cost of raw materials; and

"Whereas the advanced wage scale demanded has been granted to various employees: Therefore, be it

"Resolved by the board of directors of the Lynchburg Chamber of Commerce, That the petition of the carriers in official classification territory to advance freight rates 5 per cent be granted, and that a copy of this resolution be given the public press, as well as sent to the secretary of the Interstate Commerce Commission at Washington."

—

LA FAYETTE, IND., *January 16, 1914.*

INTERSTATE COMMERCE COMMISSION, *Washington, D. C.*

GENTLEMEN: At a meeting of the board of directors of the La Fayette Chamber of Commerce, Wednesday, January 14, the following resolution was unanimously adopted:

"Resolved, That the La Fayette Chamber of Commerce respectfully petitions the Interstate Commerce Commission to grant the request of the railroads for a 5 per cent increase in freight rates during such time as will, in the judgment of the commission, enable the railroads to make their necessary improvements, thereby contributing greatly to the welfare of the country. It is the sense of this chamber of commerce that the increase in freight rates will not place a burden of any appreciable extent on any customer, and that the granting of the request will give a stimulus not only to the railroads but to its allied industries and the country at large."

Very truly, yours,

LA FAYETTE CHAMBER OF COMMERCE,
ALBERT V. WEIGEL, *Secretary.*

—

NEW YORK, *January 19, 1914.*

To the INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Immersed in very absorbing investigations, perhaps, it has not occurred to you that at the moment your nonaction in the 5 per cent case is the one great obstacle to the continuance of the growing financial millennium.

Perhaps it has not occurred to you that an announcement something like the following would be hailed with almost universal approval:

Whereas it is quite evident that railroad-operating expenses are increasing much more rapidly than gross income; and

Whereas an increase in rates will probably increase general business to such an extent that the rate increase will be unfelt; and

Whereas many shippers are heartily in favor of said increase: Therefore be it

Resolved, That the railroads petitioning are hereby allowed to increase said rates — per cent temporarily, the actual formal award to be made at the close of the present investigation.

The action of your commission in selecting one Brandies as your counsel has given your investigation the appearance rather of a prosecution, and has earned for your commission much criticism. Any action similar to that indicated above would go far to win what everyone desires—public approval.

Yours, truly,

JOHN W. BELCHER.

—

NEW YORK, *January 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Hide and Leather Association of New York and Vicinity, held in the city of New York, January 13, 1914, the following resolution was unanimously adopted:

Whereas the value of the Nation's farm products during the year 1913 reached unparalled totals and the export trade of the United States in those staples touched figures never before attained, and further, the balance of trade in favor of this country is a large one, we are nevertheless at the beginning of the year 1914 facing an unusual condition where, in accordance with statements of the Department of Commerce and Labor, the percentage of unemployed labor is the greatest that it has been in seventeen years, and business in general throughout the United States is in a depressed condition; and

Whereas the money resources of this country are greater than they have been heretofore nevertheless all manufacturing industries are lagging, brought about by a lack of confidence and the fear that the railroad systems will not be in a position of keeping up their properties to the highest state of efficiency; and

Whereas, furthermore, the Hide and Leather Association of New York and Vicinity represents solely and purely commercial interests that pay freight to the railroads for carrying their goods, the members of said association are heartily in favor of paying and acquiescing in the advance asked for by the eastern railroads and feel that until such time as a decision is reached that business will continue in a depressed state and that the percentage of unemployed labor will constantly increase: Therefore be it

Resolved, That the Hide and Leather Association of New York and Vicinity and the members thereof acquiesce without prejudice in the advance in rates if found necessary by the commission in order to provide business with efficient service, and furthermore, be it

Resolved, That the Hide and Leather Association of New York and Vicinity urges the members of the Interstate Commerce Commission to decide the case before them with the least possible delay so that if they see fit to grant the increase asked for general business may speedily have the stimulating influence of vigorous railway purchases, and that the percentage of unemployed may be quickly thereby decreased.

Respectfully, yours,

HIDE AND LEATHER ASSOCIATION OF NEW YORK AND VICINITY,
CHAS. A. SCHIEREN, Jr., *President.*
HARRY S. AARON, *Secretary.*

—

KANE, PA., *January 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Kane Board of Trade, January 9, 1914, the following resolution was presented and adopted.

"Resolved, That the Kane Board of Trade of Kane, Pa., representing 7,000 persons whose shipments, inbound and outbound, amount to 1,000 tons daily, favor the granting of the increase of 5 per cent in freight rates asked for by the railroads of the eastern district."

Respectfully, yours,

KANE BOARD OF TRADE,
W. W. MCDADE, *Secretary.*

—

WELLSVILLE BUSINESS MEN'S ASSOCIATION,
Wellsville, N. Y., January 20, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At a meeting this morning of the directors of our business men's association, in conjunction with the leaders in our manufacturing and mercantile community, the following resolution was unanimously adopted:

"Resolved, That it is our judgment that the application of the railroad companies for a reasonable increase of freight rates in consistent and fair; that in our opinion the increase in cost of operation entirely justifies the slight increase for which your body are asked to grant permission."

We believe the granting of such application will be entirely reasonable, and that it is directly in the interest of the business prosperity of our entire country.

Yours, very truly,

GEO. C. ROSA,
Vice President.
THOS. O'CONNOR,
Secretary.

—

CHAMBER OF COMMERCE,
Roanoke, Va., January 21, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We beg to inclose herewith copies of resolutions passed by the Chamber of Commerce and the Jobbers and Manufacturers' As-

sociation, of Roanoke, Va., with regard to the proposed 5 per cent increase in freight rates by the railroads.

Very truly, yours, JOHN WOOD, *Secretary.*

Whereas railroads must maintain a high state of efficiency for the safety of both passenger and freight traffic by adding appliances and improved equipment, and

Whereas there has been a general advance in the price of all commodities and an increase in the cost of raw materials, and

Whereas the advanced wage scale demanded has been granted to various employees: Therefore be it

Resolved by the Chamber of Commerce of Roanoke, Va., That the petition of the carriers of official classification territory to advance freight rates 5 per cent be granted, and that a copy of this resolution be given the public press as well as sent to the Secretary of the Interstate Commerce Commission at Washington.

CHAMBER OF COMMERCE OF ROANOKE, VA.
By JOHN WOOD, *Secretary.*

—

NATIONAL BOOT AND SHOE MANUFACTURERS ASSOCIATION OF THE UNITED STATES,
New York, January 21, 1914.

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At the convention of our association held at the Hotel Astor, New York City, January 14, the inclosed resolution was unanimously adopted, and I was instructed to communicate the same to your honorable body, believing that you desire to keep in touch with public sentiment upon matters that come within your jurisdiction.

Cordially,

SOL WILE.

Whereas the transportation system of the country is developing at a retarded pace, and the consequent depression in the basic iron, steel, and other industries has become a leading, if not the determining, factor in the general business recession; and

Whereas the eastern railroads have asked the Interstate Commerce Commission for permission to advance their rates and have made a very impressive showing of their need of additional revenue: Therefore be it

Resolved, That the National Boot and Shoe Manufacturers' Association believes that railway facilities should be developed in anticipation of traffic demands, that no artificial restriction in the form of inadequate rates should be placed upon railway growth, and that the business men of the country will acquiesce without prejudice in an advance in rates if found necessary by the commission in order to provide business with efficient service.

Resolved, That we urge the commission to decide the case with all reasonable celerity, so that if the advance is to be granted general business may speedily have the stimulating influence of vigorous railway purchases.

—

BOARD OF TRADE,
Passaic, N. J., January 22, 1914.

Mr. CHARLES C. MCCHORD,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: As a result of a referendum held recently among the members of the Passaic Board of Trade, on the question of the increase of freight rates in official classification territory, 214 votes were cast in favor of the increase and only 9 against.

It seems evident from this very decided sentiment on the part of manufacturers and business men of Passaic that the necessity for the increase in rates is recognized, and that, so far as Passaic is concerned at least, public opinion is with the railroads.

In order that you may see in just what manner our vote was taken, I inclose herewith a copy of our referendum.

Very truly, yours,

R. E. LENT, *Secretary.*

—

BOARD OF TRADE,
Passaic, N. J., January 6, 1914.

To MEMBERS OF THE BOARD OF TRADE.

DEAR SIR: In order to determine the sentiment of the business men of Passaic on important matters affecting their interests, the directors of the board of trade have decided to inaugurate a system of referendum among the board members.

The first subject to be put to referendum, as decided at a meeting on December 18, is the matter of increased freight rates. This subject is one of very vital importance to every business man in the country. The prosperity of almost every business is related either directly or indirectly to the railroads. If the railroads are prosperous, business throughout the country is apt to be good; if the railroads are not prosperous, business throughout the country is apt to be poor. It is the claim of the railroads that an increase in rates is absolutely necessary to their continued prosperity.

When the Interstate Commerce Commission hands down its decision it will unquestionably be guided to a very large extent by public opinion. It is therefore imperative that we of Passaic should go on record either as opposing or recommending the increase.

The board of trade's committee on manufacturing has carefully considered the arguments pro and con, and is of the belief that the increase should be granted. A statement in brief of the principal arguments considered is inclosed herewith. A postal, which will serve as a ballot, is also inclosed. Please indicate whether you wish your vote recorded in favor of the recommendation of the committee—i. e., in favor of the increase in rates—or opposed to the recommendation of the committee. Mail the postal, as soon as possible, to R. E. Lent, secretary of the board of trade. No vote will be counted unless received within seven days from date.

Very truly, yours,

F. WILCKES,
Chairman of Committee on Manufacturing.

—

Passaic Board of Trade.

REFERENDUM NO. 1.

STATEMENT OF QUESTION.

The railroads of the United States are appealing to the Interstate Commerce Commission, which has absolute rate-making power over all railroads in this country, to allow a general 5 per cent increase in freight rates.

In the petition for the increase provision is made for reasonable minima and for modifications necessary to preserve differential relations.

ARGUMENTS FOR INCREASE.

INCREASED EXPENSES.

The railroads claim that they, like all other corporations or individuals, have felt the burden of the increased cost of living, but unlike all others have not been permitted, so far, to raise their prices or to adjust their charges to offset this burden. The cost of materials—steel rails, cars, construction supplies, coal, in fact, practically every commodity essential to the operation of a railroad—has increased. Wages, because of the initiative of the roads themselves or because of strike settlements, have taken a decided advance. In 1910, $1,143,725,306, or 41.58 per cent of the railroad's earnings, were distributed in wages and salaries; in 1911, $1,208,466,470, or 43.32 per cent; and in 1912, $1,243,113,172, or 43.97 per cent. The tax increase has been enormous. On the eastern roads alone this increase amounted to over $11,579,000 in three years.

INCREASED BUSINESS AND DECREASED EARNINGS.

Despite general increase in business, it is claimed that the actual earnings of the various railroads is decreasing. For example, in the case of the eastern roads the gross earnings increased $187,000,000 from 1910 to 1913, while operating expenses and taxes increased $201,000,000. There was an actual decrease in the net operating income of these roads of $16,311,000. In 1913 the roads earned in gross $1,424,000,000; their net operating income was $336,754,000, and after payment of interest on funded debt and other obligatory charges, there was left $206,600,000. The dividends paid out of this amounted to $130,000,000, which was 5.10 per cent on the capital stock outstanding. This was $19,000,000 less than the dividends paid in 1912 and $7,000,000 less than the dividends paid in 1910.

ADDITIONAL BURDENS.

Together with increases of costs in materials, in wages, and in taxes, the railroads claim that legislative enactments are adding further burdens. Such are the extra-crew laws, employers' liability, compensation acts, and grade-crossing laws.

NECESSITY OF GROWTH AND IMPROVEMENTS.

It is necessary for the railroads to furnish facilities for the enormous growth of business from year to year. The public is demanding better service, not only in the handling of freight, but in the handling of passenger business. A coach built three years ago is out of date to-day. The public demands steel coaches, faster engines must be provided, enormously expensive terminals and station facilities, better means for protecting life, etc.

OTHER ARGUMENTS.

In order to make the improvements which the public demands increased capital is needed. Yet, with decreased dividends, the difficulty of interesting further capital in railroad investments is becoming greater and greater.

Other countries are recognizing the world-wide increase in operating costs of the railroads. In the past decade, advances in rates have been effected in England, Italy, Switzerland, Belgium, Denmark, Prussia, Austria, Hungary, and other countries.

ARGUMENTS AGAINST INCREASE.

The principal argument against the increase of freight rates is the plea for greater efficiency. It is claimed that the methods of the railroads have been wasteful. Ever since Louis Brandeis, a Boston lawyer, made his startling statement that he could effect a saving of $1,000,000 per diem to the railroads, if he were allowed to apply methods of scientific management, startling revelations of waste and extravagance have been claimed. It is thought that an adverse decision on the part of the Interstate Commerce Commission would force the railroads to greater efficiency.

INCREASED BUSINESS *v.* INCREASED DIVIDENDS.

It is further claimed that if the railroads could pay dividends averaging approximately 6 per cent on a gross business of $1,237,344,000 in 1910, that they should be able to pay at least equal dividends in 1914 on the enormous increase in business.

INCREASES COST OF LIVING.

It is further claimed that an increase in rates would add to the cost of living, since the burden of the increase would necessarily fall on the ultimate consumer.

The following analysis gives some idea of the effect of the increase: "The railroads now get 2⅞ cents for carrying a pair of shoes from Boston to Chicago. If the rate were increased 5 per cent, the freight would still be less than 3 cents per pair between points mentioned. Should this affect the average selling price of shoes at $4 per pair? Between the same points the increased freight on 1 pound of sugar would be fifteen thousandths of a cent ($0.00015); on a barrel of flour, 2⅞ cents ($0.0275); on 1 pound of butter, thirty-eight thousandths of a cent ($0.00038); on 1 pound of coffee, sixteen thousandths of a cent ($0.00016); on 1 bushel of potatoes, 1 cent ($0.01); on 1 dozen eggs, fifty-seven thousandths of a cent ($0.00057); on 1 pound of dressed beef, twenty-five thousandths of a cent ($0.00025)."

—

HARDWARE MERCHANTS' & MANUFACTURERS' ASSOCIATION,
Philadelphia, January 22, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Hardware Merchants' & Manufacturers' Association, held on Tuesday last, the following resolution was adopted:

Resolved, That the Hardware Merchants' & Manufacturers' Association recommend to the Interstate Commerce Commission the advisability of granting to the railroads east of the Mississippi River an increase in their present freight rates.

The membership of this association is composed of the largest hardware manufacturers and wholesale distributors in Philadelphia.

Very truly, yours,

ARTHUR K. LIVERIGHT,
Chairman Freight Committee.

—

HAMBURG BUSINESS MEN'S CLUB,
Hamburg, N. Y., January 22, 1914.

Resolved, That the Hamburgh Business Men's Club records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that in our opinion such increase is necessary on account of business conditions and increased cost of operation, and that it is advisable because we hope it will result in better railroad accom-

modations, more railroad construction, and safer transportation, and that the secretary be directed to communicate this resolution to our Congressman and to the Hon. E. E. Clark, chairman Interstate Commerce Commission.

W. M. SEEGER, *Secretary.*

—

CLINTON, IOWA, *January 22, 1914.*

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We herewith inclose you petition to Interstate Commerce Commission regarding railroad rates, signed by representative shippers of Clinton, Iowa.

Very truly, yours, ELLIS & McCOY.

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Your petitioners are business men and shippers residing in the city of Clinton, State of Iowa, and we respectfully submit for the consideration of your honorable body, in the matter of the investigation that is now in progress looking to the readjustment of railroad rates, that efficiency and safety in the conduct of the transportation business of the country by the railroads is essential to general prosperity.

The attitude of the signers of this memorial is as follows: We are in sympathy with the work of the commission investigating this question of readjusting rates of the carriers, to the end that such carriers shall be permitted to receive just compensation for the respective services rendered and remuneration which will enable them to give efficient and safe service, to pay all reasonable expense, and a fair profit, and to restore and maintain the credit of the carriers to the end that they may be able to maintain their properties and improve and better them.

Respectfully submitted.

Clinton Commercial Club, by G. W. Dulang, jr., chairman railway committee; Clinton Bridge Works, G. E. Wilson, jr., secretary; C. Lamb & Sons, by E. A. Schult, secretary; Clinton Street Rwy. Co., by A. L. Schindry, secretary; Smith & Oakes, Alden Liner Co., H. Smith, secretary; Moeszinger-Marquis Hardware Co., L. C. Moeszinger, president; Arlen & Ingwersen, Eclipse Lumber Co., per G. W. Dulang, jr., vice president and treasurer; Curtis Bros. & Co., by F. S. Combs, vice president; Clinton Paper Co., Wm. M. Smith, secretary; S. Shounp & Arnold, R. J. Arnold, secretary and treasurer; United Lumber Co., by E. O. Gabriel, president; Gabriel Lumber & Fuel Co., E. O. Gabriel; Iowa Machine Works, W. J. Keefe, president; John D. Schultz, secretary; Mississippi Electric Co., by J. W. Hardy, president; Clinton Fruit & Produce Co., John Wolters, president.

—

CHESTER, PA., *January 22, 1914.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At the annual meeting of the Board of Trade of Chester and vicinity held last Tuesday night a resolution, copy of which is herewith inclosed, was adopted in which the board of trade goes on record as favoring the 5 per cent increase in freight rates requested by the transportation companies.

I trust that you will see fit to lay this resolution before the commission at your earliest convenience, and oblige,

Yours, very truly,

BOARD OF TRADE OF CHESTER,
NEIL B. SINCLAIR, *Secretary.*

Whereas it has been brought to the attention of the Board of Trade of Chester and vicinity that the transportation companies have applied to the Interstate Commerce Commission for an advance of 5 per cent in freight rates; and

Whereas the Board of Trade of Chester and vicinity believes that the granting of the proposed 5 per cent increase to the transportation companies would be a source of stimulation to the business interests of the country, and particularly to those of Chester and vicinity; and

Whereas the Board of Trade of Chester and vicinity is firmly convinced that railroad prosperity and national prosperity go hand in hand; and

Whereas the Board of Trade of Chester and vicinity believes that in granting the 5 per cent advance in freight rates the small increase requested is not sufficiently heavy to work a hardship or place a burden upon any of the business interests of the country, and particularly those of Chester and vicinity, and also that the smaller retail merchants will not have cause for lament if the increase is granted; and

Whereas the Board of Trade of Chester and vicinity recognize the fact that the transportation companies are and have been for some time put to considerable extra expense in every department by reason of recent legislation, necessitating their supplying themselves with more expensive equipment and modern safety appliances, and that the demands for increased remuneration are constantly growing more insistent: Therefore be it

Resolved, That the Board of Trade of Chester and vicinity do and hereby does heartily and cordially indorse the action of the transportation companies in requesting the increased freight rate of 5 per cent made to the Interstate Commerce Commission; and be it further

Resolved, That this resolution be adopted and spread upon the minutes and that copies of this resolution be properly attested and certified and forwarded to the chairman of the Interstate Commerce Commission; Mr. Charles Bye, secretary of the Charles Warner Co., Wilmington, Del.; Senator William C. Sproul, Chester, Pa.; and Mr. E. G. Ward, president of the Railway World, Philadelphia, Pa.

[SEAL.] SAMUEL D. CLYDE, *President.*

Attest:
A true copy.

NEIL B. SINCLAIR, *Secretary.*

—

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, January 9, 1914.

HON. JAMES S. HARLAN,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: On behalf of the Chamber of Commerce of the State of New York, I beg to call your earnest attention to the inclosed copy of a resolution unanimously adopted by the chamber at a largely attended meeting held January 8, 1914, expressing its gratification that the Interstate Commerce Commission had taken up for consideration the question of sanctioning an advance in railroad rates, and also expressing the belief that the shippers of the country are prepared for this action as an act of justice to the railroads and beneficial to the business of the United States.

This resolution was presented to the chamber by its committee on internal trade and improvements, composed of Messrs. Samuel W. Fairchild, chairman; Wm. Jay Schieffelin, Cornelius N. Bliss, jr., Harman B. Vanderhoef, Charles E Peck, Edward O. Stanley, and Burns D. Caldwell, all but one of whom are prominent in the mercantile trade in this city; and it was also approved by the executive committee of the chamber before its adoption at an open meeting of the chamber.

Yours, respectfully,

SERENO S. PRATT, *Secretary.*

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, January 9, 1914.

DEAR SIR: At a meeting of the Chamber of Commerce of the State of New York, held January 8, 1914, the following report, presented by the committee on internal trade and improvements, was unanimously adopted:

"Whereas the Interstate Commerce Commission is now considering the question of permitting the railroads of the United States to advance their rates, in order to cover the increased cost of labor and other growing financial burdens, without further depletion of net income, and thus enable them to obtain the additional credit necessary to provide the increased facilities needful for the expanding traffic of the country; and

"Whereas in April, 1912, the chamber adopted a report urging in the interests of shippers and of the well-being of the country as a whole, that any necessary readjustments of freight rates should be accomplished without further curtailing the revenue of the railways upon which their borrowing capacity depends, bearing in mind, as stated by the railroad securities commission, that 'a reasonable return is one which, under honest accounting and responsible management, will attract the amount of investors' money needed for the development of our railroad facilities;' and

"Whereas since that report was adopted the financial burden of the railroads has been increased by further advances in the wages of labor and in the cost of materials, repairs, and supplies, so that their net income is now declining: Therefore be it

"*Resolved*, That the Chamber of Commerce of the State of New York expresses its gratification that the Interstate Commerce Commission has taken up for consideration and decision the question of sanctioning an advance in railroad rates; and the chamber believes that the shippers of the country, many of the largest of whom are represented in its membership, now feel that a prompt advance would be not only an act of justice to the railroads but also beneficial to the entire business of the United States; and be it further

"*Resolved*, That copies of this action be transmitted to the Interstate Commerce Commission and to the President of the United States.

"SAMUEL W. FAIRCHILD,
"WM. JAY SCHIEFFELIN,
"CORNELIUS N. BLISS, JR.,
"HARMAN B. VANDERHOEF,
"CHARLES E. PECK,

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, January 9, 1914.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: On behalf of the Chamber of Commerce of the State of New York, I beg to call your earnest attention to the inclosed copy of a resolution unanimously adopted by the chamber at a largely attended meeting held January 8, expressing its gratification that the Interstate Commerce Commission had taken up for consideration the question of sanctioning an advance in railroad rates, and also expressing the belief that the shippers of the country are prepared for this action as an act of justice to the railroads and beneficial to the business of the United States.

This resolution was presented to the chamber by its committee on internal trade and improvements, composed of Messrs. Samuel W. Fairchild, chairman; Wm. Jay Schieffelin, Cornelius N. Bliss, jr., Harman B. Vanderhoef, Charles E. Peck, Edward O. Stanley, and Burns D. Caldwell, all but one of whom are prominent in the mercantile trade in this city; and it was also approved by the executive committee of the chamber before its adoption at an open meeting of the chamber.

Yours, respectfully,

SERENO S. PRATT, *Secretary.*

CHAMBER OF COMMERCE OF THE STATE OF NEW YORK,
New York, January 9, 1914.

DEAR SIR: At a meeting of the Chamber of Commerce of the State of New York, held January 8, 1914, the following report presented by the committee on internal trade and improvements was unanimously adopted:

"Whereas the Interstate Commerce Commission is now considering the question of permitting the railroads of the United States to advance their rates, in order to cover the increased cost of labor and other growing financial burdens, without further depletion of net income, and thus enable them to obtain the additional credit necessary to provide the increased facilities needful for the expanding traffic of the country; and

"Whereas in April, 1912, the chamber adopted a report urging in the interests of shippers, and of the well-being of the country as a whole, that any necessary readjustments of freight rates should be accomplished without further curtailing the revenue of the railways, upon which their borrowing capacity depends, bearing in mind, as stated by the railroad securities commission, that 'a reasonable return is one which, under honest accounting and responsible management, will attract the amount of investors' money needed for the development of our railroad facilities'; and

"Whereas since that report was adopted the financial burden of the railroads has been increased by further advances in the wages of labor and in the cost of materials, repairs, and supplies, so that their net income is now declining: Therefore be it

"*Resolved*, That the Chamber of Commerce of the State of New York expresses its gratification that the Interstate Commerce Commission has taken up for consideration and decision the question of sanctioning an advance in railroad rates; and the chamber believes that the shippers of the country, many of the largest of whom are represented in its membership, now feel that a prompt advance would be not only an act of justice to the railroads but also beneficial to the entire business of the United States; and be it further

"*Resolved*, That copies of this action be transmitted to the Interstate Commerce Commission and to the President of the United States.

—

AUBURN, N. Y., *January 23, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: As secretary of a meeting of the citizens of Auburn held at the courthouse in said city on the evening of January 22, 1914, pursuant to newspaper call, I am instructed to forward to your commission the resolution herewith inclosed, which resolution was adopted by unanimous vote of such meeting after favorable remarks made by prominent manufacturers and merchants of the city.

Very truly, yours,

GEO. K. VAN SICKLE,
Secretary.

Resolution.

We, citizens of Auburn, in a public meeting assembled,

Resolved, That we desire that the railroads east of the Mississippi and north of the Ohio and Potomac be given an increase in freight rates, because the interrelations of the people and railroads are so complete as to cause the quality of business of both to be the same; and we desire that the railroads be more able financially to make improvements for the benefit of the public.

We instruct our secretary to send to the Interstate Commerce Commission this resolution.

—

THE COMMERCIAL CLUB OF
INDIANA HARBOR AND EAST CHICAGO,
Indiana Harbor, Ind., January 22, 1914.

INTERSTATE COMMERCE COMMISSION,
Indianapolis, Ind.

GENTLEMEN: At a meeting of this club on Wednesday evening it was decided to notify your honorable body that it is the sense of this organization that the application by common carriers for a 5 per cent increase in freight rates now pending before you be granted.

Our organization represents all classes of shippers, from steel manufacturers to the smallest retailer.

Yours, very truly,

M. E. CRITES.

—

BUSINESS MEN'S ASSOCIATION,
Auburn, N. Y., January 23, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The following resolutions were adopted unanimously by the board of directors of the Business Men's Association at a meeting held this last week. I am sending you a copy for your perusal and files.

Yours, very truly,

C. G. ADAMS, *Secretary.*

Whereas an application is now pending before the Interstate Commerce Commission in behalf of the eastern railroads for a 5 per cent increase in freight rates; and

Whereas while the gross revenue of said railroads has generally increased the net revenue has decreased, owing to the rise in wages and the growing cost of material; and

Whereas the railroads have suffered and are suffering from inability to obtain funds for the proper development of facilities to handle increased business, said inability to obtain funds being caused by the continued decrease in net revenue: Now, therefore, be it

Resolved, That the Auburn Business Men's Association approve the granting of said moderate increase in freight rates, in itself fair and equitable, and with the belief that increased prosperity of the railroads will stimulate and help business in general.

—

CHAMBER OF COMMERCE,
Union City, Pa., January 23, 1914.

Resolved, That the Union City Chamber of Commerce records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that, in our opinion, such increase is necessary on account of business conditions and increased cost of operation; and that it is advisable, because it will result in better railroad accommodations, more railroad construction, and safer transportation; and that the secretary be directed to communicate this resolution to our Congressman and to the Hon. E. E. Clark, Chairman Interstate Commerce Commission.

J. H. OTTAWAY, *Secretary.*

—

SHARON CIVIC ASSOCIATION,
Sharon, Pa., January 5, 1914.

Resolved, That the Sharon Civic Association is heartily in favor of favorable action by the Interstate Commerce Commission on the application of the railroads of the central and eastern classification territory for an increase of rates, and we believe it would be advantageous to the country if such favorable action could be taken with the least possible delay.

We believe the proposed advances are justified and are necessary in order to provide sufficient revenues for the proper maintenance of and additions to tracks and equipment, to the end that the railroads may be sufficiently and properly equipped to render better service to meet the increasing demands of commerce in a manner that is now impossible, and to safeguard human life of both passengers and employees,

and to enable them to maintain, if possible, the rates of compensation to their employees which have so materially advanced in recent years.

That the secretary of this association be instructed to forward a copy of this resolution to our Representative in Congress, to the Senator from the western end of the State, and Mr. E. E. Clark, Chairman of the Interstate Commerce Commission.

J. T. HULSE, *Secretary.*

THE NATIONAL BUSINESS LEAGUE OF AMERICA,
Chicago, January 17, 1914.

Hon. CHARLES A. PROUTY,
Commissioner Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Pursuant to instructions of the board of directors of this league, I inclose copy of a preamble and resolution recommending a uniform increase of railway rates, adopted by the board at a special meeting, in Chicago, on the 15th instant.

Yours, very truly,

A. A. BURNHAM, *General Secretary.*

FOR REASONABLE RAILWAY RATES.

Resolutions adopted by the board of directors of the National Business League of America, at the Hotel La Salle, Chicago, United States of America, Thursday, January 15, 1914.

Whereas the resolutions committee of the National Business Congress, held under the auspices of the National Business League of America, in the platform adopted June 27, 1912, declared that "sufficient and efficient transportation is necessary to the prosperity of the whole country," and "depending upon transportation regulation as an established fact, we believe it important that in providing regulations due consideration be given to the question of securing transportation net earnings sufficient to meet all necessary costs of maintenance and operation, and to provide all facilities required by the growth of every community; and

Whereas we believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property; resulting also in the curtailment of purchases from dependent industries, which seriously cripples the general business of the country: Therefore be it

Resolved by the board of directors of the National Business League of America, That as a necessary measure, imperative to the prosperity of carrier, shipper, and business interests generally, an immediate uniform increase of not less than 5 per cent transportation rate be granted the railway interests: and be it further

Resolved, That copies of this preamble and resolution be presented to the members of the Interstate Commerce Commission and to the public press.

WATERTOWN, N. Y., *January 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a regular meeting of the board of directors of the Watertown Chamber of Commerce (Inc.) held last evening, the matter of the proposed increase in freight rates was given consideration.

By a unanimous vote the board recorded itself in favor of the proposed increase, and the writer was directed to formally address your body and petition, "in justice to the railroad companies and in the interest of general business," that an increase in rates be granted.

Yours, very truly,

WATERTOWN CHAMBER OF COMMERCE (INC.),
F. H. LAMON, *Secretary.*

—

JOLIET, ILL., *January 9, 1914.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.:

The Commercial Club, an organization of business men of this city, are convinced that the business conditions of the country would be benefited if the railroads are granted the right to increase their freight rates, and are unanimous in favor of and recommend that the increase of 5 per cent in rates asked for by the railroads be granted.

JOLIET COMMERCIAL CLUB.
J. R. BLACKHALL, *Secretary.*

JOLIET, ILL., *January 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Executive board favors speedy action favoring uniform 5 per cent increase in freight rates in official classification territory.

MERCHANTS' ASSOCIATION OF JOLIET.
JOS. F. NACHBOUR, *President.*
ANTON SCHAGER, *Secretary.*

—

CHAMBER OF COMMERCE OF WAVERLY, N. Y.,
January 9, 1914.

Resolved, That the Waverly Chamber of Commerce records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that in our opinion such increase is necessary on account of business conditions and increased cost of operation, and that it is advisable because it will result in better railroad accommodations, more railroad construction, and safer transportation; and that the secretary be directed to communicate this resolution to our Congessman and to the Hon. E. F. Clark, chairman Interstate Commerce Commission.

BYRAM L. WINTERS, *President.*
J. H. MURRAY, *Secretary.*

—

KENTON, OHIO, *January 9, 1914.*

Hon. E. E. CLARK,
Washington, D. C.

SIR: The members of the Kenton Commercial Club would be glad for the Interstate Commerce Commission to grant permission to the railroads to increase the freight rates 5 per cent.

We have seriously felt the discharging of so many railroad employees living in Kenton, and feel that the shippers will be more than benefited indirectly when the roads hire their normal forces.

And it will not be felt by anyone in particular if the 5 per cent increase is allowed.

We hope you will not ponder long over the 79 questions you have requested the railroads to answer by the 31st of this month. But, for the good of the country, grant the increase.

Respectfully,

THE KENTON COMMERCIAL CLUB,
By H. L. HOPWOOD, *Secretary.*

—

MERCHANTS AND MANUFACTURERS' ASSOCIATION,
Baltimore, January 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Inclosed please find copy of a resolution adopted at the December general meeting of this association, which I am sending to you for your information.

Very truly, yours, ROBERT J. BEACHAM, *Secretary.*

Resolved, That the Merchants and Manufacturers' Association of Baltimore congratulates the country and the administration upon the passage of a banking and currency law, which is being a great step in advance of old legislation, will inspire confidence in the future, and, in doing so, greatly assist in the recovery and further development of general business.

Resolved, That this association ventures also to express the hope that as the result of the investigation now in progress by the Interstate Commerce Commission the commission, with the approval of the administration, will feel warranted in permitting transportation companies to increase their charges for freight service 5 per cent of the amount of such charges as now fixed, in order that the railroads, in reaping fair profits, may be permitted, in introducing needed improvements in equipment, to again enter the market for both labor and material to the further benefit of the entire country.

—

FAIRMONT CHAMBER OF COMMERCE,
Fairmont, W. Va., January 10, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington D. C.

GENTLEMEN: I am inclosing herewith a series of resolutions unanimously adopted by the Fairmont Chamber of Commerce at a meeting held January 6, 1914, setting forth the attitude of the business men of Fairmont and vicinity on the question of granting the railroads the privilege of making the 5 per cent increase in freight rates, which matter is now before you.

We hope that it may have your favorable consideration, and that the railroads may be granted their request.

Yours, truly.

CHAS. W. EVANS, *Secretary.*

Resolutions unanimously adopted by the Fairmont Chamber of Commerce Tuesday, January 6, 1914.

Believing that the railroads of the United States constitute one of the most important factors determining her prosperity; and

Believing that additional requirements by law and public opinion in the matter of more efficient equipment, increased wages, and increased operating expenses generally necessitate additional income; and

Believing, further, that the proper development and maintenance of the business of the country depending on the railroads will be seriously retarded should the companies fail to secure from the Interstate Commerce Commission the privilege of making the 5 per cent advance in freight rates which they feel is necessary to meet increased demands in operating and other expenses; and

Believing, further, that it is proper in a matter of such vital importance as this that the people, through their civic and business organizations, be permitted to express their views as to the manner in which such action will affect them: Therefore be it

Resolved, That the Fairmont Chamber of Commerce, through its board of directors, hereby appeals to the Interstate Commerce Commission to favorably consider the petition of the railroads for the advanced freight rates which they ask to compensate them for increased operating and other expenses, and permit the adoption of freight schedules which will restore railroad activities and stimulate the business of the country, to the advantage of every section and every form of industrial enterprise.

BOARD OF DIRECTORS FAIRMONT CHAMBER OF COMMERCE,
By R. T. CUNNINGHAM, *President.*

Attest:

CHAS. U. EVANS, *Secretary.*

TERRE HAUTE, IND., *January 13, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The following resolution, which is self-explanatory, has been adopted by our organization:

"Whereas the railroads in the so-called official classification territory have filed with the Interstate Commerce Commission a proposal for a general advance of 5 per cent in freight rates; and

"Whereas the question is now up for hearing before the Interstate Commerce Commission; and

"Whereas long-continued uncertainty as to the final outcome will be detrimental to the commercial activities of the country: Now, therefore, be it

"*Resolved*, That the board of directors of the Terre Haute Chamber of Commerce favors a horizontal increase of freight rates in official classification territory, but opposes the proposed increase of one-fourth cent per 100 pounds, minimum, or 5 cents per ton; and be it further

"*Resolved*, That a copy of these resolutions be sent to the Interstate Commerce Commission."

Very truly, yours,

TERRE HAUTE CHAMBER OF COMMERCE,
By H. R. IRHIE, *Secretary.*

TRAFFIC—ADVANCE IN FREIGHT RATES.

CINCINNATI CHAMBER OF COMMERCE
AND MERCHANTS' EXCHANGE,
Cincinnati, March 20, 1914.

Honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Inclosed please find copy of resolution unanimously adopted by the board of directors of the Cincinnati Chamber of Commerce at a meeting held on March 19, 1914.

Yours, very truly,

W. C. CULKINS, *Executive Secretary.*

Resolution adopted by the board of directors of the Cincinnati Chamber of Commerce March 19, 1914.

"Whereas the railroads in official classification territory have applied to the Interstate Commerce Commission for permission to advance their freight rates generally 5 per cent, for the purpose of improving their equipment and for developing terminals and other facilities necessary for the prompt and safe transportation of freight and passengers; and

"Whereas we believe that the necessities of the carriers north of the Ohio River require that this advance in freight rates be granted and that the business conditions of the country are being adversely affected by the inability of these railroads to extend their facilities:

"*Resolved*, That the board of directors of the Cincinnati Chamber of Commerce unanimously advocate the advance, and hereby earnestly petition the honorable Interstate Commerce Commission to act favorably upon the proposed increase in freight rates, and to authorize said advance as soon as it is feasible so to do."

The foregoing resolution was unanimously adopted by the board of directors of the Cincinnati Chamber of Commerce at a meeting held March 19, 1914.

W. C. CULKINS, *Executive Secretary.*

PHILADELPHIA, PA., *March 20, 1914.*

Honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The tariffs presented by the 52 railroads in eastern classification territory for an increase of 5 per cent in freight rates are suspended by the commission pending the examination as to justness and fairness of these increased rates upon a 5 per cent horizontal increased basis, the object being in lieu thereof to assess a charge per car for so-called spotting, or placing a car at an industrial plant for loading, and also a similar charge for placing the same car at the consignee's private track for unloading. This charge to be in addition to the present freight rate.

It is our belief that if the commission would grant the 5 per cent increase in freight rates immediately to the railroads it would solve the problem confronting the business interests to-day to a very large degree. The 5 per cent increase will furnish the revenue desired, at the same time does not disturb the conditions upon which freight rates and business have been built for years. It leaves every manufacturer, as far as we can analyze conditions, in practically the same relative position he has always enjoyed. The competitive and the economical factors are disturbed decidedly less than by any other method of raising money by assessing for a spot charge on one particular branch of industries simply those owning their own sidetracks.

Every manufacturer or every shipper—can be definitely presumed, at least—would in case his particular business was menaced in every way from unjust advance in rate, any inequality as compared with his competitors manufacturing like materials, or manufacturing similar materials affecting his interest in competitive markets, will, as heretofore, endeavor to adjust these inequalities with the railroad officials who are directly interested in his particular problem, and it is safe to assume that 65 per cent of such inequalities or unfair rates would be corrected by the railroad company in accordance with the actual conditions. In case of failure to get what the industrial felt was fair and equitable rates from his railroad, he has recourse to the Interstate Commerce Commission. This simply means, as heretofore, any injustices are taken up and handled in a fair, just, equitable way, and facts ascertained through the power of the commission and conclusions reached which are fair and just.

We believe, therefore, if the commission would at once permit the railroad to make effective the suspended tariffs, there is sufficient power within the Interstate Commerce Commission to give the public and the railroads a fair deal without disturbing business conditions; without unsettling established competitive markets for various materials; without discriminating against one particular class; without discriminating in favor of another particular class; without obliging the railroads to provide new expensive facilities excepting as they are actually needed.

We furthermore believe that this transportation question has been and is to-day the most important factor that has entered into the business situation to retard its natural advancement; that this particular factor and the continuation of the hearing and investigation have obliged the railroads to economize in every possible way and from every standpoint. The industrial world knows exactly what this means; a large percentage of the products manufactured go into the railroad operation in some way or other. Industries manufacturing and supplying these commodities are suffering through loss of business, and will suffer still further. It further means that the railroad companies will be obliged to cut down their working hours and their shops, reduce train service, throwing out of employment the men necessary to operate those trains, and further economize in every way in their power.

We therefore petition your honorable body to give these facts serious consideration, and in our judgment it is necessary to put the tariff in effect first, start the wheels of progress going, and adjust the inequalities as they arise from time to time.

Yours, very truly,

EASTERN PENNA. BUILDERS' SUPPLY ASSOC.,
GEORGE A. SINN, *President.*
JOS. W. CAMPBELL, *Secretary.*

BOSTON, MASS., *March 20, 1914.*

The crisis in American railroads.

It is becoming increasingly evident to the business man that if he would live and prosper he must protect himself with every available means from the application of the unbalanced theories of the political demagogue and from the malicious, insidious, and malevolent scheming and chicanery of the professional agitator and muckraker. The business man, big and little, the investor, the capitalist, and the wage earner—to such a pass has half-baked, ill-considered legislation come—should make haste to exercise the privileges of their franchise with greater and still greater fervor if this country is to continue in the years to come what it has been in the past, namely, God's country, for those willing to work and plan and struggle. Not only should this work of organization and combination be felt at the polls, but the business man should speak through his local chamber of commerce and the investor and security holder should organize into a league, which should comprise the millions of holders of American stocks and bonds. Not until this is done will the country find relief from the operations of those whose mainspring of political action is the attack on and the crippling of business and enterprise; in short, capital asks but fair treatment, failing which it will depart in due course of time to lands and laws where its rights are respected.

Recklessness of statement and demagogy in high places are all too common, and it is this feature which the business man must fight and resist, for after all is said and done the present administration at Washington represents to a greater extent than any other in our history those whose personal stake in the country is small and of whom too many are apt to view with a suspicious and jaundiced eye success and fortune in commerce and industry. President Wilson is able and clear-sighted, having indubitably shown that he has the best interests of the country at heart, regardless of party or politics, but may it not be said that a part, at least, of his official family is more of a burden than assistance?

That the country is facing a crisis which should make every business man and investor raise his voice and make himself heard at Washington is certain. It is a crisis which has been deliberately brought on by the authorities at Washington and which can alone be composed or settled by them. We refer to the request of the eastern railroads to be allowed to increase their rates by 5 per cent. Some four years ago these railroad companies made a similar plea to the Interstate Commerce Commission, which was denied them. Since then, with diminished credit, declining earnings, advancing wages, and advancing costs of everything which enters into transportation, they have been reduced to a position where once again they have been forced to appeal to the commission for relief. This appeal by the carriers has now been before the commission for over a year; and yet, in spite of the great urgency of the case, there has been no decision handed down. It does not matter that during the past year these same roads have been obliged to raise the wages of their employees (the second time in two years), to raise new capital at ruinous rates, by means of the short-term note, for improvements demanded by the public, and to restrict their expenditures wherever possible for new equipment and facilities.

The crisis of free silver which the country faced in 1896 was not more serious or more far-reaching in its ramifications than the one which now confronts us in connection with our railroads, and we believe it to be the duty of every chamber of commerce in the land to petition the Interstate Commerce Commission that the prayer of the eastern roads not only be granted, but that the decision granting them relief be handed down with all possible dispatch. If free silver had prevailed in 1896, we should have had the most devastating panic in history; it would have meant national repudiation. If the eastern carriers are again denied relief, we shall witness a cataclysm in this country which will shock the world. Railroad credit will be paralyzed; roads now in smooth water will be forced upon the rocks of bankruptcy; suspicion will seize hold not only of the man with liquid funds, but of the man with good securities; the former will hide his capital or put it to work in Canada and the latter will rush to market to sell at ruinous prices. To state the unqualified truth, every day of delay is bringing the situation to a more serious condition, increasing the number of unemployed throughout the country, who might easily grow desperate, and causing a suspension of credit. In short, the case of the railroads has been allowed to reach that stage where the alternative is increased rates or panic and paralysis of credit. Fortunately, the railroads have a good case, as expenses for wages, equipment, materials, etc., have risen much faster than earnings. No one knows better than the Interstate Commerce Commission that the only commodity which the railroad has to sell, namely, transportation, has remained stationary during the past 10 years, while everything it must buy has advanced from 20 to 80 per cent.

The investor in industrial companies, the merchant, the manufacturer, the wage earner, and the day laborer should not lightly dismiss this crisis of the railroads as having no bearing on their own fortunes, for inextricably bound up with the railroads is the prosperity of the entire country. Not a city or a village or a hamlet but will feel the prosperity or the poverty of the railroads, they being the largest employers of labor, the largest buyers of manufactured materials, and the greatest factors in the development of the resources of the Nation.

Let us all get busy, then, through our chambers of commerce; let the business man and the investor realize to its fullest extent what this crisis of our railroads means to us. Act now resolutely, and decisively, and help restore prosperity and good times to these United States.

The turning point is very near; the burden to confidence and credit grows heavier each day: there is a limit which it would be dangerous to reach. The responsibility of the Interstate Commerce Commission for what may ensue is tremendous. Stop and think what would be the conditions in this country with poor crops this year coming on top of

a refusal to grant the railroads increased rates. The mere thought is hideous in the extreme.

F. A. SCHIRMER & CO.

—

LOCKPORT BOARD OF TRADE,
Lockport, N. Y., March 23, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The directors of the Lockport Board of Trade have given consideration to the request for a 5 per cent increase in freight rates to railroads and also for making a charge for spotting cars. The directors oppose any increase in freight rates and also oppose for charge for placing cars on privately owned switches, such as exist in this city, for the reason that private switches are a convenience to the railroads, as they would have to have more yard area, whereas the expense of the private switch is borne by the owner with the exception of the rails.

Yours, very truly,

WM. A. DICKENSON, *Secretary.*

—

NORTHEAST WASHINGTON CITIZENS' ASSOCIATION,
Washington, D. C., March 23, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: At the last meeting of the association, held Monday evening, March 9, 1914, the following resolution was adopted:

Resolution.

Whereas the railroads are pressing for an increase in freight rates; and
Whereas the existing cost of living in the United States is so high as to constitute a menace to the comfort and welfare of the people: Therefore be it

Resolved, That this association earnestly protests against any and all increases in freight rates which might in any manner or degree operate to increase the cost of living of the people at large; and

Resolved, That a copy of these resolutions be transmitted to the Interstate Commerce Commission.

Respectfully, ROSCOE JENKINS, *Secretary.*

Attest:

EVAN H. TUCKER, *President.*

—

CHICAGO, *April 24, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Chicago Brass Manufacturers' Association, of Chicago, it was resolved that in the opinion of the members of this association, an organization comprising 62 lines of kindred trades, all of whom are both receivers and shippers of freight, some larger and some smaller, that your honorable body be petitioned to grant the concession in freight rates, amounting to 5 per cent over the present rates, to the railroad companies now asking it. The resolution we beg to submit to you herewith and ask for your concurrence:

Resolved, That the Chicago Brass Manufacturers' Association, of Chicago, in monthly meeting assembled, respectfully ask that in the matter of the request made by the railroads of the country for an increase of 5 per cent in freight rates, the request be granted as being highly conducive to a better and greatly improved business condition throughout the country, the railroads being the largest purchasers of supplies of every sort from the merchants and manufacturers of this country; and it is further

Resolved, That, in the unanimous opinion of this organization, no one measure more beneficial or of greater financial value to the country could be adopted than the granting of the concession asked by the railroad companies, believing that they should have adequate income to provide proper equipment, to make necessary extensions, and render efficient service, and guarantee safety of life and property; and we are of the further belief that the armies of the idle at the present time are largely due to the fact that the railroads are unable to give them employment, owing to diminished revenues.

Respectfully submitted.

J. F. BOWERS (*Chairman*),
W. W. WILLITTS,
C. W. STIGER,
J. S. DUNCAN,
A. D. CURTIS,
W. D. ALLEN,
A. R. BRUNKER,
Committee.
WILLIAM M. WEBSTER,
Commissioner.

—

AMERICAN HOTEL PROTECTIVE ASSOCIATION
OF THE UNITED STATES AND CANADA,
Auditorium Tower, Chicago, April 23, 1914.

To the SECRETARY OF THE PRESIDENT OF THE UNITED STATES,
White House, Washington, D. C.

SIR: I have the honor to send you herewith resolution passed at a recent meeting of the American Hotel Protective Association of the United States and Canada, with the request that you bring it to the notice of the President of the United States at your earliest convenience.

Yours, respectfully,

J. K. BLATCHFORD, *Secretary.*

Resolutions unanimously adopted at the meeting of the American Hotel Protective Association of United States and Canada held at the Waldorf-Astoria Hotel, New York City, April 14, 1914. Moved by George C. Boldt, New York City; seconded by Charles C. Horton, Waterloo, Iowa; and carried unanimously.

Whereas there has been presented to the Interstate Commerce Commission the question of permitting the railroads of the United States to advance their rates in order to cover their increasing burden of maintenance and operating charges by reason of the increased and increasing cost of labor, materials, repairs, supplies, and other growing financial burdens, and in order that there may not be further depletion of the net income of such railroads; and
Whereas it is believed that such advance is absolutely necessary and that the increased revenue derived therefrom will be equitably applied to the enlargement and development of terminals, additional equipment, and to improved and increased facilities commensurate with the expanding traffic of the country; and
Whereas, to meet the needs of such expanding traffic, it is absolutely essential that the net income of the railroads of the country should not be further depleted, as this would result in increasing difficulty in obtaining credit necessary to provide for the increased facilities now so sorely needed; and
Whereas the prosperity of the country is in large measure dependent upon the ability of its railroads to adequately meet the growing demands for transportation facilities: Now be it

Resolved, That the American Hotel Protective Association of the United States and Canada, an organization having upward of 900 members, coming from all sections of the country, in convention assembled, desires to express its gratification that the Interstate Commerce Commission has taken up for consideration and decision the question of sanctioning an advance in the railroad rates; and this association desires to give expression to its belief that a prompt advance in such rates would be not only an act of justice to the railroads but also of large benefit to the entire business of the United States; and be it further

Resolved, That copies of these resolutions be transmitted to the Interstate Commerce Commission and to the President of the United States.

[SEAL.] J. F. BLATCHFORD, *Secretary.*

—

ROME, GA., *April 23, 1914.*

Hon. JUDSON C. CLEMENTS
(Care Interstate Commerce Commission),
Washington, D. C.:

The board of directors of the Rome Chamber of Commerce has passed resolutions memorializing Interstate Commerce Commission to grant the request of railroads in matter of increase in freight rates, and I beg you to communicate this resolution to the commission. The Rome Chamber of Commerce believes that it would be to the commercial advantage of the country at large for the railroads to be granted authority to increase their rates as prayed for.

WRIGHT WILLINGHAM,
President Rome Chamber of Commerce.

—

ST. LOUIS, MO., *December 1, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Inclosed please find resolutions passed at the national convention of the International Association of Electrotypers at New Orleans October 21–23, 1913.

Yours, truly,

INTERNATIONAL ASSOCIATION OF ELECTROTYPERS,
WM. B. JONES, *Secretary.*

Whereas under our present system of society it is inevitable that the prosperous condition of business, and the people generally, is dependent largely on the efficiency of our methods of distribution; and
Whereas the railroads are the chief factors in our distributive machinery; and
Whereas the railroads present forceful reasons showing that at the prevailing freight rates they can not hope to raise the money necessary to provide equipment to properly meet the business necessities of the Nation; and
Whereas railroad officials have presented arguments demonstrating that a 5 per cent increase in freight rates is needed to meet the exigencies of the case; and
Whereas we believe it is of the utmost importance that the railroads should not be hampered in their work: Therefore be it

Resolved by the International Employing Electrotypers' Convention, held at New Orleans, October 21–23, 1913, That it hereby requests the proper authorities to use all legitimate expedition in considering and deciding the application of the railroads for an advance in freight rates; and be it also

Resolved, That the officers of the convention are hereby instructed to forward a copy of these resolutions to the Interstate Commerce Commission at Washington.

—

OFFICE OF THE BOARD OF TRADE,
Martinsburg, W. Va., December 16, 1913.

"Whereas existing conditions demand readjustment of values in all lines of commerce and transportation: Therefore be it

"*Resolved*, as the sense of this meeting that the railroads are justly entitled to their proportion by some equitable increase in freight rates to enable them to provide adequate facilities and to further safeguard the lives of those they transport and employ; and

"That a copy of this resolution be mailed to the Interstate Commerce Commission and to those lines entering Martinsburg."

A true extract from the minutes of the executive committee of the Martinsburg Board of Trade unanimously adopted December 15, 1913.

MAX ROBINSON,
Acting Secretary.

—

NEW ORLEANS, LA., *December 16, 1913.*

At a regular meeting of the Turpentine Operators of Texas, Louisiana, and west Mississippi, in convention assembled, the following resolution was introduced by W. B. Gillican and adopted by the convention:

"Whereas the Interstate Commerce Commission has under consideration the matter of freight rates; and

"Whereas it is the sense of this association that the railroads should be allowed reasonable and equitable compensation for their services: Therefore be it

"*Resolved by the Turpentine Operators, composing the New Orleans Association*, That it memoralizes said Interstate Commerce Commission to allow the railroads to increase their rates to a point where their revenues will be sufficient to meet operating expenses, fixed charges, pay reasonable dividends on money invested, and provide a sufficient amount for maintenance and improvements."

A. PRIDGEN, *President.*
A. B. MARSTON, *Secretary.*

—

HUNTINGTON, W. VA., *December 13, 1913.*

MR. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have the honor of handing you a copy of a resolution passed at a recent meeting of our organization, and we trust that your

honorable body will grant the request of the carriers for a 5 per cent increase in their freight rates.

The adoption of this resolution was unanimous, and was passed at a regular monthly meeting, duly advertised according to our by-laws, and was attended by more than the usual number of members.

Very respectfully,

HUNTINGTON CHAMBER OF COMMERCE.
H. E. MATHEWS, *Secretary.*

—

Resolution adopted at the regular December meeting of the Huntington Chamber of Commerce, December 11, 1913.

Whereas railroads must maintain a high state of efficiency for the safety of both passengers and freight, by adding new appliances and improved equipment; and

Whereas there has been a general advance in the price of all commodities and an increase in the cost of raw material; and

Whereas the advanced wage scale demanded has been granted to various employees: Therefore be it

Resolved by the Huntington Chamber of Commerce, That the petition of the carriers in official classification territory to advance freight rates 5 per cent be granted, and that a copy of this resolution be given the public press, as well as sent to the secretary of the Interstate Commerce Commission at Washington.

—

BUFFALO CHAMBER OF COMMERCE,
December 13, 1913.

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In the matter of advance in rates in official classification territory (I. and S. Docket 333), I am submitting for your careful consideration and deliberation resolution adopted by the Buffalo Chamber of Commerce, relative to proposed advance of 5 per cent in rates by the lines in official classification territory.

Yours, very truly,

RICHARD C. O'KEEFE, *General Secretary.*

Resolution adopted by the board of directors of the Buffalo Chamber of Commerce Tuesday, December 9, 1913.

Whereas carriers in official classification territory have filed petition with the Interstate Commerce Commission for rehearing in Docket No. 3400, In the matter of advance in rates, asking for general increase of 5 per cent in all freight rates, praying that the case may be reopened and further considered, owing to increased cost of operation of various kinds set out in their petition, the net return no longer being sufficient; and the commission being of the opinion, from a consideration of the allegations of that petition, the need of, and justification for the additional revenue should be further examined by it at the present time; and

Whereas the commission thinks that such examination can be made more satisfactorily and more comprehensively in a general proceeding of investigation, instituted by the commission upon its own motion, than by a further consideration of this particular record, and further have denied the petition for a rehearing; and

Whereas the Buffalo Chamber of Commerce has given considerable thought to this subject respecting their attitude in the matter, which they recognize as of great importance to the members of the Buffalo Chamber of Commerce, the carriers as well as the public at large: Now, therefore be it

Resolved, That the Buffalo Chamber of Commerce is in cordial sympathy with the purpose of granting railroads such rates as will permit them to properly operate and maintain their properties, and pay a reasonable return on the money invested, and is in sympathy with the Interstate Commerce Commission in making a thorough investigation of the need of and justification for additional revenue, that body to determine from the facts the necessity for said proposed advance, and the reasonableness of the rates to be established thereby, consideration being given to certain localities where the rates are now excessive and unreasonable.

—

CLEVELAND, OHIO, *December 12, 1913.*

Mr. EDGAR E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Our attention has just been called to a communication, under date of December 9, 1913, to the Interstate Commerce Commission from the Pittsburg Vein Operators of Ohio, a copy of which communication is inclosed herewith.

While our company is a member of the Pittsburg Vein Operators' Association of Ohio, we were not represented at the meeting referred to and desire to have it distinctly understood that the communication of December 9, 1913, does not in any way embody our views. Had we been present at the meeting mentioned we would have voted emphatically against the resolution contained in this letter. We believe that the proposed advance asked for by the railroads on all classes of freight, including coal, should be granted. The granting of this advance will not only bring much-needed additional revenue to railroad operators and a much-needed improvement and extension of railroad facilities, but also will establish a new confidence of the investing public in railroad securities and an extension of business activity which will inure to the benefit of all business throughout the country.

The time is most opportune to add this needed touch of assurance.

We take this occasion, therefore, to assure you that we are not in sympathy with the move taken at the meeting of the Pittsburg Vein Operators of Ohio and that we do not join in the protest therein expressed.

Very truly, yours,

THE WHEELING & LAKE ERIE COAL MINING CO.,
By M. ANDREWS, *Vice President.*

—

CLEVELAND, OHIO, *December 9, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Pittsburg Vein Operators' Association of Ohio, a voluntary organization of coal operators, desire to hereby enter its formal protest against the advances in rates on coal shipped from mines belonging to corporations connected with the said association in eastern Ohio to lower Lake ports and local points, as provided for in I. C. C. No. 31.

In filing this protest it is upon the basis of the knowledge that the existing freight rates on coal shipments from this district are more than fairly remunerative for the services rendered, and by comparison much higher than the freight rates on coal shipments from other competitive districts.

In this connection we desire to call the commission's attention to its opinion No. 1947, in the case of the above association against the Pennsylvania Co. et al., in which the rate to the lower Lake ports from this district was established at 75 cents, and that this opinion was handed down after a careful and exhaustive study of the situation by the commission at this investigation, and in the opinion the tremendous difference in transportation charges per mile between the coal shipped from this district and the coal from competitive States was shown in detail.

We see no reason why the coal from this district should bear more than its proportionate share of the burden of transportation.

We also desire to call the attention of the commission to its finding in the Boileau case, to which reference is frequently made in opinion No. 1947, in which it was inferred that the rate established from Pittsburgh was high compared with the services performed.

We desire to further call the attention of the commission to the fact that at the time the decisions were handed down in the Boileau case and in the case of this association against the Pennsylvania Co., that carriers operating from West Virginia voluntarily reduced their rates to lower Lake ports.

In filing this protest it must not be construed as a protest against an advance in any rates other than the rates herein specified.

This protest is filed pursuant to a resolution authorizing the same passed at a meeting of the association at the Hollenden Hotel, Cleveland, Ohio, December 9, 1913.

PITTSBURG VEIN OPERATORS OF OHIO,
JOHN ZELENKA, *Secretary.*

—

BOARD OF TRADE OF THE CITY OF CHICAGO,
SECRETARY'S OFFICE,
Chicago, November 26, 1913.

Hon. EDWARD E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Inclosed please find copy of resolution adopted by the directors of the Board of Trade of the City of Chicago at its stated meeting held yesterday.

Very truly, yours,

J. C. F. MERRILL,
Secretary Board of Trade of the City of Chicago.

The following preamble and resolution were adopted by the directors of the Board of Trade of the City of Chicago at their meeting held on November 25, 1913:

Whereas the railroads in the so-called official classification territory filed a petition with the Interstate Commerce Commission to reopen the so-called general rate advance case (heard and decided adversely to the carriers about two years ago), to the end that the carriers in said territory be permitted to advance all interstate rates 5 per cent; and

Whereas said petition having been denied, tariffs were filed proposing advances in some cases of 5 per cent and in other cases more than 5 per cent to provide funds for increased expenses and additional transportation facilities required, and the commission having suspended said tariffs will proceed to a general inquiry into the subject; and

Whereas advances of more than 5 per cent are proposed in ex-Lake rates:

Therefore this committee recommends to the honorable board of directors the adoption of the following resolution:

Resolved, That inasmuch as the commercial interests of the country require increased transportation facilities and more adequate service, which facilities apparently can only be secured by an increase in the revenue of the carriers, therefore the Board of Trade of the City of Chicago favors a uniform advance of 5 per cent in all rail rates, thereby furnishing the means to provide additional transportation facilities required.

Inasmuch, however, as the necessities of the carriers for more revenue have been anticipated in the so-called ex-Lake rates, which have been subject to successive increases averaging about 40 per cent without a corresponding increase in the all-rail rates, we protest against further advances in such rates, as they are at the present time too high.

—

CHICAGO, ILL., *November 26, 1913.*

Honorable CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: At the twenty-seventh annual convention of the United Typothetæ and Franklin Clubs of America, held at New Orleans, the following resolution was passed, and in accordance with the recommendations made therein I am submitting same to you:

Whereas there appears to be a decided feeling of unrest and uncertainty among the general business public regarding the present railroad situation, which uncertainty vitally affects the printing industry; and

Whereas the railroads claim that with the tendency of the last several years toward reduced rates and increased operating costs, owing to higher wage rates and higher costs of materials and additional requirements of recent legislation: Be it

Resolved by the United Typothetæ of America assembled in its twenty-seventh annual convention, That we earnestly urge upon the honorable Interstate Commerce Commission the necessity of giving thorough consideration at the earliest possible date to the application recently filed by the railroads for permission to increase freight rates; and be it further

Resolved, That a copy of these preambles and resolutions be forwarded to the chairman of the Interstate Commerce Commission.

Yours, very truly,

UNITED TYPOTHETÆ AND FRANKLIN CLUBS OF AMERICA,
S. EVANS CLARK, *Secretary.*

—

ST. LOUIS, *December 4, 1913.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: On Tuesday evening, December 2, at the sixth annual meeting of the Traffic Club of St. Louis, which is composed of the traffic officials of all the industrial, manufacturing, commercial, and shipping interests of this community, as well as the traffic officials of

the railroads, a resolution was presented by a representative of one of the largest shippers in the United States. It was seconded by another large shipper, and was approved by unanimous vote. The resolution follows:

Whereas it appears that the railroads of the country are unable under existing conditions to perform service adequate to the needs of the shipping public; and

Whereas certain railroads have sought permission to advance their rates uniformly by 5 per cent: Now, therefore, be it

Resolved, That the Traffic Club of St. Louis favor such increase as necessary for the greatest good to the greatest number of the people of the United States, and that the secretary of the club be directed to forward to the Interstate Commerce Commission a request that such increase be granted to all the railroads in the United States as will permit them to render service adequate to the needs of the public.

Yours, very truly,

THE TRAFFIC CLUB OF ST. LOUIS,
W. S. CRILLY, *Secretary-Treasurer.*

—

MOROCCO MANUFACTURERS' NATIONAL ASSOCIATION,
Philadelphia, Pa., March 20, 1914.

Mr. CHARLES A. PROUTY,
Interstate Commerce Commissioner,
Washington, D. C.

DEAR SIR: In accordance with unanimous action at the annual meeting of the Morocco Manufacturers' National Association, held in Philadelphia March 12, 1914, I have the honor to transmit to you for your consideration a resolution, referring to plea of the eastern railroads to the Interstate Commerce Commission, asking to be permitted an advance in freight rates.

Yours, respectfully, LAIRD H. SIMONS, *Secretary.*

Resolved, That the Morocco Manufacturers' National Association, in meeting assembled at the Bellevue-Stratford Hotel, Philadelphia, March 12, 1914, are in favor of paying an acquiesce in the freight rate advance asked for by the eastern railroads, and feel that until such time as a decision is rendered by the Interstate Commerce Commission that business will continue in a depressed state; and therefore be it

Resolved, That the Morocco Manufacturers' National Association hereby acquiesce in the advance in rates, if found necessary by the Interstate Commerce Commission, in order to provide business with efficient service and restore general confidence; and further be it

Resolved, That the Morocco Manufacturers' National Association particularly urges the members of the Interstate Commerce Commission to decide with the least possible delay the vital question before them, so that if they see fit to grant the increase asked for, general business may speedily have the stimulating influence of vigorous railway purchases and thereby stimulate all lines of manufacturing and commercial business, and thereby give opportunity to the manufacturing interests at large to reemploy a large percentage of the labor which they have been compelled to dismiss on account of the unsatisfactory condition referred to.

—

DES MOINES, IOWA, *December 15, 1913.*

Hon. E. E. CLARK,
Chairman of the Interstate Commerce Committee,
Washington, D. C.

MY DEAR MR. CLARK: Under separate cover I am sending you a memorial signed by practically every jobber and distributor of the city of Des Moines.

We feel that improved service for Des Moines is necessary, in order that the growing traffic of the city be handled satisfactorily to the jobbers and large shippers.

The memorial itself will explain our attitude.

Yours, with great respect,

BROWN-CAMP HARDWARE CO.,
W. S. BROWN, *President.*

BEFORE THE INTERSTATE COMMERCE COMMISSION.

Your petitioners are business men and shippers, residing in the city of Des Moines, in the State of Iowa, and we respectfully submit for the consideration of your honorable body that in the investigation which is now in progress, looking into the propriety of the proposed readjustments of railway rates, that the relative equity of the rates, as compared with each other, should be considered, also that efficiency and safety in the conduct of the transportation business of the country by the railroads is essential to general prosperity.

The attitude of the signers of this memorial is as follows: We are in sympathy with the work of the commission investigating and adjudicating this question of readjusting and modernizing the rates of the carriers, to the end that such carriers shall be permitted to receive just compensation for the respective services rendered and remuneration which will enable them to give efficient and safe service, to pay all reasonable expenses and a fair profit, and to restore and maintain the credit of the carriers, to the end that they may be able to maintain their properties and to improve and better them.

Dated at Des Moines, Iowa, December 5, 1913.

Respectfully submitted.

—

THE CHAMBER OF COMMERCE,
Steubenville, Ohio, December 6, 1913.

PRESIDENT OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The inclosed resolutions favoring the 5 per cent increase in freight rates asked by the railroads was adopted at a meeting of the *board of* directors of our chamber of commerce last night.

Very truly, yours,

F. P. CHAFFEE, *Secretary.*

Resolutions offered by ways and means committee of chamber of commerce December 3, 1913, and referred to the board of directors with favorable indorsement.

Whereas the cost of labor and materials of all kinds and rigid restriction have advanced very decidedly in recent years; and

Whereas the freight rates on the various railroads are claimed to be too low for the proper financing and equipping of such means of transportation; and

Whereas it is of utmost importance to the shippers to get a quicker handling of freights than is now admissible with the restricted equipment furnished by the various trunk-line railroads; and

Whereas the Steubenville district handles probably as large a freight tonnage as any district of similar size in the country; and

Whereas we believe that a reasonable increase in freight rates is just and would encourage better equipment and secure better service from the railroads in the handling of freights: Therefore be it

Resolved by the Chamber of Commerce of Steubenville, Ohio, That the request of the various railroads to be allowed to put on a 5 per cent increase in freight rates is a just one, and that we recommend to the Interstate Commerce Commission that the same be granted.

Resolved further, That a copy of these resolutions be sent to the president of the Interstate Commerce Commission, the chairman of the Central Railroad Association, our Senators and Representatives in Congress, the secretary of the Chamber of Commerce of the United States, the proper officials of the railroads entering Steubenville, and given the local press.

—

PHILADELPHIA BOARD OF TRADE,
Philadelphia, December 9, 1913.

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: At the meeting of the Philadelphia Board of Trade held on May 19, 1913, the committee on inland transportation presented a report favoring an advance in the rates of freight under the petition then before your honorable body.

I have the honor to forward you herewith copy of the report mentioned, together with the resolution then adopted, and would ask for this action your favorable consideration, being authorized to forward same to you under instructions of the committee having charge of the subject.

Respectfully, yours, W. R. TUCKER, *Secretary.*

PROPOSED 5 PER CENT FREIGHT RATE ADVANCE.

The railroads covering the eastern trunk line territory have filed an appeal with the Interstate Commerce Commission for permission to advance freight rates 5 per cent. This territory produces an annual freight revenue of about $800,000,000 so that an increase of 5 per cent would mean an increased revenue to the railroads of about $40,000,000.

President Rea, of the Pennsylvania Railroad, in an open letter, claims that on that system east of Pittsburgh new legislation in five and a half years has cost his company $11,000,000; that the New Jersey grade-crossing law will cost his company, in that State alone, $60,000,000; whilst full-crew laws, railroad-valuation laws, etc., will cost untold millions more.

Other railroad systems have been similiarly affected in proportion to their extent.

Engineers and firemen have had their wages raised, conductors and trainmen are demanding increased pay; the public demands safety appliances and improved facilities with comforts and conveniences, all of which become added costs to the railroads, but unproductive in the way of revenue.

Legislation and prosecution by the Federal Government and legislation and prosecutions by the various State governments do not diminish, and it is becoming apparent that the natural timidity of capital is being affected by all these things in combination, and that world-wide investors are drawing their purse strings to see what will happen.

The letter of Mr. Rea breathes such a spirit of tolerance, along with acquiescence in and intended obedience to law, as induces a suggestion that all members of our board should give it careful reading and consideration. It should further be borne in mind that the great railroad systems of this country are such tremendous consumers of mill, foundry, and factory productions that when their purchasing power is reduced it reacts on the people, curtails employment, reduces consumption, thus affecting the masses and those least able to bear it.

On the other side of increased freight rates is the question as to what effect it may have on particular sections or on particular commodities, and to what extent some railroads have been improvidently capitalized and imprudently managed, and so not rightfully entitled to the relief an increased earning power would bring.

Your committee is of the belief that the conditions of the transportation systems of the country must be put into shape to handle freely and promptly the trade and commerce of the Nation; that the prosperity of the people is absolutely dependent on the prosperity and ability of the transportation companies to care for them and their business; and your committee, therefore, believing that the greater good will inure to the greater number by permitting the railroads to increase their rates on freights to the extent of 5 per cent, recommends that the executive officers of the board of trade be empowered to address the Interstate Commerce Commission to the effect that they see no reason for objecting to such advance.

On motion the report was accepted and the following was adopted:

"*Resolved,* That the Philadelphia Board of Trade favors such action on part of the Interstate Commerce Commission as will permit an increase of freight rates by the railroads of the country through a fair and equitable adjustment."

True copy.

W. R. TUCKER,
Secretary Philadelphia Board of Trade.

—

INVESTMENT BANKERS' ASSOCIATION,
New York, November 22, 1913.

EDGAR E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: As acting chairman of the committee on railroad bonds and equipment notes of the American Bankers' Association, I respectfully call the attention of your commission to the rapidly rising transportation costs to which most American railroads are subject, and to the rapidly declining ratio of net earnings to gross during the year 1913. For your convenience I am inclosing some sheets showing at a glance how radically conditions in this respect have changed during the past year as compared with conditions when the commission decided pro tempore not to grant the requests of the railroads for increases in rates. (Charts not printed.)

Our committee and the Investment Bankers' Association as a whole have no greater interest in the welfare of the railroads than we have in the welfare of the general public. The public must inevitably suffer as much as the railroads if the equity in earning power, which in the last analysis is the basic security for the bonds of the railroads, is to be imperiled by rising costs of operation without corresponding increases in gross earnings.

I also inclose another sheet showing at a glance the gradual but steady decline of prices in the better grade of railroad bonds for the past five years. The committee appreciates that other influences besides decreasing equities have been at work effecting this decline, but submits that if the railroads should be permitted to increase transportation tariffs commensurately with the general increase in the cost of labor and materials during recent years a distinctly forward step would be taken in relieving the present financial situation, and especially in enabling the railroads to refund at a resonable cost the many millions of dollars of obligations maturing in the near future. (Chart not printed.)

Yours, very truly,

LAWRENCE CHAMBERLAIN,
Acting Chairman Committee on Railroad Bonds and Equipment Trusts.

—

THE BUSINESS MEN'S LEAGUE,
St. Louis, December 1, 1913.

Mr. L. D. BRANDEIS,
Interstate Commerce Commission, Washington, D. C.

MY DEAR MR. BRANDEIS: It was my pleasure to attend the hearing before the Interstate Commerce Commission in the advance-rate case in eastern territory November 24 and 25, and I at that time filed appearance for our league.

I am inclosing herewith copy of resolution adopted by the executive committee of the league June 7, 1913.

Evidently the carriers are endeavoring to present their case to the commission practically along the lines suggested. However, I was instructed to-day by the board of managers of this bureau to communicate with you to the effect that it is not our purpose to attack any particular feature of the proposed advance so long as it is shown to be substantially universally 5 per cent, but that we are prepared and will be glad to assist you in any way we can in developing any facts or features pertinent to the case as may be deemed advisable by you consistent with the attitude of the league as expressed by the resolution of the executive committee.

Command us accordingly at your pleasure.

Yours, truly,

P. W. COYLE, *Traffic Commissioner.*

JUNE 7, 1913.

Whereas certain railroads in what is known as official-classification territory have in effect requested from the Interstate Commerce Commission permission to advance their freight rates uniformly 5 per cent; and

Whereas we believe that the railroads are not now receiving sufficient revenue to enable them to perform, under present conditions, service adequate to the needs of the commerce of the country: Therefore be it

Resolved, That the Business Men's League of St. Louis, by its duly authorized officers and executive committee and in accordance with the unanimous recommendation of its traffic bureau, hereby request the Interstate Commerce Commission to grant to those railroads, as promptly as circumstances will permit, permission to advance freight rates in the uniform manner set forth in their recent petition upon presentation by the representatives of the railroads of such facts and figures to the Interstate Commerce Commission as will prove the necessity of such increase in revenue in order to provide adequate service to the shipping public.

—

ALTOONA, PA., *November 23, 1913.*

Hon. JAMES S. HARLAN,
Interstate Commerce Commissioner, Washington, D. C.:

Please wire me at my expense the probable date at which the Interstate Commerce Commission would be apt to close its hearings on the 5 per cent freight rate advance matter. There is a movement on foot covering large portion of Pennsylvania from citizens only and not officials of any railroad, delegating me to be the bearer of a monster petition to your honorable body, with the request that you will allow me a half hour to deliver an address in advocacy of the 5 per cent freight rate advance. Wishing to be present before hearing is closed, and have also as much time before for signatures to the petition, I beg to thank you in advance for the courtesy of information requested.

W. E. RUSSELL.

BOARD OF TRADE,
Passaic, N. J., January 22, 1914.

Mr. JAMES S. HARLAN,
Mr. EDGAR E. CLARK,
Mr. CHARLES A. PROUTY,
Mr. JUDSON C. CLEMENTS,
Mr. B. H. MEYER,
Interstate Commerce Commission, Washington, D. C.

GENTLEMEN: As a result of a referendum held recently among the members of the Passaic Board of Trade on the question of the increase of freight rates in official classification territory, 214 votes were cast in favor of the increase and only 9 against.

It seems evident from this very decided sentiment on the part of manufacturers and business men of Passaic that the necessity for the increase in rates is recognized, and that so far as Passaic is concerned at least, public opinion is with the railroads.

In order that you may see in just what manner our vote was taken, I inclose herewith a copy of our referendum.

Very truly, yours,

R. E. LENT, *Secretary.*

—

GEORGIA-FLORIDA SAW MILL ASSOCIATION,
Jacksonville, Fla., December 17, 1913.

THE HONORABLE INTERSTATE COMMERCE COMMISSION,
Hon. EDGAR E. CLARK, *Chairman,*
Hon. JUDSON C. CLEMENTS,
Hon. CHARLES A. PROUTY,
Hon. JAMES S. HARLAN,
Hon. CHARLES C. MCCHORD,
Hon. BALTHASAR H. MEYER,
Washington, D. C.

GENTLEMEN: I am inclosing herewith certified copy of resolutions that were adopted at a meeting of this association held in this city on Saturday, November 29.

Yours, very truly,

E. C. HARRELL, *Secretary.*

Whereas it is the opinion of this association that the conditions prevailing to-day in the lumber market is, to a great extent, due to the withdrawal of the railroads from the market, which withdrawal is largely due to the railroads' inability to finance much-needed improvements; and

Whereas the inability to so finance is unquestionably due to the fact that the revenue they derive under the present rates is insufficient to enable them to meet the increased operating expenses and at the same time carry forward the said improvements: Therefore be it

Resolved, That this association go on record as favoring the proposed increase of 5 per cent on all classes and commodities now being considered by the Interstate Commerce Commission, and that the secretary be instructed to convey in such a manner as deemed most advisable the position of this association to the members of the Interstate Commerce Commission and to our Congressmen, requesting their assistance in behalf of the increase. That the secretary also be instructed to consult with the National Lumber Manufacturers Association and through it, with the affiliated members of that association, looking toward creating a sentiment favorable to said increase.

I hereby certify that the above is a true and correct copy of resolution adopted at the meeting of the Georgia-Florida Saw Mill Association held in Jacksonville, Fla., Saturday, November 29, 1913.

E. C. HARRELL, *Secretary.*

—

NEW YORK, *December 19, 1913.*

Mr. CHARLES A. PROUTY,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: At a duly constituted meeting of the board of directors of our association the question of the advance in freight rates, which the railroads are seeking, was thoroughly discussed and it was deemed appropriate to address your honorable body on the subject.

We beg to respectfully submit that, in our opinion, it is advisable at this time, in the interests of the railroads and business in general, that a reasonable advance in rates should receive the sanction of the Interstate Commerce Commission.

The rates that prevail at present have obtained for a number of years. During this period operating expenses have materially increased and earnings in many instances have as a consequence gradually diminished. Many roads are experiencing difficulty in financing and can not therefore suitably maintain their properties and secure a fair return on their invested capital, and unless relief be promptly given, it will, in our judgment, result in consequences of a disastrous nature.

The success of the railroads and the success of business in general is closely interdependent; the growth of one can not become stunted without detriment to the other. We are passing through a period of business depression which, in our opinion, is apt to assume serious proportions; railroads are reducing their working forces; many mills and factories are curtailing their operations; and it is therefore highly essential that the business interests of the country receive stimulus and encouragement. We believe there is no surer means to bring about this end than to give the transportation companies, which are the dominant factor in our industrial activity, a much-needed opportunity to expand and progress.

We do not wish to constitute ourselves champions of the railroads; we have, in fact, in the past successfully opposed advances in rates proposed by the official classification committee of the eastern roads, but we believe that existing circumstances justify favorable action on the subject on the part of your commission and that such action will have a wholesome effect upon business in general and do much to augment national prosperity.

Yours, very truly,

EASTERN MILLINERY ASSOCIATION (INC.),
M. W. AMBERG, *President.*

—

THE MARION CLUB CO.,
Marion, Ohio, December 26, 1913.

Hon. E. E. CLARK
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: By direction of The Marion Club I am inclosing herewith a copy of a resolution passed by its members approving the application of railroads for a reasonable increase of freight rates, and in presenting the same to you I express the hope of the business men of this community that this application will receive favorable consideration by the Interstate Commerce Commission.

Respectfully submitted,

J. A. SCHRODER,
President The Marion Club.

RESOLUTION.

Be it resolved by the members of The Marion Club, representing every branch of the business interests of Marion, Ohio, That we cordially favor the application of the railroads for such reasonable increase of freight rates as may be necessary to cover the increased cost of operation brought about by the numerous demands on the railroads; that such increase is expedient and desirable, in that it will enable the railroads to enter upon the making of betterments for the accommodation of the public in the transportation of freight and passengers, and in that it will restore confidence in the fairness of our citizenship, which will inspire and encourage further railroad construction, all to the end that prosperity and good feeling may be fastered and strengthened for the common good and welfare.

Be it further resolved, That this resolution be suitably engrossed and that copies of the same be transmitted to Hon. JOHN A. KEY, Representative, and Hon. ATLEE POMERENE and Hon. THEODORE E. BURTON, Senators, our representatives in Congress, for their consideration, and a copy to the Interstate Commerce Commission for its information.

THE MARION CLUB,
By J. A. SCHRODER,
Its President.

—

MEADVILLE, PA., *December 26, 1913.*

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: The Meadville Chamber of Commerce, of Meadville, Pa., representing the manufacturing and business interests of this city, recognize the fact that the eastern railway lines have had to materially increase their expenses in the matter of increase in wages to employees, as well as improvement in equipment for the benefit of the public at large, and we earnestly recommend that the 5 per cent advance which the railroad lines have asked for of your honorable body be granted to them.

We believe that the railroad rates are lower than conditions warrant, and the 5 per cent advance amounts to very little to the individual, but means a great deal to the railway lines, and we recognize the fact that their prosperity means a great deal to the general business interests of the country.

Yours, very truly,

[SEAL.] THE MEADVILLE CHAMBER OF COMMERCE.
E. P. CULLUM, *President.*
E. W. LAWRENCE, *Secretary.*

—

MEADVILLE, PA., *December 27, 1913.*

Honorable INTERSTATE COMMERCE COMMISION,
Washington, D. C.

GENTLEMEN: The Industrial Fund Association, of Meadville, Pa., composed of members of the chamber of commerce, business men's exchange, and the four banks of the city, together with the mayor, an institution formed for the purpose of fostering and encouraging the industrial life of this city, in recognition of the fact that the railroad lines in the East have had their expenses materially increased, because of the higher wages to employees, better equipment, etc., recommend that the 5 per cent advance which the eastern railroads have asked of your body be granted.

Undoubtedly the conditions to-day warrant an increase in railroad rates, as from present indications their income is not sufficient to maintain their present efficiency and increase as business conditions demand.

Very truly, yours,

MEADVILLE INDUSTRIAL FUND ASSOCIATION.
JOHN E. REYNOLDS, *President.*
C. FRED CAMPBELL, *Secretary.*

—

MEADVILLE BUSINESS MEN'S ASSOCIATION,
Meadville, Pa., December 27, 1913.

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: At a meeting of the Business Men's Exchange held at their rooms December 26, 1913, the following resolution was unanimously adopted:

"*Resolved*, That it is the sense of the business men of Meadville, Pa., that the increase of freight rates asked for by the railroads of the eastern section is fair and equitable and ought to be allowed by your honorable body.

"*Resolved*, That the Secretary of the Business Men's Exchange send a copy of the above to the Interstate Commerce Commission, Washington, D. C."

Very respectfully, yours,

M. H. LONGWILL, *Secretary.*

—

THE CHICAGO ASSOCIATION OF COMMERCE,
Chicago, December 26, 1913.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission, Chicago, Ill.

DEAR SIR: Inclosed please find copy of preamble and resolutions adopted by the freight-traffic committee of this association Tuesday, December 23, 1913, in respect to the proposed general advance of 5 per cent in freight rates in so-called official classification territory.

Yours, very truly,

H. C. BARLAW, *Traffic Director.*

Preamble and resolutions adopted by the freight-traffic committee of the Chicago Association of Commerce at their meeting held in the city of Chicago, Tuesday, December 23, 1913.

Whereas the freight-traffic committee of the Chicago Association of Commerce did on the 9th day of October, 1913, adopt certain resolutions touching upon the question of the pending investigation upon the part of the Interstate Commerce Commission into the proposed general advance of 5 per cent in freight rates in so-called official classification territory; and

Whereas said committee in their resolutions have not opposed and do not oppose the suggested advance in the all-rail interstate rates; and

Whereas long continued uncertainty as to the final outcome, in the judgment of this committee, will be detrimental to the commercial activities of the country: Now, therefore, be it

Resolved, This committee respectfully urge upon the Interstate Commerce Commission the propriety of causing all parties to the case to proceed with all possible dispatch to the end that a speedy determination of the question may be reached; be it further

Resolved, That a copy of these resolutions be sent to the members of the Interstate Commerce Commission.

—

INDIANA BITUMINOUS COAL OPERATORS' ASSOCIATION,
Terre Haute, Ind., December 31, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: A meeting of the Indiana Bituminous Coal Operators' Association held yesterday indorsed the inclosed resolution nd ordered the same forwarded to you.

Yours, truly,
P. H. PENNA.

TERRE HAUTE, IND., *December 30, 1913.*

To the Interstate Commerce Commission:

Whereas during the past few years the net earnings of the railroads of this country have been gradually decreased to the point where the margin over operating expenses is unsafe, which condition has been brought about by heavily increased operating expenses, both in wages and in complying with various new statutory requirements, while at the same time the gross earnings have not increased in nearly the same ratio; and

Whereas this situation has made it impossible for the railroads to make necessary improvements and buy additional equipment that the industries of the country demand, or even to properly maintain their present equipment and other property; and

Whereas we, the Indiana Bituminous Coal Operators' Association, feel that the welfare of our own industry, together with the welfare of the country as a whole, is closely dependent upon the prosperity of the railroads: Now, therefore, be it

Resolved, That we strongly urge the Interstate Commerce Commission to grant to the railroads an increase in freight rates on all commodities, including coal, feeling assured that such favorable action is necessary and that it will tend to immediately restore a feeling of confidence and prosperity, not only to the railroads, but to industry as a whole in this country.

Respectfully submitted.

BITUMINOUS COAL OPERATORS' ASSN.

—

NATIONAL LEAGUE OF COMMISSION MERCHANTS
OF THE UNITED STATES,
MINNEAPOLIS BRANCH,
Minneapolis, Minn., December 20, 1913.

The honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: With respect to the request of various railroad lines for an advance in rates, which matter we believe is now before your honorable body, it is our desire to call to your attention the situation which confronts us as shippers and receivers of perishable products with reference to the time schedule now in force by various railroads operating into this city from the following eastern and southern gateways, viz, Chicago, Omaha, Kansas City, and St. Louis.

Some time since the railroads operating from points mentioned lengthened their freight schedule so that car-lot shipments coming to this city reached us one day later than under the former schedule which had been in effect a number of years and which was highly satisfactory to ourselves.

It was stated by the railroads at the time that the schedule was lengthened that this action was made necessary by reason of the need for economy in operation, and that faster schedule could not be maintained at the rates then in force.

The change in schedule worked very much to our disadvantage as we were deprived of the advantage given in receiving fresh supplies from southern and eastern shipping points.

It is very essential in this line of business that we have expeditious time service. Generally the equipment furnished is satisfactory and the maintaining of the previous schedule would permit us to handle a greater volume of supplies and thus work to the advantage of both producers and consumers.

It seems entirely reasonable to us to ask that the railroads be compelled to resume their former schedule, especially if relief be granted them through an increase of rates.

We pass this to the consideration of your honorable body with the hope that our position may be appreciated, and the matter given careful consideration.

Yours, very truly,
S. G. PALMER,
President Minneapolis Branch.

—

HORNELL CHAMBER OF COMMERCE,
Hornell, N. Y., December 22, 1913.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Please find inclosed copy of resolution unanimously adopted at a meeting of Hornell Chamber of Commerce held December 22, 1913.

Respectfully, yours,
JAY H. STEVENS, *Secretary.*

Resolved, That the Hornell Chamber of Commerce records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that in our opinion such increase is necessary on account of business conditions and increased cost of operation, and that it is advisable because it will result in better railroad accommodations, more railroad construction, and safer transportation; and that the secretary be directed to communicate this resolution to our Congressman and to E. E. Clark, chairman Interstate Commerce Commission.

JAY H. STEVENS, *Secretary.*

OHIO SHIPPERS' ASSOCIATION,
OFFICE OF THE SECRETARY,
Columbus, Ohio, January 5, 1914.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We beg to hand you herewith statement for presentation to the commission, setting forth the position of the Ohio Shippers' Association with respect to proposed advance in freight rates as provided in tariffs filed by carriers in official classification territory and which are under suspension (I. & S. 333).

Kindly advise when you have placed this before the commission.

Thanking you in advance for your attention and reply, I am,

Yours, very truly,
J. N. MCCORD, *Secretary.*

Before the Interstate Commerce Commission. In the matter of tariffs filed by the carriers in official classification territory and suspended by order of the commission. I. & S. 333.

STATEMENT OF THE OHIO SHIPPERS' ASSOCIATION.

The Ohio Shippers' Association, an organization whose membership is composed of shippers located at practically all of the shipping points in Ohio, respectfully submits to the commission the following statement of its position with respect to the proposed advance of freight rates as provided in the tariffs now under suspension and being investigated by the commission. We do this with some hesitancy, for the reason that we are fully aware that the views of any body of shippers or of any individual shipper in official classification territory, with respect to the proposed advance of rates, could have no weight whatever in the determination of the matter, not being in any sense evidence, even in a remote degree.

We simply desire to express to the commission the confidence of the entire membership of this association in the ability of the commission and its counsel to develop every fact in support of the contention of the carriers that the proposed increase is reasonable and is necessary in order that they may secure sufficient revenue to properly maintain their properties, render prompt and efficient service to their patrons, and still have remaining sufficient money to pay a reasonable percentage of profit on their investment; also every fact which may show, or tend to show, that the rates provided in the tariffs already in force and sought to be increased will produce adequate revenue, with proper and economical management and operation of their properties. And that with such evidential facts before it, the commission will be able to weigh all of the evidence and determine beyond question on which side the preponderance lies.

A large majority of the officers and members of the executive committee of the Ohio Shippers' Association, all of whom are shippers or direct representatives of shippers, believe that the carriers parties to this proceeding should be permitted to put in force the tariffs herein suspended, because from their point of view said carriers, under the present tariffs, are not realizing sufficient funds to enable them to render the best possible service and at the same time pay a reasonable percentage of profit on the investment; while on the other hand, quite a large number of the membership of the association take the contrary view.

However, we respectfully bring to the attention of the commission the fact that it is the desire of every member of the association, without exception, that the proposed increase may be permitted, if the preponderance of the evidence shall, in the opinion of the commission, show that said increase is necessary in order to produce sufficient funds to cover the cost of efficient and economical management and operation of their properties and in addition a reasonable percentage of profit on their investment. If, on the other hand, the preponderance of the evidence shall fail to show such necessity, they are opposed to the proposed advance.

In other words, this association is unanimously in favor of the carriers having what is fair, equitable, and just in the way of freight rates—no more, no less. And when the question has been fully investigated and weighed by the commission and final decision rendered, the shippers of Ohio will know beyond question that the result is in accordance with right and justice as determined by men able and experienced in all matters pertaining to transportation, acting officially as a body, for the common good of the carriers, the shippers, and the general public.

Respectfully submitted.

THE OHIO SHIPPERS' ASSOCIATION,
Per J. W. MCCORD, *Secretary.*
J. L. RONEY, *President.*
H. S. GRIMES,
Chairman Executive Committee.

—

THE RETAIL MERCHANTS' ASSOCIATION OF LYNCHBURG, VA.,
Lynchburg, Va., January 29, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I am instructed by my association to forward you the inclosed resolutions passed at a meeting held on January 27. We commend this resolution to your knd attention and earnestly hope the railroads may be granted this increase in rate they ask for.

Yours, very truly,
D. B. RYLAND, *President.*

Whereas the railroads in eastern territory are petitioning the Interstate Commerce Commission for an increase of 5 per cent in freight rates; and

Whereas it is the unanimous view of this association that the general welfare of the railroads, manufacturers, jobbers, retailers, and every other class and occupation are indisputably related: Therefore be it

Resolved, First, that the Retail Merchants' Association of Lynchburg, Va., in meeting assembled, do hereby go on record as heartily favoring this rate increase of 5 per cent for the eastern railroads; and

Resolved, Second, that a copy of this resolution be made and signed by the president and attested by the secretary of this association and forwarded at once to the Interstate Commerce Commission at Washington.

D. B. RYLAND, *President.*
By PAUL T. WILLIS, *Secretary.*

CLEVELAND, OHIO, *December 11, 1913.*

To the CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Referring to a communication of the 9th instant, sent you by the Pittsburgh Vein Operators' Association of Ohio (a copy of which is herewith attached), entering formal protest against the advances in rates on coal shipped from mines belonging to corporations connected with the said association in eastern Ohio.

The Provident Coal Co. is a member of the Pittsburgh Vein Operators' Association of Ohio, but was not represented at the meeting referred to in its communication to you of the 9th instant. Had our company been represented at the meeting we would not have been in sympathy with the resolution that was passed, but would have voted against it.

On the other hand, we are entirely in sympathy with the 5 per cent advance in rates on all commodities asked by the railroads, for the reason that our understanding is that if this 5 per cent were granted it would include every commodity and apply to every railroad in the United States, and therefore would in no way prevent taking up the question of comparative freight rates on coal shipments from other competitive districts at any time.

We strongly believe that if the 5 per cent advance asked by the railroads is granted it would greatly help to restore confidence to the investor, and would altogether be the best thing that could happen present business conditions. Furthermore, we venture to express our conviction that in view of the greatly increased cost of the railroad companies' labor and supplies of all kinds they are entitled to and really absolutely need some increase in rates.

Yours, very truly,

THE PROVIDENT COAL CO.
By W. P. MURRAY, *President.*

CLEVELAND, OHIO, *December 9, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Pittsburgh Vein Operators' Association of Ohio, a voluntary organization of coal operators, desire to hereby enter its formal protest against the advances in rates on coal shipped from mines belonging to corporations connected with the said association in eastern Ohio to lower lake ports and local points as provided for in I. C. C. No. 31.

In filing this protest it is upon the basis of the knowledge that the existing freight rates on coal shipments from this district are more than fairly remunerative for the services rendered and by comparison much higher than the freight rates on coal shipments from other competitive districts.

In this connection we desire to call the commission's attention to its Opinion No. 1947, in the case of the above association versus the Pennsylvania Co. et al., in which the rate to the lower lake ports from this district was established at 75 cents, and that this opinion was handed down after a careful and exhaustive study of the situation by the commission at this investigation; and in the opinion the tremendous difference in transportation charges per mile between the coal shipped from this district and the coal from competitive States was shown in detail.

We see no reason why the coal from this district should bear more than its proportionate share of the burden of transportation.

We also desire to call the attention of the commission to its finding in the Bolleau case, to which reference is frequently made in Opinion No. 1947, in which it was inferred that the rate established from Pittsburgh was high compared with the services performed.

We desire to further call the attention of the commission to the fact that at the time the decisions were handed down in the Bolleau case and in the case of this association versus the Pennsylvania Co. that carriers operating from West Virginia voluntarily reduced their rates to lower lake ports.

In filing this protest it must not be construed as a protest against an advance in any rates other than the rates herein specified.

This protest is filed pursuant to a resolution authorizing the same, passed at a meeting of the association at the Hollenden Hotel, Cleveland, Ohio, December 9, 1913.

PITTSBURGH VEIN OPERATORS OF OHIO,
JOHN ZELENKA, *Secretary.*

WICHITA, KANS., *March 20, 1914.*

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Inclosed please find a resolution passed at the annual meeting of the Southwestern Millers' League, in Kansas City, Mo., Wednesday, March 18.

The Southwestern Millers' League is composed of the principal milling interests in the States of Kansas, Oklahoma, Texas, Colorado, Nebraska, and Missouri, and it is our opinion that a charge for "spotting cars" would lead to innumerable irregularities, and that the reasonable charge for the spotting of one car would be unreasonable for another.

The enormous increase or burden of such a move, if allowed, and the tension of feeling existing between railroads, shippers, and receivers would be strained, and that it would be a detriment to the railroads and the supposed benefits derived would result detrimentally rather than being beneficial.

We are of the opinion that if it is found necessary for the railroads to have an increased earning that an equal distribution such as the 5 per cent increase would be more favorably looked upon than a charge for spotting cars. In the case of the 5 per cent increase, it would be divided equally among all people, but in the case of the spotting of cars the burden would fall upon the few.

We feel that this is such an important matter that we suggest and urge that hearings be held throughout the country, and that all parties be given a chance to testify in this matter.

Hoping that you will give due consideration to this request, we are,

Yours, very truly,

THE SOUTHWESTERN MILLERS' LEAGUE.
C. V. TOPPING, *Secretary.*

CHARLESTON CHAMBER OF COMMERCE,
Charleston, W. Va., February 28, 1914.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I beg to announce that at the regular monthly meeting of the Charleston Chamber of Commerce, held February 27, the following resolution was unanimously passed by the chamber and the secretary instructed to transmit a record of our action to you for the information of the Interstate Commerce Commission:

"Whereas, on account of a large increase in wages, cost of equipment, safety appliances, taxes, etc., the net revenues of the railroad companies have been continually decreasing, as shown by monthly reports; and

"Whereas the best interests of the public demand that transportation facilities be steadily improved and kept up to date, requiring a constant increasing of expenditures: Therefore be it

"*Resolved*, That this body respectfully request the Interstate Commerce Commission to put into effect such rules and regulations as will raise sufficient funds to enable the railroads to keep their plant and equipment in a high state of efficiency, also returning a fair income on moneys actually invested; and be it further

"*Resolved*, That said increase in revenue be obtained, first, by preventing any forms of rebate or by giving undue privileges to any special class; second, by suggesting economies in operation, construction, and financing; and, third, if necessary, by granting an increase in trunk-line freight rates, not to exceed 5 per cent, such increase to apply equally on all trunk lines carrying competitive commodities; or any other change or modification that in the judgment of said commission may seem best after a careful investigation of present conditions and causes leading thereto."

Very truly, yours,

S. P. PUFFER, *General Secretary.*

BAY CITY BOARD OF COMMERCE,
Bay City, Mich., February 28, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At the annual meeting of the Bay City (Mich.) Board of Commerce held on February 11, the inclosed resolution was unanimously adopted, and I was instructed to send copy of same to your commission.

Very respectfully,

JUSTIN A. RUNYAN, *Secretary.*

Resolution adopted by the Bay City (Mich.) Board of Commerce, February 11, 1914.

Resolved by the Bay City (Mich.) Board of Commerce in open session, after a full and careful investigation of the freight rates now being paid, That we believe it would be safe, on an average, to allow the railroads to increase rates 5 per cent, and we are in favor of same being done, provided an equalization of rates between larger and smaller communities would be assured, and that the same equalization shall be maintained between the large and small shipper.

JOPLIN, MO., *February 27, 1914.*

SECRETARY OF INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Inclosed herewith please find copy of a resolution passed by the commercial organizations of this city at a dinner given by the business men of our city at the formal opening of the Frisco Railway Station.

The inclosed clipping of the proceedings may be of interest to you.

Yours, truly,

COMMERCIAL CLUB OF JOPLIN,
F. L. YALE, *Secretary.*

Resolution passed by the commercial organizations in the city of Joplin, Mo., February 26, 1914.

Whereas most of the commercial bodies and boards of trade east of the Mississippi River have, by resolution and petition, requested the Interstate Commerce Commission to grant the railroads east of the Mississippi River a 5 per cent advance in freight rates; and

Whereas the cities of St. Louis and Kansas City of our own State, and the business men of the city of Joplin, attending the Noonday Luncheon Club of this city have made a similar request: Therefore be it

Resolved, That it is the sense of this meeting that the several commercial bodies here assembled indorse the action of the various commercial bodies before mentioned and the action taken at our Noonday Luncheon Club by our own citizens and business men.

EAST ST. LOUIS, ILL., *March 7, 1914.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: I inclose a copy of the resolution adopted by the board of directors of the East St. Louis Industrial League for your files.

Yours, very truly,

EAST ST. LOUIS INDUSTRIAL LEAGUE,
W. N. AUBUCHON, Jr., *Manager.*

At a meeting of the board of directors of the East St. Louis Industrial League, held at its offices in the Arcade Building, East St. Louis, Ill., on the 2d day of March, A. D. 1914, Henry D. Sexton offered the following resolution and moved its adoption:

"Whereas there is now pending before the Interstate Commerce Commission of the United States an application upon the part of the railroads for a general increase of freight rates on all traffic subject to the official classification in central freight and trunk line territories; and

"Whereas the East St. Louis Industrial League is largely composed of owners of manufacturing and industrial plants in the city of East St. Louis, Ill.; and

"Whereas it is believed that the railroad companies are entitled to an increase in freight rates on account of the increased cost of operation, and that if given the increase now asked they will be better able to make necessary improvements, and in this manner will be better able to serve the public: Therefore be it

"*Resolved*, That the East St. Louis Industrial League favors the increase in freight rates asked by the railroad companies in the application now pending before the Interstate Commerce Commission for a 5 per cent increase in freight rates on all traffic subject to the official classification in central freight and trunk line territories; be it further

"*Resolved*, That a copy of these resolutions be mailed to the secretary of the Interstate Commerce Commission, with the request that they be presented to the commission."

Which motion was seconded by C. M. Horner and duly carried. Whereupon the chair declared said resolution duly adopted.

I, R. W. Sikking, secretary of the East St. Louis Industrial League, do hereby certify that the above and foregoing is a true and correct

copy of a resolution duly passed at a regular meeting of the East St. Louis Industrial League held at its offices, in the Arcade Building, in the city of East St. Louis, Ill., on the 2d day of March, A. D. 1914.

R. W. SIKKING, *Secretary.*

—

THE OHIO HARDWARE ASSOCIATION,
Dayton, Ohio, March 5, 1914.

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Please find inclosed copy of resolution adopted by the Ohio Hardware Association during their convention in Toledo, Ohio, February 24–26, 1914.

Yours, very truly,

JAMES B. CARSON, *Secretary.*

TOLEDO, OHIO, *February 26, 1914.*

Whereas the Ohio Hardware Association in convention assembled, with a membership of 1,000, representing the 1,800 dealers in Ohio, have learned that the Interstate Commerce Commission is now in session in Washington, D. C.; and

Whereas the railroads have given forceful reasons showing that they are now operating on a margin insufficient to permit them to meet the demands of the business public: Therefore be it

Resolved, That this body, the oldest association of retail hardware dealers in the United States, in its twentieth annual session, respectfully request the Interstate Commerce Commission to allow this advance of 5 per cent; and, further, we believe that prompt action will speedily result in a general business expansion.

Resolved, That a copy of this preamble and resolutions be sent to His Excellency Woodrow Wilson, President of the United States, and also to the Interstate Commerce Commission.

ALBERT ZETTLER,
H. F. AUFDERHEIDE,
W. D. JONES,
W. L. STOCKLIN,
Committee on Resolutions.

—

COLUMBUS, OHIO, *March 30, 1914.*

G. B. MCGINTY,
Secretary of Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Our chamber of commerce has requested that we write you our views in regard to the 5 per cent advance in freight rates for the eastern railroads, and also their charge of a minimum of $2 to be assessed for placing cars on private sidetracks.

The majority of our business is with the railroad companies. Our service has not been of the best for the last year from some cause. The cars seem to be too long en route, and after they reach the yards the time in placing them seems to be unreasonable.

If service depends upon the advance, we are heartily in favor of the 5 per cent advance, should your commission find that they are in any way entitled to it. But we think they should be satisfied with this advance without an extra charge for placing cars. We figure the railroad companies receive more benefit from the private sidings than the owner. The owner is required to build and maintain his siding; the railroad company reserves the right to use it, not only for the owner's cars but for the railroad company's switching, and oftentimes fill it with empties that are in no way connected with the owner of the private track. This prevents their yard from being blocked to the amount of the cars that can be handled on private tracks. We have been unable to get any service that we do not get on their own siding; therefore we think the $2 charge would be an unjust one, even; they should not be granted the 5 per cent increase.

Yours, very truly,

THE BAZLER TRANSFER & STORAGE CO.,
G. E. BAZLER, *President.*

—

SOCIETY OF AMERICAN DRAMATISTS AND COMPOSERS,
New York, March 30, 1914.

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: The Theatrical World, representing many thousands of people, implores you for the sake of general business to help the railroads, for unless they prosper we can not; unless general prosperity exists we all suffer. Clipping from New York Times herewith:

"RAILROAD EARNINGS SHOW BIG DECLINES—DISCHARGING EMPLOYEES REFLECTS CONTINUED RETREAT OF GROSS REVENUES.

"The necessity of railroad retrenchment, as displayed in the discharge of 15,000 men by the Pennsylvania and of 25,000 by the New York Central lines in the past few months, is reflected in the decline of gross earnings the country over. In many cases operating costs have been reduced, as compared with the corresponding periods of the preceding year, but not to a degree sufficient to keep profits from falling below the parity of 1913.

"According to statistics prepared by the Financial Chronicle on 92,300 miles of road in the United States, with four Canadian lines included, gross earnings in February were $60,934,916, as compared with $67,400,056 in February of last year, a decrease of $6,465,140, or 9.61 per cent. The reaction in trade was largely responsible for the shrinkage of traffic, and the grain-carrying roads of the Northwest and Middle West were affected by bad weather, as well as by the fact that last year's crops were not as great as in other recent years, particularly the corn yield. Added to these factors were increased wages and extra expense caused by snowstorms and washouts in districts where the winter weather was especially severe.

"Some of the leading carriers to report large decreases in gross revenues were the Great Northern, with a decline of $683,087; the Louisville & Nashville, $368,794; the Illinois Central, $327,131; the Missouri Pacific, $407,600; and the Denver & Rio Grande, $175,300. The Union Pacific system reported gross income of $5,909,570, a falling off of $565,300 from the preceding February, while the Southern Pacific had a gross return of $9,850,724, as compared with $10,453,543. Gross revenue of the Chicago & North Western was $6,226,499, against $6,658,696 in February, 1913.

"In the first week of March 39 roads had aggregate receipts of $12,041,222, as compared with $13,077,596 in the same week of 1913. In the second week 40 companies reported gross amounting to $12,983,752, a recession of $615,241, and in the third week 24 roads totaled $10,246,764, a falling off of $680,122.

"A summary of operations on 225,510 miles of steam road, as prepared by the bureau of railway economics, showed operating revenues in January of $226,618,120. This amount included revenues from freight and passenger traffic, from carrying mail and express packages, and from miscellaneous sources connected with rail operation. Compared with January of the preceding year this total represented a decrease of $16,457,067. Operating receipts per mile of line displayed a decline of $82, or 7.5 per cent a mile. There was a decrease of 9.9 per cent in freight revenue per mile and of 1.2 per cent in income from passenger traffic.

"Operating expenses, including all the costs of maintaining track and equipment, operating trains, securing traffic, and administration, amounted to $175,067,091. This was $4,464,388 less than in the preceding January. These costs per mile of line averaged $776, as compared with $802 the year before, a decrease of $26 per mile. Net operating revenue amounted to $51,551,029, a recession of $11,992,679 from the record of January, 1913. This was a falling off of $56 per mile, or 19.3 per cent. Taxes were, in the aggregate, $11,178,828, or $50 per mile, a gain of 10.2 per cent.

"The railways of the eastern district showed a decrease in total operating revenues per mile of line, as compared with January, 1913, of 11.2 per cent. In the southern district the decline was 0.4 per cent, and the lines of the western district displayed a decrease of 6 per cent. Operating income per mile declined 48.2 per cent in the East, declined 9.7 per cent in the South, and 9.7 per cent in the West.

"A comparison of returns for seven months of the current fiscal year with those of the same months last year revealed a decline of 1.5 per cent per mile in total operating revenues, an increase of 3.8 per cent in operating expenses, and a falling off in net operating revenue of 12 per cent for every mile of road in operation. In this period net operating revenue fell away 19.3 per cent per mile in the East, increased 1.2 per cent in the South, and decreased 9 per cent in the West."

Respectfully,

H. E. SMITH.

Pray, help the whole country.

—

THE CHAMBER OF COMMERCE OF ALTOONA,
Altoona, Pa., March 30, 1914.

The INTERSTATE COMMERCE COMMISSION, *Washington, D. C.*

GENTLEMEN: The Chamber of Commerce of Altoona, which includes in its membership 515 of the representative citizens of Altoona and vicinity, through its duly authorized board of directors, begs leave to submit the following resolution:

We believe that the eastern railroads are entitled to an increase in freight rates, which request is now being considered by your honorable body.

We are convinced that not only will the best interests of the entire country be conserved by the granting of such increase, but an early announcement of such a decision not only will restore public confidence and normal business conditions but will avert greater hardships to thousands of workmen now out of employment.

Therefore we wish to record the expression of this organization, which we believe reflects the prevailing sentiment of the greater Altoona industrial district of more than 100,000 population.

Very respectfully,

[SEAL.]

BOARD OF DIRECTORS,
By W. C. WESTFALL, *President.*
H. J. SEADS, *Secretary.*

—

CONCORDIA, KANS., *April 1, 1914.*

Hon. C. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: At a meeting of this association held to-day the following resolution was unanimously adopted:

"Resolved, That this association favors granting to the railroads the 5 per cent horizontal increase in rates asked for in official classification territory."

We feel that this advance is essential to the prosperity of the roads, that they may be able to serve the growing needs of the country in transportation matters.

Yours, truly,

THE JOBBERS & MANUFACTURERS' ASSOCIATION,
By O. E. CURRAN, *Secretary.*

—

KENOSHA, WIS., *April 2, 1914.*

INTERSTATE COMMERCE COMMISSION, *Washington, D. C.*

GENTLEMEN: At a meeting of the Manufacturers' Association of Kenosha, Wis., the following resolution was passed unanimously:

"Resolved, That the manufacturers and shippers represented by this association are in favor of a horizontal advance of 5 per cent on all freight rates, without discrimination in favor of any class of shippers or any community.

"That, after this has been accomplished, we are in favor of such adjustments as will 'iron out' any inequalities that may exist before or after the advance.

"That we are in favor of the readjustment of the rates and tariffs of so-called industrial railways down to the point where the division of the tariff returns to the individual, partnership, company, or corporation which owns said industrial railway a return equal to the service which the carrier would render if the carrier owned the tracks on easements.

"That we are not in favor of charging individuals, partnerships, companies, or corporations a spotting charge, believing that a charge of this kind would be a step backward as well as a discrimination. The use of private tracks should be encouraged as much as possible. To the extent that this can be done it would relieve the already congested terminals and would be the means of more prompt loading and discharging of freight, which would be a gain to everyone, in that more nearly the maximum carrying capacity of the railway equipment could be utilized. During normal times in the fall of the year there is generally a scarcity of equipment. Steps should be taken to relieve this condition rather than to increase it."

Yours, very truly,

MANUFACTURERS' ASSOCIATION OF KENOSHA,
GEORGE H. ALLEN, *President.*
CONRAD SHEARER, *Secretary.*

—

THE HERSHEY-RICE MANUFACTURING CO.,
Columbus, Ohio, April 3, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At the meeting held by the Manufacturers and Jobbers' Association of our city in the department of our chamber of com-

merce, of which the writer is chairman, and in speaking our views on the matter of freight rates and the increase of 5 per cent which the railroad companies have been asking for, we as a firm and 90 per cent of the members of our association are in favor of your Commerce Commission to grant the railroad companies the increase of 5 per cent.

We all believe they are entitled to this, due to the various conditions and obstacles that they have had to meet within the past several years, and the little increase of freight that we are to pay on the various classes of merchandise we do not believe we would miss or that it would cause any inconvenience or advance of merchandise to the consumer, but our association and our firm do not approve of the minimum charge of $2 for placing cars in carload lots on tracks or private tracks; and we believe if the railroad companies get their 5 per cent this additional charge of setting cars would be eliminated.

Also, we believe that an increase of freight rates with the railroad companies would help stimulate business throughout the United States, and we would soon be repaid in the volume of business that we would receive by the stimulation of business throughout the country.

Respectfully, yours,

A. W. HERSHEY.

THE CHAMBER OF COMMERCE,
Steubenville, Ohio, April 3, 1914.

PRESIDENT OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We beg to inclose herewith copy of the resolutions adopted by our chamber of commerce on the 2d instant, and ask your serious consideration of the same.

Very truly, yours,

CHAMBER OF COMMERCE,
F. P. CHAFFEE, *Secretary.*

Resolutions adopted by the Chamber of Commerce of Stubenville, Ohio, at a regular meeting of its board of directors, on April 2, 1914.

Whereas the Chamber of Commerce of Steubenville, with a membership of over 400 of the leading business men and manufacturers of this city, at a previous meeting adopted resolutions favoring the granting of the railroads the 5 per cent increase in freight rates; and

Whereas the Steubenville district handles as large a freight tonnage as any district of similar size in the country; and

Whereas a charge for placing and spotting freight cars would involve a very large and almost prohibitive expense to many small industries in this district that are now struggling for existence; and

Whereas the present unsettled condition of railroad affairs in this district, due to the delay in settling the question of freight-rate increase, is seriously detrimental to the business interests of Steubenville and the Steubenville district: Be it

Resolved, That we earnestly protest against the railroads being required to charge for the placing and spotting of cars; and be it

Resolved further, That we respectfully urge the Interstate Commerce Commission to give its decision as to the matter of the 5 per cent freight raise asked by the railroads at the earliest possible date, in order that business conditions may become readjusted and the movement of freight return to normal conditions; be it further

Resolved, That a copy of these resolutions be sent to the President of the Interstate Commerce Commission.

ZANESVILLE MERCHANTS' ASSOCIATION,
Zanesville, Ohio, March 24, 1914.

PRESIDENT INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIR: I have the honor of presenting to you the formal action of the executive board of the Zanesville Merchants' Association, in reference to the request of the railroads of the Nation for an increase of freight rates.

Very truly, yours,

H. SERKOWICH, *Secretary.*

Whereas the railroads operating in the United States are petitioning the Interstate Commerce Commission for permission to increase the rates on freight transportation not to exceed 5 per cent; and

Whereas the profitable operation of the Nations' transportation facilities is being seriously retarded by reason of the railroads not receiving such rates for freight transportation as would insure the profitable operation of the railroads of the country; and

Whereas the railroads of the Nation are the highways of commerce, and when such highways of commerce are burdened by unprofitable operation, the effect is felt in every line of commercial endeavor: Therefore be it

Resolved, That the executive board of the Zanesville (Ohio) Merchants' Association, organized for the purpose of promoting, protecting, and fostering mercantile interests in the city of Zanesville, Ohio, and surrounding territory, do hereby indorse and recommend that the petition for the increased rates be granted.

EXECUTIVE BOARD MERCHANTS' ASSOCIATION,
By M. M. DUNCAN, *President.*

Attest:

H. SERKOWICH, *Secretary.*

MARCH 24, 1914, A. D.
Zanesville, Ohio.

COLUMBUS, OHIO, *March 25, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We beg to transmit to you the following statement of the attitude of this association upon matters now pending before your honorable body, such action being taken upon a referendum vote of the membership of this association.

Very respectfully,

OHIO MANUFACTURERS' ASSOCIATION,
By MALCOLM JENNINGS, *Secretary.*

COLUMBUS, OHIO, *March 25, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Ohio Manufacturers' Association, representing the second largest industry in Ohio, urgently petitions your honorable body to grant immediate compliance with the request of the railroads of the United States for a horizontal increase in rates for freight shipments.

As shippers, we realize that the increase so granted would make an additional charge upon our cost of operation and production, but it would be a burden distributed upon all shippers alike, without discrimination or yielding of unfair advantage.

While there have been, unquestionably, serious abuses in the railway development and operation in the past, and while some such abuses may still exist, arising from conditions for which the Government and all the people, as well as the railroads, are responsible, we believe that the revenue to be derived from the proposed increase in rates is absolutely necessary to reasonably maintain the credit of the railroads, to permit them to make the repairs and betterments necessary, to adequately provide for the growing demands of service and facilities, and to stop the enormous losses now affecting the business of the entire country.

We protest that in our judgment the alternative plan proposed for providing additional revenues for the railroads, through the imposition of special charges for "ferry," "trap car," and "spotting car" service, would result in still further unsettling business conditions and, in application, would bring about disastrous inequalities and discrimination among and between shippers.

We submit that the present rates, as a whole, have been based upon long-established shipping customs, and that arbitrary changes in switching and car-placing regulations would be confusing and harmful in many ways and of doubtful benefit to the carriers. The abuses which may have arisen in connection with switching and car-placing service, and we do not doubt that there are instances of this sort, can be eliminated upon investigation and order, without involving all shipping interests.

Therefore, we protest against any arbitrary withdrawal of switching or car-placing services, or the institution of special charges therefor, holding as we do, that these services are wholly compensated in the building and maintaining, by shippers, of individual tracks, loading stations and appliances, which greatly fecilitate the transportation of all classes of freight, wherever or by whomever shipped, and prevent the congesting of traffic and storage.

The substitution of such a change would work a great hardship upon shippers, would necessitate increased prices to the consumers, and would not greatly or uniformly benefit the railroads nor give the relief for which they and we pray.

We believe that the granting of a horizontal rate increase without delay will result in the immediate stimulation of business in all lines of productive endeavor and that it will not entail serious loss or injury to any person or persons, firms, or corporations. With the losses of roadbeds, tracks, bridges, rolling stock, and equipment in the unparalleled floods of the past year, with revenues depleted by loss of business, with operation controlled by legislative enactment and exactions and hampered by new regulations and requirements, already unable to meet the demands of shippers for adequate service even at a time of partial depression, facing the absolute necessity for rebuilding and extensions, there is no doubt—there can be no question—that the railroads need the relief prayed for, and need it now; and neither is there question that a large majority of the shippers of the United States realize these conditions and join in this prayer.

Respectfully submitted, by order of executive committee.

OHIO MANUFACTURERS' ASSOCIATION,
S. P. BUSH, *President.*

COLUMBUS, OHIO, *March 26, 1914.*

RATE INCREASE IN OFFICIAL CLASSIFICATION TERRITORY—SUPPLEMENTAL STATEMENT OF THE COLUMBUS CHAMBER OF COMMERCE.

Before the Interstate Commerce Commission. Docket No. 5860. I. S. Docket No. 333.

The Columbus Chamber of Commerce begs leave to submit to the commission the following supplemental statement in the matter of the petition of carriers in official classification territory to be permitted to increase their revenues by increasing freight rates, and the question which has been raised in connection with the proposed rate-advance proposition as to the carriers assessing charges for so-called special services, such as spotting cars, trap-car service, etc., long recognized as being elements or parts of transportation service, the cost of the same being practically all included in the transportation charge.

It was our intention in the former statement to make clear to the commission that the Columbus Chamber of Commerce is opposed to and protests against the carriers being permitted to make any change in the method which has been in force for more than 40 years and to now assess charges for any such special services, and we briefly stated our reasons therefor.

Now, in addition to what we said in our former statement, we desire to say that in the event it is shown to the satisfaction of the commission that the carriers are entitled to an increase of revenue, it is our belief that the plan of permitting a horizontal advance in freight rates would be preferable to that of permitting the carriers to assess charges for the so-called special services. Indeed, we confidently believe that if the latter method were adopted it would result in confusion, injustice, and discrimination, and at the same time fail to yield to the carriers the necessary amount of increased revenues.

Respectfully submitted.

THE TRAFFIC DEPARTMENT OF THE
COLUMBUS CHAMBER OF COMMERCE,
J. C. MILLER, *Chairman.*
F. H. HYSELL, *Manager.*

BAYONNE, N. J., *March 27, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C

GENTLEMEN: The manufacturers' committee of the Chamber of Commerce of the City of Bayonne, representing practically all the large shippers of this city, the commerce of which is in excess of 3,000,000 tons annually, under authority of the chamber, made a canvass of such shippers and found they were almost unanimous in believing that it was in their interest that the railroad companies operating in official classification territory be granted the advance in freight rates that they are seeking to secure through the Interstate Commerce Commission.

When the manufacturers' committee reported to the chamber of commerce, the chamber adopted the following resolution:

"Whereas this chamber has discussed the question of increased freight rates after the manufacturers' committee, at its request, had carefully considered it and recommended in its favor; and

"Whereas this chamber believes that the petition of the railroad companies is just and reasonable, and that confidence and increased business prosperity will follow a favorable consideration of said petition:

"Therefore this chamber resolves that presentation of these views be made to the Interstate Commerce Commission, urging a decision on the application favorably to the railroad companies as soon as possible."

All of which is respectfully submitted.

CHAMBER OF COMMERCE OF THE CITY OF BAYONNE,
DE WITT VAN BUSKIRK, *President.*
HAROLD C. STEVENS, *Secretary.*

—

BAYONNE, N. J., *March 27, 1914.*

To the honorable the PRESIDENT OF THE UNITED STATES.
The White House, Washington, D. C.

HONORABLE SIR: The manufacturers' committee of the Chamber of Commerce of the city of Bayonne, representing practically all the large shippers of this city, the commerce of which is in excess of 3,000,000 tons annually, under authority of the chamber, made a canvass of such shippers and found that they were almost unanimous in believing that it was in their interest that the railroads operating in official classification territory be granted the advance in freight rates that they are seeking to secure through the Interstate Commerce Commission.

When the manufacturers' committee reported to the chamber of commerce, the chamber adopted the following resolution:

"Whereas this chamber has discussed the question of increased freight rates after the manufacturers' committee, at its request, had carefully considered it and recommended in its favor; and

"Whereas this chamber believes that the petition of the railroad companies is just and reasonable, and that confidence and increased business prosperity will follow a favorable consideration of said petition.

"Therefore this chamber resolves that presentation of these views be made to the Interstate Commerce Commission, urging a decision on the application of the railroad companies favorably and as soon as possible."

—

MASSACHUSETTS REAL ESTATE EXCHANGE,
Boston, Mass., May 6, 1913.

Hon. WARD PROUTY,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: President John J. Martin instructs me to forward to you the inclosed resolution with regard to the present railroad situation.

It was our intention to have this presented during the hearing recently held in Boston, but have thought it best to forward it direct to your commission at Washington.

Very truly, yours,

CHAS. E. LEWIS, *Secretary.*

—

The INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: The following resolution was adapted at a meeting of the committee held at the exchange rooms, Tuesday, April 15, 1913:

"Whereas the growth and welfare of our community is largely dependent upon proper transportation facilities, and the cost of furnishing transportation depends largely on the cost of its principal constituent elements of labor and materials, and the cost of performing services at their increased cast has been, as shown by statistical records, greater in proportion than the increase of population and of business: Now, therefore

"*Resolved*, That in the opinion of the special committee appointed by the board of directors of the Massachusetts Real Estate Exchange with power to act, it is in the public interest that if a railroad is honestly capitalized and honestly and ably run the road should be allowed to earn from its traffic an income reasonably adequate to meet the requirements of its increasing business and sufficient to make a safe and profitable return on the investment reasonably necessary for the purpose; and that therefore the Interstate Commerce Commission be requested to permit under the law such reasonable advances in railroad rates as may be necessary and proper to furnish proper transportation facilities and to insure the safe investment of any additional capital necessary for the purpose; and that the Massachusetts Railroad Commissioners be requested to do all acts and things necessary or proper under the law to cooperate to this end."

The special committee is made up as follows: President, John J. Martin; chairman, Hon. Wm. H. Gove; Edmund D. Codman, Hon. Wm. B. Lawrence, William Minot, Elbridge R. Anderson, and Col. Peter H. Corr.

MASSACHUSETTS REAL ESTATE EXCHANGE.

Attest:

CHAS. E. LEWIS, *Secretary.*

—

THE MERCHANTS AND MANUFACTURERS' ASSOCIATION OF CINCINNATI,
Cincinnati, June 5, 1913.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At meeting of the executive committee of this association yesterday the subject of 5 per cent increase in freight rates proposed by the railroads was discussed and resolution favoring the increase adopted, copy of which I attach hereto, and will appreciate it very much indeed if you will present same at the next meeting of the commission.

I sincerely hope that the request of the railway companies will be given favorable consideration.

Yours, very truly, JNO. W. IRVINE, *Secretary.*

The following preamble and resolution was adopted at a meeting of the executive committee of the Merchants and Manufacturers' Association, held June 4, 1913, 215 Provident Bank Building, Cincinnati, Ohio:

"Whereas from the statements made by the railroad representatives at meeting held at the Business Men's Club May 22, 1913, regarding the 5 per cent advance in rail rates, it is believed that the increase is an absolute necessity, and if granted the amount derived therefrom will be equitably applied to the purchase of additional equipment, enlargement and development of terminals, also increased and improved facilities, and that the advance will not result in undue discrimination against localities or commodities.

"*Resolved*, That we approve of the proposed advance and respectfully recommend to the Interstate Commerce Commission that they grant the request of the carriers for authority to increase the rail freight rates 5 per cent on all commodities in the territory east of the Mississippi and north of the Ohio and Potomac Rivers."

(Extracted from the minutes.)

STEWART SHILLITO,
Chairman of the Meeting.
JNO. W. IRVINE,
Secretary of the Meeting.

—

THE BUSINESS MEN'S LEAGUE OF ST. LOUIS,
June 7, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am directed by the executive committee of the Business Men's League to hand you herewith the attached resolution, which was unanimously adopted by this executive committee at its regular meeting June 6, 1913, the secretary being directed to forward the resolution to your honorable body. I am, with great respect,

Your obedient servant,

W. F. SAUNDERS,
Secretary and General Manager.

Whereas certain railroads in what is known as official classification territory have in effect requested from the Interstate Commerce Commission permission to advance their freight rates uniformly 5 per cent; and

Whereas we believe that the railroads are not now receiving sufficient revenue to enable them to perform, under present conditions, service adequate to the needs of the commerce of the country: Therefore be it

Resolved, That the Business Men's League of St. Louis, by its duly authorized officers and executive committee, and in accordance with the unanimous recommendation of its traffic bureau, hereby request the Interstate Commerce Commission to grant to those railroads, as promptly as circumstances will permit, permission to advance freight rates in the uniform manner set forth in their recent petition, upon presentation by the representatives of the railroads of such facts and figures to the Interstate Commerce Commission as will prove the necessity of such increase in revenue in order to provide adequate service to the shipping public.

JUNE 14, 1913.

Mr. WILLIAM F. SAUNDERS,
Secretary and General Manager
The Business Men's League of St. Louis, St. Louis, Mo.

DEAR SIR: This will acknowledge receipt of your letter of June 7 inclosing a copy of a resolution adopted by the executive committee of the Business Men's League of St. Louis, concerning increase in freight rates.

A copy of the petition filed by carriers in official classification territory, requesting a hearing upon the question of their right to a general advance of 5 per cent in freight rates, is inclosed.

The commission has made no announcement of its action with respect to this petition.

Respectfully, ——— ———, *Acting Secretary.*

—

INDIANAPOLIS, IND., *June 18, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We inclose herewith copy of communication addressed to Mr. G. H. Ingalls, chairman of committee representing Central Freight Association carriers, along with copy of resolution adopted by this body Thursday, June 5, both of which are self-explanatory.

This information is respectfully submitted for your consideration.

Yours, very truly,

INDIANAPOLIS CHAMBER OF COMMERCE,
L. H. LEWIS, *General Secretary.*

—

NEW JERSEY STATE CHAMBER OF COMMERCE,
Jersey City, July 18, 1913.

Hon. EDGAR E. CLARK,
Washington, D. C.

DEAR SIR: For your information the secretary takes pleasure in inclosing herewith copy of communication being forwarded to-day to the Interstate Commerce Commission.

Respectfully,

MARCUS A. BEEMAN, *Secretary.*

—

NEW JERSEY STATE CHAMBER OF COMMERCE,
Jersey City, July 18, 1913.

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: On June 11, 1913, the transportation committee of the New Jersey State Chamber of Commerce submitted to a referendum vote its proposal to support a movement which might tend to increase the earnings of the railroad systems of the country.

As membership in this chamber is individual and not held by local organizations or corporations, it was possible to secure the views of its members without delay. As a result of this referendum vote it was ascertained that 98 per cent of our members approved the proposal of the transportation committee.

It is the belief of the New Jersey State Chamber of Commerce that there are many apparent reasons favoring the contention of the railroads of this country that they should be allowed a larger margin of earnings in order to insure proper service and maintenance, and that this would result in a general business expansion. The chamber further believes that the restoration of financial credit and the opportunity thus afforded to grow and expand would work a benefit to every industrial city in the United States.

The chamber does not advocate a specific increase for any or all railroads, but believes that this is a matter for most exhaustive investigation. It is of the opinion that in some instances the railroads have suffered from radical legislation, while in others the question of financial management should be considered; and that all of these factors come solely within the jurisdiction of the Interstate Commerce Commission.

Respectfully submitted.

WM. C. HEPPENHEIMER,
President.
ERNEST BIARDOT,
Chairman Transportation Committee.

INVESTMENT BANKERS' ASSOCIATION OF AMERICA,
OFFICE OF THE SECRETARY,
111 West Monroe Street, Chicago, November 1, 1913.

Mr. JOHN H. MARBLE,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: The Investment Bankers' Association of America, comprising 400 of the leading investment banking houses of the United States and Canada, have just closed their second annual convention which was held in this city.

During one of the sessions of our recent meeting a resolution was passed and instructions were given me to submit a copy to yourself.

In compliance with my instructions, therefore, I take pleasure in handing you herewith exact copy of the resolution.

Very truly, yours,

F. R. FENTON, *Secretary.*

Resolution.

To the INTERSTATE COMMERCE COMMISSION:

The Investment Bankers' Association of America is an organization whose membership comprises most of the prominent dealers in investment securities doing business in this country. It represent through its membership a great army of investors holding hundreds of millions of dollars of railroad securities. The association is therefore intimately concerned with the prosperity of the railroads and the value of their securities.

For the past decade there has been a constant and large increase in the expenses of the railroads, especially in the items of cost of materials and the cost of labor. There has also been an ever-increasing demand for better equipment and more complete installation of safety devices designed to protect the traveling public.

With these increased expenses has come little or no increase in the compensation received for the transportation of freight or passengers, and the surplus earnings of the roads are in few cases sufficient to provide funds for making the improvements which have been demanded.

The supply of liquid capital throughout the world has been during the last few years decidedly limited, and it has been increasingly difficult for the railroads to make sales of securities to provide additional funds. Holders of railroad securities at the present time are receiving only fair returns on the funds so invested, and yet a reduction in this return seems imminent unless the railroads can in some way increase their earning capacity. In view of these facts, it seems to this association that an increase in rates should be approved by your commission, and we earnestly hope that this question will receive careful consideration from you from the standpoint of the investor as well as from the standpoint of the shipper.

—

NORRISTOWN CHAMBER OF COMMERCE,
Norristown, Pa., April 6, 1914.

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We as a chamber of commerce, representing the business interests of this town and vicinity, desire to, and do hereby, enter a formal protest against the proposed charge for "spotting," or placing of cars on private sidings.

We are firmly convinced that this will prove detrimental to the interests of the shippers of this town, as well as to the shippers in general, and we do not believe that it will prove of any great benefit to the railroads.

We are in favor of some action by your esteemed body whereby the revenues of the railroads may be increased and thereby bring greater prosperity to our country, and we believe this can best be done by allowing them to increase rates, as proposed by the railroads and which you are now considering.

The whole country is awaiting your decision in this most important matter, and we trust that your honorable body will be able to grant this increase in freight rates at an early date.

SAMUEL ROBERTS,
Vice President.
JOHN A. LONGACRE,
Chairman Transportation Committee.
THEODORE HEYSHAM,
Secretary.

—

WHITE RATS ACTORS' UNION OF AMERICA,
New York City, April 6, 1914.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Have we actors got to risk our lives traveling on weak bridges? You gentlemen ought to give the roads plenty of money to keep the roads safe. Lives are too precious to risk when you gentlemen can stop it.

Unless the railroads are safe the country goes to ruin.

Be more than generous to the roads.

There are over 50,000 of us actors.

Respectfully,

L. F. GRAVES, *Actor.*

—

HOUSTON, TEX., *April 9, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Southern Supply and Machinery Dealers' Association, in convention assembled to-day in this city, greet you and express their implicit confidence in your ultimate decision in the freight-rate cases, but urge you to make a speedy decision.

I. F. YOUNG, *President.*

—

NORTHWESTERN RETAIL COAL DEALERS' ASSOCIATION,
Minneapolis, Minn., March 17, 1914.

Important information.

As you probably are aware, the Interstate Commerce Commission has up for consideration the advancement of rates on all classes and commodities of freight in tariffs filed by the carriers throughout the country. Two questions are before the commission:

(a) Are the present revenues of the carriers adequate?

(b) If not, how may they be supplemented?

The carriers have prepared tariffs for filing with the commission in which a charge of 7½ cents per ton, with a minimum of $2 per car, has been agreed upon. This, of course, would mean that the minimum charge of $2 a car would be collected for setting cars on any sidetrack belonging to any coal or lumber company, grain elevators, etc. This extra amount has heretofore been regarded as part of the rate, and if made effective it means a practical slap at economy and benefits only the strong lines.

If the Interstate Commerce Commission are of the belief that the carriers should be granted an advance in rates after hearing all of the testimony offered on the part of receivers and shippers of freight throughout the country, then the only fair thing to do is to grant the advance on all classes and commodities. Will you therefore write to the commission, protesting against the adoption of any plan charging for spotting of cars, the service of which is already included in the freight rate which you pay?

Kindly give the matter your prompt attention, addressing your letter to Hon. C. B. McGinty, secretary Interstate Commerce Commission, Washington, D. C.

Yours, very truly,

H. L. LAIRD, *Secretary-Treasurer.*

—

THE ST. ANTHONY & DAKOTA ELEVATOR CO.,
Minneapolis, Minn., April 9, 1914.

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We are advised by the secretary of the Retail Coal Dealers' Association that your commission has up for consideration an advancement of rates on all classes and commodities of freight in tariffs filed by carriers throughout the country; that the carriers have prepared tariffs for filing with the commission in which a charge of 7½ cents per ton, with a minimum of $2 per car, has been agreed upon for setting cars in on any sidetrack for loading or unloading.

This company operates a large number of grain elevators, coal and lumber yards, and, as interested parties, we desire to protest against any charge for switching to and from our elevators, coal and lumber yards, especially where the trackage on which we are located belongs to the carrier. We would very much prefer not to complicate matters by making an extra charge of this kind for switching service. If in the opinion of the commission the carriers are entitled to a larger compensation for hauling freight, we are perfectly willing that the commission should grant such additional compensation for such purpose as in its judgment may be adequate, but we protest against a multiplicity of charges for the same service. The tariff rate should be made high enough to cover the service now rendered by carriers along this line. Our business is large enough so that it requires under present conditions a special department to check tariffs and freight charges, and, with a multiplicity of charges of this kind for different parts of the same service, it would be annoying in the extreme and expensive also to take care of the complications that would arise on account of the separate and extra charge. In our opinion there is no reason why the regular tariff should not be made large enough to cover the service rendered and to increase the income of carriers to such an extent as the commission deems proper.

Kindly bear in mind that we do not protest against an increase in the freight tariff, but only against creating a multiplicity of charges where it is wholly unnecessary and would only result in complicating matters that are already complicated enough.

I am inclosing circular letter of Mr. Laird, of the Northwestern Retail Coal Dealers' Association, calling our attention to the point in question.

Yours, very truly,

E. G. FLINN, *Manager Lumber Department.*

—

[Telegram.]

LIMA, OHIO, *April 10, 1914.*

Mr. JAMES S. HARLAN,
Chairman Interstate Commerce Commission, Washington, D. C.

The Transportation Club of Lima represents more than 100 shippers and receivers of freight. At a recent meeting the club went on record unanimously favoring granting the railroads in Central Freight Association territory a 5 per cent increase in rates. We earnestly urge this for the public welfare.

O. C. ROBINSON, *President.*

—

FURNITURE MANUFACTURERS' ASSOCIATION
OF GRAND RAPIDS, MICH.,
April 11, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In accordance with the instructions of our association, I beg to inclose herewith copy of a resolution passed at a full meeting of our association on April 7.

For your information, I beg to advise that members of our association employ between 8,000 and 10,000 men and have an annual product of from $12,000,000 to $15,000,000.

Yours, very truly,

ROBERT W. IRWIN, *President.*

Whereas the members of the Furniture Manufacturers' Association of Grand Rapids market a large product, which, as raw material and a finished product, is dependent for its movement on the railroads; and

Whereas there is now pending before the Interstate Commerce Commission a petition of the railroads in official classification territories for increases in freight rates, under titles, "Investigation and suspension, docket No. 333," and "Interstate Commerce Commission, docket No. 5860," combined; and

Whereas we, as manufacturers, realize that the cost of operation in all branches of industry and transportation have greatly increased in the past five years; and

Whereas, further, it is the belief of this association that an increase in freight rates will enable the railroads to so improve their equipment and service as to make them adequate to the increased demands for equipment and service: Therefore be it

Resolved, That it is the judgment of the Furniture Manufacturers' Association of Grand Rapids that the aforesaid petition of the railroads should be granted, and that they should at an early date be permitted to establish a horizontal increase of 5 per cent in freight rates; be it.

Resolved further, That the proper officers of this association transmit a copy of this resolution to the Interstate Commerce Commission.

APRIL 7, 1914.

OHIO SHOE TRAVELERS' ASSOCIATION,
Columbus, Ohio, April 11, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Ohio Shoe Travelers' Association of Columbus, Ohio, at their meeting April 11 passed the inclosed resolutions, which I beg to lay before your honorable body.

Yours, very truly,

J. J. KALTENBRUN, *Secretary.*

APRIL 11, 1914.

Whereas we believe that the present net earnings of the railways are insufficient for the proper maintenance of equipment, extension of facilities, efficient service, and safety of life and property, resulting also in the curtailment of purchases from dependent industries which seriously cripples the general business of the country: Therefore be it

Resolved by the Ohio Shoe Travelers' Association, That as a necessary measure, imperative to the prosperity of carrier-shipper and business interests generally, an immediate uniform increase of not lesss than 5 per cent in freight transportation rates to be granted the railway interests; be it further

Resolved, That a copy of these resolutions be sent to the Interstate Commerce Commission, also to the affiliated associations of the National Shoe Travelers' Association, at Boston.

—

THE HARDWOOD MANUFACTURERS ASSOCIATION,
Cincinnati, Ohio, April 11, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: On Saturday, the 4th instant, this association sent you a telegram, which read as follows:

"At its meeting here to-day it is the unanimous sense of the executive board of the Hardwood Manufacturers' Association that freight rates on lumber are proportionately higher than on any other commodity. We realize, however, it is necessary for the railroads to have a reasonable advance in freight rates at this time, and therefore favor the same, providing that a readjustment will be made later placing lumber on a fair basis as compared with other commodities."

The executive board in instructing that this message be sent had in mind that if an advance were made in freight rates, it would be general, but if any exception were made it should be lumber, which, as stated in the message, carries proportionately higher rates than other commodities.

The executive board now confirms this message with the request that if the advance is not general, or if later on an adjustment of rates is to be made, we be given an opportunity to appear before you with the view of having lumber placed on a fair basis with other commodities.

Very truly, yours,

W. H. WELLER, *Secretary.*

—

CHAMBER OF COMMERCE,
Troy, N. Y., April 13, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At the last regular monthly meeting of the officers and board of directors of the Chamber of Commerce the following was adopted by a rising vote of all the directors present excepting two:

"Whereas the increasing commerce of our country is constantly demanding more railroad equipment and larger terminals for its movements; and

"Whereas under the present unsatisfactory totals of railroad net earnings they are unable to borrow money for urgent improvements at a moderate rate of interest; and

"Whereas the railways have been unable to adapt their charges as have other industries to the change in the purchasing power of money; and

"Whereas the cost of living has increased with the railways commensurate with the increased cost of living for other industries; and

"Whereas they have continued to sell their service for an amount which has remained comparatively fixed in money, but has declined greatly in purchasing power: Now

"Therefore, we, the directors of the Troy Chamber of Commerce, most respectfully request the Interstate Commerce Commission to grant an application of the railways for a 5 per cent increase in freight rates."

Respectfully, yours,

SAMUEL E. HUTTON, *Secretary.*

—

GRAND RAPIDS ASSOCIATION OF COMMERCE,
Grand Rapids, Mich., April 15, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Permit me to advise you that the retail department of the Grand Rapids Association of Commerce at a meeting held yesterday adopted the following resolution:

"*Resolved*, That we are heartily in favor of the 5 per cent increase in freight rates asked for by the eastern railroads."

I was instructed to convey this information to you, and in this connection I might add that this department of our association is composed of all the leading retailers of this city.

Yours, very truly,

LEE H. BIERCE,
Assistant Secretary.

—

HAMILTON, OHIO, *April 18, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I beg to advise you that the attached resolution was adopted by unanimous vote of the board of trustees of the Hamilton Chamber of Commerce on April 17, 1914.

Pursuant to the spirit and the purpose of this resolution we have the honor to most respectfully request your favorable consideration of the application of the railroads for a moderate increase in freight rates, which is now pending before the Interstate Commerce Commission of the United States.

Very respectfully,

HAMILTON CHAMBER OF COMMERCE.
C. R. GREEN, *Secretary.*

Resolution.

Resolved by the board of trustees of the Chamber of Commerce of Hamilton, Ohio, That it is the sense of this chamber that the prosperity of the United States and the welfare of the people of the country will be subserved by the granting of the application of the railroads for the increase in freight rates of not to exceed 5 per cent by the Interstate Commerce Commission of the United States; and further

Resolved, That the secretary be, and is hereby, instructed to mail a copy of this resolution to the Interstate Commerce Commission, to the Congressman from the third Ohio district, and to the Senators from the State of Ohio.

BOARD OF TRUSTEES, HAMILTON CHAMBER OF COMMERCE,
By C. E. MASON, *President.*

Attest:

C. R. GREER, *Secretary.*

—

BOARD OF TRADE, OFFICE OF SECRETARY,
Passaic, N. J., April 21, 1914.

Mr. JAMES S. HARLAN,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: At a meeting of the directors of the Passaic Board of Trade, held on April 17, a resolution was passed strongly opposing the proposal of the Interstate Commerce Commission to make an extra charge to shippers using freight sidings. Shippers who avail themselves of these facilities have supplied themselves at their own expense with these facilities, and in using them are assisting in the handling of the railroads' traffic.

The Passaic Board of Trade, as the result of a referendum held in January, went on record as favoring a horizontal increase of 5 per cent in freight rates. The board is of the belief that such an increase is justified, and that the burden of increasing the revenue of the carriers would be far more equitably distributed by such an increase than by the introduction of a new set of charges, which would place the burden on one class of shipper alone.

R. E. LENT, *Secretary.*

—

BOARD OF TRADE, OFFICE OF SECRETARY,
Passaic, N. J., April 21, 1914.

Mr. CHARLES C. MCCHORD,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: At a meeting of the directors of the Passaic Board of Trade, held on April 17, a resolution was passed strongly opposing the proposal of the Interstate Commerce Commission to make an extra charge to shippers using freight sidings. Shippers who avail themselves of these facilities have supplied themselves at their own expense with these facilities, and in using them are assisting in the handling of the railroads' traffic.

The Passaic Board of Trade, as a result of a referendum held in January, went on record as favoring a horizontal increase of 5 per cent in freight rates. The board is of the belief that such an increase is justified, and that the burden of increasing the revenue of the carriers would be far more equitably distributed by such an increase than by the introduction of a new set of charges, which would place the burden on one class of shipper alone.

Very truly, yours,

R. E. LENT, *Secretary.*

—

ST. LOUIS REAL ESTATE EXCHANGE,
St. Louis, March 10, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At the last meeting of the board of directors the following resolution was adopted:

"Whereas the board of directors of the St. Louis Real Estate Exchange believe that the increase of rates asked for by the railroads of this country would be a great help to them, and that the granting of said increase would have a material effect upon business conditions of this country: Therefore be it

"*Resolved*, That it is the sense of this meeting that we respectfully urge and request your honorable body to take speedy action upon this matter and grant said increase."

Yours, very truly,

E. A. HILDENBRANDT,
President.

—

CHAMBER OF COMMERCE OF IRONTON, OHIO,
March 11, 1914.

To the honorable COMMISSIONERS OF THE
INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Chamber of Commerce of Ironton, Ohio, desires to be on record as favoring the application of the railroads for 5 per cent advance in their tariff rates.

But this chamber of commerce also wishes to be on record with your honorable body as emphatically protecting against the charge proposed to be made for placing cars for loading or unloading on siding serving industries; in other words, "spotting cars."

By order of the Ironton (Ohio) Chamber of Commerce.

Respectfully submitted.

W. G. WARD, *President.*
EARLE STEWART, *Secretary.*

—

THE ROCHESTER CHAMBER OF COMMERCE,
March 16, 1914.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: I have been informed that you were born at Lima, N. Y. If so, may I identify you as the son of Mrs. Henry Clark, whose family I remember well? My wife was Louise Bigelow, who lived, when attending the Genesee Wesleyan Seminary, next door to your mother's residence. We have been living in Rochester about 30 years, and this year I am the president of the Rochester Chamber of Commerce.

I congratulate you upon the position of very great responsibility that you hold, and I want to say that your commission have it in their power to do more to stimulate business and bring prosperity to the Nation than any agency in existence. The business men of the Nation

are profoundly of the conviction that your commission should, as speedily as possible, grant the application of the railroads for an increase in rates. They have reached this conviction from studying the reports of the railroads to your commission showing constantly lessened net earnings that alarms investors and renders it difficult and well-nigh impossible for the railroads to get the capital to furnish the facilities that a rapidly developing Nation needs and must have if we would make the progress that we all wish to see.

We have in this chamber of commerce 1,350 members, and recently we sent out a referendum on the question of advance in freight rates, and over 95 per cent of answers received were "Yes." This organization is made up almost wholly of manufacturers and merchants. There are any number of men in every community that are waiting only to hear your commission's answer on this important question. A favorable action would be of enormous benefit sentimentally to all business, because every intelligent business man knows that the prosperity of the railways or otherwise affects the prosperity of the whole people.

I beg of your commission, therefore, very earnestly, representing this organization of American business men, to grant this request, believing as we do that it is in the interest of the whole American people.

With great respect, I am,

Yours, very truly,

GEO. W. THAYER, *President.*

THE EVANSVILLE BUSINESS ASSOCIATION,
Evansville, Ind., March 14, 1914.

Hon. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Charge for switching, placing, or delivering of cars for loading or unloading on industrial sidetracks, etc.

At a meeting of the board of directors of the Evansville Business Association, Wednesday, March 11, 1914, consideration was given to the proposed charge of the carriers in official classification territory for the so-called spotting of cars, or to be more explicit, the switching, placing, or delivering of cars for loading or unloading on industrial sidetracks privately owned or owned by the railroads, and Evansville being a very large manufacturing center, and the majority of our manufacturers are located on industrial sidetracks, some of which are privately owned, and others owned by the railroads, it was the consensus of opinion that the charge, if imposed, would be unjust, and instead of having the effect desired by those concerned, viz, of adding to the revenues of the carriers, it would result in the need of more freight-house and team-track facilities to adequately care for the great volume of traffic that would be delivered there instead of being handled at the industry with a sidetrack or switch, as at present.

To provide these improvements in facilities would necessitate a great outlay of money on the part of the carriers, and it undoubtedly would require considerable time for the carriers to be reimbursed for the money thus expended. Furthermore, it stands to reason that many of the large manufacturers and shippers rather than pay whatever charge might be assessed for the spotting, trap, or ferry car, or other service for which the charge might be made, would prefer to load and unload at the freight house or on the team track of the carrier, and there is no doubt but that this would result in a continuous and serious blockade or congestion of teams and traffic at the terminals of the various carriers, and we doubt, therefore, that the end would justify the means employed to add to the revenue of the carriers. We believe that in some quarters the idea has been advanced that the present system of spotting cars and giving shippers located on sidetracks the benefit of the trap car or ferry service is discriminatory to the small shipper not located on a sidetrack who must load or unload his freight at the freight house or on the team track. The foregoing statement as to the congestion or blockade of traffic at terminals, which undoubtedly is undeniable, especially at large manufacturing and jobbing centers, should be given serious consideration in connection with this matter, and if that is done, surely it can be readily seen that the small shipper will gain nothing other than the selfish satisfaction that the large shipper located on a sidetrack or switch is deprived of the advantage of the privilege of which he could not avail himself. For many years, as is well known, the shippers in official classification territory have enjoyed the advantage that it is now sought to charge for, and it is the universal opinion that the service is taken care of in the published freight rates, and that the carriers have received full compensation thereby for the work done by them in the placing of cars for loading or unloading at industries with sidetracks, and a departure from this practice requiring the carrier to add to the present freight rate a separate charge for the service will deprive the shipper of the value of his investment in terminal facilities and transfer it to the carrier.

Already the Evansville Manufacturers' Association, through the medium of the National Industrial Traffic League, is on record with your honorable body as being opposed to the imposition of a charge for the various switching services performed by the carriers, which inspires this letter, and in conclusion, we will say also that both the Evansville Business Association and Evansville Manufacturers' Association are also on record with the commission as favoring the 5 per cent advance in freight rates in official classification territory, and we earnestly trust that the evidence that is presented in the 5 per cent advance matter will prove to the commission the justification of it being necessary to the successful and profitable operation of the roads in the territory involved in the question, and accordingly authorized it. Likewise, it is our earnest hope that such evidence will be introduced against the imposition of a charge for spotting cars and furnishing trap-car service, as will prove conclusively to your body that it will do more harm than good, and that the salutary effect that it is hoped to have will not be forthcoming, and that the proper manner in which the revenue of the carriers can be conserved is through the 5 per cent advance in freight rates in official classification territory and not by charging for switching service performed at industries located on sidetracks, etc.

Yours, very truly,

J. C. KELLER, *Secretary.*

THE BUSINESS MEN'S CLUB OF NYACK,
March 17, 1914.

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

At a regular meeting of the Business Men's Club of Nyack, held March 5, 1914, the following was unanimously adopted:

"Resolved, That the Business Men's Club of Nyack is in favor of granting to railroads the small increase in rates requested by them.

"Resolved, That the prosperity and welfare of the country is so intimately bound up with and dependent upon the prosperity of the railroads, that any unnecessary delay in granting such increase should be discouraged.

"Resolved, That taxpayers, stockholders, and employers should cooperate in opposing any amendment to the Sherman antitrust law exempting labor unions and farmers' combinations from the application of that act."

The secretary was directed to send a copy of above resolutions to the Senator and Congressman from this district, the Interstate Commerce Commission, the Railway Age, and the United States Chamber of Commerce at Washington, D. C.

R. J. BONNER, *Secretary.*

IMPORTANT INFORMATION.

NORTHWESTERN RETAIL COAL DEALERS' ASSOCIATION,
Minneapolis, Minn., March 17, 1914.

As you probably are aware, the Interstate Commerce Commission has up for consideration the advancement of rates on all classes and commodities of freight in tariffs filed by the carriers throughout the country. Two questions are before the commission:

(a) Are the present revenues of the carriers adequate?

(b) If not, how may they be supplemented?

The carriers have prepared tariffs for filing with the commission in which a charge of 7½ cents per ton with a minimum of $2 per car has been agreed upon. This, of course, would mean that the minimum charge of $2 a car would be collected for setting cars on any sidetrack belonging to any coal or lumber company, grain elevators, etc. This extra amount has heretofore been regarded as part of the rate, and if made effective it means a practical slap at economy and benefits only the strong lines.

If the Interstate Commerce Commission are of the belief that the carriers should be granted an advance in rates after hearing all of the testimony offered on the part of receivers and shippers of freight throughout the country, then the only fair thing to do is to grant the advance on all classes and commodities. Will you therefore write to the commission protesting against the adoption of any plan charging for spotting of cars, the service of which is already included in the freight rate which you pay?

Kindly give the matter your prompt attention, addressing your letter to Hon. C. B. McGinty, Secretary Interstate Commerce Commission, Washington, D. C.

Yours, very truly,

H. L. LAIRD,
Secretary-Treasurer.

SIOUX FALLS, S. DAK., *March 24, 1914.*

I would much prefer paying a higher rate, if this would insure more efficient service and better equipment, for both of these are rotten now; that is, referring to the freight equipment and service.

G. H. PERRY.

HUNTINGTON, N. Y., *March 13, 1914.*

Hon. LATHROP BROWN, M. C.,
Capitol, Washington.

DEAR SIR: We understand the question is being considered of allowing the railroads to make a charge of 50 cents to $2.50 per car for placing cars on private sidings. These sidings in this section are paid for and maintained by the owner all at his expense, and by his maintenance of this private siding he relieves the railroad of congestion which would occur on the public siding, if the railroad could not place the cars on the private siding.

Furthermore, the individual consumer can unload cars on the private siding at no extra expense, while the retail dealer who carries stock and often caters to the same trade must pay this extra charge.

If it is deemed best to allow the railroads a general advance in freight rates, we would be perfectly satisfied; but think this is not fair to the retailer, who has his capital invested and carries a stock to supply the wants of the consumer.

Trusting you will interest yourself in this matter, we are,

Very truly, yours,

W. WILTON WOOD.

NORTHAMPTON, MASS., *March 18, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I inclose for your consideration a statement of how the so-called "spotting" charge looks to us.

We are in favor of making a charge on every carload shipment in and out, regardless of placement, rather than the proposed plan, if it is decided that any charge is to be made, thus giving the railroads a decided increase in revenue without showing the discrimination that we claim.

As a matter of fact, from our point of view, public track deliveries deserve an extra charge far more than the delivery to coal dealers' siding.

Respectfully submitted.

NEW ENGLAND COAL DEALERS' ASSOCIATION,
By W. A. CLARK, *President.*

"Terminal service charge or a charge by the railroad for placing cars on side tracks other than public team tracks. A question that is now before the Interstate Commerce Commission. How it affects the retail coal dealer and what it will cost, based on a rate of $1 per car. From the point of view of the New England coal trade, as represented by the New England Coal Dealers' Association, through its president, W. A. Clark, of Northampton, Mass."

Any such charge will be discrimination against the merchant who is in business all the year round, who invests in a plant, either through a lease for rental or by actual ownership—discrimination in favor of the itinerant who is a competitor without proper facilities for furnishing goods at all times, who enters into the business, generally, at a time when all business is dull and conducts his affairs without any investment in plant or equipment, thus having no overhead charges as an expense or contributing to the upkeep of his town by paying taxes; relying upon the railroad for free side-track facilities where he may unload his cars, thus depriving the railroad not alone of their limited team-track space, but entailing upon the railroad additional costs from per diem charges on the cars in question.

It is said that a freight car averages to earn $2.60 per day. If this is true, the following figures prove that the regular or equipped coal dealer is the man for the railroad to do business with rather than the one who does side-track or stock-on-hand business. For example, a 40-ton car arrives at destination in the night, March 15, is placed on coal dealers' trestle at 9 a. m., March 16; railroad removes it p. m., and car starts return journey at night, 16th. Rental of car 45 cents

(i. e., P. D. charge) plus $2.60, one day's possible earnings. A 40-ton car placed on public team track for itinerant does extremely well if he gets it unloaded the third day—goes out empty night of 19th. This cost per diem—three days, at 45 cents, $1.35; three days' lost service, average $2.60, $7.80; car earns no demurrage because it was placed after 7 a. m. the 16th. Total cost to roads interested $7.80 plus $1.35 equals $9.15 on this car as against 45 cents plus $2.60 equals $3.05 on the car that was handled by the regular dealer—$6.10 in favor of regular equipped coal dealer from railroad point of view.

The properly equipped coal yard averages to release cars within the first 24 hours after arrival, while the itinerant is notorious in delay and demurrage. The average coal yard in New England is so situated that the actual expense for placing cars is no greater than upon public team tracks; in many cases it is less. Further the railroad is not liable for cars while upon private tracks; for the upkeep of the tracks, yards, or trestles. The railroad is distinctly liable for accident—fire and otherwise—on public team tracks, including up-keep of tracks and roadway leading to same. The railroads leading to New England from the anthracite mines of Pennsylvania have asked for no increase in anthracite coal rates, thereby implying the rates were sufficient. If a charge is imposed for placement of cars upon other than team tracks by order of the Interstate Commerce Commission, it will mean an advance in rates that was not intended or asked for. The existing tariff rates on anthracite coal are apparently based on delivery of cars to consignees' sidings; all coal is unloaded by consignees without expense to the railroad, and the railroads recognize in their tariffs that they are charging a rate that includes delivery to consignees' sidings by including the demurrage rules as part of the tariff.

The Interstate Commerce Commission has accepted this by taking jurisdiction on demurrage charges as part of interstate rate contract.

"What a charge of $1 per car will mean to the coal trade of New England, based on a tonnage of 9,000,000 tons."

Say one-half reaches New England via the several all-rail routes, 4,500,000 tons, loaded on cars that will average 40 tons per car, 112,500 cars; $1 at loading point and $1 at destination, $225,000. Five cents per ton; add that to the 10 cents that the Pennsylvania State tax has added to the retailers' costs since July 1, 1913, and you have 15 cents that must be paid by the consumer in 1914, no part of which has been paid in 1913. (There are but few places where the retailer added this 10 cents tax increase.) So much for the all-rail coal. How about the coal routed rail and water, and that routed rail, water, and again rail?

First, say 3,500,000 tons, rail and water: $1 at the mines or loading point and $1 where cars are unloaded to vessels; again 5 cents per ton. The million tons that we estimate is reshipped from boats to cars will get two additional charges, $1 when taken from boat to car and the charge at final destination. This latter class will probably average more than 5 cents because of the average smaller car in the service, possibly making the price per ton equal another cent, or 11 cents in all. Here we have 5 cents per ton on all but the 1,000,000 tons coming rail, water, and rail, on this 11 cents, or a total of $510,000 additional cost for anthracite over and above present prices to coal dealers in New England, added to the 2½ per cent State tax of Pennsylvania, put on July 1, 1913.

If this charge is imposed it will mean a most chaotic condition, and lead to further and most pronounced agitation against our New England roads. It will mean the attention of the railroad officials and the Interstate Commerce Commission constantly endeavoring to explain and interpret the tariff. If this spotting charge is ordered to apply on private tracks only, let the order specify beyond dispute what a private track is; the figures given here are based on a charge to everything except public team tracks.

For instance, at one place in Hartford, Conn., a coal car placed on a private delivery track for unloading into a dealer's yard will be entitled to a charge of $1, while a car of coal placed at the same spot to be unloaded into wagons on the opposite side of the car, would be entitled to no spotting charge. There are hundreds of such places in New England.

The railroads are entitled to an increase in revenue and should be allowed to have it, not by a 5 per cent or 5 cent increase on every rate now existing, but on certain classes or commodities that will bring in sufficiently increased income to enable the management to continue to operate. Make the rate increase hit everyone and not be discriminative in character, as this proposed terminal or placement charge certainly is.

—

BELLEVILLE, ILL., *March 19, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The members of the manufacturers' association of this city, see list appended, as well as individual manufacturers emphatically protest against the proposed charge of "spotting cars" by the railroad companies, a charge that is already taken care of by their tariffs.

We believe that a general advance of 5 per cent in freight rates granted to the railroad companies (except in such cases where the advance would seem unfair) is much more preferable and desirable to the shipping interests, and that much good would be the prompt result on general business conditions by the granting of such increase, and at the same time eliminating any possible resemblance to discrimination against the shipper.

We further believe that more hearings should be held and at some convenient point in the Middle West, which would be only just to the small as well as large shipper, and perhaps insuring greater attendance.

We understand that a further hearing is set for the 24th, and we respectfully urge your earnest consideration on this all-important subject before date named and to be advised to that effect.

Thanking you in anticipation of an early reply, we remain,

Yours, very truly,

MANUFACTURERS' ASSOCIATION,
C. T. MULLEN, *Secretary.*

Members: Belleville Water Supply Co., Belleville Brick Co., Belleville Stove & Range Co., Baker Stove Works, Crown Foundry Co., Eagle Foundry Co., Excelsior Foundry Co., Enterprise Foundry Co., Hartman Hay & Reis Co., Harrison Machine Works, Hertzler & Henninger Works, Imbs Milling Co., Oakland Foundry Co., Orbona Stove & Range Co., Quality Stove & Range Co., St. Clair Foundry Co., Geo. W. Stanley Co., St. Clair County Gas & Electric Co., J. C. Born Machine Co., Safety Gas Machine Co.

ROME, N. Y., *February 28, 1914.*

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIR: We understand that you are collecting data relative to services extended to shippers and receivers of freight, with particular reference to ferry-car service.

We therefore give below answers to the three questions you ask in this connection:

(a) There are 85 concerns represented in our organization.
(b) Of these 27 are connected by sidings to the railroads.
(c) The number availing themselves of ferry-car service at the present time is 7.

We wish to state that the sense of our organization is against the idea of charging for this service.

We wish to point out that over 90 per cent of the outgoing and incoming freight is shipped by or consigned to those concerns who are connected by sidings; that most of the articles shipped or received by those who are not connected are of such intrinsic value that the freight is not such a consideration as it is in the case of those having sidings; that we do not see the justice in penalizing the 90 per cent in order to extend a doubtful benefit to the 10 per cent.

We believe that in view of the difference in rates on carload and less-than-carload shipments it might easily work out as a detriment to the small purchaser were still another charge added; that there is a convenience to the railroad as well as to the shipper in the arrangement; and that it works to the benefit of such concerns as have less than carload shipments, yet who have not enough to warrant an expensive automobile or like equipment to haul goods to and from the freight station.

We also wish to state that we are not favorable to the charge for spotting cars except in extreme cases. We believe that the rate charged should include the service rendered; that the charge would operate unfavorably to the small manufacturer or shipper of products upon which the freight is a large proportion of the value.

Some time ago we put this organization on record as favoring the so-called 5 per cent increase of rates, which we wish to state is our present idea of the most equitable solution of the question.

Trusting that this communication may have your valued consideration, we remain,

Very truly, yours,

ROME CHAMBER OF COMMERCE,
WESTON JENKINS, Jr.,
Chairman Transportation Committee.

—

CHAMBER OF COMMERCE,
Wilmington, Del., February 18, 1914.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In accordance with one of the provisions of a resolution passed by the Chamber of Commerce of Wilmington yesterday, I now beg to transmit to you herewith a copy of the said resolution, with the request that it be laid before the commission at the proper time.

Very truly, yours,

NEIL B. SINCLAIR,
General Secretary.

This is to certify that at a meeting of the chamber of commerce, held upon this date, the following resolutions was unanimously adopted:

"Whereas the Interstate Commerce Commission now has under suspension tariffs providing for a uniform increase of freight rates by the 42 eastern railroads; and

"Whereas it has been found necessary for the railroads to increase their rates by reason of the advanced cost of operation, due to increased price of materials, labor, safety appliances, equipment, and extension of facilities to take care of increased business and safeguard life and property, resulting in a decrease in net revenues since 1910, as set forth in statements presented by the said railroads to said commission: Therefore be it

"Resolved, That this organization, through its members, representing the manufacturing, industrial, and commercial interests of Wilmington, Del., and vicinity, do fully cooperate with the railroads in their efforts to secure the relief which they ask from said commission, for the reason that, in the judgment of this organization, the existing modern conditions surrounding the business of transportation by steam railroads make the approval of such increase in freight rates just and equitable to all concerned; and be it further

Resolved, That this resolution be spread upon the minutes and that a copy of same be forwarded to the chairman of the Interstate Commerce Commission at Washington, with the request that it be submitted to the commission when it shall consider the question of the proposed 5 per cent advance in freight rates."

Attest:

JOSIAH MARVEL, *President.*
NEIL B. SINCLAIR, *Secretary.*

—

RETAIL DRY GOODS ASSOCIATION,
New York, February 13, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The membership of the Retail Dry Goods Association is made up of the proprietors of large retail stores in the city of New York.

At a meeting of the directors, held on February 10, 1914, the following preambles and resolution were authorized to be sent to you:

"Whereas an application is now pending before the Interstate Commerce Commission for an advance of 5 per cent in the freight rates of the railroads; and

"Whereas we are convinced that such advance, while it would impose no hardship on the consuming public, would enable the railroads to undertake betterments of various kinds, giving employment to many classes of labor and thus contribute to greater commercial activity in all lines of industry; and

"Whereas we believe it essential that favorable action on the proposed increase be taken at once: Therefore be it

"Resolved, That the members of the Retail Dry Goods Association of the City of New York urge the Interstate Commerce Commission to grant to the railroads permission to advance rates as above noted, and that such permission be granted without delay."

Very truly, yours,

WM. J. DUNN, Jr., *Secretary.*

THE NATIONAL ASSOCIATION OF THE
GRANITE INDUSTRIES OF THE UNITED STATES,
Boston, Mass., February 11, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: At the annual meeting of our association February 3, 1914, the proposed increase of 5 per cent on freight rates was discussed at considerable length and the conclusion reached that we present no formal protest to the advance, although it will prove quite a burden on our industry.

Our view of the matter is that to a great extent the apparent need of additional revenue is not the result of natural forces, but the outcome of lax methods and lack of economy; and if it were not for the fact that confidence must be restored and commercial activity preserved, we should be unalterably opposed to the advancement of rates.

In the belief that it may be public policy to rectify the situation in the manner proposed, we feel we have the right to say that any increase of revenue should be accompanied by sound policies and strict economies that will, with the opportunity for adjustment, in due time give to the shipper a return in the form of increased facilities and better service; and it is with the expectation of that being brought about in due course that we contemplate assuming the burden of a 5 per cent increase.

Respectfully,

THE NATIONAL ASSOCIATION OF THE
GRANITE INDUSTRIES OF THE UNITED STATES,
ROBERT D. SMITH, *Secretary.*

ROTARY CLUB,
Louisville, February 11, 1914.

TO INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Rotary Club last night the resolutions hereto attached were adopted.

This is for your information.

Yours, sincerely,

C. H. HAMILTON,
Secretary-Treasurer.

Whereas certain railroads in what is known as official classification territory have requested from the Interstate Commerce Commission permission to advance their freight rates uniformly 5 per cent; and

Whereas conditions with the railroads have materially changed since their request made a year or two ago for an advance; that the increase of wages granted through arbitration, the increase in taxes, the increased expenditure to insure greater safety to both the men and the public, and the increase caused by legislation of the full-crew type, have so increased the operating expenses of the railroads in general that their net revenues seem to be insufficient to provide for that degree of rehabilitation and extension of facilities necessary to enable them to render service adequate to the needs of the commerce of the country; and

Whereas the Rotary Club, of Louisville, Ky., is of the opinion that shippers can better afford to pay a uniform advance of 5 per cent, or whatever proportion thereof the railroads may actually need, than suffer in the future any impairment of railroad services: Now, therefore, it be

Resolved, That the Rotary Club, of Louisville, Ky., hereby request the Interstate Commerce Commission to grant to these railroads, as promptly as circumstances will permit, permission to advance freight rates in the uniform manner set forth in their recent petition upon presentation by the representatives of the railroad of such facts and figures to the Interstate Commerce Commission as will prove the necessity of such increases in revenue, in order to provide prompt and efficient service to the shipping public. And also be it

Resolved, That if the above permission is given to the railroads that same shall not be applied to further wage advances, but to the rehabilitation and extension of facilities, so that the present service to the shippers be maintained and improved.

Resolved, That a copy of these resolutions be sent to the members of the Interstate Commerce Commission and that it be requested to reach a final determination of the question as speedily as possible.

Adopted, February 10, 1914.

C. H. HAMILTON, *Secretary.*

GREENVILLE, PA., *February 10, 1914.*

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.:

At a regular meeting of Board of Trade of Greenville last evening following resolution was unanimously adopted after full discussion that the president be directed to wire Hon. E. E. Clark, chairman Interstate Commerce Commission, it would be to the immediate industrial benefit of this community and to the country at large if the railway rate advance application was settled by allowing the railroads to increase their rates not to exceed 5 per cent, and we respectfully urge such action by the commission.

W. M. JOHNSON, Jr.,
President Board of Trade.

NEW YORK, *February 10, 1914.*

The CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: At the January meeting of the board of directors of this association held in this office on January 28 last, the subject of the request of the eastern railroads for permission to advance their rates 5 per cent, now pending before your body, was discussed and it was decided:

That in the opinion of the board the railroads have made a very impressive showing of their need of additional revenue, and that no artificial restriction in the form of inadequate rates should be placed upon railway growth; that railway facilities should be developed in anticipation of traffic demands; and that the business men of the country would probably acquiesce without prejudice in an advance in rates if found necessary by your commission, in order to provide business with efficient service; also,

That the opinions as expressed above should be conveyed to you as representing the views of this association, together with the hope that your commission might decide the case with all reasonable celerity, so that the stimulating influence of vigorous railway business might speedily be brought to bear upon the country in general.

Yours, very truly,

AMERICAN MANUFACTURERS EXPORT ASSOCIATION,
E. V. DOUGLASS, *Secretary*

INDIAN REFINING CO. (INC.),
New York, February 4, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: At a meeting of the board of directors of the Indian Refining Co. held in New York on Friday, January 30, 1914, at which all of the directors were present, it was unanimously resolved that the executive committee be instructed to prepare a suitable resolution for presentation to the Interstate Commerce Commission, to the effect that the Indian Refining Co. does not oppose the application of the railroad companies east of the Mississippi River for an advance in freight rates now being considered by the commission.

At a meeting of the executive committee of the Indian Refining Co. held on Tuesday, February 3, 1914, the following preambles and resolutions were unanimously adopted:

Whereas Indian Refining Co. is a corporation organized under the laws of the State of Maine and doing business in petroleum products in various States of the United States, but chiefly in those States lying north of the Ohio and Potomac Rivers and east of the Mississippi River; and

Whereas Indian Refining Co. is entirely independent of any other company doing a general business in petroleum products; and

Whereas 49 railroad companies operating in what is commonly referred to as Central Freight Association and Trunk Line Territory, are participating in an application to the Interstate Commerce Commission for an increase in freight rates to an amount of 5 per cent; and

Whereas Indian Refining Co. during the year 1913 paid in freight rates an amount, approximately, $650,000; and

Whereas Indian Refining Co. sells a large amount of its product to manufacturing companies, the volume of sales being chiefly dependent upon general business conditions; and

Whereas many of the industries upon which Indian Refining Co. is dependent for a market for its product have been operated for a considerable time past at much less than their normal capacity, due to a general slackening of business, thus resulting in a decrease in their consumption of fuel: Therefore be it,

Resolved, That Indian Refining Co. does not oppose the present application of the said railroad companies for an increase in freight rates as desired by the said railroad companies, even though, should such an increase be granted, it would involve an increase to the expenses of the company; and be it further

Resolved, That in the opinion of the directors of Indian Refining Co. the railroad companies are entitled to this additional compensation for their services, and in their opinion the good effect upon general business conditions would more than offset the additional cost of shipping their product.

Yours, truly,

INDIAN REFINING CO.,
P. B. CLEMPLER,
Chairman of Board of Directors.
THEO. Z. POMMY, *President.*
GOFFREY KONTA, *Secretary.*

TACOMA, WASH., *February 3, 1914.*

EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.:

The business world awaits with great interest and anxiety decision of the Interstate Commerce Commission on matter of railroad rate advance. Many important and necessary railroad and industrial improvements are being delayed from month to month pending definite announcement on this matter. We therefore respectfully urge that decision be reached and announced as promptly as may be consistent with the duty and convenience of the commission. We believe that worthy investments honestly managed are entitled to reasonable earning opportunity. Beyond question the matter is so regarded by a great majority of the people and there is every confidence that the commission in dealing with the question of rate advance will consider its close relation to the commercial and industrial prosperity of the Nation.

TACOMA COMMERCIAL CLUB AND CHAMBER OF COMMERCE.

NATIONAL LIME MANUFACTURERS' ASSOCIATION,
Riverton, Va., January 31, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: By a submitted vote, 85 per cent of the members of the National Lime Manufacturers' Association assenting and 15 per cent dissenting, the following preamble and resolution was adopted, and in accordance with instructions I am laying it before your honorable body.

Very respectfully,

WILLIAM E. CARSON, *President.*

Whereas in view of the increasing freight traffic and the necessities arising therefrom it is imperative the railroads should increase their rolling-stock equipment, betterments, and additions; and

Whereas it is shown in the face of a greatly increased volume of business there is such a contraction in net profits, due to increased cost in operating expenses, the railroads can not successfully finance their securities or lay aside sufficient funds to carry forward needed improvements, thereby facilitating passenger service, freight traffic, and property safeguarding life: Be it

Resolved, That we believe it would be for the best interest of not only the lime business, but every other business, that the request of the railroads to the Interstate Commerce Commission for an increase in freight rates of 5 per cent on all classes and commodities be granted, and the president of this association is instructed to lay this resolution before the Interstate Commerce Commission that they may know the sentiment that exists among lime manufacturers on this important matter.

MERCHANDISE BROKERS' ASSOCIATION,
Lynchburg, Va., January 29, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the proposed advance in rates of 5 per cent asked for by the railroads, this association takes pleasure in saying that they view this advance favorably and trust that your commission will see fit to permit the railroads a general advance of 5 per cent, believing that increased cost of labor, maintenance, and supplies justify them in asking for this increase.

Very truly, yours,

MERCHANDISE BROKERS' ASSOCIATION,
By JOHN T. OWEN, *Secretary and Treasurer.*

THE MERCHANTS' PROTECTIVE ASSOCIATION
OF PITTSTON AND VICINITY,
Pittston, Pa., January 24, 1914.

Hon. E. F. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Please find inclosed resolution adopted by this association on January 19, 1914.

Respectfully, yours,

E. T. MESSICK, *Secretary.*

Resolved, That the Merchants' Protective Association of Pittston, Pa., records itself as in favor of the application of the railroads for a reasonable increase of freight rates; that in our opinion such increase is necessary on account of business conditions and increased cost of operation; and that it is advisable because it will result in better railroad accommodations, more railroad construction, and safer transportation; and that the secretary be directed to communicate this resolution to our Congressman and to the Hon. E. E. Clark, chairman Interstate Commerce Commission.

E. T. MESSICK, *Secretary.*

THE NORTH CAROLINA PINE ASSOCIATION,
Norfolk, Va., January 26, 1914.

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Herewith inclosed find resolution adopted at the meeting of our association held here on the 22d instant relative to the request of the railroads for permission to advance their rates 5 per cent. A committee was appointed at the same time to personally appear before your commission in advocacy of this course of action. They will be in Washington on February 20, the date set for hearing the lumber interests.

Yours, truly,

W. B. ROPER, *Secretary-Treasurer.*

Resolution adopted at the regular monthly meeting of the North Carolina Pine Association held in Norfolk, Va., January 22, 1914:

Whereas it is the opinion of this association that the conditions prevailing to-day in the lumber market is to a great extent due to the withdrawal of the railroads from the market, which withdrawal is largely due to the railroads' inability to finance much-needed improvements; and

Whereas the inability to so finance is unquestionably due to the fact that the revenue they derive under the present rate is insufficient to enable them to meet the increased operating expenses and at the same time carry forward the said improvements: Therefore be it

Resolved, That this association go on record as favoring the proposed increase of 5 per cent on all classes and commodities now being considered by the Interstate Commerce Commission, and that the secretary be instructed to convey in such a manner as deemed most advisable the position of this association to the members of the Interstate Commerce Commission and to our Congressmen, requesting their assistance in behalf of the increase. That the secretary also be instructed to consult with the National Lumber Manufacturers' Association and through it with the affiliated members of that association, looking toward creating a sentiment favorable to the said increase.

AKRON, OHIO, *January 26, 1914.*

To the Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

HONORABLE SIR: Referring to the hearings of shippers before your honorable body on specific commodities under the 5 per cent advance rate case, we notice January 28, 1914, has been set for the hearings on tile, brick, and clay.

These are commodities we are interested in.

Our company is incorporated with a capital stock of $7,000,000, all issued and outstanding.

We manufacture principally sewer pipe and some allied products, and we believe that our shipments fully equal those of any other company in the United States. During the year 1913 we shipped 15,111 cars of clay products.

The attached affidavit of our assistant secretary and treasurer confirms the facts above stated.

We are greatly interested in having adequate railroad service for the distribution of our products and we desire to express ourselves in favor of the 5 per cent general advance by the railroads for the reason that we believe it will enable the railroads to better meet the demands for service and will, under all existing conditions, tend to the general prosperity.

We are not in any way influenced in making this request by the railroads from a business standpoint, as our sales to them do not amount to over 50 carloads per year.

Respectfully submitting the above.

Yours, truly,

AMERICAN SEWER PIPE CO.,
ROSS W. SMITH,
Traffic Manager.

STATE OF OHIO, *County of Summit, ss:*

W. R. Anderson, being first duly sworn, deposes and says that he is assistant secretary of the American Sewer Pipe Co., a corporation duly incorporated under the laws of the State of New Jersey, and incorporated thereunder on the 5th day of March, 1900, with a capital stock of $7,000,000, all of which is issued and outstanding; that he, as such officer, has full charge of the books and accounting department of said company, and according to the records in his office said company has shipped during the year 1913 a total of 15,111 cars of clay products. And further this deponent says that the above facts are true as he verily believes.

W. K. ANDERSON.

Sworn to before me and subscribed in my presence this 26th day of January, 1914.

[SEAL.] R. H. NESBITT, *Notary Public.*

AMERICAN WOOD PRESERVERS' ASSOCIATION,
Baltimore, Md., January 27, 1914.

Mr. EDWARD E. CLARK, *Chairman,*
Mr. JUDSON C. CLEMENTS,
Mr. CHARLES A. PROUTY,
Mr. JAMES S. HARLAN,
Mr. CHARLES C. MCCHORD,
Mr. BALTHASAR H. MEYER,
Interstate Commerce Commission.
Mr. GEORGE B. MCGINTY, *Secretary.*

GENTLEMEN: I take pleasure in advising you that at the tenth annual convention of the American Wood Preservers' Association, at New Orleans, January 20 to 22, a resolution was unanimously adopted favoring an increase in railroad freight rates as a necessary factor in maintaining the prosperity of our great industries that are dependent upon rail transportation from source of production to point of consumption.

This resolution, a copy of which I attach, is the result of a careful analysis of the railroad situation by members of the American Wood Preservers' Association, who are not only identified with the railroad industry, but are also affiliated with important commercial enterprises, who recognize the need of higher freight rates to meet the obligations of the railroads and improve their operation for the benefit of the general public.

The purpose of the American Wood Preservers' Association is to conserve our timber supply by lengthening life of the timber in use by preservative treatment, and incidentally to encourage all enterprises whose fundamental principles are the welfare of the public at large.

It is in this spirit that the accompanying resolution is respectfully submitted to the honorable members of the Interstate Commerce Commission, and we hope that it will receive the fair consideration which is accorded by the commission to matters of like importance.

Yours, very truly,

F. J. ANGIER, *Secretary-Treasurer.*

Resolution adopted by the American Wood Preservers' Association at its tenth annual convention, held in New Orleans, La., January 20–22, 1914.

Whereas the Interstate Commerce Commission is now giving consideration to an increase in the rates of freight charged by railroads; and

Whereas the use of treated material is one of the fundamental features of economic railroad maintenance:

Resolved, That the American Wood Preservers' Association favors such an increase in rates as will enable the railroads to carry out their plans for improved service; and

Resolved further, That a copy of this resolution be forwarded to the Interstate Commerce Commission by the secretary.

M. K. TRUMBULL.
E. A. STERLING.
J. H. WATERMAN.
JOHN FOLEY.

WASHINGTON, D. C., *April 24, 1914.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a representative meeting of railroad employees held in the city of Indianapolis, Ind., April 9, 1914, the following resolutions were unanimously adopted:

RESOLUTIONS.

"Whereas the cost of all commodities and of every class of service has, during recent years, been very greatly increased, and the cost of the operation of every industry has been proportionately advanced, and under these conditions railroad freight rates, being regulated by law, have remained stationary; and

"Whereas it is unfair, under such conditions, to prohibit railroad companies raising the cost of their service so as to permit of their meeting the demands of the increased cost of operation; and

"Whereas, with a view to this end, the railroads of the United States have petitioned the Interstate Commerce Commission for the privilege of very slightly increasing their freight rates, and these demands of the railroad companies being gradually recognized as fair, just, and reasonable:

"*Resolved*, That this convention, representing railroad employees, do hereby earnestly request and urge upon the Interstate Commerce Commission to accede to this request of the railroad companies in this particular, and thus permit them to maintain the railroad industry of the country up to a proper standard of efficiency.

"*Resolved further*, That recognizing that the railroads of the United States are the best in the world, while freight rates in this country are the lowest in the world, we believe that the best economy in this connection requires that the railroads be maintained to their present high standard, and that this condition to so maintaining them should not be withheld.

"*Resolved further*, That a committee representing the railroad employees be appointed to present our views in this matter to the Interstate Commerce Commission."

Replying to your telegram of the 16th instant, we, the committee, beg leave to submit the following brief, and we sincerely trust that it will be treated in a spirit of fairness and in the interest of the men we have the honor to represent, and that the ultimate outcome of this great question that has brought about serious conditions throughout the country may be settled satisfactorily to all concerned.

The conditions that prevail throughout the railway centers of this country at the present time, and which is becoming more serious day by day, brought about this gathering of representative men who believe, and from personal knowledge know, that we are passing the gravest crisis ever encountered by railway employees, and that the situation existing in the railroad centers at the present time is very embarrassing to the general public and to the employees who are handling and transporting a large part of the commerce of the Nation,

During the past few months thousands of men in all departments of the great railroads of this country have been laid off, and engineers and conductors, who had been running engines and trains for 9 or 10 years regularly have been set back to firemen and trainmen.

Many regular schedule trains have been discontinued, telegraph offices have been closed, men in charge of pumping stations have been laid off and the work doubled on men now employed, hours have been reduced of the men working at present in the shops and in offices.

Many employees have been dismissed from the service and retrenchment is general in all departments, and in many instances wages have been cut anywhere from 10 to 20 per cent and the hours of thousands of employees reduced.

There is a cause for this condition. We will not attempt to go into detail or submit figures regarding the earnings of the railroad companies, because we feel that enough has already been submitted to the commission upon this subject.

We feel that we have a right to present to you our views and opinions upon this important question, which involves the welfare of almost 3,000,000 wage earners, and we desire to state that we are not endeavoring to exaggerate this, for the commission must take into consideration that every man and woman working for industries that furnish supplies to railroad companies are directly interested in this rate question.

It has been said by eminent men that many petitions have been presented to the commission and Members of Congress praying for an increase of rates which upon their face show that men higher up in the railroad movement have had something to do in the framing of such petitions. However, we desire to inform the commission that no official directly or indirectly connected with a railroad company has ever approached us upon this subject. We have represented respective organizations in legislative matters and have promulgated and put into effect through legislation many laws beneficial to railway employees and the public in general, and we realize the great necessity of more legislation for their protection and safety.

We feel that our opinion upon this great question deserves the most careful consideration by the commission, because we are in a position to know that the earning capacity of the railroads have been decreased to a large extent by the enactment of legislation that has compelled them to provide for safer operation of trains.

This subject was taken up with the administration officials several months ago, and we believe the policy of the administration is to deal with fairness and justice upon all matters which pertain to the general welfare of all people.

We realize the judicial jurisdiction of this rate-making question lies wholly with the Interstate Commerce Commission, and in our conference with administration officials upon this subject we suggested that the commission take up with the presidents of the great railway systems this question and ascertain from them the real cause of present conditions, and if they contended that their revenue was insufficient and that the depreciation of business was due to this fact that they be granted an increase pending the investigation, and if found after the commission had made a thorough investigation that such was not the case that the railroads be punished for bringing about the present deplorable conditions.

We realize that there is a fictitious value on many things, even on the land which produces everything, and it is undoubtedly true that many railroads have a fictitious value upon their stock, and we presume that this will be properly taken care of by the commission, which is now considering the physical valuation of the railroads.

There are at the present time about 3,000,000 people directly interested in this rate question, and we feel that we can truthfully say that one-half million of these people are at present out of work; figuring their average daily pay at the rate of $2 per day will mean $1,000,000 a day, or $30,000,000 a month, which is being taken away from the employees and their families. These employees would receive $360,000,000 in one year. Put them to work, let them earn this money and put it into circulation, and we are sure that it will stimulate business to a great extent.

We feel that the rates could be equalized—for instance, a sliding scale could be inaugurated wherein a higher rate could be charged for perishable commodities, which are almost exclusively used by the rich. However, we do not desire to enter into this phase of the question, for we have confidence in the commission's judgment upon these matters.

What the railroad men who constitute a large part of the working people of America want at this time is results; in other words, they want work.

At the present time engines are laying in the shops for repairs, thousands of cars are stored, rolling stock has been run down, the laws upon the statute books of the Federal and State Governments are being constantly violated, and these men who have nothing to do and can not secure employment elsewhere are getting tired of investigations; what they want and desire is results. We feel that the shippers may have a grievance; we will not attempt to dispute their claim, but we do know that the small business men of the country, together with the farmers, would much rather be assessed a little more in the shipment of their products and the consumer would be satisfied to pay more for his goods in order that he might see the thousands of men now out of employment back to work and the country prosperous than to see existing conditions.

President Wilson in his speech of acceptance at Seagirt, N. J., August 7, 1912, speaking of wage earners, said:

"The welfare, the happiness, the energy, and spirit of the men and women who do the daily work in our mines and factories, on our railroads, in our offices and marts of trade, on our farms, and on the sea, is of the essence of our national life. There can be nothing wholesome unless their life is wholesome; there can be no contentment unless they are contented. Their physical welfare affects the soundness of the whole Nation."

Shortly after the present administration assumed control of the Government Secretary of Commerce and Labor Redfield delivered several speeches, which were given wide circulation by the newspapers, in which he expressed the views of the administration. Representative UNDERWOOD, speaking for the party, stated upon the floor of the House, in substance, "that if big business proceeded to shut down their industries for the purpose of throwing men out of employment that an investigation would be made at once, and, if found that they were trying to embarrass the administration, drastic action would follow and the men responsible would be punished.

This procedure could be followed by the commission. The investigation of freight rates has been going on for a long time, and we attribute the present conditions of this country to a large degree due to the fact that the railroads have not received sufficient revenue to transact their business legitimately.

The railroad employees as well as the people in general are vitally concerned in the future prosperity of our country, and we are sure that they feel that President Wilson has made good, taking into consideration the great problems that he has had to handle. We think that quick action upon this matter by the commission is of vital importance to the present administration.

In presenting this information we desire to inform you as American citizens representing in this instance a certain class of men of which 414 gave up their lives and 171,400 were injured while transporting a large part of the Nation's commerce during the fiscal year ending June 30, 1913.

These men constitute a great moral force among the wage earners of America, and our only aim and desire is to try and convince you that this commission is in a position where they can relieve the distressing conditions which are confronting many people of this country.

We sincerely trust that you will accept this brief in a spirit of fairness and honesty and that you will give it earnest and careful consideration, for thousands of people are awaiting with great anxiety the result of your decision.

Very truly, yours,

FRED L. FEICK, *Chairman*,
JOHN O'MARA, *Secretary*.
Committee.

—

MOROCCO MANUFACTURERS' NATIONAL ASSOCIATION,
Philadelphia, Pa., March 20, 1914.

Mr. JUDSON C. CLEMENTS,
Interstate Commerce Commissioner, Washington, D. C.

DEAR SIR: In accordance with unanimous action at the annual meeting of the Morocco Manufacturers' National Association, held in Philadelphia March 12, 1914, I have the honor to transmit to you for your consideration a resolution referring to plea of the eastern railroads to the Interstate Commerce Commission, asking to be permitted an advance in freight rates.

Respectfully, yours, LAIRD H. SIMONS, *Secretary.*

—

MARCH 23, 1914.

Mr. LAIRD H. SIMONS,
Secretary Morocco Manufacturers' National Association, Philadelphia, Pa.

MY DEAR SIR: This will acknowledge receipt of yours of the 20th instant, inclosing copy of resolution passed by your organization at its recent meeting, referring to the investigation pending before this commission concerning proposed advance in freight rates by carriers in official classification territory.

In all cases of this kind this commission is required under the law to act only after full hearing, which implies that it shall be thoroughly informed by investigation as to all the facts, circumstances, and conditions pertinent to the question of whether or not the rates involved are reasonable and just for the service performed.

The commission is proceeding with this inquiry as expeditiously as possible, having in view all the requirements of the law, and will dispose of the question involved as soon as practicable.

Yours, very truly,

JUDSON C. CLEMENTS,
Commissioner.

—

HOUSE OF REPRESENTATIVES,
Washington, April 27, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Local.

SIR: I beg to hand you herewith copy of resolution adopted by the Chamber of Commerce of Fremont, Ohio, urging the increase of rates on freight transportation, which question is now before your commission. This organization consists of 450 members, and I trust it will receive your careful attention.

Sincerely, yours, JNO. A. KEY.

Whereas the railroads operating in the United States are petitioning the Interstate Commerce Commission for permission to increase the rates on freight transportation not to exceed 5 per cent; and

Whereas the profitable operation of the Nation's transportation facilities is being seriously retarded by reason of the railroads not receiving such rates for freight transportation as would insure the profitable operation of the railroads of the country; and

Whereas the railroads of the Nation are the highways of commerce, and when such highways of commerce are burdened by unprofitable operation the effect is felt in every line of commercial endeavor: Therefore be it

Resolved, That the Fremont Chamber of Commerce does hereby indorse and recommend that the petition for the increased rates be granted.

—

APRIL 16, 1914.

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The following organizations representing the industries in the printing trades in the city of Chicago and vicinity—Typographical Union, No. 16; Pressmen's Union, No. 3; Franklin Union, No. 4, I. P. & A. U.; Photo-Engravers' Union, No. 5; Blank-Book Binders and Paper Cutters' Union, No. 25; Electrotypers' Union, No. 3, in joint conference assembled, respectfully submit to your honorable body that:

Whereas an unprecedented depression has thrown out of employment large numbers of workers in the printing industry here, which represents 22,300 wage earners, and has otherwise depressed the printing trade; and

Whereas this depression is directly traceable to the restriction in railway service due, it is declared, to the inability of the railroads to maintain their normal service under present freight rates; and

Whereas individual physical suffering on the part of a large number of wage earners, and mental anxiety due to uncertainty of the future demands immediate relief: It is therefore

Resolved, That we as wage earners respectfully represent to you, the honorable Interstate Commerce Commission, the loss and suffering entailed by withholding the authorization for increase in freight rates requested by the railroads is destructive and demoralizing, and that whatever causes may have urged the withholding of the authorization to advance railroad rates 5 per cent the burden now falls heavily upon the printing-industry workers in this city and among the vast number

of workers in other industries, and earnestly urge relief from distresses from which we and the workers in other industries are suffering.

Respectfully submitted.

Typographical Union, No. 16, Walter W. Barrett, president; Michael Colbert, secretary. Pressmen's Union, No. 3, Chas. E. Sanguin, president. Franklin Union, No. 4, I. P. & A. U., Harry Muss, president; L. S. Mills, secretary. Photo-Engravers' Union, No. 5, Rudolph Clemens, president; J. H. Schussler, secretary. Blank-Book Binders and Paper Cutters' Union, No. 25, John R. Fitzgibbon, president; C. J. Pickthall, secretary. Electrotypers' Union, No. 3, Henry D. Frank, president.

EXHIBIT E.

CORPORATIONS, FIRMS, AND INDIVIDUALS SOUGHT TO PERSUADE THE INTERSTATE COMMERCE COMMISSION TO GRANT THE INCREASE.

Several hundred letters and telegrams were received from corporations, firms, and individuals, asking for freight-rate advances. These for the most part consist of the same stock arguments of the railroads. Many of the petitioners sell supplies to the railroads, some are security holders, and still others receive free services from the railroads and are therefore naturally favorable to the rate advance. Some writers doubtless believe that national prosperity is dependent upon the rate increase, as has been continually urged by the railroads. The public at large seems to have had little to say, though they must ultimately pay the freight.

DENVER, COLO., *February 12, 1914.*

To the CHAIRMAN INTERSTATE COMMERCE COMMISSION.

MY DEAR SIR: As owner of 15 shares New Haven Railroad I receive no dividend. As I understand it, this is because you will not allow the railroad to increase its rates.

I notice your Mr. Prouty, together with the Massachusetts Railroad Commission, did not grant the Boston & Maine Railroad the increase they decided it ought to have.

I consider the settlement of the Delaware & Hudson strike a disgrace to the United States.

As a citizen, voter, and taxpayer, I respectfully demand that my rights as a small investor be protected along with unionism, and that you grant the railroads an increase in rates without undue delay.

Very respectfully,

ROBERT W. JOHNSON.

—

BELKNAP HARDWARE & MFG. CO.,
Louisville, Ky., January 23, 1914.

Hon. CHARLES A. PROUTY,
Commissioner, Interstate Commerce Commission,
Washington, D. C.

ADVANCES IN RAILROAD RATES.

MY DEAR SIR: We desire to respectfully indorse the request of certain railroads doing business in eastern territory for a general increase of 5 per cent in their freight rates.

We receive very large quantities of freight from the district affected, and naturally make this indorsement with full understanding of the burden that it will put upon us in the payment of this increase in rates. Our reasons for indorsing the request, however, outweigh, in our opinion, the importance of the consideration of additional freight that we will have to pay.

It is our belief that the increase cost of operating railroads militates against the quality of service, and if continued without a corresponding increase in freight rates would result in the service becoming inefficient and dangerous.

We further believe that the increase proposed, while not a serious handicap on any industries, will result in large purchases by the railroads of many products purchased by industries now in a great state of depression and which would be greatly benefited by such purchases.

We furthermore believe that such a change would result in a better market for railroad securities essential to enable at least some of the railroads affected to make provisions for improvements, betterments, extensions, and sidings necessary for the service they must render to the public.

Respectfully submitted.

WM. HEYBURN, *President.*

—

COLUMBUS, OHIO, *April 2, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The officers of the subscribing company, being trustees for some 3,500 stockholders, voicing these stockholders and the almost unanimous wish of the entire population in this vicinity and State, beg your honorable body to grant the request of the railroads for a horizontal increase of freight rates.

We further beg that this increase be granted immediately. The condition of the business of the entire country, we feel, is dependent upon the compliance of your honorable body to their request.

It is the one item now necessary to stimulate business and furnish employment to the rapidly growing multitude of unemployed.

Arguments have been placed before you so thoroughly by representatives of the people that we make no arguments at this time, but we do feel the grave responsibility resting upon you for your action in this matter, affecting the entire population of the United States.

Yours, respectfully,

THE RALSTON STEEL CAR COMPANY,
F. A. MILLER,
Secretary and Treasurer.

—

COLUMBUS, OHIO, *March 31, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As a member of the chamber of commerce in the city of Columbus we are writing you with reference to the proposed increase of freight rates, which we believe should be granted at the earliest possible date. There seems to be no question about the need of this advance, and the present condition of the country in a business way indicates that if it is to be granted it should be done promptly in order to set the wheels of business moving.

Very respectfully, yours,

THE COLUMBUS OIL CLOTH CO.,
By C. L. DICKEY, *President.*

—

CLEVELAND, OHIO, *December 31, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Harboring the honest opinion and belief that the railroads of the country are in absolute need of and entitled to an increase in rates, and with the hope that the arguments made by them in your opinion are reasonable, we plead and hope that you can see your way clear to grant the rates asked for.

THE CLEVELAND BOX CO.,
GEO. A. MARTIN.

—

THE WILLYS-OVERLAND CO.,
Toledo, Ohio, December 31, 1913.

Hon. CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: After considering from every angle the matter now before your honorable body pertaining to the general increase in rates, I am constrained to write and express to you my belief in the advisability of such action. I am convinced that conditions warrant it, and that carriers are entitled to a larger revenue for the service they perform.

So I would respectfully ask to be placed on record as not only not objecting to the increase, but as strictly advocating it, notwithstanding the fact that it will mean a large increase in the expenses of my company.

I might add that the Willys-Overland Co. and the several companies owned by it and myself making parts for Overland cars are, as you are doubtless aware, heavy shippers. The Willys-Overland Co. alone ships and receives approximately 16,000 carloads per annum and pays freight charges on inbound carload shipments, exclusive of coal, oil, and lumber, considerably over $200,000 per annum.

Yours, very truly,

J. N. WILLYS, *President.*

—

THE AUTHORS' CLUB,
New York, March 31, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

We, makers of books to teach and educate the people, want to say that unless the railroads are not only treated fairly but liberally we can not prosper. Surely the whole people want it and beg for it, from ocean to ocean.

Respectfully,

H. E. SMITH.

—

CLEVELAND, OHIO, *April 3, 1914.*

INTERSTATE COMMERCE COMMISSON,
Washington, D. C.

GENTLEMEN: We beg to submit to you the following statement of this company's attitude upon matters now pending before your honorable body:

We respectfully urge and petition your honorable body to grant immediate compliance with the request of the railroads of the United States for a horizontal increase in rates for freight shipments.

We realize that such increase would augment our cost of operation and production, but believe that there would be an equitable distribution of the burden upon all shippers alike without discrimination or yielding of unfair advantage.

We believe that such an increase is absolutely necessary to maintain the credit of the railroads, permit them to make the necessary repairs, betterments, and renewals; to adequately provide for the growing demand of service and facilities and stop the enormous losses now affecting the entire country.

We protest against the imposition of special charges for "ferry," "trap car," and "spotting" service, believing that such a plan could only result in disastrous inequalities and discrimination among and between the shippers and further unsettle business conditions.

We believe that arbitrary changes in the regulations of switching and placing of cars would be confusing and harmful to shippers and of doubtful benefit to carriers, and wish to go on record as being opposed to any arbitrary changes in the regulations above referred to.

The granting of a horizontal rate increase without delay will, we believe, result in the immediate stimulation of business throughout the country and entail no serious loss or injury to anyone.

Unparalleled floods during the past year, increased rates in wages paid to trainmen, the depletion of revenues by loss of business, and operation controlled by legislative enactment and exactions have combined to work great hardships on the carriers. At the present time of partial depression they are unable to meet the demands of shippers for adequate service; and facing the necessity of rebuilding and extensions, there is no doubt that the railroads need the relief they pray for, and beg leave of your honorable body to join in their prayer.

Very respectfully,

THE UPSON NUT CO.
H. A. FULLER, *President.*

—

CINCINNATI, *April 3, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We urgently petition your honorable body to grant immediate compliance with the request of the railroads of the United States for a horizontal increase in rates for freight shipments.

As shippers, we realize that the increase so granted would make an additional charge upon our cost of operation and production, but it would be a burden distributed upon all shippers alike, without discrimination or yielding of unfair advantage.

While there have been, unquestionably, serious abuses in railway development and operation in the past, and while some such abuses may still exist, arising from conditions for which the Government and all the people as well as the railroads are responsible, we believe that the revenue to be derived from the proposed increase in rates is absolutely necessary to reasonably maintain the credit of the railroads, to permit

them to make the repairs and betterments necessary, to adequately provide for the growing demands of service and facilities, and to stop the enormous losses now affecting the business of the entire country.

We protest that, in our judgment, the alternative plan proposed for providing additional revenue for the railroads through the imposition of special charges for "ferry," "trap car," and "spotting car" service would result in still further unsettling business conditions and, in application, would bring about disastrous inequalities and discrimination among and between shippers.

We submit that the present rates, as a whole, have been based upon long-established shipping customs and that arbitrary changes in switching and car-placing regulations would be confusing and harmful in many ways and of doubtful benefit to the carriers. The abuses which may have arisen in connection with switching and car-placing service—and we do not doubt that there are instances of this sort—can be eliminated upon investigation and order without involving all shipping interests.

Therefore we protest against any arbitrary withdrawal of switching or car-placing services or the institution of special charges therefor, holding, as we do, that these services are wholly compensated in the building and maintaining by shippers of individual tracks, loading stations, and appliances which greatly facilitate the transportation of all classes of freight, wherever or by whomever shipped, and prevent the congesting of traffic and storage.

The substitution of such a change would work a great hardship upon shippers, would necessitate increased prices to consumers, and would not greatly or uniformly benefit the railroads nor give the relief for which they and we pray.

We believe that the granting of a horizontal rate increase without delay will result in the immediate stimulation of business in all lines of productive endeavor and that it will not entail serious loss or injury to any person or persons, firms, or corporations. With the losses of roadbeds, tracks, bridges, rolling stock, and equipment in the unparalleled floods of the past year, with revenues depleted by loss of business, with operation controlled by legislative enactment and exactions, and hampered by new regulations and requirements, already unable to meet the demands of shippers for adequate service, even at a time of partial depression, facing the absolute necessity for rebuilding and extensions, there is no doubt—there can be no question—that the railroads need the relief prayed for, and need it now; and neither is there question that a large majority of the shippers of the United States realize these conditions and join in this prayer.

Respectfully submitted.

THE ROBERT MITCHELL FURNITURE CO.,
Per R. H. MITCHELL, *Vice President.*

—

SPRINGFIELD, OHIO, *April 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: If there is any one thing more than the recent tariff legislation that is and for a long time has been disastrously affecting the business of the entire country it is the failure of your honorable body to grant the request of the railroads of this country for a horizontal increase in freight rates.

The enormous losses now affecting the business of this great country, and that have already been sustained by reason of the delay to sanction the reasonable request of the railroads, would pay the increase asked for more than 10 years.

It certainly never was contemplated by creating the Interstate Commerce Commission with unlimited powers that it should be used as an instrument to indefinitely hamstring the greatest and most important industry of this country.

We respectfully urge immediate compliance with the request of the railroads for a horizontal increase in freight rates.

Very respectfully,

THE FAIRBANKS CO.,
By N. H. FAIRBANK.

—

MIDDLETOWN, OHIO, *April 2, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to add our urgent request to that of the many others that you must have received that your honorable body grant, as quickly as possible, the request of the railroads of the United States for a horizontal increase in freight rates.

As large shippers, we believe that all shippers and the public generally will be equally benefited by this concession to the railroads through the improvement in business that we feel certain must follow.

The railroads are to the business and the prosperity of the country as are the arteries to the human system. They must be in first-class working condition or serious consequences will follow.

In addition to increased expenses from many sources, they are unquestionably in a run-down condition, and the needs of the general public demand that large sums be spent for maintenance, motive power, and rolling stock.

The railroads are apparently to-day as a patient who is convalescent—they need stimulant and nourishment, and they need it quickly. After they have regained their normal strength they may be able to stand further diet without injury.

We believe that the business of the country is losing hundreds of thousands of dollars every day that the settlement of this important matter is delayed, and where business loses, labor must lose proportionately.

We sincerely trust that you can see your way clear to take favorable action on this matter immediately in the interests of the country at large.

Yours, very truly,

THE AMERICAN ROLLING MILL CO.
GEO. M. VERITY, *President.*

—

BARNESVILLE, OHIO, *March 26, 1914.*

INTERSTATE COMMERCE COMMITTEE,
Mr. GEO. B. MCGINTY, *Secretary,*
Washington, D. C.

DEAR SIR: Referring to the case now in hearing before your honorable body wherein the common carriers of the country are asking for permission to make an advance in the rates of 5 per cent, and also an alternate proposition in lieu of an advance in freight rates to impose an extra charge on shippers and receivers of freight for switching or spotting cars for loading or unloading, the undersigned would much prefer and herein ask your honorable body if they find it necessary to grant to the common carriers an increase in their revenue, that it may be done on a percentage increase in the existing freight rates; and that conditions relating to switching or spotting cars for loading or unloading remain the same as they are at present.

Yours, very truly,

THE WATT MINING CAR WHEEL CO.,
Per P. H. LAUGHLIN, *General Manager.*

—

AGOSTA, OHIO, *March 28, 1914.*

SECRETARY OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I read in the press and trade papers that your body has about decided to order the carriers, in lieu of their request to advance freight rates 5 per cent, to make charges for the service of placing cars at stations at other points than public team tracks. I am the owner of two country grain elevators, both of which will be affected by such a ruling as this, provided I have the correct understanding of the matter, viz, that all cars placed at special points at stations (other than ordinary team track) will carry a special-service charge. I have a great deal of money invested in plants at these points to provide especially for the economical and prompt handling of out shipments of grain and in shipments of cement, coal, fertilizers, feed, flour, and building material, and I handle over a hundred cars per year in the manner above indicated. If this ruling goes into effect I will be compelled to pay switching charges amounting to several hundred dollars per year, while parties loading one or a few cars will escape this charge. The profits of our business are now all but wiped out by expenses of conducting it, not the least of which is our almost inability to collect claims for shortage and damage—principally the former—on account of the present bill of lading under the terms of which we are compelled to make our shipments, and which makes it all but impossible to collect a claim. Country shippers will also be compelled to stand these switching charges at terminal markets, as receivers will charge them up against our accounts, the same as they now do with car service, etc. Thus we will get a double dose of it, and there will be no way to get out from under this expense, as those shippers who have no facilities and who usually ship to parties who have none will be enabled to use the carriers' equipment for warehousing purposes at both ends and also escape this switching charge at both ends. I would much prefer that the carriers be allowed to increase their revenue by a straight advance of rates of the 5 per cent, as they have requested, as that would give everybody a chance to contribute without discrimination. Kindly lay this matter before the commission and see if this matter can not be arranged so as to give us the rate advance in preference to the switching charge, as proposed.

Thanking you in advance, I am,

Very truly, yours,

C. O. BARNTHOUSE.

—

COLUMBUS, OHIO, *March 28, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As shippers of goods in carload quantities, we want to protest against the allowance of any compensation to the railroads for spotting service.

We believe, because of the severe financial losses that the railroads have sustained, especially in this section during the past 18 months, that their request for an advance of 5 per cent in rates is not an unreasonable one.

This advance of 5 per cent, however, will doubtless increase their revenue to the point where operation of the line will continue to be profitable and satisfactory to the stockholders thereof.

Yours, very truly,

THE COLUMBUS PIANO CO.

—

NORTHWEST TRUST & SAFE DEPOSIT CO.,
Seattle, May 27, 1913.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I venture to suggest that your commission give the closest consideration to the request of the railroads, that they be permitted to make a general increase in railroad rates.

Statistics show conclusively that the operating expenses of the railroads have increased very largely and out of proportion to the increase in rates during the past few years. This increase in expenses has very largely arisen through legislation and through the action of labor unions. The consequence is that investors have become nervous regarding the net income of railroads, and are, as is well known, evincing more hesitation in buying railroad securities, whether bonds or stocks, than for very many years.

Yours, truly,

E. SHORROCK, *President.*

—

THE NATIONAL HAY ASSOCIATION,
Toledo, Ohio, October 14, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We understand that the railroads throughout the official classification territory are going to ask for a 5 per cent increase in freight rates, which we think would be to the best interests of all concerned, as at this time the railroads seem to be unable to provide sufficient funds for the maintenance of equipment and terminal facilities, owing to the increased cost of labor and material.

Now, the National Hay Association feel that while they are bearing more than their share of the burden with hay in fifth class, that for the best interests of the country in general it would be advisable to allow this increase of freight rates on all commodities, and as chairman of the transportation committee I have been authorized to advise you of their decision.

Yours, very truly,

H. H. DRIGGS,
Chairman of Transportation Committee.

—

MARIETTA, OHIO, *April 7, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We sincerely trust that in the interests of general business in this country that you will see fit to grant the railroads the

5 per cent horizontal increase in freight rates for which they have been praying for some little time.

It is not for us to judge whether they are entitled to this percentage or to an increase of any sort, but we do know this: That there has been a condition of mind created throughout this country to the effect that were the increase which the railroad companies are asking for granted, business conditions would very materially loosen up. We are sure that while this reason is not the only one to be considered, it is of sufficient weight to merit your earnest consideration. General business conditions in this country are certainly not good, and we believe that when the country at large regards that the increase under consideration will relieve the situation, that it is your duty to look most favorably upon this proposition.

We have no interest in any railroad, either by stockholding or otherwise.

Yours, very truly,

THE SAFE-CABINET CO.,
By R. P. DICK,
Secretary-General Manager.

—

SANDUSKY, OHIO, *April 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In common with thousands of American manufacturers, this company has made extensive outlay in providing itself with railway track facilities, thus directly benefiting the railroads by free expansion of their terminals and relief of yard congestion.

Having in mind a proposition, now before your honorable body, to augment railway revenues by the assessment of certain so-called "trap car" and "spotting" charges, we can not fail to see that such charges would constitute a tax upon private track owners for service which is in good part performed for the convenience of the carriers, and which must of necessity be very generally rendered free to those who, having made no investment in railway facilities, depend entirely upon the public deliveries provided by the carriers at their own expense.

This company therefore begs to submit its respectful protest against the assessment of such special charges, which it holds to be unjust and discriminatory; and recognizing as it does the right of the carriers to fair remuneration for transportation service and the justice of rates which conform in some measure to the present advanced costs and prices in all lines of production and effort, this company respectfully prays your honorably body to authorize a general increase of freight rates amounting to 5 per cent of the present scheduled rates.

Such an increase seems to us to be indicated alike by justice and by public policy; its burden would be distributed with absolute equality, and no shipper or consumer can in fairness object thereto.

Respectfully submitted.

THE HINDE & DAUCH PAPER COMPANY,
J. J. DAUCH, *President.*

—

WINCHESTER, IND., *April 8, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We have noticed in the daily press that the Interstate Commerce Commission is considering the proposition of ordering the transportation companies to discontinue the practice of rebilling grain in transit or stopping grain to be handled through a transfer house unless a charge is made for such service, and that no grain can be rehandled en route unless the railroad company charge for service of stopping, rebilling, etc.

Now, the writer is not a lawyer, and can not express himself as well as he would like to on this matter. But we feel if this order is issued it would handicap the smaller markets in the country and work a hardship to the handlers of actual grain that would be almost irreparable.

We can readily see where it would be an advantage to Chicago and other large terminal markets, which are the terminus of transportation lines and where lake and rail grain would meet, as they would get all the service that the intermediate markets would pay for without any charge.

It has been the policy of the railroad companies in the past few years—and we think it very wise—to foster the smaller grain markets and give them exactly the same service that the larger markets have enjoyed. This certainly has been a benefit to the producers and handlers of grain as well as to the consumers.

There is no large market in the country that has ample railroad facility, and they can not very well have on account of the enormous value of property that would have to be acquired to secure ample facilities. But in smaller markets real estate is cheaper and they have more abundant trackage and these numerous transfer and cleaning elevators have been built and have been accorded all the privileges that gateway and terminal market elevators have enjoyed.

This has tended to divert a great deal of grain from the congested centers and also scatter the holders of grain so the market could not be so easily manipulated and has given the producers of grain its full value, while at the same time it gives the consumer a lower price than had the grain, as it was a few years ago, all been held in a few terminal markets.

It has only been in the past few years that Peoria, Indianapolis, Fort Wayne, and a number of cities and smaller towns in Ohio that now have transferring and storage facilities were entirely without plants of this character.

We know it is not the purpose or desire of the commission to in any way hamper the free movement of grain or do anything that will add to the present cost of handling grain.

But, in our honest opinion, if the interior shippers were compelled to pay for the reconsigning of grain, it would add an expense to the business that would simply handicap them so they could not compete at all.

Grain is handled on such a small margin by country shippers and smaller transfer houses that the charge that might seem reasonable to the commission would put them out of business.

We do believe that the transportation companies are entitled to an increase in rates, and no doubt grain and other farm products should pay their share of the increase.

In 1897 we paid 16 cents a hundred pounds freight on 20-cent corn from this point to Baltimore. For the past few years we have paid 15 cents a hundred pounds for hauling 50-cent to 75-cent corn from this point to Baltimore. Either the rate then was much too high or is now entirely too low.

We beg to remain,

Yours, very truly,

GOODRICH BROS. HAY & GRAIN CO.

Do not delay in rate decision. We are heartily in favor of proposed advance.

POWER MANUFACTURING CO.

—

LIMA, OHIO, *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION, *Washington, D. C.:*

The prosperity of the country in general, we believe, depends largely upon your early decision in favor of the 5 per cent increase in freight rates. We are heartily in favor of this increase.

LIMA LOCOMOTIVE CORPORATION.

—

LIMA, OHIO, *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION, *Washington, D. C.:*

As the most extensive carload receivers and shippers of fruit and produce in northwestern Ohio, we firmly believe railroads should have the 5 per cent increase in freight charges as petitioned for through your honorable body. We believe it is necessary, so they can pay the increased salaries demanded, improve their lines, replace worn-out rolling stock and motive power, eliminate grade crossings, and pay off the millions of dollars in claims pending against them—many through unjust local legislation, prejudiced jury findings, much through pilferage, negligence, wanton waste, and destruction. By according railroads this advance all industries, labor, and business in general will be benefited and the present financial depression throughout the country alleviated. We believe railroad managers understand their business and would not appeal for advance in rates at this time if not fairly entitled.

ALTSCHUL BROS. CO.

—

LIMA, OHIO, *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION, *Washington, D. C.:*

We earnestly request that you grant railroads 5 per cent advance in rates, as asked by them, and believe the country at large will be benefited. Our shipments exceed 9,000 cars annually.

THE BLUFFTON STONE CO.,
ALLEN PATTERSON, *President.*

—

PIQUA, OHIO, *April 9, 1914.*

The INTERSTATE COMMERCE COMMISSION, *Washington, D. C.:*

GENTLEMEN: We beg to call your attention to the necessity of an immediate action in the matter of granting or not granting the increase rate demanded by railroads throughout the country.

Our company would favor and recommend the 5 per cent increase, but we would rather forego our preference than to have the matter delay to the undoubted detriment of general business conditions.

We wish to protest against the plan provided for by railroads for additional charge in the matter of "spotting-car" service.

We make this appeal to your honorable body, hoping that it may add a mite toward helping the present deplorable situation in business which the writer feels sure results from lack of action in Washington.

Very sincerely, yours,

THE IMPERIAL UNDERWEAR CO.,
Per A. D. HANCE.

—

DAYTON, OHIO, *April 9, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We urgently petition your honorable body to grant compliance with the request of the railroads of the United States for a horizontal increase in rates for freight shipments.

As shippers and receivers, we appreciate the increase so granted will make an additional charge upon costs, but the burden will be distributed upon all shippers and receivers alike, without discrimination or unfair advantage.

We think an action of this kind may encourage the railroads to carry on their betterments, extend their lines, more fully equip, and give employment to a vast number of former employees. We hope this may be one of the means of stopping the enormous losses now affecting the business of the entire country.

We protest against the proposed plan for providing additional revenue through special charges for spotting-car service, etc. Services of this kind are wholly compensated in the maintenance by many shippers of individual tracks, appliances, etc.

It seems to us that the granting of a horizontal rate increase immediately will result in the stimulation of business in all lines of endeavor, and will not entail a serious loss to any persons, firms, or corporations.

The foregoing is respectfully submitted.

Yours, very truly,

THE LIMA TRUCK & STORAGE CO.

—

SANDUSKY, OHIO, *April 13, 1914.*

To the honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As is the case with thousands of American manufacturers, this company has been to considerable outlay in providing itself with railway track facilities, thus directly benefiting the railroads by free expansion of their terminals and relief of yard congestion.

Referring to a proposition now before your honorable body to augment railway revenues by the assessment of certain so-called "trap car" and "spotting" charges, we can not fail to see that such charges would constitute a tax upon private track owners for service which is in good part performed for the convenience of the carriers and which must of necessity be very generally rendered free of those who having made no investment in railway facilities depend entirely upon the public deliveries provided by the carriers at their own expense.

This company, therefore, begs to submit its respectful protest against the assessment of such special charges, which it holds to be unjust and discriminatory; and, recognizing as it does the right of the carriers to fair remuneration for transportation service and the justice of rates which conform in some lines of production and effort, this company respectfully prays your honorable body to authorize a general increase of freight rates amounting to 5 per cent of the present scheduled rates.

Such an increase seems to us to be indicated alike by justice and by public policy; its burden would be distributed with absolute equality, and no shipper or consumer can in fairness object thereto.

Respectfully submitted.

SANDUSKY TOOL CO.,
MOZART GALLUP, *President.*

—

MASSILLON STONE & FIRE BRICK CO.,
Pittsburgh, Pa., and Massillon, Ohio, March 13, 1914.

The Hon. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Referring to the question of charges for spotting cars on private siding, Interstate Commerce Commission Docket 5860, I. & S. Docket 333, would say:

The Massillon Stone & Fire Brick Co. works are located near Massillon, Ohio, with headquarter offices at Pittsburgh, Pa.

Our works are located on the Pennsylvania lines. No other connections.

Our siding is about 1,500 feet. We use no motive power of our own. The railroad company will spot cars in and haul out shipments.

We receive and ship about 4,000 tons per month.

It would be manifestly unjust to charge for services performed, for the reason that the cost to the railroad company is very light compared to the revenue received in handling the tonnage we provide. It would be much better for the railroad company to receive the 5 per cent advance in freight rates asked for, which would be borne by the general public, rather than that this burden should be borne by manufacturers.

Sincerely trusting that present conditions may continue, we remain, with great respect,

Very sincerely, yours,

E. A. KITZMILLER,
Treasurer.

—

VINCENNES, IND., *April 17, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Believing that the business prospects in this country rest largely with the railroads, the directors of this company instructed the writer to communicate with your honored body for the purpose of recommending that the 5 per cent increase in freight rates be granted at the earliest moment, feeling that such an increase would indirectly benefit every man, woman, and child in the country.

Such action would give new life to the business situation at this time, and would hereafter build up strong protective interests around business.

We consider that this would be a master stroke for the administration, and without this advance the administration must go to pieces very rapidly.

Yours, truly,

NATIONAL ROLLING MILL CO.,
By J. H. JONES.

—

CLEVELAND, OHIO, *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We firmly believe that the railroads of the country in general are entitled to an increase in rates and hope their arguments made before you will show to your satisfaction the justice of their requests, as we believe that with an increase in revenue from this source the railroads will at once begin buying supplies for betterments, etc., which will result in doing more to liven up business than any other one thing we know of.

Hoping the matter may have your favorable consideration, we remain,

Very truly, yours,

THE MILLS-CARLETON CO.

—

CLEVELAND, OHIO, *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We believe that the railroads in general are in actual need and entitled to the increase of 5 per cent in rates, and we hope that you can see your way clear to give them this increase, as we believe if the same is granted the benefits will be much greater than any injustice that might be done.

Yours, very truly,

THE FISHER & WILSON CO.

—

TOLEDO, OHIO, *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the railroads of the country, in general, are in need of and entitled to an increase in rates, and if the arguments made by them in your opinion are reasonable, we hope you can see your way clear to grant the increase asked for.

If granted, we fully believe that the benefits, as a whole, will be very much greater than any injustice it might do.

Yours, very truly,

KELSEY & FREEMAN.

—

MANSFIELD, OHIO, *November 25, 1913.*

E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As small manufacturers and shippers of textile lines it is our belief that the railroad companies have been legislated against too strongly, and that they are perhaps entitled to a slight increase in freight rates to offset their increased operating expenses.

We do believe, however, that when any decided changes are made in the way of increased rates the minimum weights should be reduced from 100 pounds to perhaps 50 pounds, or thereabouts. At the present time a 50-pound case of our goods costs us about $3 to send by freight to San Francisco, and while we have the privilege of sending 100 pounds for the same price, it doesn't help us any when we have a

50-pound case, and express charges on long hauls are out of the question.

We do believe the railroad companies must surely make a big profit on first or second class shipments, considering the fact that it is largely this class of goods that are so often shipped in smaller quantities than 100 pounds, and we think the minimum weights on small shipments should be 50 pounds instead of 100 pounds as at present.

Yours, very truly,

THE OHIO SUSPENDER CO.,
D. L. ZAHNISER, *Treasurer.*

THE KENTON COMMERCIAL CLUB,
Kenton, Ohio, February 28, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Replying to your letter of the 17th, question A, the present rates of the railroads must be inadequate, or they would not appear before the commission asking for an increase, and ready to substantiate their claims. This is the best proof.

B. According to the present laws and arrangements, there is no other course for the railroads to pursue than their application for an increase from the commission.

There are 100 or more concerns in our organization.

Two companies have private spur or siding; both enjoy trap-car service.

Hope you can conscientiously allow the 5 per cent increase.

Respectfully,

H. L. HOPWOOD, *Secretary.*

THE MERCHANTS AND MANUFACTURERS ASSOCIATION,
Cincinnati, March 2, 1914.

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Yours of the 17th ultimo, relative to our resolution advocating the general advance in freight rates, and your request for answers to questions contained in your letter.

"A." In view of the inability of the railway companies to meet the requirements necessitated by the constantly increasing business of our merchants and manufacturers, i. e., provide adequate terminal facilities, motive power, etc., and this condition is due to the lack of capital and inability to secure proper loans, it would seem to us that the present rates of transportation do not yield adequate revenues in the official classification territory.

"B." By increasing freight rates so as to enable them to keep abreast of the times, it being understood that the revenue derived from the increase shall be used for the increase of terminals and facilities for the prompt handling of the freight.

Private tracks:

1. We have 100 members.
2. Two members have private spur or siding.
3. One member makes some trap or ferry cars.

Yours, very truly,

JNO. W. IRVINE,
Secretary-Treasurer.

BELKNAP HARDWARE & MFG. CO.,
Louisville, Ky., March 5, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: My attention was called this morning to a monthly trade letter issued by the Union National Bank of this city. I am inclosing a clipping which will doubtless be of interest to you.

Practically all of the business interests here, so far as I am able to judge, are favoring the granting of increase in freight rates asked by the railroads, and I am strongly convinced that something must be done, and promptly, to give encouragement to the business interests of the country and put the railroads in position to come into the market again for steel products.

Whenever we can get a good market for steel, it seems to inspire confidence in all branches of industry; and we will not get that market until the railroads are able to do more buying than they are at present. Our sales of products in steel to the railroad companies have decreased about 60 per cent as compared with the previous year.

Can't we make some forward movement that will stimulate trade and afford employment to the great masses? If something is not done, in our judgment, we will be confronted with a problem more serious than car shortage; that is, a great army of unemployed men.

"BUSINESS.

"General business is slow to develop the volume that was hoped for following the decided improvement in sentiment and confidence, and the decreased volume is reflected in railroad earnings. Complete returns for December from 479 roads are in, showing a decrease in gross earnings of $12,000,000 and a decrease in net of nearly $14,000,000, or 16⅔ per cent. Sentiment is growing stronger daily that the railroads, if they are expected to maintain the present wage scale, must be afforded some relief in the way of increased freight rates asked for.

"January bank clearings were $33,000,000 less than January, 1913.

"On February 1, 1913, there were 37,260 idle cars, and on February 1, 1914, 209,678.

"We hope our statesmen at Washington are studying these figures.

"UNION NATIONAL BANK,
"*Louisville, Ky.*"

Yours, very truly,

JNO. W. PRICE,
First Vice President.

TOLEDO, OHIO, *March 30, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have kept in close touch with this proposition, and from the standpoint of a grain dealer and shipper I believe that the most equitable plan for distributing the burden contributing to the apparent needs of every railroad company in official classification territory would be to permit a horizontal advance of 5 per cent in freight rates. The proposition of securing additional revenue by the imposition of charges for so-called special service would not meet the situation, and would only afford relief to a comparatively small number of the carriers.

Speaking for the country elevator operator and grain dealer, he is now contributing at a very great expense to himself, instrumentalities for the handling and shipping of grain that really should be borne altogether or in great part by the carriers, and it would be an injustice and an imposition upon this class of shippers to charge for "special" service when, in the performance of that special service by the carrier, it has saved to itself a much greater expenditure than would have been incurred had the instrumentality not been afforded by the shipper.

Summing it up, I am therefore in favor, from a standpoint of justice, of allowing the carriers to increase their freight revenue by assessing a horizontal advance on all freight tariffs in such an amount as, in the opinion of your honorable commission, is found necessary to yield sufficient and adequate revenue.

Respectfully submitted.

J. W. LONG.

COLUMBUS, OHIO, *March 30, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We have had brought to our attention in many ways over the past few months the attempt of the railroads in the eastern territory to increase their freight rates 5 per cent on all classes of freight; also, the proposition that a charge be made for placing cars on private switches and for trap cars. The most of our unloading is done from a public teaming track near our factory and we represent only the rank and file of manufacturers, but from the knowledge obtained, chiefly by reading, the officers of this company advocate the advance of 5 per cent in freight rates and that no change be made in the present method of placing cars on industrial side tracks and the placing of trap cars to be loaded without going freight. We may further add that we hope whatever is done may be done very speedily, as we feel that the concessions will have a beneficial effect in increasing the present volume of business in the iron and steel line, in which we are chiefly interested. Not since 1908 have we suffered the depression that we are now experiencing.

Respectfully submitted.

COLUMBUS BOLT WORKS,
W. K. LANMAN.

COLUMBUS, OHIO, *March 30, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At the suggestion of Mr. H. T. Hysell, manager of traffic department of the chamber of commerce of this city, I am writing you in regard to the proposed railroad rate advance.

In my opinion the railroads should have the 5 per cent increase in freight rates. I am not at all in favor of allowing them to make a charge for the spotting of cars and work necessary to make the car available for loading. The latter plan would cause a great amount of hardship and confusion to the shipper. Furthermore, I think that the 5 per cent increase should be spent for the betterment in the way of equipment and terminal improvement.

Yours, respectfully,

H. A. KEENER.

COLUMBUS, OHIO, *March 30, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We wish to express our opinion in favor of the proposed advance of 5 per cent in freight rates and against the proposed charges for special service, such as placing cars on private or industrial sidetracks, either for loading or unloading.

We believe that the proposed general advance of 5 per cent in freight rates will be much more equitable and cause much less confusion than the proposed special charges.

Yours, very truly,

THE KAUFFMAN-LATTIMER CO.,
GEO. W. LATTIMER, *Treasurer.*

COLUMBUS, OHIO, *March 31, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the possible increase in freight rates now before the commission, will you permit us to express, as our own opinion, that an advance which would amount to 5 per cent uniformly and no more will be fair to the railroads and their patrons, but the new tariffs should be scanned closely to prevent a greater increase on any classes. For placing cars on strictly private tracks a nominal charge would not be unreasonable, but no such charge should be made for placing cars on switches owned by the railroads and located on their property or in streets and alleys of a city. We will add, however, that if the 5 per cent advance in rates is granted, there should be no necessity for the charge for placing cars, and as the owners of private tracks are undoubtedly traffic producers to the benefit of the railroads, no placing charge should be made except as a last resort. We are,

Respectfully, yours,

THE THROOP-MARTIN CO.

COLUMBUS, OHIO, *March 31, 1914.*

GEORGE W. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We consider an increase of 5 per cent in the freight rates justifiable when you consider the great increase in the cost of operating expenses during the last few years.

The increase of 5 per cent in the freight in our particular line of business would be so small that it would not affect the consumer.

We believe that the railroads' petition to assess charges for special services would result in confusion and discrimination.

Yours, truly,

THE OUTFIT STORE.

COLUMBUS, OHIO, *March 31, 1914.*

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Referring to the subject now before your commission, relative to the proposed increase of 5 per cent in freight rates. We

notice from the newspaper reports that in lieu of these increased rates, it is proposed that the carriers be permitted to charge for placing cars for loading and unloading on industrial switches. It would appear to us that this latter proposition would cause no end of trouble and dissatisfaction between carriers and shippers, and the view of this company is that it would be far better to advance the freight tariffs instead. From our observation, it would appear that the railroads are entitled to this latter extra compensation, and this company wishes to be placed on record as favoring such increase.

Very truly, yours,

THE KEEVER STARCH CO.
CHARLES A. SUYDAM, *Treasurer.*

—

SPRINGFIELD, OHIO, *April 1, 1914.*

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We have a communication from the Ohio Shippers' Association in reference to increase of charges of transportation companies for special service, such as switching and spotting cars, either at original point of shipment or at destination, requesting us to express our opinion of same to you.

We believe the railways should have some increased revenue to enable them to buy new and repair old equipment and roadbed, after which, of course, we will expect better service; but we do not believe that the additional revenue should be obtained through so-called special-service collections, as we do not believe it would be either fair or equitable to make a charge for what is obviously not a complete transaction until the car is placed on the siding for unloading; furthermore, it seems unfair to place the burden of increasing the revenue on carload business where the shipper or consignee have private sidings. It appears to us as discrimination in favor of the shipper or receiver who uses the public team track, and in many cases, where the carloads are to be hauled to industries, it would force us to order such cars to the public team tracks rather than pay 5½ cents per ton, causing a congestion of the railway team tracks.

The writer also wishes to state that in many years' experience as a railroad agent he was convinced that there was a less net revenue from less-carload business than in carloads; in addition to the increased cost of loading and unloading, there were vastly more damage claims on small shipments. We also wish to state that we have three sidings, with a capacity of 10 cars each, with coal bins and sheds alongside, and that many cars are released in less than a day by unloading into bins and sheds, thereby putting cars back in service more quickly than when unloaded from team tracks.

Yours, very truly,

THE BECKLEY & MYERS ICE & FUEL CO.,
By A. J. BECKLEY.

—

COLUMBUS, OHIO, *April 2, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In the matter of freight-rate increase in official classification territory, and in the matter of the proposed charge for spotting, trap, and ferry car service now before the commission, we beg leave, on behalf of ourselves as heavy shippers and receivers of freight, to file protest against these proposed charges covered alleged free service and to urge upon the commission the desirability of granting to the railroads their request for a horizontal increase in rates of 5 per cent, and we herewith summarize our views as follows:

1. Spotting is not a free service, but is an integral part of the entire transportation service, and the cost is included in the rate. If the freight rates for the entire service are now inadequate, this evil should be remedied not by setting up separate charges for terminal services, but by proper increases in the rates themselves.

2. Delivery and spotting on industrial or private tracks costs the carrier no more than delivery upon the team tracks, which latter delivery the carrier is obligated to make and for which no additional terminal charge is suggested.

3. The industrial spur is not a mere plant facility, but is of inestimable value to the carrier and to the shipping public at large, including the team-track shipper.

4. Delivery and spotting on industrial tracks does not constitute unjust discrimination against team-track shippers, and the latter class of shippers make no such complaint.

5. Spotting service for larger industries having several tracks and handling a large number of cars containing different kinds of commodities is relatively neither more expensive nor complex than the service rendered the smaller shipper.

6. If additional revenues are needed, it is manifestly unfair to attempt to assess a separate terminal charge on part or all of the carload and heavy or low-grade traffic if, as claimed by prominent railroad officials, such traffic is already paying, as compared with L. C. L. and high-grade traffic, its full share or more of the transportation expense.

7. Additional revenues derived from spotting charge would accrue principally to the stronger and more prosperous roads.

8. If a spotting charge is allowed, discrimination will result between different classes of shippers using industrial spurs, and the revenues from the spotting charge will be much less than is now anticipated.

9. Protest is against a spotting charge for the initial placing of cars for loading or unloading. Second spotting or strictly intraplant movements should be and now are paid for.

We urge that this protest be brought to the attention of the commission promptly.

Yours, very respectfully,

THE COLUMBUS IRON & STEEL CO.,
By J. C. MILLER, *Secretary.*

—

COLUMBUS, OHIO, *April 2, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: There has been quite a great deal of agitation regarding the 5 per cent advance on all class of freight. We feel frankly that the railroads are entitled to this advance. There is no question but what the advance in equipment, supplies, and labor during the past 5 or 10 years has far surpassed the advance in rates or over the volume of business.

The railroads have practiced a great deal of extravagance which the commission can no doubt show them and enable them to save considerable in this way.

We are not in favor of charging in the ordinary sense of the word for spotting cars. This would work the greatest hardship; in fact, would so demoralize business and, in fact, the smaller concerns, who would have no switch engines or other traction equipment with which to move their cars, that it would result in a large number of small concerns absolutely going broke.

The business, as handled to-day, must be handled quickly and in the most economical and efficient manner possible. If smaller concerns were not able to get to their cars quickly it would tie up their investment longer, lose their customers to their larger competitors who are able to afford some better method of handling these cars after set on their switches.

We believe this is a part of the delivery service which the railroad should perform. We don't believe there should be any discrimination shown, and we believe that if the railroad performs a special service, which is of special benefit to one of their customers, goes out of their way to do it and it costs them money to make this special delivery or do this special service, the railroad should charge them for it, going on the basis that it actually saves this concern money over and above its competitors.

We think there is a point of equity, and we believe your commission is well enough informed on the various methods used by some concerns, as well as the methods operative on the railroads, to prevent some plan which would show such discrimination, hence we will close by saying we are in favor of 5 per cent advance and are against charging for spotting cars, except on special conditions, and we feel there are many cases where a charge should be made.

Yours, truly,

THE H. D. BRASHER LUMBER CO.

—

CINCINNATI, OHIO, *April 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We urgently petition your honorable body to grant immediate compliance with request of railroads of the United States for a horizontal increase in rates for freight shipments.

We realize that the increase so granted would make an additional charge upon our cost of operation and production, but it would be a burden distributed among all shippers alike without discrimination or yielding of unfair advantages to any shippers.

Our judgment is that the alternative plan proposed for providing additional revenue for the railroads through the imposition of special charges for ferry, trap car, and spotting car service would result in still further unsettling business conditions and in application would bring about disastrous inequalities and discrimination among and between shippers.

We protest against any arbitrary withdrawal of switching or car-placing service or the institution of special charges therefor, holding, as we do, that these services are wholly compensated in the building and maintaining by shippers of individual tracks, loading stations, and appliances which greatly facilitate the transportation of all classes of freight and prevent the congesting of traffic and storage.

The substitution of such a change would work a great hardship among shippers and general business community and would necessitate increased prices to consumers, and would not greatly or uniformly benefit the railroads nor give the relief for which they and we ask for.

We wish to say that we are heartily in favor of your commission granting the railroad companies' request for horizontal increase in rates, believing that such action taken by your commission will be beneficial to interests of the individual as well as business interests.

Yours, very truly,

THE HUENEFELD CO.,
Per C. E. PFAN, *Secretary.*

—

HAMILTON, OHIO, *April 3, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are heartily in accord with the argument contained in the statement sent to you under date of March 25, 1914, by the Ohio Manufacturers' Association, and trust that you will conclude to grant the railroads of this country the 5 per cent horizontal freight-rate increase asked for by them without delay.

Very respectfully,

SCHULER & BENNINGHOFEN.

—

PIQUA, OHIO, *April 3, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We most respectfully urge the immediate compliance of your honorable body with the request of the railroads for a 5 per cent increase in freight rates, and we wish to enter an emphatic protest against the special charge for spotting-car service.

We feel that the interests of the country at large are quite dependent on an early adjustment of these rates, and as each railroad has shown pretty thoroughly that an increase is justifiable we trust your body will see the wisdom of granting it at the earliest possible time.

Very respectfully,

THE SUPERIOR UNDERWEAR CO.,
J. L. BLACK.

—

BELLEVUE, OHIO, *March 24, 1914.*

Hon. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We presume that about all of the reasons against charges being imposed for switching, spotting of cars, and so on, have already been filed with you; but we could not resist writing, suggesting one thing that seems to us to be very unfair.

We, after years of hard work, have been able to erect, for instance, hay-transfer houses and grain elevators at several country points. These buildings are all necessarily small, the volume of business at these towns is small, and therefore the profits are not large, yet any of our competitors who do not have a house to work with and are in the beginning able to, perhaps, handle these cars at less expense than we by having these cars spotted for loading on the loading track of the car-

rier and would be put to no expense, while we, to have these cars brought to our houses, which have already been provided, must pay the switching charges, and it hardly seems fair to us nor equitable.

We merely offer this to you, hoping that the commission will not find it necessary to impose this switching charge.

We are heartily, instead, in favor of the 5 per cent increase, should your commission see their way clear to grant it, as this would make, then, the cost of everything the same to everyone.

Thanking you for any consideration you may give this letter, we remain,

Yours, very truly,

THE IRVIN T. FANGBONER CO.,
IRVIN T. FANGBONER, *President.*

THE OHIO & WESTERN LIME CO.,
Huntington, Ind., March 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand there is a movement on foot by which the railroad companies are to receive $2 per car for spotting or shifting them on private sidings. This would mean a great loss to the shipper, especially to the small shipper who has not enough business to keep an engine there to do his own spotting and shifting.

We have many plants from which we ship from 3 to 4 and 5 cars per day, the total number of cars shipped from these plants being about 40 or 50 cars daily. These plants are located in various counties and towns, and are all of such a small nature that we can not afford to keep a switch engine to do the spotting of our cars at any of the plants. Would this not be discriminating against the small shipper and a man who has plants of the character as mentioned heretofore?

The large shipper, who has plants in one locality and who ships from 20 to 40 cars per day, can afford to keep a switch engine and, therefore, would have the advantage over the small producer.

The earnings of these plants are very small now, and this switching charge could not be added to the consumer, therefore it would cripple and handicap many of the small producers who should be taken care of and who have their plants at various points. Furthermore, it also discriminates against the manufacturers of a cheap article as compared to those that manufacture an expensive article, as one might realize 20 times as much out of one carload as the other and still the one manufacturing the cheaper article would have to pay 20 times as much for spotting or shifting cars, or the same price.

We have private sidings at all our little plants. You will see where they are located by looking at our letterhead. All plants average three or four cars per day, besides the crushed stone we are shipping, which is a very cheap commodity, and the man who ships a high-priced commodity where the revenue from 1 car would be as much as from 20 cars of crushed stone or lime would have to pay about the same price per car.

If the railroads can not get along without a change—of which we are unaware—we feel they should add a certain per cent to the present freight rates—2 per cent, 3 per cent, or 4 per cent, whatever it may be. The railroad companies are not the only people to be taken care of. All manufacturers and people who have worked their lifetime to get their business started, especially in our business, which now pays a very small interest on our money, as prices are very low, would suffer greatly. We therefore render a serious protest against the movement as heretofore stated.

Hoping this letter will have your due consideration, I am,

Very respectfully, yours,

PETER MARTIN.

DAYTON, *Ohio, January 30, 1914.*

GENTLEMEN: Referring to your letter of January 28, concerning our feeling regarding the 5 per cent increase on tariff rates asked for by the railroad companies, we personally believe that they are entitled to it.

Yours, very truly,

THE A. A. SIMONDS & SON CO.
Per H. R. S.

LOUISVILLE, KY., *January 16, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I think the time has come for you to recommend an increase in the amount of money to be paid to the railroad companies for hauling goods. We are large shippers. Our company has $4,000,000 capital invested and the lumber company has $2,000,000 more, making $6,000,000 all told. We are both in favor of giving the railroad companies an advance, although none of our directors or officers hold any stock whatever in any railroad company. You have recently made a great many suggestions pertaining to the protection of human life, and which are commendable, but they should be given the money with which to carry your suggestions into effect. Give them the money with which to reduce the grades, better the roadbeds, and double-track wherever it is necessary, put in sidings, and all that kind of thing, then your work will be well done. No one has asked me to write you this letter, but I can see that the railroads are getting the rough end of it, and, in my opinion, something should be done to relieve them somewhat.

MENGEL BOX CO.,
C. C. MENGEL, *President.*

CLEVELAND, *January 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The delay in settling the question of advanced rates is likely to hurt railroad clerks more than any others, for the roads are now considering reduction of salaries paid clerks.

It appears to some of us that no matter if the proposed advance is allowed it will come too late, and that we will have borne the brunt and with no likelihood of later restoration of what is taken from us.

Yours, truly,

M. B. SHORE.

SANDUSKY, OHIO, *January 3, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the railroads of the country in general are in need of and entitled to an increase in freight rates, and if the arguments they have presented in your opinion are reasonable, we trust you can see your way clear to grant them the increase they have asked for or may require.

If granted we are confident that the benefits as a whole will be considerably greater than any injustice it might cause.

Yours, truly,

THE SANDUSKY LUMBER & BOX CO.,
By C. A. ZULZKE, *Treasurer.*

THE PREST-O-LITE CO. (INC.),
Indianapolis, March 20, 1914.

The honorable the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: We are advised that there is at this time before your honorable body a resolution passed by the Indianapolis Chamber of Commerce against a 5 per cent increase in freight rates, which is being prayed for by the railways.

This company desires to go on record before your honorable body as being opposed to the principles laid down in this resolution of the Indianapolis Chamber of Commerce, and while we are one of the largest manufacturers and shippers in Indianapolis, if not the largest manufacturer and shipper located at this point, we feel that the petition of the railways for the proposed 5 per cent advance in freight rates is justified, and ask favorable consideration in behalf of the roads.

It might interest you to know that this company is operating fifty-two (52) branch stores and plants located in the principal cities of the United States, from the Atlantic to the Pacific and from the Great Lakes to the Gulf of Mexico, and that the present freight traffic of this company is costing us over a quarter million dollars per annum.

Respectfully, yours,

JAMES A. ALLISON,
Vice President.
R. H. COMB.
General Traffic Manager.

PIQUA, OHIO, *March 21, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington D. C.

DEAR SIR: We are aware that your commission has before them at the present time the subject of an advance in freight rates in the interest of the railroads of the country. We are also aware of the fact that many large manufacturers who manufacture goods for which the railroads are their largest clients are urging upon your body the necessity of allowing this increase.

The manufacturers of the United States seem to have had an inning through legislation, both in Washington and State legislatures and senates. They for some time past have been laying heavy burdens upon them.

We appreciate that the labor costs and legislation have also imposed burdens on the railroads, and no doubt while they are entitled to a great deal of the blame in their efforts to make dividends on inflated bond and stock issues, at the same time we believe that manufacturers generally are willing to accept a slight advance all along the line in rates. Other charges by railroads are continually being added to their instructions, which is not only a burden on the manufacturer but merchants and shippers of all products generally.

We therefore desire to protest against allowing them consideration for special service, such as switching, spotting of cars, transit privileges, trap-car service, and any other services which are absolutely necessary as transportation companies, to receive and deliver cars and merchandise to their customers.

We believe that if this 5 per cent rate advance is given to the roads all other charges should be considered on a basis of strictly road haul.

The burdens on the manufacturing industries of the United States are becoming so heavy that it is a very serious matter, and we trust may have your consideration in the interest of a fair deal as between the shipper and the railroad companies.

Yours, very truly,

THE WOOD SHOVEL & TOOL CO.,
H. K. WOOD, *President.*

CANAL DOVER, OHIO, *March 23, 1914.*

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Regarding the matter of 5 per cent increase in freight rates asked by the railroads of our country, and which is being held in abeyance, we think, unnecessarily, we believe that the railroads should be permitted to have this increase at the earliest possible moment, for two good reasons, viz:

First. If permission for the increase is not granted, the railroads will be compelled to impose extra charges for spotting cars and for other so-called "special service," which charges will be paid wholly by the manufacturers and wholesalers of this great country.

Second. There is no question that if this 5 per cent increase be permitted the transportion services by the railroads will be at least 20 per cent better, and it will immediately start up the iron industries all over the country by reason of heavy orders for rolling stock and improvements on nearly all railroads in this country—which improvements, we believe, they can not afford under present conditions, as there is no doubt that the rates charged at this time are not in accordance with the increased cost of operation and maintenance within the last few years.

The limiation clause in bills-of-lading contract, requiring claims to be filed within four months, is wholly wrong and should be extended at least one year, as in many instances the claims do not develop within the present four months' limitation of time.

Respectfully submitted.

THE DEIS-FERTIG CO.,
GEO. E. FERTIG,
President and General Manager.

CLEVELAND, OHIO, *December 11, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Pittsburgh Vein Operators' Association of Ohio, of which we are members, held in the Hollenden Hotel, Cleveland, Ohio, Friday, December 5, a resolution was passed opposing the granting of an increase in freight rates to the railroads on Ohio coal.

We opposed this resolution for the reason that we are heartily in favor of this increase being granted the railroads, feeling, as we do, that their expenses have been increased very largely in the last few years and they are justly entitled to the moderate advance in rates which they are asking.

Verq truly, yours,

THE PURSGLOVE-MAHER COAL CO.,
By JOSEPH PURSGLOVE, *President.*

CLEVELAND, OHIO, *December 12, 1913.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: At a meeting of the Pittsburgh Vein Operators' Association of Ohio, of which we are members, held in the Hollenden Hotel, Cleveland, Ohio, December 5, a resolution was passed opposing the granting of the 5 per cent advance in rates to the railroads. The writer was absent at the time of this meeting, hence I take this occasion to protest against this resolution.

I wish to state that both personally and our company are heartily in favor of the railroad companies getting an increase of at least 5 per cent. There is no question in my mind—taking into consideration the heavy expenses that the railroad are at, the increase of wages of recent years, and the increase of taxes, together with the enormous depreciation going on at all times—that the 5 per cent asked for is not only just and equitable, but that the public should demand it in order to enable the railroads to keep up their facilities and give the public the service that it demands.

We ship considerable coal, and we know from our close relationship with the railroads that we have suffered for the want of both service and cars during this last year, and unless something is done to permit the railroad companies to purchase more equipment and keep up service it is bound to work disastrously to the general business throughout the country.

Very truly, yours,

THE VALLEY CAMP COAL CO.,
J. A. PAISLEY, *President.*

THE CAMBRIDGE COLLIERIES CO.,
Cleveland, Ohio, December 19, 1913.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We understand there is opposition from some coal interests against the proposed advance in freight rates asked by the railroads on all classes of freight.

In these days, when the question of good service is constantly before us and demanded by the consumer, it seems to us that a refusal to meet the railroads in a fair spirit in the matter of a reasonable increase in rates would be unfair and destructive of our interests.

As far as we are concerned, we prefer to see the railroad where our properties are located prosperous and in a position to supply equipment and service to the highest degree of efficiency.

This will not only be profitable to the railroad and ourselves, but will likewise be a great advantage to the consumer, to whom this small advance, in comparison, will be of no consequence, whereas at this time it means so much to the railroads and their activities. We are therefore absolutely and positively in favor of this advance.

Yours, truly,

A. A. AUGUSTUS, *President.*

CLEVELAND, *December 17, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the matter of a general increase in railroad freight rates, which is now being investigated by your commission, we wish to state that we are heartily in accord with the railroads in their movement to secure same.

We believe that their operating expenses have increased in the same ratio as ours, and that an increase in their freight rates is imperative with them if they are to keep themselves out of the sheriff's hands.

Believing that they will receive fair treatment at your hands and trusting that you will grant the increase asked for, we are

Yours, very truly,

J. H. SOMERS & CO.,
By C. W. SOMERS.

CLEVELAND, OHIO, *December 18, 1913.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Pending an investigation of competitive tariffs, this association, on December 10, 1913, filed with your body a protest against the proposed advances in coal rates from the No. 8 field of Ohio.

Having since more fully investigated the tariffs as filed by you, and being convinced that no discriminatory action is contemplated against the interests of this field, we hereby withdraw the protest and enter our hearty approval of the proposed general advances, feeling that the railroad interests and the general welfare of the country need the encouragement your favorable action would give.

Yours, very truly,

PITTSBURG VEIN OPERATORS OF OHIO.
C. E. MAURER, *President.*
JOHN ZELENKA, *Secretary.*

NEW YORK, *January 21, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Referring to the complaint of a number of manufacturers of cement having plants in the territory commonly known as the Lehigh Valley cement region, executed on the 9th day of November, 1913, addressed to your honorable body, we desire to say that we are the largest manufacturers and shippers of Portland cement in the district.

While it is true there is dissatisfaction existing with certain rates on cement from that district, in our opinion the adjustment of these rates should not be interjected into the matter covered by I. & S. Docket 333, in the matter of the so-called general increase of 5 per cent in freight rates.

It is our view that the general interests of the country are so largely dependent upon the transportation facilities of the railroads that it is the part of wisdom at the present time to grant the general increase of 5 per cent, even though it includes some rates that are not in themselves exactly fair and reasonable, and then, in a specific complaint, take up before your honorable body, if necessary, the subject of readjusting the rates of which complaint is made.

We sincerely hope that the general interests will appeal so strongly to your sense of justice that you will grant permission for the increase asked for by the railroads in the official classification territory, at the earliest possible moment, with the proviso that it shall not be a bar to any later inquiries as to the propriety of any of the rates embodied in the tariffs that have been filed with you.

ATLAS PORTLAND CEMENT CO.,
By JOHN R. MORRIS, *President.*

CHICAGO, *January 15, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

As shippers of freight amounting to 6,500 carloads annually, and believing an advance in freight rates is necessary on account of increased operating expenses and needed rehabilitations and extensions of facilities, we urge your favorable consideration of the request of the railroads for a uniform advance of 5 per cent in freight rates.

WESTINGHOUSE, CHURCH, KERR & CO.

DULUTH, MINN., *January 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: After reviewing the situation very thoroughly for several months, it occurs to us that the demands of the railroads of this country for increased freight rates are most reasonable indeed. The railroads, to furnish efficient service, will be obliged to secure modern and up-to-date equipment, and besides, the cost of operation of a railroad business has increased correspondingly with the cost of conducting all other lines of business in this country.

We fully believe that a moderate increase in rates is due to the carriers and will result in great benefits to all lines of trade and industry.

Yours, very truly,

RUST-PARKER-MARTIN CO.,
By C. R. RUST, *President.*

STARK BROS. NURSERIES & ORCHARDS CO.,
Louisiana, Mo., January 15, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Owing to the increased value of all material used by the railroads, and the continual call for increase in wages from the various employes, and the demand from shippers for better service, we believe the carriers are entitled to the increase of 5 per cent for which they are asking, and do not believe it will work a hardship on anyone.

When the matter comes up for final decision, we would like for this letter, which was not solicited in any way, to go on record as being in favor of the increase.

Truly,

E. W. STARK, *President.*

LOUISIANA, MO., *January 15, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The writer believes the railroads in eastern territory are justified in asking permission to advance their rates 5 per cent, as practically everything now used by them has greatly advanced in price, besides they are very seldom free from calls for advance in wages and, in addition to this, shippers expect better transportation facilities than in former years, all of which add to their increased expenses.

The 5 per cent should not work a hardship on anyone and while slight it will no doubt mean a great deal to the railroads and result in their placing additional orders for material, etc., which would in a large measure restore confidence and prosperity.

Kindly consider this as being in favor of the increase and place on file for reference.

Truly,

CHAS. SIZEMORE.

GREENSBORO, N. C., *January 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Allow me to say that many of us here are in favor of a moderate increase in railway-freight rates while at the same time we would advocate better protection to investors. We believe, however, that the latter consideration is having proper attention by the Government, so far.

Yours, very truly,

J. H. FARISS.

HOMESTEAD BRICK CO.,
Homestead, Pa., January 21, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: While we are only one small drop making the great ocean of commerce handled by the 49 railways now asking your honorable body to grant them the privilege of increasing their freight rate 5 per cent, it is the small corporations, companies, and individuals that form the backbone and strength of this great Nation.

As president and manager of one of these small corporations, I am convinced the railways are justified in their request at this time.

With reference to increase in freight tonnage and popular double tracking, side tracking, etc., in the last decade, you should have sufficient data, and it is therefore needless for me to state figures.

The grounds for my conviction and the reasons for asking you to grant the railway companies' request are these:

The railways buy more than one-half the iron and steel manufactured in this country, and at the present time they are only buying what they must have and can not get along without, for the reason,

as their reports show, they can not afford to invest in materials, except for immediate use, and on account of the present tight and unsettled condition of the money market they have curtailed all purchases.

As the territory covered by these railroads is the center of the iron and steel industries of our own country, I believe if their request was granted they would immediately place their orders for supplies, etc., and mills now being closed down would have to start. This would restore confidence and all other lines of business would improve to the extent that would make 1914 the greatest year for business in general that this country has ever known.

I would much rather pay a few cents more freight and be busy and get an increased price for our product than be closed down with overhead expenses eating up what profit we have made.

The consumer can and will gladly pay the increased freight rate when times are good and work available.

These are my convictions from my experience, and I trust your honorable body will grant the request of the railway companies, and that my prophecy will come true.

Most respectfully, J. B. COEN, *President.*

—

PERKASIE, PA., *January 21, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: In answer to your query will say what we want is quick, sharp decision, so that we may earn our daily bread. An elaborate decision later on will answer—but what we want is positive, quick relief, now.

Yours, truly, W. C. ERWIN.

—

SAGINAW, MICH., *January 22, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This association filed a complaint before your commission in the matter of the 5 per cent advance, with a view of having a thorough investigation of this advance and also to prevent the canceling of commodity rates on lumber which the various railroads had planned to take effect the same date as the 5 per cent advance. Our members are now of the opinion that a flat increase of 5 per cent over present class and commodity rates would not be opposed by this association if your commission, after the careful investigation you are now making, deemed it advisable to grant such advance to the railroads.

Very truly, yours,
SAGINAW VALLEY LUMBER DEALERS ASSOCIATION,
R. V. COOPER,
Secretary.

—

TIDEWATER OIL CO.,
New York, January 22, 1914.

Mr. GEO. B. MCGINTY, *Secretary,*
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We have your notice of the several hearings for the taking of testimony from protestants regarding an increase in railroad rates on various commodities, among which we note that the hearing on petroleum is to be held January 26, 1914.

The Tide Water Oil Co. will not be represented at this hearing, for the reason that we believe the railroads are entitled to a general increase of 5 per cent in their rates, for which they are asking.

We think that prosperity of the railroads adds more to the general prosperity of the country than any other one factor, and we hope the commission will grant their petition.

Yours, very truly, R. D. BENSON,
President.

—

NEW YORK, *January 22, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We pay the railroads in freights each year about $500,000. We are not large sellers to the railroads, for they are not large consumers of the products which we manufacture. We wish to state to you that in our judgment conditions justify the 5 per cent increase in freight rates requested by the railroads, and it is only fair that this advance should be granted. This is the opinion of all business men with whom we have come in contact, regardless of direct interest in railroad development. We are writing you in the belief that it will be acceptable to you to have an expression of opinion from manufacturers on this important matter.

We have not been asked to write this letter by anyone.

Yours, very truly,
THE CENTRAL FOUNDRY CO.,
WADDILL CATCHINGS,
President.

—

HOLLIDAYSBURG, PA., *January 22, 1914.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We desire to go upon record as favoring the 5 per cent increase in freight rates as asked for by the railroads.

We do not have any intimate knowledge of the intricate questions involved, but our belief is that common equity requires that where burdens have been placed upon the shoulders of the railroads through wage increases and other increased expenses due to the supervision of the peoples' agents—your body—the public should be asked to share a large portion of them.

We do not share the contention that the railroads have been abused in any manner, rather holding that such abuses as exist are largely the results of the acts of the railroads themselves, but we believe that there is a standard of fairness which is favored by shippers and carriers alike and that the consensus of opinion, particularly amongst small shippers, of whom we are one, is that the increase should be granted.

We furthermore desire to go upon record as in hearty accord with the past action of your body; it has justified its existence in every particular and it enjoys the confidence of the trading public to the utmost.

We believe the railroads themselves are in intimate sympathy with a controlling commission and that they will in the future, as they have evidenced in the immediate past, conduct their business along lines in accord with public opinion.

Yours, very truly,
E. R. BALDRIGE & CO.,
W. L. BALDRIGE,
General Manager.

—

NORTH TONAWANDA, N. Y., *January 2, 1913.*

INTERSTATE COMMERCE COMMITTEE,
Washington, D. C.

GENTLEMEN: We believe that the railroads of the country, all things considered, are entitled to an advance in rates. We have given the matter careful consideration and have arrived at this conclusion. After giving the matter thorough consideration, we earnestly hope and believe that you will arrive at the same conclusion that we do.

Respectfully, yours,
BRADY BROS.

—

JANUARY 5, 1914.

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: It is noted that in considering the application of the railroads for an increase of freight rates and to conserve the interests of the opponents of this application, the shippers, in passing upon the merits of the questions at issue, your body has determined to call for information relative to the disbursements of income for supplies, etc., and other facts seeking to establish a proper economic administration of finances.

May I ask if the deliberations of your honorable body have included the clerical force of the railroads, whose number is considerable, and who have had to meet the constantly increasing cost of living with practically no increase of salary?

Owing to this same "increase of living" experienced by the railroads reducing their income to a very appreciable degree, and which has been further depleted by the award to the trainmen made by arbitration in accordance with United States laws, there is no prospect of a voluntary advance of wages by the roads to this class of employees, unless the request for higher freight rates is granted.

It is not a very salutary commentary upon justice to see a class as represented by the shippers, who on the plea of increased expenses, have advanced the price of their products from 15 to 33 or 40 per cent or more, opposing an application that would entail an increase of an infinitesimal fraction of 1 per cent upon their output and on such grounds depriving another class of some additional compensation to meet their imposed burden of higher prices.

This action could hardly be characterized as one of entire disinterestedness, but would rather savor of an unjust discrimination against a class.

It is not necessary to append a signature to this, as the facts presented can very easily be verified, and you may wish to look into the points involved.

Respectfully, ONE AFFECTED.

—

CHICAGO, *January 5, 1914.*

Hon. WOODROW WILSON,
President of the United States,
Washington, D. C.

DEAR SIR: We believe that a 5 per cent horizontal raise in freight rates in official classification territory would be equitable and beneficial.

Very respectfully,
FELT & TARRANT MANUFACTURING CO.,
D. E. FELT.

—

CHICAGO, *January 6, 1914.*

Hon. EDGAR E. CLARK, *Chairman,*
Interstate Commerce Commission, Washington, D. C.

GENTLEMEN: Give the railways the increase of 5 per cent which they ask. Their request is only fair in view of the added expense they have been compelled to assume for the greater safety of the public et al.

The manufacturer grits his teeth at the suggestion of any increase in the cost of his product, but the thoughtful man sees the justice of this demand and approves it. Please act promptly.

Very respectfully, yours,
CHICAGO VARNISH CO.,
W. S. POTWIN, *Vice President.*

—

ELGIN, ILL., *January 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have watched with interest the agitation pro and con in regard to the request of the railroads to advance their freight rates 5 per cent on all hauls. At first we were very much opposed to it, believing it was unnecessary and simply a request of the carriers. We are now convinced, however, that in order to render the shippers and consumers the necessary prompt and efficient service that the freight rate must be advanced, but on a uniform basis and proportion all rates on all lines, long or short. We would urge you to consider their request of making a uniform advance of 5 per cent.

We are writing you of our own volition without any knowledge of or request by the railroads or their agents or attorneys. The shippers require prompt and efficient service. With the advance of labor and various arbitrary State laws we are satisfied the railroad companies will be crippled unless the Federal Government gives them release. We would urge our representatives to grant their request. We would object seriously, however, to any exceptions or privileges. All rates of all natures east and west, north and south, long and short, should be advanced alike. If there were still discriminations they could be adjusted on the new rate as well as now.

Yours, truly,
THE D. E. WOOD BUTTER CO.,
M. C. JOCELYN.

—

ELGIN, ILL., *January 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: There has been a long and serious agitation throughout the United States, first started by the railroad companies for the purpose of advancing the freight rates by a uniform 5 per cent basis,

Naturally, the shippers objected because this additional cost would either hit the manufacturer or the consumer, which would be quite an item. I am writing you, however, as a manufacturer to say that I think the time has come when the advance should be allowed. I want to place on record with you a request that you seriously consider it, and if it comes before you I hope you will allow it.

We believe the efficiency of transportation now depends upon an increased freight rate. We want to urge, however, that you allow an increase, if it comes before you, on a strictly uniform and parallel basis; that there be no exemption or favors on account of short hauls or long hauls, lake service or canal tributaries. A uniform advance will not greater affect present competition, but will rehabilitate the railroads.

Yours, truly,

B. S. PEARSALL.

—

ALBANY, N. Y., *January 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We would earnestly suggest that you allow the railways of the country a revision of rates whereby their freight charges may be materially increased.

A large part of the material of our business is either received or delivered by rail, and any increase would of course affect us at both ends. At the same time, we are confident that a general increase of railway rates would improve the business of the country to such an extent that the increased freights we would be required to pay would be more than offset by general improvement.

In making such an increase, we would also earnestly suggest that the increase be made largely on the long-haul rates, which are so low that they necessarily mean a loss to the railways and are beneficial only to manufacturers and producers in very remote regions; whereas, manufacturers and producers of similar materials in local regions are charged such high rates that their business is frequently not profitable; the result being that the people in the consuming region are actually required to pay for the developments of far-away regions, instead of being given the opportunity to develop industries near home which would give work and money to a great many. If you would like specific examples of this, we would be very glad to send them to you.

Yours, very truly,

ARNOLD & CO.

—

CHICAGO, *January 6, 1914.*

Hon. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

GENTLEMEN: Give the railways the increase of 5 per cent which they ask. Their request is only fair in view of the added expense they have been compelled to assume for the greater safety of the public et al.

The manufacturer grits his teeth at the suggestion of any increase in the cost of his product, but the thoughtful man sees the justice of this demand and approves it. Please act promptly.

Very respectfully, yours,

CHICAGO VARNISH CO.,
W. S. POTWIN,
Vice President.

—

DULUTH, *January 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We desire to place before your honorable body an expression that it is our belief that an advance in rates would not be a bad concession to the railroads, provided such an advance in some way be spent in bettering service and bettering equipment. We believe that the present day's demands upon the railroad are so great that increased rates should be considered for the betterment of their service and their equipment. We believe in the long run it would be of advantage to the country as a whole, and not a detriment.

We would say, however, at this time, that we are quite opposed to any advance in the Lake rates. The present Lake rates are quite sufficient, but that the proposed 5 per cent advance to railroads would, as we say, be a benefit as a whole, and much more of a benefit than an injustice, providing this advance in rates could, as we have said, better the equipment of the country and the service.

Beg to remain,
Very truly, yours,

STONE ORDEAN WELLS CO.,
R. A. HORR,
Treasurer and Manager.

—

NEW YORK, *January 7, 1914.*

Hon. EDGAR E. CLARK,
Chairman the Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The writer notes by the papers this morning that the Illinois Association of Manufacturers have signified their belief that the prayer of the railroads for a 5 per cent increase in freight rates, to meet the ever-increasing demands of increases in wages of labor which have been granted, and the high prices of all other commodities which they use, should be allowed.

It is also our belief that the time has come when the proper increase of freight rates should be allowed to the railroads to meet the actual conditions which exist.

It also seems to us that the granting of these increases should not be too long delayed, so that the prosperity which other conditions which obtain seem to promise may be fulfilled.

Yours, truly,

E. W. MCCLAVE & SON (INC.),
ROWLAND MCCLAVE,
President.

—

BAY CITY, MICH., *January 7, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the railroads of the country in general are in need of and entitled to an increase in rate, and if the arguments made by them, in your opinion, are reasonable, we hope you may see your way clear to grant them the increase they desire, provided such increase in rate is made throughout all territory so that all of the markets may be on an equal basis.

If granted, we fully believe that the benefit as a whole will be very much greater than any injustice it might add.

Very truly, yours,

BRADLEY-MILLER & CO.

—

CHICAGO, *January 6, 1914.*

Hon. BALTHASAR H. MEYER,
Interstate Commerce Commission,
Washington, D. C.

GENTLEMEN: Give the railways the increase of 5 per cent which they ask. Their request is only fair in view of the added expense they have been compelled to assume for the greater safety of the public et al.

The manufacturer grits his teeth at the suggestion of any increase in the cost of his product, but the thoughtful man sees the justice of this demand and approves it. Please act promptly.

Very respectfully, yours,

CHICAGO VARNISH CO.,
W. S. POTWIN, *Vice President.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We presume you welcome an expression from different trades as to the advance in freight rates which the railroads are asking for. Our belief is that they are entitled to it.

Yours, very truly,

MONTGOMERY BROS. & CO.

—

DULUTH, *January 14, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Am a grocer of this city; have been here 26 years and grown gray in the service. Am of sound mind and average intelligence. I make this prelude to demand proper attention to my words. Just want to dwell for a line on my subject. The railroads are entitled to a 5 per cent increase in freight rates. That is brief and to the point; my reasons are those of 90 per cent of humanity.

Yours, truly,

M. M. GASSER.

—

FIRST NATIONAL BANK OF COMMERCE,
Hattiesburg, Miss., January 15, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In my judgment something substantial should be done for the railroads, and I beg to so express myself. I am aware of the fact that it has been said that the railroads have been reckless in the matter of financing themselves, and that they did not obtain value received for large quantities of stocks and bonds, and that they should not be permitted to charge so as to be enabled to pay customary re-

turns on such securities. In my opinion it will be a great mistake to listen to such talk at this late day and time. These securities for the most part, if not entirely, have reached the hands of people who were not parties to the original acts, and who are innocent purchasers of same. They have become incorporated in the affairs of the Nation, and are now part and parcel of us, and whatever bad judgment and misfortunes may be covered up in them should be absorbed by the business public, if it has not already been done, as a matter of business policy.

Railroad building has always been hazardous, and due allowance should be made for same. We have the railroads; they are a great blessing to us regardless of how they were constructed, and it is not likely that they could have been built and developed to their present high efficiency by any other methods than those employed.

The best interests of the public demand that the railroads do even a great deal more in the way of providing additional facilities and conveniences for the accommodation of business and travel. The railroads should be placed in position to commence providing these facilities without delay, and if your honorable body will so view the question and act accordingly, good results will flow therefrom to the public.

The same reasoning applies to all railroads and fair concessions should be made to them all regardless of geographical location.

Yours, very truly,

F. W. FOOTE, *Vice President.*

—

18 BROADWAY, NEW YORK CITY, *January 8, 1914.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

SIR: In common with most of the business men we come in contact with, we are in hopes that your honorable commission will render a decision in favor of the increase in freight rates asked for by the eastern railroads. We believe that this time the railroads' plea for assistance is a just one. We also think that such favorable action on your part will do more to improve the general business conditions in the United States than anything else.

Yours, respectfully,

E. H. LEWIS LUMBER CO.,
E. H. LEWIS.

—

NEWARK, N. J., *January 8, 1914.*

To the CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We, as shippers of leather to the West, are awaiting with interest the decision of your committee on the request of the railroads for an increase of 5 per cent in rates.

It is very important that there should be no shrinkage in the general business of the country, and we are quite positive in our belief that should the railroads not get their rates advanced all business will be dealt a severe blow.

The slight advance requested by the railroads we would gladly pay to stop this widespread depression, and we therefore urge upon your honorable body the importance of granting at as early a date as possible the advance requested, which we believe will materially help the interests of all.

Very truly, yours,

HUDSON LEATHER CO.,
J. H. WALSH,
Secretary.

—

CHICAGO, *January 8, 1914.*

Hon. JUDSON C. CLEMENTS,
Interstate Commerce Commission, Washington, D. C.

DEAR MR. COMMISSIONER: The question of most vital importance to our country now is the 5 per cent horizontal raise in freight rates. Business is at a standstill, awaiting the early decision on this vital subject by your honorable body. The business of our company is greatly affected, and I believe that the vast majority of shippers are in favor of granting the railroads this small advance in rates. Should action be deferred, receivership proceedings will undoubtedly result for several of our western railway systems. At no time has the public been so thoroughly aroused in favor of aiding the railroads as in this instance. Will you not relieve the present business crisis by deciding in favor of the increase?

Please pardon my encroachment on your valuable time; however, 1914 will not be a year of prosperity unless the railroads are given this increase.

Thanking you for your kind consideration, and with all good wishes, I am,

Most sincerely, yours, GEORGE R. CARR.

—

MISSOURI MALLEABLE IRON CO.,
East St. Louis, Ill., January 8, 1914.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We desire to express not only the hope that the Interstate Commerce Commission, of which you are chairman, will see fit to grant to the railroads the 5 per cent advance which they have asked for in Official Classification Territory but to further express the hope that action upon this important matter may be taken at the very earliest possible date.

The purchasing power of the railroads has been curtailed to such an extent that they are placing practically no orders at all for equipment and supplies, with a result that the slowing down in all industrial lines has reached the point where the situation is actually becoming serious. Iron and steel plants throughout the country are working at about half capacity or less, and a great deal of distress already exists among the laboring classes, with chances of its becoming materially worse as the winter advances, particularly on account of the unusually heavy tide of immigration into the country.

It looks to us as though the question for the Interstate Commerce Commission to determine at this time is not so much as to what is an equitable rate, but what action, upon the part of the commission, would be necessary to again induce capital to invest in railroad securities, to the end that the railroad companies might be able to finance the improvements and betterments in their facilities without which the country can no longer progress.

In passing upon this question, we trust your worthy body may not only decide to grant the advance in full, but trust that a word of warning will be sounded to legislators, both State and National, municipalities as well, not to go on putting unjust burdens upon the railroads. If they have been guilty of sins in the past, the severe disciplining they have been getting in the last decade has, it seems, gone too far, and if persisted in will act as a boomerang upon the general public.

Again hoping that speedy and favorable action will be taken, we beg to remain,

Respectfully, yours, F. E. NULSEN.

—

CHICAGO, *January 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As manufacturers and shippers, we desire, individually, as well as in our corporate sense, to approve the increase of 5 per cent horizontal raise in freight rates in the official classification territory, which subject is now before your honorable body.

Yours, respectfully,

DRAKE RAILWAY AUTOMOTRICE CO.,
F. E. DRAKE, *President.*

—

BERNET, CRAFT & KAUFFMAN MILLING CO.,
St. Louis, Mo., January 9, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I refer to appended clipping.

There has been a constant reducing of rates with a similar clamor for improved facilities, which, in the nature of things, can not run together for any long period without disaster to some one, and for this reason I desire to go on record as favoring the increased rates.

Without entering into a general discussion of any other reasons I may have, I respectfully submit the following:

The present financial conditions of many of the transportation lines have been built largely during the past, because of the inefficiency of our laws in many instances, and the laxity of their application in other cases. The fact remains that the conditions exist.

Securities are held largely by the public. The question for solution is: Are present rates ample to take care of the obligations of the railroads and enable them to increase their facilities to take care of the increased commerce in the country? It is not sufficient that rates shall take care of simply present conditions. Increased facilities are necessary, and the demand will continue even should the advance be allowed. The country is growing. It is impractical and unjust to take the income from the security holders to buy increased facilities to take care of the increased commerce. There is only one way to do that, and that is to increase the income, and that can only be done by increasing rates.

The Government may be able to suggest a more rigid economy in the conduct of the transportation business and thus relieve the necessity for an advance as much as 5 per cent, but we respectfully submit that it is not fair to punish the shipping interests of the present day for the past sins of the transportation lines in waterlogging their properties, where that has really occurred.

I think all fair-minded, right-thinking merchants and manufacturers must admit that the prosperity of the country is so closely linked with the prosperity and efficiency of our transportation facilities that the former can not grow without a corresponding growth of the latter.

The Government should allow an increase in rates and see that the revenue therefrom is properly applied to the benefit of both the railroads and the public, but not as a basis for increased capitalization.

Respectfully submitted.

F. E. KAUFFMAN.

RAILROADS.

EASTERN RATE ADVANCE—COMMISSION TO DECIDE NEXT WEEK UPON A HEARING FOR SHIPPERS.

WASHINGTON, *January 7.*

The shippers' opportunity to be heard on the 5 per cent increase in freight rates proposed by the 52 eastern railroads will be passed upon next week by the Interstate Commerce Commission. Commissioner Harlan so announced to-day at a hearing arranged for the railroad officials asking for modifications of questions the commission asked to have answered before February 1.

Attorneys for the railroads told Commissioner Harlan that, in some instances, it would require a year to furnish the information the commission wanted in a month. Louis D. Brandeis, representing the commission and shippers in opposition to the increase, consented to several modifications. George Stuart Patterson, general counsel for the Pennsylvania, and Daniel Willard, president of the Baltimore & Ohio, headed the delegation which had been selected to speak for all the railroads.

For the New York Central it was represented that to answer the commission's questions about lighterage at New York would cost $75,000 in clerk hire and require one year. Louis D. Brandeis suggested that a representative month be selected, and that an answer be prepared on that basis. The railroad officials seemed to approve the idea.

To answer the commission's question about contracts for material, it was said on behalf of the Baltimore & Ohio that it would involve 13,000 pages of copying and a review of 100,000 transactions. The railroad offered to submit originals of any contracts the commission might wish to inspect. Mr. Brandeis readily agreed to that.

Commissioner Harlan said there was no doubt as to the right of shippers to be heard as to particular rates, but that he intended to ask the entire commission, next week, to pass upon the question whether hearings on particular rates should be incorporated into the hearing of the general question of increased rates or reduction of expenses, or whether shippers should be given an opportunity, after those questions were decided, to present their position.

—

ST. PAUL, MINN., *March 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We make thousands of shipments all over the United States, and still agree with the inclosed circular, that transportation companies are entitled to increased freight rates, owing to the increased cost of operation.

Yours, truly,

B. T. GOLDMAN.

THE RAILROADS.

UNITED STATES RAILROADS MAKE POOR SHOWING FOR LAST HALF YEAR.

Railways of the United States during the first six months of the calendar year, from July 1 to December 31, 1913, in order to carry a $10,000,000 greater business than in the corresponding period of the year before, had an increased expenditure of $68,600,000. There was a resulting loss in net operating revenues of the railways for the half year of $58,000,000. How unfavorable an outlook this offers for the entire fiscal year may be deduced from the fact that the unfavorable net showing from the first six months—$510,000,000 against $568,000,000 the year before—confronted the railways, despite the fact that only two of the months showed large losses in business compared with the previous year. July, August, and September enjoyed large expansions in gross, though all lost in net. October showed the total mileage of railways practically at a standstill as to gross business, though losing $12,000,000 in net. With November came a more decided slump in gross business, with resulting larger loss in net; and the figures for December, now available to complete the half year, intensify the unfavorable showing.

SOME OF OUR RAILROADS ARE BECOMING THIN AND EMACIATED.

(By Alfred H. Smith, president New York Central Railroad.)

As a general proposition, the railroads of this country are physically strong. It has been stated they carry high-class freight at the rate of 1 ton 3 miles for the value of a 2-cent postage stamp; that they carry 1 ton of dead freight 4 miles for 1 cent. Not all of them are making money at these rates. Some of them are getting thin and emaciated.

There is criticism afoot that the railroads have not used their money judiciously. It is hard to indict the whole country or industry representative thereof. The efficiency and integrity of these railroads must be judged by facts palpable to all—their strength in heavy steel rails, good ballast, steel cars, modern signal systems, and other appurtenances that constitute a safe transportation machine whose efficiency is proved by paying the highest wages for services rendered by its employees and furnishing transportation at the lowest cost.

This is a simple problem. Those who confuse it and complicate it serve only to hide the truth. In establishing the commissions the people have provided a means of searching out the facts and truth of the matter in order that they (the people) may do justice and right. The railroads have hope and confidence in these bodies in this work. By their efforts to learn and speak the whole truth of these railroads, they are bound to perpetuate and enhance the confidence of the people in these great properties, to the end that they may grow and be more and more serviceable to the Nation and its people.

—

THE PENNSYLVANIA RAILROAD COMPANY,
GENERAL OFFICE,
Philadelphia, March 17, 1914.

To the stockholders of the Pennsylvania Railroad Co.:

In view of numerous requests made by stockholders and others, and in pursuance of instructions of the board of directors, the following statement made by Mr. Samuel Rea, president, at the annual meeting of the stockholders of the company on March 10, 1914, is sent you:

LEWIS NEILSON, *Secretary.*

"Before adjournment I think it is proper to call the attention of the meeting to the report of yesterday's proceedings before the Interstate Commerce Commission on the application of the railroads for increased rates, in which the allegation is made that in effect many railroads, including the Pennsylvania Railroad Co., have technically manipulated their accounts to show increased costs of operation. We have not yet seen an official confirmation of the statement, but the charge, so far as it relates to the Pennsylvania Railroad Co., and I am sure to other lines as well, is absolutely untrue.

"Your management is determined that, within the limits of reason, it will hereafter allow no statement to go unchallenged that reflects on the management or the integrity of its officers. Your property is honestly, economically, and efficiently operated and maintained, and in addition to the information furnished to the Interstate Commerce Commission and the State commissions, and the report published for the stockholders, any further details desired by the Interstate Commerce Commission will be at once furnished upon request. At the inception of the freight rate hearings we promised to produce officers who will not only explain the operating expenses, but prove their necessity.

"What the commissions, the public, and the shippers have so far apparently failed to appreciate is the cumulative effect of legislative enactments and regulations, both State and Federal, dealing with almost every phase of railroad operations—increased wages, limitations affecting working conditions, extra crew laws, and other wasteful expenditures imposed upon the railroads without their consent. The result is higher maintenance and operating charges; large outlays resulting from the use of steel cars and consequently heavier trains; additional ties; better track structure throughout; more modern stations and other facilities and appliances. Railroad costs have been very materially increased and we can not avoid them.

"In addition to maintaining this safe standard of railroad, the Pennsylvania Railroad Co. has put into its accounts a fair charge for depreciation, renewals, and obsolescence, i. e., 3 per cent on freight cars, which means a life of 33⅓ years, and 4 per cent upon passenger cars and locomotives, which means a life of 25 years, and who can say that these charges are unfair, or anything but moderate?

"The truth of the situation is that the railroads as a whole have not been spending enough for maintenance. They have been operating economically, but the enforced economies due to the loss of gross revenues and the failure to grant them the right to charge reasonable rates for the transportation service performed force them in years of depression to reduce operating costs, but remember it is only deferred maintenance, and therefore in the end not a real saving.

"No serious public consideration is at present being given to the investors who have furnished the capital for all the railroads, and thereby provided the most substantial foundations for the past and present progress of the country, and without the prosperity of the railroads the country can not prosper.

"What is the present situation? The railroads are prevented from charging reasonable rates; they have sustained a serious loss in revenues; they are prevented from furnishing facilities so as to be prepared to meet the reasonable transportation needs; every occasion is being used to publicly discredit them; and the result is that there must be enforced economies. If large numbers of railroad men and others depending on railroads for every character of supplies and work are out of employment, and a general loss of confidence exists, and suspicion has been engendered, no attempt must be made to place this responsibility upon the railroad management. They have issued warnings and made petitions for fair dealing, but without effect. The time has come when all fair-minded men, and investors as a whole, must individually and collectively impress on State and Federal Senators, Representatives, and Government that they are a part of the Nation entitled to at least fair consideration.

"This statement is not made to predict calamity, but it is made to prevent calamity, and because heretofore we have used our efforts to influence investors from asserting their rights, but we will no longer occupy that position while every other interest in this country petitions for their own special welfare and is having the benefits of legislative protection.

"Your company is in good condition physically and financially because for over 60 years it has regularly paid a reasonable dividend and devoted a portion of its annual surplus income to the betterment of the property, and did not issue either capital stock or bonds for these expenditures, thereby conserving its capital account; and only by the continued practice of that policy, which has been commended both at home and abroad, does your management believe its prosperity can be assured.

"May I add just one word more with respect to the so-called extra-crew laws? You may have seen that we have petitioned the Legislatures of New York and New Jersey for the repeal of that obnoxious and unjust law. Unfortunately, the State of Pennsylvania will not convene its legislature until next winter. We propose to go before that legislature, because, under that unjust law of the Legislature of Pennsylvania, this company has paid about $500,000 a year, which has been wasted. I hope when the time comes that the stockholders of this company will interest themselves so far as to find out how their representatives are going to vote on a question of that kind. Fully one-third of the stockholders of the Pennsylvania Railroad are residents of the State of Pennsylvania. This State is the home of the Pennsylvania Railroad, and it ought to be protected like other citizens of the State."

—

WATSONTOWN, PA., *March 20, 1914.*

CHAIRMAN HARLAN,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We wish to be placed on record as being in favor of some revision in freight rates, as we feel that the railroad companies are justly entitled to this, owing to the increased cost of operating expenses and equipment, and we feel that this should be granted in preference to making a charge for trap cars.

We feel that a great injustice would be done to all corporations owning private switches if this system was adopted. We presume that all people having private switches have been put to a great expense in having their sidings built. In our case alone we were compelled to spend over $1,000 on our private switch, and if we are not to have any privilege on account of the switch without paying for it we certainly would be losing to a great extent, and many other corporations would be much heavier losers than we would be, and we therefore feel that we should have the use of our siding for switching purposes without any charge, as it would not take them any longer to switch a car to our siding than it does to switch it to some other siding to be unloaded.

The railroad companies all over the country would not be in a position to handle all this extra loading and unloading of their private sidings at their warehouses, and if they would it would require a great deal of extra help at such places and the chances are that the expense of extra labor and warehouse room would more than eat up the cost of switching cars to private sidings. It would also mean that in times of car shortage that the cars would be held up longer than they ever would on a private siding, as freight all going to one central point would congest everything to such an extent that cars could not be

loaded and unloaded promptly, while on our sidings cars are unloaded within one day, and the same time is consumed in loading cars to go out, so they are not held any length of time and they can be used promptly for other purposes.

If we should deliver all our goods for shipment to the depot at this place, along with the rest of the shippers in town, their warehouses would be so congested that they could not possibly handle the goods with any degree of promptness, and our shipments would be delayed and in many cases would be the means of our losing trade, and it would be impossible for us to handle the same amount of goods in this manner as we could by having the privilege of loading cars on our own siding. We do not think that you would find the railroad company at any point that would have the facilities for handling everything through their depot, and the charges that would be made for trap cars would be offset many times by the additional help and warehouse room required to handle the business at their stations, and we feel that when we are relieving the railroad company of handling all this material at their depots that we should not have to pay for the privilege of loading goods at our sidings, and we feel that we are practically saving them a considerable amount of money under the present system, and we certainly should not be charged for saving them dollars and cents.

We therefore wish to protest against any charge for trap cars, and we would ask that you give this your fair and just consideration.

Yours, truly,

WATSONTOWN TABLE & FURNITURE CO.,
H. W. ROMBACH, *Treasurer.*

—

SCULLIN-GALLAGHER IRON & STEEL CO.,
OFFICE OF THE PRESIDENT,
St. Louis, March 20, 1914.

Hon. JAMES S. HARLAN,
Chairman, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Every day in conversation with men of affairs, with whom the necessity of my business brings me in contact, I hear the question, "What is wrong with business conditions in this country?" and almost invariably the answer is—"The lack of ability of the railroads to obtain money to make necessary betterments and improvements of their properties, etc."

I am, therefore, appealing to your commission, combined and each of you, asking you to grant the request of the railroads for a 5 per cent increase in rates. I ask this as one of the largest shippers in the western country; I ask this as one, who having to pay this increase, will be vitally affected; but, I know from my investigations and observations that this increase is absolutely and vitally necessary to the railroads and what is their necessity is essentially necesasry for the good of this country.

The railroads of the United States have made it possible for this to become the greatest producing country of the world; they have built lines through country absolutely untilled and desolate, which would have remained so without the necessary facilities for bringing the people to settle these lands and allowing them to market their products. This has been done at a tremendous initial cost to the railroads and for years was in most cases productive of practically no revenue.

The railroads for some unknown reason have been attacked on all sides and absolutely discredited. Financial men fear to assist them, as the constant delay in granting them any relief is apparently a warning conveying the idea that further attacks are premeditated. These attacks may all be made in good faith, but the fact remains that a very small percentage of any of the railroads operating in the United States are making even a meager living. Relief must come to them or it means their financial ruin, and any thinking man can see at once that that means catastrope to the business interests of this country, as the business of the United States is absolutely dependent upon the ability of the railroads to give prompt and efficient service.

Our State, Missouri, has four railroads in the hands of receivers, and the indications point very strongly that unless relief comes there will be others in the same predicament.

It is so often urged that the railroads are not operated in an economic manner. This is a broad, general, assertion and hardly bears the stamp of facts. The great majority of the railroads in the United States are managed by capable and intelligent men, who are as capable of economic management as are the heads of other industries. We must all admit there have been cases of mismanagement, and perhaps even criminal mismanagement, but surely the isolated case will not be allowed to condemn the entire railroad fraternity.

This matter of a rate increase has been before your honorable commission for a very long time and it has been delayed and postponed until doubt as to the ultimate result has been born in all quarters. The railroads at present, when they are able to obtain financial aid, are compelled to pay from 1½ to 2 per cent more for money than commercial establishments.

Your commission has a very great and solemn duty to perform and one that is fraught with serious consequences if not performed in the proper manner.

I am sure from my very wide inquries that the majority of the thinking and substantial people in this country are a unit in the feeling that this increase should be granted to the railroads. I sincerely trust and hope that your commission may be guided by this general desire and that you may act promptly and give the railroads the relief which they must have to save them from absolute ruin.

I again earnestly beg of your commission, one and collectively, that you may grant this increase and that your action may be taken very promptly, and I am sure you will be proud of your decision in the splendid business impetus that you will see in this country.

Very truly, yours,

HARRY SCULLIN, *President.*

—

SPOTTING OF CARS—REVENUE OF CARRIERS, ETC.

WINONA, MINN., *March 20, 1914.*

Hon. JAMES HARLAN,
Chairman Interstate Commerce Commission.
Washington, D. C.

GENTLEMEN: From our observation, taking into account the changed conditions in the past 20 years wherein there have been reductions in freight rates versus added cost of operating expenses to railroads in the way of increased salaries to train men—in fact, all employees—we would consider that they were entitled to increased freight rates on all commodities. The only stipulation that we would suggest is that such advance should be equally distributed as to commodities and all territories treated the same.

We do not consider in our particular case, or industries similarly situated, that there should be any change in the methods which have existed for many years in the placing of cars to our plant for unloading and loading, since it requires special equipment to unload cars as well as load cars, which we supply, thus relieving the transportation lines of equipping themselves with facilities for handling our carload freight.

The side tracks adjacent to our property are owned by the C. & N. W., C. B. & O., and C. M. & St. P. R. R. Cos., and within two blocks of the local freight stations and team track yards of the two first mentioned companies

In other words, throughout the Northwest the method of unloading wheat and loading flour is an enormous saving to the carriers—not only in the matter of lessened terminal facilities, but in the item of labor.

Trusting that this matter will receive careful diagnosis, we are

Yours, truly,

BAY STATE MILLING CO.,
H. C. GARVIN,
Secretary and Manager.

—

ORANGE, TEX., *March 21, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As a citizen and voter of Texas I feel it my duty to favor an increase in freight rates for the railroads of the country and oppose all drastic legislation that would work hardships, directly or indirectly, on the railroads and other corporations, as you are aware no doubt the thousands of employees of these corporations would be the innocent sufferers. This is the sentiment of the writer and 50 others to my knowledge in this community.

Yours, truly,

B. C. NELMS.

—

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, March 20, 1914.

Mr. RICHARD T. EDDY,
Secretary to the Chairman,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I beg to acknowledge receipt of your letter of March 18. I take it from your letter that the commission has heard both sides and now has the matter under advisement. Am I correct?

We sincerely hope the commission will use its influence to stop this continual harassing of the shippers on the part of the carriers. Most shippers are willing to conform themselves to rules that are fair, but to constantly change and shift is unprofitable, unjust, and annoying.

Please bring this letter to Mr. Harlan's attention.

Very truly, yours,

JOHN M. GLENN, *Secretary.*

—

BROOKLYN, N. Y., *March 23, 1914.*

GENTLEMEN: Please have the courage to show the country that you are not the prejudiced board they all accuse you to be against the railroads.

As an insignificant citizen I indorse the inclosed editorial as being fair. Public opinion must be served or the Interstate Commerce Commission is doomed. Everyone will say that your regulation is valueless when, as a matter of fact, it has been very beneficial. Make it still more beneficial by giving them a full 10 per cent increase. Nothing less.

Yours, very truly,

FRANK F. STARINS.

"AN OVERWORKED COMMISSION.

"If railroad rates are to be regulated by Federal authority, action should be prompt as well as just. The most elaborate system of bookkeeping ever devised has been imposed upon American railroads by our interstate-commerce laws. To many corporations the cost is a serious item. Data supplied in this way should be almost instantly at hand when questions of rate increases or decreases are under consideration.

"The Interstate Commerce Commission was asked as long ago as last May to grant eastern railroads an increase of 5 per cent in their freight rates. It was thought that a decision one way or the other would be quickly reached, but now after many delays it appears that the facts in the case can not be collected and assimilated before April or May, next. While dilatoriness is always characteristic of Government, it becomes doubly a hardship when great business interests wait on it.

"In this case it is to be said in behalf of the commission that it is overloaded with investigations undertaken at the request of Congress which ought to have been instituted elsewhere. The question of rates is one which that body alone can settle, whereas inquiries may be carried on by many other official agencies, including committees of Congress.

"The commission has brought criticism upon itself and upon the whole idea of Federal regulation by its inability to meet this issue with reasonable celerity. A wiser policy henceforth would be to attend to its legitimate business first. This would serve to compel Congress to pursue the investigations which are part of its duties."

—

THE RAILWAYS AND THEIR RATES.

Two classes of persons are bothered by no doubts as to the action with regard to freight rates.

The first is composed of those of the belief that anything withheld from the railways is necessarily a gain for the public. To them the railways represent a malign and deleterious influence to be pounded and repressed. They do not take the trouble to examine the facts filed in support of the pending application. They are against any and all rate increases on general principles. Railway owners are to them men with mutton-chop whiskers and plethoric pockets that it is a positive virtue to despoil.

The other class is equally averse to an examination of the facts and takes similar short cuts to a desired conclusion. Its members are for rate increases under any and all circumstances. They are fixed in the conviction that it reveals demagogy and an anarchistic mind to hesitate. If the railways did not need more money, railway managers would not ask for it—so runs the easy reasoning. The ratiocination is as simple as that of the Illinois justice of the peace who always found for the plaintiff, saying that if the defendant did not owe the money the plaintiff would not have sued him.

Happily, there is reason for thinking that neither President Wilson nor the members of the Interstate Commerce Commission fall into either of these classes. The indirect statement emanating yesterday from the White House shows that the case of the railways is being considered on its merits.

If the railways are able to establish the case whose general features have been laid before the public, and it is not shown that their allegations of fact rest on doctored books and deliberate misrepresentation, there is not much question concerning the decision. It inexorably flows from the proof offered of practically stationary gross incomes, rising expenses, and a higher interest rate for the new money that must be invested in railway enterprises if the public is to be well served.

Three years ago the Interstate Commerce Commission rejected the application of the railways for permission to raise rates. The commission acted justly and wisely, as subsequent events have shown. At the time the decision was rendered the rates were high enough to pay the railway owners of this country a reasonable return on the value of the property devoted to the public's service. The railways in 1910 did not make out a case.

But judging the present income of the railways by the standards applied in 1910, it appears, assuming that the sworn reports to the Interstate Commerce Commission are accurate, it is difficult, if not impossible, to avoid the conclusion that the railways are entitled to substantially the increase for which they now ask. The gross earnings of so representative a system as the Pennsylvania were $316,476,822 for the 11 months ended November 30, 1910, and its net after taxes was $75,198,334. For the 11 months ended November 30 the gross income of the Pennsylvania was $360,288,038, and its net after taxes was $66,719,250. Gross income was up $44,000,000, but net income was down $8,000,000. Out of the decreased net income it was necessary to pay the charges on the $100,000,000 of new money invested on the property; so the return to the owners of the Pennsylvania was something like $13,000,000 less in the 11 months of 1913 than during the 11 months of 1910. It is obvious that the deficit must not decrease if the Pennsylvania is to have money for improvements and is to serve the public as it wishes to be served.

The exhibit in regard to the Pennsylvania is representative of the exhibit of practically every eastern railway. The returns tell stories of falling net returns on an enlarged investment. The water has been squeezed out of railway stocks. The railways could not be reproduced for anything like the present market value of their securities. It follows that either there must be an increase in rates or the public must prepare itself for poorer service and a shock to our most important industrial interest that it will take years to recover from.

—

VINTON COLLIERY CO.,
New York, December 11, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Our management has given considerable thought to the request of the eastern railways for an increase in their freight rates. We have come to the conclusion that it will be very much to the advantage of the consuming public, the shippers, the railroads, and practically everyone, to have these increases granted.

It seems too bad that the prosperity of this country should be held up, due to the fear on the part of all who have had a chance to save a little money that railroad investments are unsafe. This feeling about American railroads must exist in Europe as well as in this country.

The railroads have had a hard time recently, and unless they are prosperous we all suffer. They have been compelled to raise wages, which, of course, at times is only fair and just, and as the tendency of conditions in this country is to have the cost of living go up—necessitating raising of wages—then the railroads should be allowed to charge more for what they have to sell.

Our company is quite a large miner of coal, say 500,000 tons per year, and we make about 80,000 tons of coke, and we would rather have the extra burden thrown on our industry occasioned by the raise in freight rates, to help the general good, than to have conditions remain as they are.

If the increases are granted we think that the United States will enter upon a period of great prosperity; and, if they are not granted, we think it will be great hardship for most of us for some years to come, though it will fall most heavily upon the men working for day's wages and upon those dependent upon them.

From our standpoint, we do not think the extra revenue that the railroads should get will help nearly as much from the money standpoint alone, as the fact that confidence will be restored both in this country and abroad, among people who have been fearful to invest in railroad securities. The restoration of the railroads' credit will give them an opportunity to make much-needed improvements, build extensions, and buy needed cars.

Yours, very truly,
C. M. SCHWERIN,
General Manager.

—

NEW YORK, *December 11, 1913.*

Hon. EDGAR CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: My firm, H. Hentz & Co., has been longer in the cotton trade than any other house in this country, having commenced business in 1856, and we are now past our fifty-seventh year. I am still active in business generally. I am a former vice president of our chamber of commerce, and its second oldest member, and am one of the oldest directors of the Farmers Loan & Trust Co. and the Mechanics & Metals National Bank, two of our important banking institutions. I mention this, hoping it may attract your attention to what I write, namely, that I trust your commission will allow the increase of 5 per cent in freight rates asked for by our railroads.

I inclose pages 1544, 1545, and 1546 of the Financial Chronicle (of the 29th ultimo), of this city, which is my financial bible. This article gives very strong reasons, to which very little can be added, why this increase should be granted, and I sincerely hope your commission will not decide against the railroads without reading this interesting and truthful article. No paper in the world stands higher in character and ability than the Chronicle. If anything, it has really underestimated the situation, as it does not include the railroad stocks and bonds which are held by the various banks and trust companies of this country.

We are drifting into a panicky state, and it can only be arrested by your commission acting favorably toward the railroads. This is the feeling here.

Very respectfully, yours,
HENRY HENTZ.

NEW YORK, *November 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: In view of the proceedings pending before your commission as to the advance in freight rates on eastern lines, we beg to give you our views on this subject, feeling justified as shippers of over 150,000 tons of commodities per annum to say a word on the question.

The freight rates eastbound are low, and business in all lines would not suffer if rates from Chicago or St. Louis or similar points over the trunk lines were increased 5 per cent. How low these rates are is probably not generally appreciated; but if you compare our freight rates on most of our commodities like copper, lead, and spelter—from Chicago to New York of $2.70 per net ton, with freight rates which we are paying to Europe of from $3 to $4 per net ton—it will become immediately apparent that our railroad rates are reasonable, in view of the fact that water transportation is so much cheaper. The business of this country, and especially in the eastern part of the country, would most decidedly be benefited if a reasonable advance in the eastern freight rates was allowed, because industrial activity is at low ebb at this time owing to lack of orders from the railroads.

At the same time, and while adjusting the eastbound rates, the commission might look into the question of westbound rates over the same lines. These rates are considerably higher than eastbound rates, and the high rates prevailing for shipment from tidewater to the Middle West frequently stand in the way of business. While some argument can be made in favor of higher westbound rates than eastbound, the difference is too large and not justifiable.

Respectfully submitted.

Yours, very truly,
L. VOGELSTEIN & Co.

—

WOODBROOK, MD., *November 12, 1913.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Inclosed herewith is a timely editorial from the New York Herald, which I think will be of interest to you, as I realize how important and essential to the well-being of every citizen of our country it is to give the railroads a fair deal, which they are not now getting.

Yours, respectfully,
FRANK N. SANDS.

[From the New York Herald, Wednesday, November 12, 1913.]

RAILWAY "ARTERIOSCLEROSIS."

The award of the arbitrators granting the trainmen and conductors of the eastern railways advances in wages amounting to $6,000,000 a year, following the previous advances in the wages of engine drivers and firemen, serves to emphasize the position of the railways as "between the devil and the deep sea."

With the great increase in expenditure for supplies and for higher wages "the cost of living" has increased for railways as for individuals; but while individuals—and especially those serving the railways—have obtained greater incomes, the Interstate Commerce Commission has refused to permit any increase in the charges for transportation to offset the greater cost of the service.

This condition of the great arteries of the body economic the Herald has compared to the state known as arteriosclerosis in the human system—the state in which they are dried up and ready to break under any increased pressure. The commission at the hearing fixed for one week from next Monday must grant the request of the eastern roads for an increase of 5 per cent or incur the odium of deliberately trying to ruin the great transportation systems, upon the well-being of which is dependent the whole country's prosperity.

—

BALTIMORE, MD., *November 12, 1913.*

Hon. JOHN WALTER SMITH,
United States Senate, Washington, D. C.

DEAR SIR: You know of the decision of the board of arbitrators which granted eastern railway men an increase in pay amounting to 7 per cent.

Yesterday I had an interview with President Willard, of the Baltimore & Ohio Railroad, in relation to a most necessary physical improvement at their terminals at Locust Point, involving an expenditure of about $500,000. Mr. Willard stated that no future expenditures for the improvement of the property could be made under existing conditions; in fact, unless prompt relief arrived by permission of the Interstate Commerce Commission to grant to the railroads additional income for freight service, it was a most serious question with not only his road, but other roads, how they could continue to meet the legitimate requirements as to transportation and service for the future; that the Baltimore & Ohio Railroad Co. had completed the expenditure of the fifty millions borrowed for physical betterments. Much of this work having been completed for several years, they were in position to know the economic results of these expenditures, but that, owing to the increase of wages made necessary by the awards of the different arbitrations, all of the economies that were obtained by those improvements had been offset by the increase in wages of their employees. Further, that natural wear and tear of the equipment resulted in the annual retirement as useless of 50 to 60 locomotives and 6,000 freight cars, and that the accumulated increases obtained by labor through arbitration have now brought the company to the point where they must consider the retirement of all labor not imperatively necessary for the movement of traffic, and that the railroads are not in financial position to replace their motive power or their equipment under existing rate and financial conditions.

You can see, Senator, that this means absence of orders to manufacturers in all directions. It means a stoppage of the heretofore enormous purchasing power of our transportation companies, and this stoppage will be most unfortunately and disastrously reflected in many lines of trade. We all know that the good judgment and spirit of fairness of the American people will not long permit the present conditions to exist, as public sentiment has already crystallized in this rate matter by recognizing the economic absurdity of on one hand requiring the transportation companies to increase the pay of employees and on the other hand withholding from them the power to increase the freight rates in order to equalize the situation. The people of this country are also insistent that the railroads must not stop, that there should be no interruption to the flow of traffic, and they are equally insistent that ample and efficient service be given to all communities and localities. The danger in the situation lies in the possibility of a delay in the relief necessary, which relief can only be granted by the Interstate Commerce Commission through its order permitting increased revenue to the railroads.

It will not do to allow this already sick patient to become so emaciated from lack of nourishment through fair rates of freight that the patient be so weak as to be beyond resuscitation; and a few receiverships would result in the utter demoralization of railroad credit. Without credit and the ability to borrow money in large sums to meet the increasing demands for transportation in our country our railroads and our people will be disastrously affected.

You understand this situation thoroughly. No one can so forcibly present present and prospective conditions. I write to ask that if your good judgment permits that this situation be brought by you to the attention of our good President that he be impressed with the necessity of prompt relief through the Interstate Commerce Commission. Delay is dangerous.

With kind regards,

Yours, very truly,

LOUIS MÜLLER CO.,
By JOHN M. DENNIS, *President.*

—

CHICAGO, *November 17, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This acknowledges yours of the 8th relative to the meeting on the 24th of this month to consider the increase in freight rates to the eastern roads. We will be glad to see the railroads get an increase in rates, as we believe they need it, because it seems that they are unable to keep pace with the enormous increase in business and the ever-increasing expenses. Surely they are entitled to do this, and at the same time pay a reasonable return to their stockholders.

Yours, very truly,

WAHL ADDING MACHINE CO.,
C. S. ROBERTS, *President.*

—

ST. LOUIS, *December 10, 1913.*

Hon. EDGAR E. CLARK,
Member Interstate Commerce Commission, Washington, D. C.

MY DEAR MR. CLARK: In a book recently published by Mr. Howard Elliott, chairman of the board of the New England railroad systems, it is stated that "out of 92 million people relatively few in the regular course of their lives and business come closely enough into contact with the railroads to know railroad officers or understand their business."

While there have been certain abuses in the past, the public should not seek revenge, and itself become wrong, but should seek that basis of right and justice which will best safeguard this vital public utility, the welfare of which is more important than any other single internal interest of the Nation.

Those who like yourself understand the problems confronting the railroads recognize that the "one thing needful" is to get the facts before the general public; for if the public realized the actual conditions surrounding the railroads there is no doubt but what their attitude toward them would be greatly changed, because, when acquainted with the facts, the American public is very fair. The public, however, does not realize the great expenses which the railroads have had to incur, and are incurring each day, to keep pace with the growth of this great expanding country of ours, where it is necessary to steadily increase terminal facilities to take care of the growing business. This one item alone requires a large expenditure of money.

With the growth of the country the railroads have been largely extended; taxes have been greatly increased; the cost of labor and materials have increased and other burdens have been placed upon the railroads, such as the introduction of steel cars. The general clamor for the immediate replacement of wood cars with all-steel cars would mean the expenditure of $650,000,000 and require more than 10 years' time at the present full capacity of all the car works in the country, and with the present revenue of the railroads it is impossible to finance this replacement even if it were practicable. However, much of this would be obviated if the public knew what has been accomplished by some of the great railroad systems and the Pullman Co. by not discarding their good wooden cars but reinforcing them with steel underframing, steel ends, and outside steel sheathing, which make the car structurally stronger than an all-steel car because it has practically the same underframe as an all-steel car, in addition to the strong wood underframing. A car thus reinforced will give the public all it demands in an all-steel car.

The railroads are finding it constantly more difficult to interest new capital, and in view of all the foregoing conditions confronting the railroads it would seem inevitable that if the public desires all these improvements and expects the railroads to render efficient service they must permit and encourage the increasing of rates to an adequate basis.

The increase in rates needed by the railroads is so small that it amounts to practically nothing to the individual, and while in the aggregate it will not provide the improvements required by the public, it will enable them to interest sufficient capital to finance all proper improvements and maintain their properties in first-class manner.

If Mr. Elliott's book "The Truth about the Railroads" (a copy of which I am pleased to send you), could be placed in the hands of each thinking man in the country, it would undoubtedly do a great deal toward informing the public and causing them to see in a true light the railroad situation. It will be appreciated by men in all walks of life, for it is written from a broad standpoint. It has so appealed to me that I have had a special edition published for the purpose of distribution, feeling it is my duty as a citizen and large shipper to, as far as possible, bring before the people of this country the true situation with regard to railroads.

Sincerely, yours,

CLARENCE H. HOWARD.

—

CHICAGO, *November 25, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I wish to call to the attention of your honorable body the importance of granting the railroads a substantial increase in freight rates. This country is at present suffering the greatest kind of a setback, due to the fact that the railroads, which are the great upbuilders of the country, are being discouraged and stifled by your constant refusal in permitting them to raise their rates. If it were not that our railroads are managed by the greatest brains the United States possesses, they would all be bankrupt long before this. No business could ever withstand such hardships and such constant increase of expense caused by arbitrary legislation without being permitted to raise the only merchandise they sell, namely, transportation. If a wholesale concern advances the price of a suit of clothes 50 cents per suit, being forced to do so through paying more for labor, or rent, or taxes, or any other item (but never on account of freight rates, as they are the very least to be considered) the retail merchant at once raises the price of that same suit $2; mind you, the latter is already making from 50 to 100 per cent not counting the $2 raise in addition, yet the freight charge does not enter into this at all, as he does not pay it; i. e., in the city of Chicago there are some of the greatest wholesale and retail establishments in the world. The retail merchant receives his merchandise delivered from the wholesale house in said city without freight or even cartage charges, yet he marks the price according to the attractiveness of the style and pattern, not even thinking of the freight charge, as it is too infinitesimal. Come with me and visit the largest retail establishments which made a net profit of $17,000,000 last year and I will demonstrate to you that some of their merchandise is sold at 100 per cent profit where no freight or even cartage enters into the transaction. I will take you into the wholesale houses incognito and we can follow the merchandise right into the retail establishment in the same city on almost every commodity where the latter pay no freight or even cartage charges, yet they charge just as much or even more for the merchandise. I quote these instances solely for the purpose of showing that the freight charges play no part whatever so far as the consumer is concerned, and the innocent are forced to suffer through a misunderstanding of the other.

Railroad employees are on an average the best paid in the country, and the railroads are willing that this should be the case, but they can not maintain this standard of wages much longer unless they be permitted to raise their rates in order to keep up with every other demand made upon them. It has been proven that the very retail concern which made a net profit of $17,000,000 last year has grown-up persons in its employ at $4.50 per week. I dare anyone to discover such an appallingly poorly paid person of a similar age and class employed by the railroads.

What about the investors, the thousands of the investing public who furnish the money with which to build the railroads and who have every right to expect a reasonable return on their investment, say, 7 per cent per annum? Some of the private mercantile companies make from 33 to 400 per cent and they are of no benefit to the country whatever. We could get along without the merchant, if we had to, but we could not get along without the railroads; yet the merchant is allowed to charge what he pleases while the other—the railroads—are driven to pay the advance on everything they use and are prohibited from raising their rates. When the railroads are prosperous everybody is prosperous—from the humblest section hand up to the richest citizen, and that embraces the entire American people—but when the railroads are hit everybody along the line is hit with them.

The railroads promise new stations, better roadbeds, heavier rails, double tracking, special safety devices, paying their employees higher wages and giving them shorter hours, steel cars, additional trains, electric lighted trains, and the investor might receive some benefit through increased dividends and all these expenditures find their way back

directly to the laboring classes. They will be the greatest beneficiaries if the increase in freight rates is granted. Do you find any such promises from the shippers? No, not a single one—they promise nothing. Why, then, stifle the wheels of progress so beneficial to every rank and file and allow the shippers to have things their own way, which is detrimental from the humblest to the highest, who promise nothing in return? I therefore petition your honorable body to at once grant a substantial increase to the railroads, thus restoring prosperity for all time to come and give the railroads a fresh start in life. You will quickly see the rest of the business houses will benefit greatly through the railroads' prosperity.

Most respectfully submitted.

S. NIEDERBERGER,
3001 Michigan Avenue, Chicago, Ill.

—

FELIX ROTHSCHILD & CO.,
Chicago, November 26, 1913.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: As a business man and looking to the welfare of everyone, I can not see the injustice of allowing the railroad companies to advance rates 5 per cent. It will hurt no one and help many. As long as we business men do not object I can not see why your commission should. I care nothing about the harvester company. They are paying 10 per cent on watered stock while us business men are perfectly satisfied to earn 7 per cent on actual money invested. Give the railroads a chance and quit fighting them. It makes a difference to me of 3 cents a hundred, and if I can stand it the harvester company, with its 100 per cent, can stand it, too. Make the railroads prosperous and it will help all of us. Do what is right.

With kindest regards, I remain,

Yours, truly,

FELIX ROTHSCHILD.

—

PHILADELPHIA, PA., *November 26, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am interested in a number of companies who are large shippers. We give the railroads, on the average, a full train for a big locomotive each day, loading approximately from 70 to 80 cars.

Up to this time we have been opposed to the granting of an increase in freight rates, but now believe it would be a matter of good business to allow the railroad companies to increase their freights the 5 per cent which they are asking. There are two reasons why we are of this opinion.

First. Because we believe, with the latest increase of wages, that the railroads are entitled to an increase to the extent now asked.

Second (and more important to the business of the country). We believe that the psychological effect of granting the 5 per cent, and thus have the railroads get the income they think they should have, and the certainty that they will not only express their satisfaction but also publish the same, and the opportunity it will give them of obtaining money, at fair rates, which they need for improvements and additions (about which they have been talking for so long), will tend to change the entire business outlook of the country, with the result of making business men optimistic instead of doubtful, as they are at the present time.

We are fully convinced that success is largely a matter of optimistic opinion as to what business will be, and could we get the general business opinion changed from one of doubt (as it now is) to one of optimism we are sure that business would greatly pick up and be equal to any business situation we have ever had.

To secure this result, however, prompt action should be had and the hearing that you are now undertaking should be short and quick. A favorable decision promptly rendered would be much more effective in its result than a hearing long drawn out with a decision much delayed.

Having the opportunity of meeting many business men and large shippers, I feel sure of my position in this matter.

Thanking you for your attention, I am,

Yours, respectfully,

E. C. HARGRAVE,
Shearer Building, Bay City, Mich.

—

PITTSBURGH, PA., *December 3, 1913.*

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In our humble opinion the railroad companies of this country are entitled to the 5 per cent advance in freight rates which they are asking, and we would like to go on record as being one shipper that would be glad if your honorable commission would grant this concession.

Yours, very respectfully,

HEPPENSTALL FORGE & KNIFE CO.,
W. HEPPENSTALL,
Treasurer and General Manager.

—

RIDGWAY, PA., *December 3, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We beg the privilege of addressing you on the question covering the proposed increase of 5 per cent on the part of the railroad companies, for which they are now petitioning your body. The increase of wages, taxes, cost of capital, etc., without doubt are causing serious embarrassment to all railroads, and their only recourse under present conditions will be an increase in both passenger and freight rates, particularly the latter.

Viewing the question from this standpoint, we beg to respectfully say that we are in full accord with the petitions of the railroads, and hope your body can see itself clear to grant the proposed increase, fully realizing that the prosperity and business of the country depend entirely upon the prosperity of the railroads.

Very respectfully,

RIDGWAY SAND & STONE CO.,
A. URMANN.

NEW YORK, *November 26, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We take liberty in addressing you on the subject of the increase of freight rates by the railroads of the eastern division.

We are interested in the coal rates and would favor an increase of 5 per cent so as to assist the railroads to furnish a more efficient service by the acquirement of a more adequate equipment. We have been very much handicapped in working our mines at Nanty Glo, Cambria County, Pa., by the everlasting shortage of cars, and it is our unbiased opinion that if the railroads could be made to guarantee a better service in this respect, they ought to be assisted in that.

We would like to be placed on record to that effect and remain,

Very truly, yours,

LINCOLN COAL CO.,
W. A. MARSHALL, *President.*

—

IN REGARD TO THE RATE-INCREASE INVESTIGATION.

NEW YORK, *November 26, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Acting as buyers and sellers of bituminous coal, it is our desire to express in connection with your present investigation our opinion that we would be benefited by your granting to the railroad companies the increase of 5 per cent in freight rates for which they have made application, and our request is that this advance be granted.

This opinion and request is based upon the assumption that the railroad companies will act in good faith and so fit themselves as to render better service than heretofore toward the public. Under existing conditions and by reason of the shortage of railroad equipment, which occurs virtually every fall and winter, we invariably encounter inflated conditions in the coal market which inures to the disadvantage and loss to coal shippers and consumers alike. It has been necessary for coal shippers to make their contracts subject to car supply. On the other hand, there is a moral obligation to take care of consumers' requirements, and to do this during a period of car shortage many of the shippers are compelled to enter the market and buy coal at exorbitant prices in order to fulfill their obligations. Even so, many of the consumers are unable to get their coal requirements on contract and are compelled to purchase coal at abnormally high figures during such periods of shortage. We contend that if the railroad companies could furnish a full supply of equipment at all times that the coal market would become stable with a reasonable profit to the handlers of coal and a reasonable and steady price to the consumer.

In addition, we believe that the confidence of the business community requires it.

Yours, very truly,

W. A. MARSHALL & CO.,
W. A. MARSHALL, *President.*

—

MANSFIELD CENTER, CONN., *November 26, 1913.*

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: Kindly read the inclosed to-day's clippings from Norwich Bulletin. The railroads, so needed to bring prosperity to our country, should be prized and helped—they know best their needs—and not to be forced to "slow starvation." Two ways of killing—You kill the railroads, and you help kill me and the stockholders. Seventy-one years old; I want my dividends for the future.

Very truly, yours.

CHAS. H. LEARNED.

[From the Norwich Bulletin, Nov. 26, 1913.]

BOSTON & MAINE IN SERIOUS STATE—BIG DECREASE IN NET RETURNS OF THE ROAD—ELLIOTT'S STATEMENT—NEW HAVEN'S CHAIRMAN SAYS INCREASED RATES MUST BE THE REMEDY—DISCUSSES NEW HAVEN'S REORGANIZATION.

BOSTON, *November 25.*

The Boston & Maine Railroad's financial condition was characterized to-night as "very serious" by Howard Elliott, chairman of the board of directors of the New York, New Haven & Hartford Railroad, in an address before the New England Dry Goods Association. "The Boston & Maine has suffered a decrease of $1,221,000 in net returns during the first four months of the present fiscal year," Chairman Elliott said.

He added:

"Unless this decrease can be wiped out in the remaining eight months, the company will have failed to earn enough to pay its obligations. So the situation, you see, is very serious."

NEW HAVEN'S REORGANIZATION.

The remedy, he, said, was to be found in an increase in rates.

Referring to the Government's demand for a reorganization of the New Haven system to conform to the requirements of the Sherman antitrust law, he said:

"The Government, either rightly or wrongly, thinks that some of the acts by the officials of the road were not according to law. The Attorney General feels that some of that road's relations are unlawful, and may move to bring about dissolution of the property. I don't think we ought to be brought into litigation at this time. We ought to work the matter out in a practical way. We are doing what we can to make matters right."

LARGE EXPENDITURES NECESSARY.

Chairman Elliott here interjected a story of a western horse rancher's method of training a horse.

"Bill Yoakum brought his horse into a corral and rode him and worked on him until he had him trained. Then he found that the horse was stone dead. I think," the speaker said, "that is a good simile for the Government's attempt to regulate the railroads."

"The northern New England situation, in a way, is more critical than the New Haven situation," said Mr. Elliott, in taking up consideration of the Boston & Maine's affairs. "To bring about a condition of the road physically that would make for the standard desired by officials of the company and the public alike, would require the expenditure of a large amount of money."

B. & M. WORTH MORE THAN PAR.

Regarding the examination of the road's property by Samuel M. Felton, president of the Chicago Great Western Railroad, Chairman Elliott explained that Mr. Felton found many instances in which considerable economy in the operation of the road was possible, but only at great initial expense.

"The Boston & Maine now," he said, "is worth more than the par of its capitalization."

[From the Norwich Bulletin, Nov. 26, 1913.]

RAILROADS SUFFERING FROM SLOW STARVATION—ASSERTION OF PRESIDENT OF WABASH ROAD AT HEARING.

WASHINGTON, *November 25.*

Preliminary hearing before the Interstate Commerce Commission on the application of the railroads in eastern "classification territory" for an advancement of 5 per cent in all freight rates were concluded late to-day. An adjournment was taken until December 10 in order to afford the commission and the opposing counsel time to analyze the mass of statements, testimony, and statistics submitted by the attorneys for the roads.

The figures offered to-day tended to prove that while the roads generally are enjoying an increased business, the returns from operations continuously are decreasing until, as Vice President Maxwell of the Wabash declared:

"The situation is becoming daily more serious. We are suffering from slow starvation."

—

ST. MARYS, PA., *November 28, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

HONORED SIRS: We have read considerable of the discussions concerning the request of the railroad companies for an increase in their rates to the extent of about 5 per cent, and we wish to go on record as saying we believe that the railroads are entitled to due consideration on this matter. We feel that the improved service they are continually giving the public in better equipment of all kinds and in the installation of safety appliances should merit due recompense in the way of earnings to the their stockholders.

We wish to say that so far as we are concerned, we are heartily in favor of the advance of 5 per cent on the commodities we purchase and on the material we ship. We do not feel that this will be a hardship on us or our customers, but will certainly enable the railroads to keep on improving the service in passenger and freight traffic.

We also feel that the manufacturers of this country require vast development of latent properties to find a market for the immense production of the mills, and unless the railroads are enabled to assist in this development the country certainly will not grow as it should.

We do not write this letter as an argument on the matter, but simply place ourselves on record as strongly in favor of the increase.

Yours, very truly,

ELK FIRE BRICK CO.,
J. D. RAMSAY, *President.*

—

NOVEMBER 28, 1913.

To INTERSTATE COMMERCE COMMISSIONERS.

GENTLEMEN: I cut this, inclosed, out of Baltimore Sun and send you, asking if this is true. If so, I want to urge upon you to allow all the railroads are asking for, believing such an allowance would be just. Besides, I have noticed where railroads are doing lots of work the country is prosperous and the people get it back anyway.

Yours, very respectfully,

R. E. ESTEY.

HOW MONEY MAKES MONEY.

(By Channing Rudd.)

"Are the wages we pay the railroads high enough?" is the title of a primer on railroad rates now in course of preparation by eastern railroads as part of their educational campaign for an increase of 5 per cent in freight rates. Some quotations from the primer are:

Freight rates in the whole country have steadily dropped from 1¼ cents per ton mile in 1880 to three-fourths of a cent for several years past.

Railroads get 2⅞ cents for carrying a pair of shoes from Boston to Chicago. If the rates were increased 5 per cent the freight would still be less than 3 cents a pair. Should this affect the average selling price—$4 a pair?

The railroads now carry a piano 1,000 miles for $6. It costs the average householder $5 to get one moved across the street.

A 2-cent stamp will pay the freight on 1 ton of coal over 6 miles. Railroads carry a suit of clothes 1,000 miles for 6⅔ cents; a derby hat 1,000 miles for 2 cents; an overcoat 1,000 miles for 6 cents; a typewriter machine 1,000 miles for 45 cents.

The average reader may not think he is interested in this, but nearly everything he has or wears or uses comes to him by railroad and he is interested in maintaining the efficiency of the service. To be efficient the railroads must be fairly paid for their services.

—

BOSTON, *November 27, 1913.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: As an unbiased observer of the present situation in railroad affairs, I don't see where an adjustment of 5 per cent or even 7 per cent increase of freight rates is going to hurt anybody, and it would only be a square deal to a class of business in the United States which has made this country what it is to-day. How many millions each year are stolen from transporation companies through fraudulent classification? Are not the equipment and service far superior to what they were years ago when they were permitted to enforce their own rate schedules. It would be a good idea to allow this increase to all roads whose passenger rate does not exceed 2½ cents per mile.

Yours, respectfully,

R. J. BLANCHARD.

—

F. L. SMIDTH & CO.,
New York, December 17, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This is just to put before you the view of one shipper regarding the advance in rail freight rates.

There is no doubt about the increase in operating expenses through the increase in cost of materials and in wages.

We all know there has been no corresponding increase in returns to the railroads for transportation.

If it has not been the practice of the railroads to pad their operating expenses with legitimate investment charges, then they are undoubtedly entitled to an advance in the rates.

Shippers have not been unfair in resenting the old practice to charge all the traffic would bear, more especially since the true values of railroad properties were unknown, and it was not possible to estimate how much more than a fair rate was being charged. Most of the managers of the "all-the-traffic-will-bear" class have disappeared from control or have reformed. It is consequently in my opinion unfair for the public under the present conditions to continue resentment against the railroads.

I am for an advance in rates, provided the operating expenses have been fairly charged.

Yours, very truly,

GEO. M. NEWCOMER.

—

CLEVELAND LUMBER & MANUFACTURING CO.,
Cleveland, Tenn., December 18, 1913.

President WOODROW WILSON,
Washington, D. C.

DEAR MR. PRESIDENT: You do not often find a shipper requesting higher freight rates. However, we think the roads are entitled to some consideration, as their cost of operation has more than doubled. Business is at a standstill. Roads won't buy anything—have nothing to buy with—when the roads are not buying lumber about one-half the sawmills in the South are closed down. Lumber is being sold below cost of production, and thousands of men are out of work in the South. As far as lumber is concerned it is as bad as 1908.

The people have no confidence in securities. It seems to us that the roads should be allowed to advance rates, and we would then see the greatest prosperity the United States have ever known. In politics we are Democrats—sons of Confederate soldiers.

Yours, truly,

B. M. WEBB.

No reply expected.

—

MILLERVILLE, PA., *December 5, 1913.*

INTERSTATE COMMERCE COMMISSION.

SIRS: Please may I ask why dilatory tactics are used in your decision of the proposed 5 per cent increase in freight rates.

I am directly or personally interested in it, but that would be selfish if I were to ask for a favorable decision for my personal benefit alone, but I am asking for justice for the railroads and its stockholders in general and for the future progress and development of this country. If railroads do not prosper in times of heavy traffic as now is the case and under curtailment of expenses with the exception of employee's wages, which wages are forced to be paid by the railroads through arbitration boards, there must be something radically wrong with the rates and something must be done in order to give a square deal to the investor and that immediately. Railroads have to pay more now for money, material, to their employees, for safety appliances, elimination of grade crossings and numerous other things for the safety of the public. Why should they not receive now an increase of rates instead of waiting, waiting, and waiting, when gross receipts are increasing and net gains are decreasing. Is it any wonder that the business and financial world and the spokes of industry are wavering and hesitating?

I am also deeply interested in the complete success of this administration. Social justice is meted out to labor, but why not to capital as well, particularly to those of the railroad world? Your commission receives a report from the railroads monthly and you should be fully cognizant of the vast difference of the gross receipts and the net earnings. Why wait and wait to "investigate" when you should have been investigating right along in the right and sincere performance of your duties? Is it any wonder that one interested in the transportation system of this country loses patience in the procrastination of his equal and just rights? Don't you think living expenses have gone up for the railroads also? And yet in the face of all these facts you want to "investigate" and render a decision in the sweet by and by. Why render a decision when expenses have eaten up nearly all or all of their earnings and on the verge of bankruptcy? It is like a man who locks up his stable after the horse is stolen.

It is now that the railroad and business world needs your help and wise judgment, and not later when confidence is destroyed and the roads are deeper and deeper in their deficit.

I hope that this letter will be read by members of the commission themselves, instead of only subordinates and clerks to the commission, as I presume is usually the case.

I hope that the railroads throughout the entire country will receive the increase, not because they want it, but because it is due them and due them now.

I am no capitalist, neither the son of one. I am a workingman saving what little I can, but I believe in justice and fair play to all, not next year, but this year as well.

Wishing you well in your ardous work and hoping for immediate results, I am,

Yours, respectfully, TITUS F. FELTY.

P. S.—May I receive an answer at your convenience?

T. F. F.

—

NEW YORK, *November 25, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: As operators of bituminous coal mined in the State of Pennsylvania, we write with the purpose of expressing our desire that the rate increase requested by the eastern railroads be granted.

Under existing conditions we have great difficulty in holding our labor supply and in getting over our contracts due to the unreliability of car supply and the erratic manner in which we are furnished with equipment. This results in heavy losses to us during every fall and winter, during which period coal is in heavy demand and at good values.

We feel that the increase should be granted upon the condition, however, that unless the railroad companies act in good faith and furnish high-class service that complaint can be made and a reduction in freights requested by shippers on the ground of poor service.

Yours, very truly,

MAPLE RIDGE COAL CO.,
DAVID L. MORRISON, *President.*

—

CHICAGO, *November 19, 1913.*

Mr. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We understand that your hearing of the eastern railroads' application for freight rate advance begins on Monday next, and feeling as strongly as we do on the subject, we are presuming to advise you of our opinion, as well as to give you a few of the reasons for same.

To our knowledge in years past the railroads have been required to spend enormous sums of money in the improvement of their track, in track elevation, greatly improved and enlarged terminal facilities, as well as being required to adopt numerous devices in car and locomotive construction. The result is that to-day the railroads are operating in a more efficient manner and with much less risk to life and property than ever in the past.

They also, as you know, have increased the wages of all of their employees a number of times, latterly so frequently and to such an extent that the percentage of wages to operation is larger than ever before.

All of these changes, as you know, have taken place without, we might say, any additional compensation to the railroads, and in a great many instances with very much reduced revenue.

The increases which are requested by the eastern lines are such that the per capita expense, if the increases are allowed, are insignificant, while the result to the railroads is such as will enable them to live and make not more, we think, than a very reasonable profit.

We also think that nothing is more disastrous to a country than to have any of its important interests crippled by enforced unprofitable operation, and where the most important interest is threatened, not only with impairment of profit, but with the loss, practically, of all profit, and some of the less fortunate ones with insolvency, we feel that too careful consideration can not be given before any adverse ruling is had.

We ourselves are very much larger shippers than the recipients of business from railroads, and write this letter after having given the matter very careful consideration not only from the standpoint of right and justice, but of the broad proposition of the country's progress and a normal business.

We feel that if the railroads are required to operate in the highly efficient manner now extant, and with the wage scales which are now effective, that unless they are given the right to increase their revenue, the future holds out but little encouragement for the return of activity and prosperity.

Thanking you for such consideration as you may give this letter, we remain,

Yours, very truly, CHARLES A. RIDGELY & Co.

—

CLAYSVILLE, PA., *December 27, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I believe there is no one thing that will do as much toward making a boom in business and in turn help us alike as to allow the railroad companies to raise the freight rates. While I pay out over $4,000 per year for freight charges, and of course it will cause me to pay out more money, yet for the good of the country I am willing to do so. The railroads are not making enough money, they are not buying enough steel, are not making enough improvements, they need more money. The States have fixed their passenger rates in many States, the States and National Government have caused them to pay out much more expenses than some years ago, shorter hours, etc., and the fact of the matter is the railroad companies are in bad shape; they should earn more money and they should be allowed to increase their freight rates at least 5 per cent. I have changed my mind in regard to the railroad companies. I formerly thought it all right to hit them right and left, but I see it will not do. The prosperity of the whole country depends largely upon the railroads. I am a plain business man, a Democrat, rather progressive, but feel that we want business booming, and no one thing will cause more prosperity than the railroad companies prospering. I have no stock in any railroad, directly or indirectly.

Very respectfully, GEO. B. SPROWLS.

—

CHICAGO, *January 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand the railroad companies are about to make or have made an application on your commission for an advance of 5 per cent in freight rates. If it is consistent with your policy after hearing the argument, we think it would be no more than right that the advance be granted them.

Yours, very truly,

THORNTON-CLANEY LUMBER CO.,
By JOHN CLANEY, *President.*

—

FREDERICK, MD., *December 18, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN. At a meeting of the Frederick Board of Trade held last Friday, December 12, and attended by numerous Frederick shippers, the resolution was passed indorsing the request of the railroads to be permitted to advance rates horizontally 5 per cent. We trust this expression of opinion from the shipping public of Frederick will be given some consideration by your honorable body and result, as we have no doubt it will, in a fair adjudication of this question.

Very truly, yours,

FREDERICK BOARD OF TRADE,
S. L. MOTTER, *President.*

—

SPEYER & CO.,
New York, December 18, 1913.

Hon. CHARLES A. PROUTY,
Chairman, Interstate Commerce Commission,
Washington, D. C.

MY DEAR JUDGE PROUTY: I was very glad to have had the long talk with you yesterday, and I send you herewith a statement of the short-time notes that mature during the next year and thereafter.

I am satisfied that unless confidence is restored in railroad investments very shortly it will be difficult or more correctly, impossible for several of these railroads to meet their maturing obligations, and naturally they will not be able to raise any funds for improvements, betterments, equipment, etc. This will retard, in my opinion, the return of general prosperity in the country and in fact will make the labor situation worse. If this condition and bankruptcies of railroad companies is to be avoided, it can only be done by restoring confidence in railroad investments immediately, and the most effective step to do that is for the Interstate Commerce Commission to grant an increase in rates. I myself believe that 5 per cent asked for the eastern roads is moderate. This can be granted quickly, if the commission so desires, while any rearrangement or raising of individual rates would take considerable time.

I take the liberty of writing these lines, not only because we and our clients are largely interested in railroad securities, but also as a citizen of the United States who is desirous of seeing the country prosperous.

Sincerely, yours,

JAMES SPEYER.

Maturities first 8 months, 1914	286,470,000	129,699,500
Total maturities 8 months		416,169,500

This compilation only takes account of $1,000,000 and larger maturities.

THREE YEARS' MATURITIES ABOUT $1,000,000,000—BONDS AND NOTES DUE BEFORE 1917 REACH $953,206,011—OF THIS AMOUNT $45,897,000 IS TO BE MET IN 1913—SHORT-TERM ISSUES LARGELY IN EXCESS OF BOND FLOTATIONS—PENNSYLVANIA RAILROAD HAS DEBT OF $86,827,000 TO LIQUIDATE IN 1915.

The outstanding bond and note obligations of the leading railroad and industrial corporations of the United States which mature and must be paid or renewed before the end of 1916 amount to nearly a billion dollars—to be exact, $953,206,011. Of this total, $45,897,000 must be met before the end of the current calendar year, while the remainder is distributed over the next three years, as follows: 1914, $474,583,381; 1915, $318,758,400; 1916, $113,967,230. In appraising these figures it should be borne in mind that the short-term financing to be reckoned with for the years 1915 and 1916 has not reached anything like the volume it will unquestionably finally assume, for there is no telling what amount of one or two year notes may be issued in the interim.

It will be observed that the aggregate of maturing note issues is considerably larger than that of bond maturities, illustrating how extensively corporations have resorted within the past few years to short-term flotations in preference to bonded debts of longer maturities because of the refusal of capital to undertake long-term commitments. A striking example of this tendency is in the case of industrial maturities for 1916, the bonds amounting to only $850,000, while the note issues aggregate $22,387,000.

Investments in short-term notes have become a form of American hoarding. Money is timid; it will not invest in enterprise that means national progress; it will take no risks and seeks employment where the principal must be repaid within a year or so.

The outstanding maturities are distributed over the next three calendar years as follows:

	1914	1915	1916
Railroad bonds	$24,951,000	$124,603,000	$45,864,500
Railroad notes	310,022,548	95,203,400	21,612,730
Traction bonds	9,845,000	10,089,000	20,553,000
Traction notes	52,840,000	8,048,000	2,700,000
Industrial bonds	24,669,333	16,834,000	850,000
Industrial notes	52,255,500	63,981,000	22,387,000
Total	474,583,381	318,758,400	113,967,230

The maturities for December, 1913, compare with similar figures for the previous month and for December of last year, as follows:

Summary of maturities.

	Dec., 1913.	Nov., 1913.	Dec., 1912.
Railroad bonds	$3,262,000	$3,073,000	$3,000,000
Railroad notes	42,285,000	21,660,500	1,800,000
Industrial bonds	----------	328,000	470,000
Industrial notes	350,000	----------	214,000
Total	45,897,000	25,061,500	5,484,000

The largest single amount falling due next month is an issue of $40,000,000 notes of the New Haven system. Other issues in large amounts are $1,817,000 Interborough-Metropolitan notes and $1,800,000 United Railroads of San Francisco bonds. Following are the December maturities in detail:

RAILROAD BONDS.

Bangor & Aroostook	$45,000
Central Vermont	15,000
Cincinnati, Hamilton & Dayton	116,000
Minneapolis, St. Paul & Sault Ste. Marie	51,000
Missouri Pacific	323,000
Norfolk & Western	100,000
Seaboard Air Line	216,000
Southern	367,000
Texas & Pacific	185,000
United Railroads of San Francisco	1,800,000
Wabash	44,000
Total	3,262,000

RAILROAD NOTES.

Carolina, Clinchfield & Ohio	$130,000
Chicago & Alton	113,000
Interborough-Metropolitan	1,817,000
New York, New Haven & Hartford	40,000,000
New York, Ontario & Western	200,000
Toledo & Ohio Central (Zanesville & Western)	25,000
Total	42,285,000

INDUSTRIAL NOTES.

T. H. Symington Co	$350,000

Conspicuous among the maturities of the ensuing three-year period are $86,827,000 bonds of the Pennsylvania Railroad falling due in October, 1915; $30,000,000 New York Central notes maturing in March, 1914, and a like amount of Chicago Elevated notes due in July, 1914. The subjoined table shows the maturing issues (in amounts of $200,000 or over) of the leading corporations, together with the date of maturity in each case:

RAILROADS.

Ala., Tenn. & Nor. notes, May, 1916	$1,000,000
Ann Arbor notes, May, 1914	750,000
Atchison (Chi. & St. L.) bonds, March, 1915	1,500,000
Atchison bonds, Feb., 1914	200,000
Atl., Birm. & Atl. notes, May, 1915	5,936,800
Atlantic Coast Line (Richmond & Petersburg) bonds, May, 1915	340,500
Baltimore & Ohio notes, July, 1914	20,000,000
Birm. & N'west'n notes, March, 1916	450,000
Boston & Lowell bonds, March, 1915	$500,000
Boston & Lowell bonds, July, 1916	750,000
Boston & Maine notes, Feb., 1914	10,000,000
Boston & Maine notes, June, 1914	17,000,000
Brinson Ry. notes, Aug., 1915	1,250,000
Cal. W. R. R. & N. bonds, Jan., 1915	600,000
Catskill Mountain bonds, Aug., 1915	277,000
Chesa. & Ohio (Kineon Coal) bonds, Oct., 1915	200,000
Chesa. & Ohio notes, June, 1914	28,500,000
Chi. & E. Ill rec. cert., July, 1914	4,000,000
Chi., Mil. & St. P. bonds, July, 1914	4,748,000
Chi., Mil. & St. P. (Dak. & G. Sou.) bonds, Jan., 1916	2,856,000
Chicago & N'western bonds, Feb., 1915	12,832,000
Chicago & N'western (Ced. R. & Mo. Riv.) bonds, May, 1916	2,332,000
Chicago & N'western (Winona & St. Peter) bonds, Dec., 1916	4,038,500
Chi. & W. Indiana notes, Sept., 1915	10,000,000
Cleve., Cin., Chi. & St. L. (Clev., Col., Cin. & Ind.) bonds, June, 1914	4,138,000
Combination Bridge (Sioux City) bonds, July, 1915	500,000
Concord & Claremont bonds, Jan., 1914	500,000
Connecticut River notes, June, 1914	2,000,000
Cumberland Corp'n notes, June, 1915	5,000,000
Delaware & Hudson bonds, June, 1916	13,973,000
Det., Tol. & Ironton notes, June, 1915	1,656,000
Det., Tol. & Ironton notes, Oct., 1915	2,500,000
Duluth & Iron Range bonds, Jan., 1916	5,000,000
Dul., Winn. & Pac. bonds, Jan., 1916	2,000,000
Erie (Buf., N. Y. & Erie) bonds, June, 1916	2,380,000
Erie notes, April, 1914	12,500,000
Erie notes, Oct., 1914	4,550,000
Erie notes, April, 1915	10,000,000
Fort St. Union Depot bonds, July, 1915	312,000
Gainesville Midland notes, Oct., 1916	325,000
Harriman & N'east'n bonds, Jan., 1916	300,000
Hudson Cos. notes, Feb., 1914	2,697,000
Idaho & Wash. Nor. notes, Dec., 1915	1,200,000
Idaho Southern notes, May, 1914	250,000
Illinois Central notes, July, 1914	15,000,000
Interborough-Met. notes, Jan., 1914	2,039,520
Interborough-Met. notes, Jan., 1915	4,000,000
Int. & Gt. Nor. notes, Aug., 1914	11,000,000
Kan. City Term. notes, July, 1916	7,366,500
Lake S. & Mich. So. notes, March, 1914	12,000,000
Lake S. & Mich. So. notes, May, 1914	12,043,930
Laramie Hahn's P. & P. notes, Jan., 1915	1,450,000
Lehigh Valley (Elmira, Cort. & Nor.) bonds, April, 1914	2,000,000
Louisville & Nash. bonds, March, 1916	617,000
Maine Central notes, April, 1914	2,000,000
Manhattan El. Ry. bonds, March, 1916	1,000,000
Michigan Central notes, March, 1914	4,000,000
Michigan Central notes, Aug., 1914	2,000,000
Minn. & St. Louis notes, Feb., 1914	3,000,000
Minnesota Transfer bonds, Aug., 1916	1,980,000
Mo., Kan. & Tex. notes, May, 1915	19,000,000
Mo. & N. Ark. rec. cert., May, 1915	1,250,000
Missouri Pacific notes, June, 1914	24,976,000
Missouri Pacific (L. Rock Junc.) bonds, April, 1916	435,000
Morris & Essex bonds, May, 1914	5,000,000
Morris & Essex bonds, June, 1915	11,677,000
Muscatine Nor. & Sou. notes, Oct., 1914	425,000
N. Orleans & N'eas'n bonds, Nov., 1915	1,320,000
N. Y. Central (Oswego & Rome) bonds, May, 1915	750,000
N. Y. Central notes, March, 1914	30,000,000
N. Y. Central notes, May, 1915	20,000,000
N. Y. Central notes, April, 1914	20,000,000
N. Y. Central notes, May, 1914	2,000,000
N. Y. Central notes, Sept., 1914	5,000,000
N. Y., N. H. & H. notes, Feb., 1914	5,009,000
Northern Pacific notes, July, 1914	10,000,000
Northern Pacific (Taylor's F. & L. Sup.) bonds, Jan., 1914	210,000
Northern Pacific (Duluth S. L.) bonds, Sept., 1916	500,000
Northwestern Pacific (Eel River & Eureka) bonds, Oct., 1914	313,000
Ocean Shore R. R. bonds, Dec., 1916	700,000
Oklahoma Cent. rec. cert., Nov., 1914	556,000
Pennsylvania R. R. bonds, Oct., 1915	86,827,000
Pennsylvania R. R. bonds, Sept., 1914	2,338,000
Pennsylvania Co., bonds, Nov., 1916	4,002,000
Pere Marquette rec. cert., April, 1914	605,000
Pere Marquette notes, April, 1916	206,230
Pitts., Cin. Chi. & St. L. (Steuben & Indiana) bonds, Jan., 1914	3,000,000
Pitts. & Shawmut notes, June, 1914	2,500,000
Pitts., Shawmut & No. rec. cert., Aug., 1915	1,500,000
Pitts., Shawmut & No. rec. cert., March, 1916	875,000
St. L. & San Fran. notes, Sept., 1914	2,600,000
St. L. & San Fran. notes, July, 1916	390,000
Salt Lake & Los Ang. bonds, Jan., 1916	300,000
Seab'd Air Line notes, March, 1916	6,000,000
Southern Pacific notes, June, 1914	20,000,000
Southern Railway notes, Feb., 1916	5,000,000
Southern Railway (Col. & Green.) bonds, Jan., 1916	1,925,000
Southern Railway (Rich. & Danv.) bonds, Jan., 1915	4,722,000
Southern Railway (West. N. Caro.) bonds, July, 1916	2,414,000
Tavarres & Gulf bonds, July, 1915	299,000
Tenn. Cent. rec. cert., Feb., 1914	350,000
Tioga R. R. bonds, Nov., 1915	239,500
Vicksb., Shrevep. & Pac. bonds, Nov., 1915	1,323,000
Wabash Pitts. Term. rec. cert., Feb., 1914	973,000
Wabash Pitts. Term. rec. cert., March, 1914	433,772
Wabash Pitts. Term. rec. cert. June, 1914	969,326
Wabash R. R. rec. cert., Aug., 1914	14,000,000
W. Jersey & Seashore notes, July, 1914	1,394,000
Western Maryland notes, July, 1915	10,000,000
Western Maryland notes, Jan., 1914	3,000,000
Wheel. & L. E. rec. cert., Feb., 1915	460,000
Winona Bridge bonds, Sept., 1915	384,000
Wisconsin Central (Chi., Wis. & Minn.) bonds, March, 1916	776,000

TRACTIONS.

No. Ohio Trac. & Lgt. (Ak., Bed. & Clev.), bonds, Sept., 1915	$300,000
Union Traction of Indiana (Marion City) bonds, May, 1915	338,000
United Rys. & Elec. notes, July, 1914	840,000

Westinghouse Elec. & Mfg. (Walker Co.) bonds, Jan., 1916	850,000
Westinghouse Machine notes, Jan., 1914	4,605,500

—

NORTH TONAWANDA, N. Y., *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are convinced that the railroads of the country, in general, are entitled to an increase in rates, and we trust that the arguments and briefs presented by them will receive favorable consideration from you. If the increase is granted, we believe it will result in better freight service; also stimulate general business. We pay the freight on 92 per cent of our shipments, therefore are not actuated by selfish motives, but rather for the general good.

Very truly, yours,

A. WESTON & SON.
L. S. DEGRAFF.

—

CHICAGO, ILL., *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the return of prosperous conditions is largely dependent upon the decision which will be made as applies to granting the 5 per cent increase in freight rates to the railroad companies.

Owing to the unfortunate conditions which are prevailing at the present time, as applies to the large number of people out of employment, etc., we earnestly hope that decision will be made along the basis of equity and fairness at as early a date as possible.

Yours, very truly,

HERMAN H. HETTLER LUMBER CO.
H. H. HETTLER.

—

WHITE, GRATWICK & MITCHELL (INC.),
North Tonawanda, N. Y., December 29, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our opinion that the railroads of the country in general are, under the circumstances, entitled to the increase in rates they have asked for, and we trust that it will be granted.

We think that the railroads need the increase and that the granting of same to them will be one of the best things that can be done for general business conditions.

Very truly, yours,

G. A. MITCHELL,
President.

—

DULUTH, MINN., *December 27, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the railroads of the country in general are in need of, and entitled to, an increase in rates, and if the arguments made by them, in your opinion, are reasonable, we hope you can see your way clear to grant them the increase asked for.

If granted, we fully believe that the benefits, as a whole, will be very much greater than any injustice it might do.

Very truly, yours,

ALGER, SMITH & CO.

NORTH TONAWANDA, *N. Y., December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are not interested in railroads nor have we been requested by the railroads to write this letter, but, as large shippers of lumber, we desire to say that we believe the railroads are entitled to an increase in rates, and that business will be greatly benefited by an early and favorable decision on the part of your honorable body.

Very truly, yours,

THE R. T. JONES LUMBER CO.,
R. T. JONES.

—

FAIR-VIEW FARM,
Winthrop, Me., December 29, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am nothing but a plain farmer, but I believe the railroads should have the 5 per cent increase in rates which they ask. They are giving us good service and treating us fairly in every respect here in New England, and in order to continue they must have more money. My neighbors all feel the same as I do. Please give the roads

a fair show, and we believe it will help sentiment and business as well.

Very truly, yours,

A. L. BRANN.

—

NORTH TONAWANDA, N. Y., *December 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are convinced that the request of the railroad companies east of the Mississippi River and north of the Ohio for an increase in their rates is justified, and that not only their interests but the interests of the whole country require that an increase should be granted them. If, therefore, in your opinion, the arguments they present warrant your granting the increase we trust you will do so. We appreciate there are sound arguments on both sides of the question; still we are of the firm opinion that the best interests of all concerned will be met by the advance in rates asked for.

Yours, very truly,

HAINES LUMBER CO.,
By M. E. PREISCH,
President.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Kindly read this printed clipping.

Very truly, yours,

CHAS. H. LEARNED.

GIVE THE RAILROADS A LIVING CHANCE.

[New York Journal of Commerce.]

The cure for all this is not a further advance in the wrong direction or toward greater Government control. The wrong step of 1910, taken in a time of special excitement on the question, should be allowed to frame their own schedules of rates and file them, subject to subsequent correction where they can be shown to be excessive, ill-adjusted, or in any way unjust or unreasonable. It is for the interest of the railroads to make them favorable to the industrial and business activity of the country, and they can be held accountable for discrimination or injustice without being bound hand and foot and held down by an inert body of officials with an intolerable load on their shoulders. The railroads have had their lesson and are suffering their penalty. What they need now is more freedom of action within legal limits and under rational supervision, and not further bondage or absolute death, with politicians waiting to seize the carcass.

P. S.—As a man of 71 years, I am interested in old-age R. R. dividends.

C. H. L.

—

MARSHALL-WELLS HARDWARE CO.,
Duluth, December 31, 1913.

INTERSTATE COMMERCE COMMISSION,
United States of America, Washington, D. C.

MY DEAR SIRS: From our knowledge of the railroad situation we believe the railroads in general should have an increase of rates. If, in submitting their argument, you find their demands reasonable, we trust you will see your way clear to grant the increase they ask for, believing as we do that the country as a whole will be benefited and no great injustice done to any shipper.

Our company is among the large shippers of the Northwest, having distributing houses at Duluth, Spokane, and Portland, moving a large tonnage, and we are very much interested in the rates of freight, yet we can not but feel, from our observations, that an increase of earnings is needed by the railroads, and, if given, it would be to the advantage of all interests. We do not see how general business can prosper unless the railroads are put on a remunerative basis, and we believe if some relief is not soon afforded them that the country at large is going to suffer.

Yours, very truly,

A. M. MARSHALL, *President.*

—

NEW YORK, *December 31, 1913.*

G. B. MCGINTY, Esq.,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter of the 27th instant, having reference to ours of the 20th, addressed to the President, relative to the propriety of granting the 5 per cent advance in freight rates involved in the consideration of eastern rate advance case, Docket No. 5860, received.

We desire to say in this connection that this letter was written to the President solely as an expression of opinion as held by ourselves, as a party immediately affected, and as reflective, we believe, of the unanimous feeling now prevailing, not only among piano dealers and manufacturers throughout the country, but in business circles generally also. Neither the writer nor anyone connected with this company holds any railroad stocks or is in any way thus directly interested. It is certainly apparent, however, that these great institutions exert a tremendous influence on general business and economic conditions and that that influence has been of a deleterious character, under the unfriendly character of legislation directed against them of late. That uncertain financial and apprehensive commercial feeling has been the result is only a matter of current history.

Naturally, as a house seriously affected by this and as bespeaking precisely the same state of affairs as respects our fellow piano manufacturers and the dealers all over the country that share our interests, we are vitally concerned in a revival of enterprise and the restoration of normal conditions. And while a short time ago we rejoiced at decisions quite the contrary—in fact, within the last six months—we must confess that our satisfaction would be much greater now were the desired increase of 5 per cent made to the railroads affected. It is our sincere belief, based on the writer's own personal canvass of the generally prevailing sentiment of manufacturers and dealers, that this concession just at this time would supply just the needed impetus to halting business to once more inspire confidence, induce expansion, and insure a full and vigorous resumption of national enterprise.

As explained in our letter to the President, this expression is made simply because we, like, as we believe, the majority, if not all, of the other heavy shippers who will be principally concerned in the rate advance in question, desire to make known our lack of hostility to it. And we indulge the hope that some consideration may be given that phase of the matter by your honorable body, and that this element, in union with what would seem to be the general expediency of the situation, may be of weight in contributing to a favorable determination to the increase petitioned for.

Respectfully,

BEHNING PIANO CO.,
By HENRY BEHNING, *President.*

—

RAILWAY BUSINESS ASSOCIATION,
New York, December 31, 1913.

Hon. JAMES S. HARLAN,
Interstate Commerce Commissioner,
Washington, D. C.

DEAR SIR: Your attention is respectfully invited to certain utterances which were made at the annual meeting of the Railway Business Association on December 11, 1913, with regard to the importance of as prompt a decision as can justly be reached in the matter of the proposed general advance in eastern freight rates.

Geo. A. Post, president of the association, in his opening address at the morning session, said:

"If relief is to be had it should be prompt. In the past the roads have been told in hard times that they ought not to raise rates and in good times that they do not need to. This is battledore and shuttlecock which may never come to an end. No pains should be spared to assure the commission that the public will approve any degree of expedition compatible with justice to all concerned."

E. B. Leigh, president of the Chicago Railway Equipment Co., in an address at the same session, said that "no factor which could now be introduced into the situation would do more to stimulate general business out of its present and impending condition than a vigorous resumption of railway expenditures. This conclusion, while applying to the state of affairs at this moment, is based upon a careful study and comparison covering many years, showing the relation between railway purchases and general business." Mr. Leigh's address, "Railway purchases measure general business prosperity," illustrated by a chart and presenting statistical proof of his conclusion, is herewith inclosed. Please note on page 3 the following:

"It is not for a moment proposed that railways shall be permitted advances in rates in order that unnecessary purchases may temporarily benefit the railway supply industries or even the whole country. Waste never permanently benefits anybody. It is not unnecessary purchases which are under discussion. Railway facilities are insufficient to meet any considerable increase in tonnage. The proposition is not to overstimulate but to remove an artificial restriction in the shape of rates too low. It is well recognized that it requires a greater force to start from inertia than to continue a momentum already established. The sooner the commission can issue a favorable decree the more certainly will the influencing power of railway purchases be effective in the restoration of general business."

The association adopted the following resolution:

"We believe that if the Interstate Commerce Commission finds as a result of its inquiry that the railways need more revenue to enable them to provide railway service adequate to the growing needs of the public and will grant an increase in transportation rates, the effect will be to promote an immediate improvement in all lines of business. We request the president of our association to publish Mr. Leigh's address and place copies in the hands of the Interstate Commerce Commissioners and State railroad commissioners.

The rate advance case was also discussed in two addresses at the association dinner by Howard Elliott, chairman of the New England lines, and James M. Cox, governor of Ohio. Copies of these speeches are inclosed.

Mr. Elliott, on page 5, says: "A continued improvement of the railways will stimulate trade, give a general steadiness to business, and minimize depression. The money the railways would spend in expanding their facilities, as they should be expanded to keep pace with the growth of business in the country, would percolate into every conceivable artery of trade. Can it be doubted that this would impart that wholesome stimulus to business that is so anxiously awaited at the present time?"

Gov. Cox, on page 5, says: "The development of the country makes a call on the railroads for extensions and equipment, which finds an enforced feeble response. They could advantageously to the public use hundreds of millions of dollars right now;" on page 7, "We might just as well recognize at the outset that a puritanical severity with stockholders who honestly acquired their securities is not going to do any good. The thing to do is to restore the patient and then prescribe and enforce a diet and behavior which will prevent recurrent illness;" on page 8, "Regulation must proceed on the theory that what society imposes on the railroads, society itself must pay for * * *. If we expect the railroads to draw from their earnings to meet the changed and developing conditions of the day, they must receive the same consideration shown to other business enterprises,

or the result with them will be the same—disaster;" and on page 9, "If it develops that while the gross receipts have increased the net receipts are considerably diminished by the liberal policy of society, then relief ought to be granted whether it be 1, 5, or 10 per cent that is needed."

With high respect,
Very truly, yours,

FRANK W. NOXON, *Secretary.*

RAILWAY BUSINESS ASSOCIATION,
New York, December 31, 1913.

Hon. EDGAR E. CLARK, *Chairman,*
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Your attention is respectfully invited to certain utterances which were made at the annual meeting of the Railway Business Association on December 11, 1913, with regard to the importance of as prompt a decision as can justly be reached in the matter of the proposed general advance in eastern freight rates.

George A. Post, president of the association, in his opening address at the morning session, said:

"If relief is to be had it should be prompt. In the past the roads have been told in hard times that they ought not to raise rates and in good times that they do not need to. This is battledore and shuttlecock which may never come to an end. No pains should be spared to assure the commission that the public will approve any degree of expedition compatible with justice to all concerned."

E. B. Leigh, president of the Chicago Railway Equipment Co., in an address at the same session, said that "No factor which could be introduced into the situation would do more to stimulate general business out of its present and impending condition than a vigorous resumption of railway expenditures. This conclusion, while applying to the state of affairs at this moment, is based upon a careful study and comparison covering many years, showing the relation between railway purchases and general business." Mr. Leigh's address, "Railway purchases measure general business prosperity," illustrated by a chart and presenting statistical proof of his conclusion, is herewith inclosed. Please note, on page 3, the following:

"It is not for a moment proposed that railways shall be permitted advances in rates in order that unnecessary purchases may temporarily benefit the railway supply industries or even the whole country. Waste never permanently benefits anybody. It is not unnecessary purchases which are under discussion. Railway facilities are insufficient to meet any considerable increase in tonnage. The proposition is not to overstimulate but to remove an artificial restriction in the shape of rates too low. The greatest danger at this moment is delay. It is well recognized that it requires a greater force to start from inertia than to continue a momentum already established. The sooner the commission can issue a favorable decree the more certainly will the influencing power of railway purchases be effective in the restoration of general business."

The association adopted the following resolution:

"We believe that if the Interstate Commerce Commission finds as a result of its inquiry that the railways need more revenue to enable them to provide railway service adequate to the growing needs of the public and will grant an increase in transportation rates, the effect will be to promote an immediate improvement in all lines of business. We request the president of our association to publish Mr. Leigh's address and place copies in the hands of the Interstate Commerce Commissioners and State railroad commissioners."

The rate advance case was also discussed in two addresses at the association dinner by Howard Elliott, chairman of the New England lines, and James M. Cox, governor of Ohio. Copies of these speeches are inclosed.

Mr. Elliott, on page 5, says: "A continued improvement of the railways will stimulate trade, give a general steadiness to business, and minimize depression. The money the railways would spend in expanding their facilitites as they should be expanded, to keep pace with the growth of business in the country, would percolate into every conceivable artery of trade. Can it be doubted that this would impart that wholesome stimulus to business that is so anxiously awaited at the present time?"

Gov. Cox, on page 5, says: "The development of the country makes a call on the railroads for extensions and equipment, which finds an enforced feeble response. They could advantageously to the public use hundreds of millions of dollars right now." On page 7: "We might just as well recognize at the outset that a puritanical severity with stockholders who honestly acquired their securities is not going to do any good. The thing to do is to restore the patient and then prescribe and enforce a diet and behavior which will prevent recurrent illness." On page 8: "Regulation must proceed on the theory that what society imposes on the railroads, society itself must pay for. * * * If we expect the railroads to draw from their earnings to meet the changed and developing conditions of the day, they must receive the same consideration shown to other business enterprises, or the result with them will be the same—disaster." And on page 9: "If it develops that while the gross receipts have increased, the net receipts are considerably diminished by the liberal policy of society, then relief ought to be granted, whether it be 1 per cent, 5 per cent, or 10 per cent that is needed."

Buffalo, N. Y., December 31, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are decidedly of the opinion that the railroads of the country are entitled to an increase in their rates, and that by your giving them such permission it will result in quickly relieving the present acute business depression and benefit a very much larger number of our people than it would injure.

Soliciting your favorable action, we are,
Very truly,

CHAS. M. BETTS & CO.

—

DETROIT, MICH., *December 31, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In view of the extraordinary high cost of living, it is conceded that the railways are obliged to pay a higher schedule of wages than ever heretofore.

The operating expenses, as disclosed from time to time in the reports of the leading railway corporations, show the cost to have greatly increased per ton-mile.

In our opinion, we believe the railways to be entitled to a reasonable increased freight tariff; that it should also be so graduated as to distribute the burden over all commodities, with readjustments as to long and short haul clauses where the same are manifestly in order. We believe that if they were permitted to have this increase it would be to the best interests of all lines of commerce, and we respectfully pray that the same may be granted to them.

Yours, respectfully,

DETROIT LUMBER CO.,
By E. L. THOMPSON, *President.*

—

THE RICHMOND MICA CO.,
Richmond, Va., December 20, 1913.

Hon. JUDSON C. CLEMENTS,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: As large shippers of freight we desire to call your attention to the absolute necessity of the railroads being granted a good increase in freight rates.

It is of far greater importance for us to receive orders and keep our business going at full blast than it is for us to be able to continue shipping and receiving our goods at low freight rates.

You will readily recognize that the railroads are the largest buyers of material and employers of labor in the United States outside of the farmers.

This country will not only not go forward but, on the contrary, it will go into a serious depression unless the railroads can secure a good increase in freight rates.

Ten per cent (10 per cent) would not be excessive.

To quote one of the largest payers of freight in the United States, we would call your attention to a statement issued recently by Mr. John Claflin, of the United Dry Goods Co., in which he says:

"It is hard to tell much about the future. It all depends on Washington. If they permit the railroads to advance their freight rates a little everything will be all right. There is no trouble with the money situation at present."

We would call your attention to the following facts in regard to the recent application to your commission for an increase of 5 per cent in freight rates:

There is no let up in the increase of taxes our railroads are compelled to pay. The taxes of 49 railroads now petitioning for an increase in freight rates increased 111.43 per cent from 1903 to 1913, in the face of an increase of only 40.5 per cent in net operating revenue. From 1910 to 1913 gross earnings of these roads increased only 15 per cent, net earnings fell off 0.7 per cent, but notwithstanding this the companies had to bear an increase in taxes of 26.9 per cent, or at the rate of $3,800,000 per annum. A large part of the life blood of our governmental bodies is contributed by the railroads. In the face of an expenditure of $659,000,000 for additions and improvements since 1910 the expenses and taxes increased to such extent ($203,000,000) that there was a falling off in net income, from which ultimately the increased interest on the capital invested had to come, of $16,311,000.

Above-petitioning railroads, to affect more economical operation, have been constantly increasing the size of locomotives. Average tractive power per locomotive increased nearly 34 per cent between 1903 and 1912. Average capacity per freight car increased 28 per cent between 1903 and 1912. The average trainload increased 30 per cent, railway revenues per unit of service rendered decreased. Average receipts per ton-mile decreased from 5.5 per cent from 1903 to 1912. Aggregate compensation to employees (excluding general officers) increased from $364,000,000 in 1903 to $567,000,000 in 1912, or 56 per cent.

Even the newspapers are now commencing to see a great light and recognize that the campaign against the railroads has gone entirely too far. The conclusive array of figures presented by the railroads and clearly illustrating the process of starvation to which they have been subjected in recent years can not fail to impress every fair-minded judge. "We may gratefully appreciate," to quote a promi-

nent journal, "that change is visible in the temper of the people toward the servant, capital. They have begun to realize that under perpetual beating or starving it is sure to sulk or to soldier or be unable to work sufficiently. The railroads, for example, are being accorded a juster recognition, both for their service and for their needs. The demagogues who would exult in their misfortunes are now fewer; corporation baiting is more generally recognized as a boomerang sport. That the gravity of the transportation problem is more commonly appreciated, and that the problem of railway relief has been brought to a head is in itself a negative blessing." As one judge of the situation said sometime ago: "the public wants better service, we are trying to give it, but they refuse to pay for it."

We believe you will be doing your country a great service in granting all of the railroads in the United States at least a 10 per cent increase in freight rates.

Our company can much better afford to live and pay a 10 per cent increase in freight rates than it can afford to go out of business, and we are satisfied that a tremendous number of concerns in the United States will go out of business or become absolutely idle within the next 12 months unless the railroads are immediately granted a large increase in rates.

Yours, respectfully,

L. M. WILLIAMS,
Secretary and Treasurer.

—

MERCHANTS' UNION TRUST CO.,
Philadelphia, October 30, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Great interest exists in the procedure looking toward a possible slight increase (5 per cent) in freight transportation rates on our eastern railways.

From all that we can learn there seems to be a continuously heavy increase in railway expenditure incident to the wage rate, cost of supplies, interest on new capital, and other items of expenditure of these companies, and it appears that the credit of the railroads has been very seriously affected by the continuance of low rates for transportation at a time when expenses have so largely increased.

Though there has been a very heavy demand for capital throughout the world, yet in making comparison with the prices of English railway securities it seems that there has been nothing like the equivalent decline in that country in railroad securities that, with the adoption of a liberal policy as regards rates (as far as consistent with justice to the public), the interest cost on the new obligations required by the transportation companies will again be reduced to the ultimate advantage of general business interests. Another feature of this subject is the stimulus to general trade produced by restoring a better credit to these companies, thus enabled to make placement of the permanent obligations and share capital necessary to provide for betterments and extensions on their several systems.

I feel that this whole subject will be thoroughly presented to your honorable body from its various standpoints, but desire herein to add our own viewpoint in the matter.

Yours, very truly,

JOHN S. BIOREN, *President.*

—

DULUTH, MINN., *January 14, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our belief that the railroads of the country in general are in need of and entitled to an increase in rates, and if the arguments made by them, in your opinion, are sound, we hope you can see your way clear to grant them the request asked for.

If granted we fully believe the benefits derived as a whole will be very much greater than any injustice which it might do.

Yours, very truly,

HEIMBACH LUMBER CO.
By W. P. HEIMBACH, *President.*

—

HIGH BRIDGE, N. J., *January 27, 1914.*

Mr. G. B. MCGINTY, *Secretary,*
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We are manufacturers and shippers of iron and steel products at all our plants.

Regarding the petition of the railroads in the official classification territory for an advance in freight rates, we are in sympathy with the plan of having that question decided by the Interstate Commerce Commission, that body to determine from the facts presented the necessity for said proposed advance and the reasonableness of the rates to be established thereby.

We therefore desire to go on record as not being opposed to the advance referred to, if found justifiable by your commission.

Yours, very truly,

TAYLOR-WHARTON IRON & STEEL CO.,
WM. H. FREDERICK, *Traffic Manager.*

—

F. BLUMENTHAL CO.,
New York, January 28, 1914.

EDGAR E. CLARK, Esq.,
Chairman, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have been informed that up to and including March 5 assignment has been made to different lines of industry for argument before the Interstate Commerce Commission regarding the advance in freight rates asked for by the eastern railroads, and that the date of March 2 is assigned for hides and leather.

I am under the impression that those appearing before your honorable body desire to argue against the advisability of allowing the increase asked for. I beg to say that the corporation of which I am first vice president feels favorably disposed toward an allowance of increased freight rates, and I therefore take the liberty of asking whether you would consider it advisable for me to appear before your commission on March 2 with the intention of presenting my arguments for the allowance of an increase.

I look forward to your esteemed reply, and believe me,

Respectfully, yours,

J. STEVENS ULMAN.

PHILADELPHIA BOARD OF TRADE,
Philadelphia, February 27, 1914.

Mr. GEORGE B. MCGINTY,
Secretary, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the questions covered by Commissioner Harlan, under date of February 19, 1914, but more particularly as to "private spur and switch tracks," and the existence of some 25,000 such in the territory east of the Mississippi, it is probably fair to assume that about 20,000 of these connect the smaller industrial, warehouse, coal, and lumber yard operators.

It is the belief of this board of trade that it would become a material hardship to all of these smaller concerns to have to pay any switching charge for the placing or drawing out of cars, which would become closely equivalent to a cartage charge, to get away from the cost of which thousands of these concerns have invested extra capital for locations on railroad tracks, and so to keep down the cost of hauling or production. Any switching charge assessed per car means an increase of freight cost, regardless of whether the railroad haul be 10 miles or 1,000 miles, and freight charge $10 or $100 per car. All connections that can properly or reasonably be described as "private spur or switch tracks" should not be assessed with switching charges, if the little fellow is to be allowed to exist.

If the present revenues of the carriers "are not adequate" then supplement them by allowing a commodity rate increase that will bear equally on all, both large and small, without discrimination.

By order of the

COMMITTEE ON INLAND TRANSPORTATION,
W. R. TUCKER, *Secretary.*

—

NEW YORK, *February 28, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We beg to reply to your communication of February 17.

Our organization has a membership of 175 and represents an annual volume of business of approximately $140,000,000.

None of our members are connected with any railroad by a private spur or siding.

None of our members enjoy ferry or trap car service.

Our reasons for advocating a reasonable advance in freight rates have been set forth in our communication of December 19, 1913. They represent the views of our board of directors, and have been unanimously confirmed by our membership assembled in convention on January 15, 1914.

The advance in transportation charges which the carriers desire to make would involve but a very slight increase in the cost of merchandise to the recipient. For instance, the average weight of a case of millinery merchandise is about 125 pounds. The average value of contents about $200. The freight rate from New York to Baltimore, for example, is 33 cents; from New York to Boston, 45 cents. The additional charge under a 5 per cent increase would be about 2 cents, and the added cost of merchandise to the consignee would be about one-hundredth part of 1 per cent. This, with reasonable variation, is illustrative of the manner in which the advance will affect many distributors of textile products. Yet an advance in freight rates which will have an insignificant effect upon many merchants will, we respectfully submit, prove of considerable benefit to the carriers, and a stimulus to business in general.

We sincerely trust that the subject will receive favorable consideration at the hands of your honorable body.

Very truly, yours,

EASTERN MILLINERY ASSOCIATION,
M. W. AMBERG, *President.*

—

CHICAGO, *March 3, 1914.*

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In reference to the agitation stirred up through the eastern lines not being granted an increase of 5 per cent in freight rates, we would ask you to kindly consider this as our protest against what we consider unreasonable expense on our part if the trunk lines will now be obliged to assess a charge for spotting cars on a private siding.

When you take into consideration the way it will affect us, you will no doubt agree with us that the spotting charge places us at a very serious disadvantage. Our plant is located on the Illinois Northern Railway, which is probably considered as an industrial road, serving the International Harvester Co., but it is generally overlooked the Illinois Northern serves a number of industries who have no connection with the International Harvester Co. whatever. These industries, as well as ourselves, have within the last few years located on the Illinois Northern Line on account of the transportation facilities and in order to get away from congestion of the freight houses and team tracks of the so-called "Loop District" of Chicago.

Should it come to pass that free spotting will be eliminated, we figure that by taking into consideration the time required to bring a car from the trunk lines into our siding it would cost us most anywhere from $9 to $17 per car. This charge, understand, would be in addition to that compiled on the Chicago freight rate and will accrue in about this way.

We are citing one instance:

M. C. car No. 28615, which the Michigan Central turned over to the Chicago junction for the Illinois Northern to place on our siding. The car contained three blocks of marble from Taber & Co., which was forwarded from New York, N. Y., on the 13th ultimo via the New York Central & Hudson River Railroad, Blue Line, care of the Illinois Northern. It took six days to get this car on our siding after it had been delivered to the Chicago junction by the Michigan Central. Out of these six days we were allowed two days' free time, which would make $4 car service on this car before it reached us. It necessarily will take one day to unload the car, which would make the car service $5, and an additional four days to return the car to the Michigan Central, or $9 car service, on top of which we would be assessed $2 for the trunk line spotting it on the Chicago junction tracks, $2 for the Illinois Northern to spot it on our siding, making a $4 spotting charge, plus the Illinois Northern line charge, which no doubt would amount to $5, making a total of $18 additional, besides the freight which we pay to the trunk line for their service.

We give you this merely as an illustration of what it cost us to get a car from trunk line to out siding, and no doubt you will agree with

us that the condition which will be brought about through this spotting proposition will be extremely unfair to a great many industries who are now unfortunate enough to be located upon a siding, especially those who are on roads similarly classed as the Illinois Northern and more so situated as we are 7 or 8 miles from any trunk line team track or freight house.

While the proposition is up we might add that we have always looked favorably upon a general increase of freight rates of 5 per cent, or possibly slightly greater, because it looks reasonable to us, and it would not affect any individual person, body of persons, or industries.

Yours, truly.

THE LIQUID CABONIC CO.,
O. A. KENBARTH, *Traffic Manager.*

—

ASSOCIATED MORTGAGE INVESTORS,
Rochester, N. Y., March 4, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: May I be permitted, as a citizen, to express my personal feeling that the railroads should be granted an increase in rates which they ask for, and my conviction that this feeling is shared by a majority of the business men with whom I come in contact? Many business acquaintances, as well as myself, must base such a conclusion on general principles and not on specific data, necessarily, but it may aid your board in determining the equities of the case to have an expression of public opinion.

I think that business men generally recognize that whereas in past years there have been flagrant instances of railroad mismanagement, either from motives of selfishness or on account of incapacity, nevertheless the railroads which are properly managed are in need of assistance, and that the just should not suffer on account of the sins of the unjust.

It is probably true also that the revelations of the last few years are serving to convince an increasing number of business men that the man who conducts his business properly can not allow his responsibility to end there, but must take such steps as he can to see that his competitors do not injure him and others who are doing business in a reputable way by violating the rules of that business both by dishonesty or inefficiency. The injury to the general credit of the business is sufficient warrant for this attitude, if no higher motive were present; and perhaps no class of business men realize this more keenly than railroad men.

I think that the attitude of business men on this point is well expressed in the propaganda of recently organized associations in different classes of business. In my own business (that of securities) the investment bankers have formed an association, one of the chief objects of which is to eliminate unreliable dealers and to eliminate methods of business which are not conducive to the welfare of the business in the long run. The mortgage bankers are planning an organization for the same purpose.

Attention is called to the above facts in support of my contention that public sentiment is in favor of giving the railroads every possible chance to improve their condition, because it is realized that the prosperity of the country in general depends so vitally on the ability of the railroads to serve the country; and I think the public feels that if the railroads show themselves incapable of appreciating the opportunity given them then is the time for the Government to take even more radical steps than before to regulate their scheme of business.

Thanking you for the opportunity to present my views, I am,

Respectfully, yours,

KINGMAN N. ROBINS.

—

PHILADELPHIA, *March 11, 1914.*

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I acknowledge with thanks the various data which you have been sending me relative to the demand by the railroad companies for an increase of 5 per cent in their freight rates.

After careful consideration I am of the opinion that at least a portion of this should be granted, not only to safeguard the investors' interests who have placed their capital in railroad securities, but to allow the railroads to carry out the extensive improvements which they need and those which are demanded under State and Federal regulation, and also in order to help the general prosperity of the country, which undoubtedly is largely affected by the prosperity or adversity of the railroads which serve their sections.

Yours, very truly, E. LOWBER STOKES.

—

ERIE COUNTY SAVINGS BANK,
Buffalo, N. Y., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: You have doubtless received the letter of White & Kemble, No. 56 Pine Street, New York City, under date of February 10, 1914, in reference to investments on the part of savings institutions in our country in railroad mortgage bonds.

I do not think there is anything more that I can say to you than what they have stated, only I would strongly emphasize the position they have taken and I trust you can see your way clear to assist the railroads and thereby maintain the security of their bonded indebtedness.

Yours, very truly, R. S. DONALDSON,
President.

—

CHICAGO, *November 25, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I wish to call to the attention of your honorable body the importance of granting the railroads a substantial increase in freight rates. This country is at present suffering the greatest kind of a setback due to the fact that the railroads, which are the great upbuilders of the country, are being discouraged and stifled by your constant refusal in permitting them to raise their rates. If it were not that our railroads are managed by the greatest brains the United States possesses they would all be bankrupt long before this. No business could ever withstand such handships and such constant increase of expense caused by arbitrary legislation without being permitted to raise the only merchandise they sell; namely, transportation. If a wholesale concern advances the price of a suit of clothes 50 cents per suit, being forced to do so through paying more for labor, or rent, or taxes, or any other item (but never on account of freight rates, as they are the very least to be considered) the retail merchant at once raises the price of that same suit $2; mind you, the latter is already making from 50 to 100 per cent not counting the $2 raise in addition, yet the freight charge does not enter into this at all, as he does not pay it; i. e., in the city of Chicago there are some of the greatest wholesale and retail establishments in the world; the retail merchant receives his merchandise delivered from the wholesale house in said city without freight or even cartage charges, yet he marks the price according to the attractiveness of the style and pattern, not even thinking of the freight charge, as it is too infinitesimal. Come with me and visit the largest retail establishments which made a net profit of $17,000,000 last year and I will demonstrate to you that some of their merchandise is sold at a hundred per cent profit where no freight or even cartage enters into the transaction. I will take you into the wholesale houses incognito and we can follow the merchandise right into the retail establishment in the same city on almost every commodity where the latter pay no freight or even cartage charges, yet they charge just as much or even more for the merchandise. I quote these instances solely for the purpose of showing that the freight charges play no part whatever so far as the consumer is concerned and the innocent are forced to suffer through a misunderstanding of the other.

Railroad employees are on an average the best paid in the country and the railroads are willing that this should be the case, but they can not maintain this standard of wages much longer unless they be permitted to raise their rates in order to keep up with every other demand made upon them. It has been proven that the very retail concern which made a net profit of $17,000,000 last year has grown-up persons in its employ at $4.50 per week. I dare anyone to discover such an appallingly poorly paid person of a similar age and class employed by the railroads.

What about the investors, the thousands of the investing public who furnish the money with which to build the railroads and who have every right to expect a reasonable return on their investment, say 7 per cent per annum? Some of the private mercantile companies make from 33 to 400 per cent and they are of no benefit to the country whatever. We could get along without the merchant, if we had to, but we could not get along without the railroads; yet the merchant is allowed to charge what he pleases, while the other—the railroads—are driven to pay the advance on everything they use and are prohibited from raising their rates. When the railroads are prosperous everybody is prosperous—from the humblest section hand up to the richest citizen, and that embraces the entire American people; but when the railroads are hit everybody along the line is hit with them.

The railroads promise new stations, better roadbeds, heavier rails, double tracking, special safety devices, paying their employees higher wages and giving them shorter hours, steel cars, additional trains, electric lighted trains, and the investor might receive some benefit through increased dividends and all these expenditures find their way back directly to the laboring classes. They will be the greatest beneficiaries if the increase in freight rates is granted. Do you find any such promises from the shippers? No, not a single one—they promise nothing. Why then stifle the wheels of progress so beneficial to every rank and file and allow the shippers to have things their own way, which is detrimental from the humbiest to the highest who promise nothing in return. I therefore petition your honorable body to at once grant a substantial increase to the railroads, thus restoring prosperity for all time to come and give the railroads a fresh start in life. You will quickly see the rest of the business houses will benefit greatly through the railroads' prosperity.

Most respectfully submitted.

S. HIEDERBERGER,
3001 Michigan Avenue, Chicago, Ill.

—

NEW YORK, *December 16, 1913.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Knowing that you are opposed to the increased railroad freight rate, we beg to send you the following comparative figures of the difference in freight between European railroads and those in America.

We are large importers of steel from Kladno, Austria, which we ship by way of Bremen. The distance from Kladno to Bremen is approximately 400 miles, and our contract with the railroads there, which you know are owned by the State, is as follows:

STEEL BARS AND STEEL FORGINGS.

Boxed or otherwise, in less than carload lots, 57 cents per 100 pounds.
In half carload lots, 37 cents per 100 pounds.
In carload lots, 15 cents per 100 pounds.

STEEL BILLETS.

In less than carload lots, 57 cents per 100 pounds.
In half carload lots, 37 cents per 100 pounds.
In carload lots, 14½ cents per 100 pounds.

You will of course bear in mind that in making comparison with American freight rates that the above figures are for carriage of 400 miles. We are shipping some of this material—for instance, the billets—in carload lots through to Detroit, about 700 miles, for less than 16 cents, and shipping broken carloads of steel in boxes to Buffalo for 19 cents, which is 440 miles, compared with 57 cents or 37 cents, according to the quantity, on the same material for a similar distance.

Taking into consideration that the employees on foreign railroads receive less than half the pay that they do on the American railroads, we feel that the increase in railroad rate is justified.

Hoping that this information may be of value to you, we beg to remain,

Yours, very truly,

PETER A. FRASSE & CO. (INC.),
A. E. BRION, *President.*

—

BOSTON, *February 24, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I understand there is some agitation in regard to advancing freight and establishing charges for spotting cars on sidetracks; also increasing charges for holding and diverting cars at different junctions.

While I feel that the railroad companies need more revenue, there is a difference of opinion how this should be obtained. It seems almost a universal opinion that the increased revenue be obtained from an increase in through rates; also in local rate where the latter is practical.

But I do not feel it would be advisable to make any charge for spotting cars.

In regards to holding and diverting cars, I feel that I am paying all that it costs the railroads, and the privileges are not worth any greater expense than we are now paying. The necessity of holding and diverting foodstuffs is a great convenience to the public, and almost a necessity on account of the uneven movement of cars.

Yours, truly,

C. P. WASHBURN.

CHICAGO, *February 28, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are in receipt of advice from several associations of which we are members, putting several questions to us and asking us to make answer to your commission on or before March 1, 1914.

A. From the meager information which we have it is impossible to tell whether carriers are obtaining sufficient revenue. At the same time the matter has been agitated so much that we believe a general advance of 5 per cent is desirable and would be generally beneficial to the prosperity of the country.

B. We believe that the classification should be revised. Many commodities and other items are transported at much less than cost, and we think a general revision of the classification would make to the ultimate good of the present situation.

We believe that a special charge should be made by the railroads for all privileges, private spurs, sidings, trap car service; in fact, there should be no discrimination of any kind allowed as between a large and small shipper.

Yours, very respectfully,

THE FLORSHEIM SHOE CO.,
By MILTON S. FLORSHEIM.

UNION SQUARE SAVINGS BANK,
FORMERLY INSTITUTION FOR THE
SAVINGS OF MERCHANTS' CLERKS,
New York, February 20, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This bank—a mutual savings bank having no stockholders and whose earnings accrue entirely to its depositors, who are mainly persons in moderate circumstances—deems it proper to strongly urge upon your honorable body the granting of such an increase in rates to the railroads as will enable them to make net earnings sufficient to meet the increased cost for advance in wages, extra service, equipment, etc., some of which is made mandatory through legislation.

Representing over 15,000 depositors who are interested in an investment through this bank of nearly two and one-half millions of dollars in railway bonds, it is felt that the financial security of this investment will be endangered without an increase in rates to the railroads.

Yours, very truly,

WM. H. ROCKWOOD, *President.*

THE SIMMONS MANUFACTURING COMPANY,
Kenosha, Wis., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I notice in the consideration of the advance rate case that some attention is being given to the service rendered by the carriers, for which they apparently receive no revenue.

The Simmons Manufacturing Company wishes to go on record here and now as being most emphatically in favor of the rate advance as requested by the railroads in trunk-line territory, on the ground that the carriers are entitled to earning a fair return on the investment.

We feel that in a majority of cases this is not now possible; due to the fact that their expenses have steadily advanced from causes largely beyond their control, while their revenues have been steadily reduced, which condition they are apparently just as powerless to remedy.

We feel a general advance in rates to be the best possible solution of the problem, inasmuch as it will go a long way toward relieving the situation, and the fact that it is of the nature of a general remedy, and will be borne by the public at large, will therefore be as devoid of discrimination as possible.

Considering the miscellaneous services rendered by carriers, the business of this country to-day is more dependent on railroad service and facilities than ever before in its history. We feel, therefore, that it is of the gravest importance that nothing be done that will in any way result in a restriction of this service or facilities.

Practically speaking, the manufacturing business of the country is handled in plants that have their own sidetrack; in fact, it could not be handled otherwise for reasons that must be apparent to you. Team track facilities are totally inadequate to-day to take care of the miscellaneous business that of necessity seeks this means of distribution, and the constant switching team tracks, I think any carrier will tell you, costs that carrier more money per car to handle than cars placed on industrial sidings.

This argument is borne out by the fact that a carrier will construct a siding almost anywhere in reason, providing the shipper pays for it, in order to get the business into a specific channel, which enables them in that manner to reduce the cost of handling.

Relatively, I think you will find very few cases where there is a reasonable demand for sidetrack that some means is not effected to provide it. This is further evidenced by the fact that in former years the western roads at least put in sidetracks almost indiscriminately, even at local stations, and at their own expense, to develop the business and reduce the expense of handling.

From my experience, I believe it is safe to say that the average yard car is handled five times, while a car going to an industrial track, goes in loaded and comes out empty, or vice versa, and in many cases goes in loaded and comes out loaded with the one handling.

The fact that conditions are so varied, locations and demands are different, it would seem to me absolutely impossible to make a charge that would not be discriminatory, and we respectfully request that nothing whatever be allowed to interfere with the placement of cars free of charge to legitimate sidetracks.

Yours, truly,

F. H. TRUAX, *Traffic Manager.*

DETROIT, MICH., *March 20, 1914.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Relative to the proposition for the spotting of cars on the side tracks, would state that we are decidedly opposed to this and consider it unjust.

However, we believe that the railroads are entitled to an increase in freight rates and urge upon your honorable body that they be permitted to increase their rates 5 per cent, as suggested, but that they be refused permission to charge for spotting cars, as they desire. In a great many cases this would be impracticable, for private sidings are used for the storage of empty freight cars by the railroads.

We understand that these spotting-of-cars tariffs have been suspended for the present, and we write you to urge upon you that this suspension be permanent and that at the same time the railroads be permitted to increase the freight charges 5 per cent.

Yours, very truly,

BRIGGS-DETROITER CO.,
By E. D. MOESSNER, *Secretary-Treasurer.*

MARQUETTE CEMENT MANUFACTURING CO.,
Chicago, March 20, 1914.

Hon. JAMES MCANDREWS,
House of Representatives, Washington, D. C.

DEAR SIR: I have noted Secretary McGinty's letter to you of March 12, which is attached hereto.

No doubt there is confusion in the minds of shippers as to the attitude of the Interstate Commerce Commission, but it is common knowledge that the commission has suggested to the carriers that some charge should be made in placing cars on sidings for loading. The traffic journals and the newspapers for the past few weeks have many times referred to the fact that some of the carriers contemplate making a charge of 7½ cents per ton, with a minimum of $2 per car, for placing, for loading, and unloading on ordinary private sidings.

In common with many other shippers, we understood that some of these tariffs making these charges are already filed with the commission. I understand now the commission will listen to arguments on both sides on March 30 and 31 and hope you will urge that no such action be permitted.

The carriers, if this arrangement was permitted, would receive an increase much greater than the 5 per cent ordinarily asked for. The advance would be discriminatory, in that it would only apply to industries and not to the general public. Any expense in connection with this service has heretofore been included in the line-haul rate. The carriers have asked permission to advance rates 5 per cent. We are not opposing this, but we are opposed to any scheme that will enable the carriers to advance their rates from 20 per cent to 40 per cent, which is what would happen to us should a charge be made for switching cars to and from private sidings.

Respectfully, yours,

GOLD WILLIAMS,
Sales Manager.

IN THE MATTER OF PROPOSED CHARGE FOR SPOTTING CARS.

SAGINAW, MICH., *March 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to file a protest with your honorable body against the advisability of allowing the railroads to make a charge for spotting cars on private sidings. Such a charge as proposed would be unjust and illegal, basing our protest from the fact that the published tariffs sufficiently repay the railroad companies for these privileges. If your honorable body allow the railroad companies this privilege the hardships imposed would be so severe that it would effect the lumber industry to a large extent. The charge would not be consistent, owing to the fact that a good many large consuming territories are port towns and can receive their lumber via vessel and distribute their entire output in a retail way, thereby giving them an advantage over their competitors should this contemplated charge be allowed the railroad companies.

We favor the proposed increase of 5 per cent in freight rates and hope your honorable body will not consider the proposed charge for spotting cars.

Yours, truly,

BOOTH & BOYD LUMBER CO.,
Per H. W. ZAHNOW.

SAGINAW, MICH., *March 16, 1914.*

Mr. R. S. COOPER,
Secretary Saginaw Valley Lumber Dealers' Association,
Saginaw, Mich.

DEAR SIR: Referring to the matter now before the Interstate Commerce Commission of allowing the railroad companies to make a charge for spotting cars in lieu of the 5 per cent advance asked by the railroads, beg to state that our company would vigorously oppose any such charge, which would be an extra burden, which the profits of the white-pine lumber business will not stand.

On the basis of our business for last year, a minimum charge of $2 per car would mean an extra tax on our business of approximately $5,000, as we handle in and out approximately 2,500 cars during the year.

Our company has gone on record as expressing itself in favor of allowing the railroad companies to advance their freight rates 5 per cent, but we will strongly oppose in lieu of this a charge for spotting cars which, in our opinion, would be a great hardship and a very unjust discrimination against the lumber shippers.

Very truly, yours,

MERSHON, EDDY, PARKER CO.,
Per F. E. PARKER, *President.*

WEIRTON, W. VA., *March 24, 1914.*

Hon. GEO. B. MCGINTY,
Secretary, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: A proposition is now before your commission which would permit the railroads to charge an extra amount of $2 per car for "spotting" or switching on to private tracks. This would be in addition to the regular rate, and it is our contention that this service is

already contemplated and provided for in the rate and always has been since the establishment of railroads in the United States. This is a seriously radical departure from well-established and strictly maintained principles.

This intended "spotting" charge is, in our humble opinion, discrimination and makes a comparatively few carry a burden which should be stood by all. We believe the railroads in question should be put in a position to increase their revenue through legitimate advances in their tariff rates and that no deviation should be made from the regular custom in spotting cars.

No doubt you have already given this matter considerable thought and very likely have had protests from a great many industries in different parts of the country, and we hope you will use all your influence against the passage of any laws or rules that will make effective revenue from the placing of railroad equipment.

Yours, very truly,

PHILLIPS SHEET & TIN PLATE CO.,
——— ———, *Vice President.*

—

ST. LOUIS, *February 28, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: For your information we present to you the following facts:

This concern ships about 12,000 tons of malleable iron cooking ranges each year. We ship into 42 of the 48 States. Up to about six months ago we had not had a complaint that amounted to anything relative to the nonreceipt of goods or their being delayed on the road, but within the last few months, over certain roads, we have had a great many complaints.

On investigating we found that as a rule the trouble was a broken-down car or an accident due to inefficient equipment. The rates from St. Louis to all sections where we sell goods have always been satisfactory to the merchant who bought the goods and paid the freight bills, and a 5 per cent advance (if service is given commensurate with the advance) would, we believe, be hailed with joy by every concern and person with whom we do business. It is getting to be a mater of "service" more than anything else. That is what the people want. Of course, they do not want excessive rates, but if it takes an advance of 5 per cent or 10 per cent on rates to keep the railroads going the people who receive the goods are generally satisfied that it is the best way the money could possibly be spent.

We sincerely hope that the small amount asked for—an increase of say, 5 per cent—may be granted to the railroads of this country.

Yours, very truly,

MAJESTIC MANFG. CO.
R. H. STOCKTON, *President.*

—

CHARLOTTE, N. Y., *February 28, 1914.*

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It goes without saying that the people generally are highly pleased with their Interstate Commerce Commission. I myself feel that it is one of the most useful organizations, but whereas I am much pleased to have the railroads held well in hand, I must confess that I also think you should deal liberally with them in their application for slight increases in freight rates. I realize that you have the matter well in hand, but merely suggest that a small advance could not possibly harm general prosperity, whereas the adoption of the opposite course would, in my opinion, precipitate very dire results. I also wish to voice my opinion as opposed to the suit for the divorce of the Southern Pacific and Central Pacific systems. This suit ought to be stopped at once. Where, oh where, is there any demand for such a suit? It seems ridiculous.

Respectfully, yours,

FRANK S. UPTON.

—

UNIONTOWN, PA., *February 27, 1914.*

Mr. G. B. MCGINTY.
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Owing to change in conditions which existed at the time our letter of October 28, 1913, was written, in which protest against the contemplated advance of 5 per cent in the rates published by the Baltimore & Ohio Railroad Co. on lumber and forest products was made, we beg to respectfully withdraw the objections set forth in the letter referred to above.

Yours, very truly,

PALMER & SEMANS LUMBER CO.,
By J.D. SMITH.

—

ST. LOUIS, MO., *February 27, 1914.*

Honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have just taken the liberty of writing you as per confirmation herewith, believing that you will have no objections to a communication direct from interested shippers.

In the first place, we have no objections to an increase of 5 per cent in freight rates, as we feel something should be done to help the railroads in their present difficulties. But on the other hand, we feel that a spotting charge is absolutely a discrimination against those shippers who happen to have a switch on their own ground for which they have had to spend considerable money. Take the case of this company, for instance, which is similar to that of many others.

First. In most instances the railroads are not provided with sufficient team track yards and switching facilities to take care of more than a small percentage of the business they handle.

Second. Therefore manufacturers have had to provide their own facilities in order to carry on their own business.

Third. To provide these switches requires, first, capital lay out, and then maintenance and depreciation charges. In the case of this company the maintenance charges alone on a $2,500 switch is $1,500 per annum.

In 1913 we handled 1,800 cars, 600 of which were outbound, 1,200 inbound. A $2 spotting charge would be an additional expense of $3,600.

We paid approximately $30,000 on incoming freight, therefore a spotting charge in this case would have increased our incoming freight charges approximately 10 per cent.

We have located near us two or three small team tracks, maintained by the railroad companies at their own expense. They are not sufficient to take care of the local business, but in spite of this it is not proposed to make any spotting charge for cars placed on these tracks.

Only yesterday we gave the Independent Bakery Co., one of our neighbors, permission to unload a car of flour on our switch. Under the proposed rules there would have been a spotting charge of $2 on this car, whereas if the car had been placed on a public team track no spotting charge would have been made. Therefore we feel that a spotting charge for cars placed on private switches is a discrimination.

Roughly speaking, it will cost the railroad companies the same amount of money to place cars at one of their own expensive freight depots for loading or unloading as it would to place the same cars on our switch for loading or unloading. Therefore, if a charge is made for placing cars on a private switch, it should also be made when the cars are spotted in a railroad freight terminal.

Respectfully submitted.

CURTIS & CO. MANUFACTURING CO.,
J. H. STEEDMAN.

—

NATIONAL LIGHT & POWER CO.,
St. Louis, February 27, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: May the writer, as representing several concerns who are large shippers of freight, venture to suggest that in our opinion the increase in freight rates for which the railroads of the country are asking would be beneficial to the country as a whole by making it possible for the railroads to extend and improve their service and help in this way to stimulate general business and give employment to more men.

Yours, very respectfully,

JUDSON H. BOUGHTON.

—

CHICAGO, *January 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The general opinion seems to be that the railroads should be granted a 5 per cent advance in rates.

If this is done, would it not be possible to exempt wheat? It hardly seems right to add to the farmers' burdens.

Yours, truly,

MARY L. SMITH.

—

MULKEY SALT CO.,
Detroit, Mich., March 9, 1914.

Mr. JAMES S. HARLAN,
Commissioner Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: You will recognize in my name one that has been before the commission on several occasions with complaints against certain railway and water transportation companies. This time I am writing to you without any instigation from any source, but to simply voice my opinion that there is now something due the railway people, and due quickly.

I have had some experience the last 10 or 12 years in the construction and operation of electric lines and know something of the conditions surrounding that branch of the railroad business. I know that wages and material have gradually been going up all the time, without any chance for an increase in passenger and freight rates. I have had labor organizations walk in and demand increase in wages, and when told the road would not stand it without receivership, was informed that they would just as soon work for receivership as for me. It is a question of wages with them entirely, and I know this is the experience of all the steam road companies in this country; consequently their operating expenses have gone up at a fearful rate, and I can not see how they are to live unless they have an advance in freight rates. I know that the steam roads have many sins to answer for; but, for all that, the conditions that confront us now are serious, and ought to be remedied as soon as possible.

I think you are right in forcing a show-down from all these roads in your effort to bring about economies and proper financing; but this will have to be done gradually, and not put them all in the hands of receivers at once. In fact, the railroad situation, to my mind, now is the one thing in the way of general prosperity; and if its screws can be lightened a little bit, I think it would be for the benefit of the entire country. I believe the consensus of opinion now of all citizens is that the roads are entitled to the 5 per cent advance they ask for; and, for the country to get full benefit, it should be done promptly, so they may commence their improvements as early in the year as possible.

Very truly, yours,

J. M. MULKEY.

—

HAGERSTOWN, MD., *March 9, 1914.*

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

Brother CLARK: I address you thus, as I suppose you are still an honorary member of the Order Railway Conductors, and I am not going to take up any of your valuable time in a long-winded argument, nor am I going to make use of any of the vast amount of so-called facts and figures that you are being constantly supplied with; but I am going to say that in the opinion of all thinking Order Railway Conductors men your honorable commission is doing its members (Order Railway Conductors) a great injury and are making it most difficult to keep the (all too few) concessions that conductors have gotten, and that men and committees feel that some consideration is due them at the hands of the Interstate Commerce Commission. Neither do I say these things in the belief that you do not already know them, but rather to assure you that the men are most vitally interested in the so-called rate-increase case; and no one with whom I have discussed this matter but is of the opinion that the increase should be granted. The writer has been a member of the Order Railway Conductors since 1900, and is writing solely, as he believes, in the interest of his brethren and in hopes of it being some benefit to his country at large.

Briefly, the increase should be granted, and with as little delay as possible.

Trust you will accept this in the same spirit it is intended.

Am also taking the liberty to "Personal" the letter.

I am, most sincerely, yours,

J. R. HEIMBAUGH,
Hagerstown, Md.

CHICAGO, *March 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I have your notice of March 5, for which I wish to thank you, but I can not understand the necessity of continued further investigation, for the business of the country is being ruined by the delay.

Why not grant the 5 per cent increase at once? The railroads surely are entitled to it and it will mean wonders for the prosperity of the whole United States.

If you keep the question open a thousand years there will still be selfish interests to satisfy.

What the business interests, as a whole, need is quick action. The commission can then rectify any serious errors that may develop later.

Sincerely hoping for an early decision in favor of the railroads, I beg to remain,

Yours, very truly, W. R. BETHAM.

P. S.—Brandeis's quibbling does not feed the hungry nor employ the idle, whose numbers everywhere is rapidly increasing.

—

NEW YORK CITY, *March 9, 1914.*

The Hon. EDGAR E. CLARK.

MY DEAR SIR: I venture to state to you my earnest hope that the Interstate Commerce Commission will grant the 5 per cent increase in rates the railways ask. My reason is partly selfish and partly altruistic. I am a clergyman, over 60 years of age, and have been for 36 years the minister of a church of plain people in this city. My inheritance of about $50,000 is invested in the stocks of the Delaware, Lackawanna & Western, the New York, New Haven & Hartford Railroad, the New York Central & Hudson River Railroad, and the Pennsylvania Railroad. The dividends have permitted me to turn back a nominal salary so as to assist people in trouble. To lose this income will entail a great hardship. But I have had to be the advisor of over a hundred men and women in regard to investments. Most of these have, at my suggestion, invested their hard-won earnings in the railway stocks I have named and own from 10 to 30 shares each. It is their only capital. To lose the income from this and to note its market depreciation unfits them for their duties through loss of hope.

I have reason to believe that the classes I refer to are very large. Therefore, in the interest of their well-being I beg of you to regard my plea. I am,

Yours, sincerely, JOSEPH R. DURYEE.

—

NEW YORK, *March 9, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION.

DEAR SIR: Doubtless an individual opinion carries little weight, but I can not refrain from expressing the conviction that in view of the evident distress of our great railroad systems, due to compulsory increase of expenses without permission to obtain additional income, it is your duty to allow the rate increases asked for at as early a date as possible and that this should be done not only in justice to the railway companies, but because of the fact that delay in this matter is seriously affecting the prosperity of the whole business community.

Yours, very truly,

EDWARD P. SWIFT.

—

BENTON HARBOR, MICH., *March 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In re petition of the Mamer Brick Co. The above petition was made against the discriminations contained in the tariff of the Michigan Central Railway, the Pere Marquette Railway, and the Cleveland, Cincinnati, Chicago & St. Louis Railway, relative to hauling brick. They do not protest against the general 5 per cent increase so long as the rates are uniform.

Can you advise them when a hearing will probably be had as to the charge of discrimination?

Very truly, yours, H. S. GRAY.

—

FORT WORTH, TEX., *March 5, 1914.*

Mr. JUDSON C. CLEMENTS,
Washington, D. C.

DEAR SIR: I am taking the liberty of mailing you, under separate cover, copy of an article written by the president of this company, Hon. Geo. W. Armstrong, which is self-explanatory. This article appeared in every daily newspaper in the State, and is the third of a series which we hope in the end will accomplish a great good. I doubt if there is any other individual in the Southwest who creates more tonnage of freight than does Mr. Armstrong.

TEXAS ROLLING MILL CO.,
Per BARNEY SMITH,
General Manager.

PROPOSED ADVANCE IN RATES DISCUSSED—LETTER TO THE NEWS COMMENTS ON RAILROAD SITUATION—BELIEVES PRESIDENT WILSON FAVORS GRANTING OF APPLICATION OF CORPORATIONS FOR TARIFF INCREASE.

To THE NEWS:

President Wilson, according to a dispatch from Washington, has conferred with the Chairman of the Interstate Commerce Commission regarding the application on the part of the railroads for a 5 per cent increase in freight rates. While the report states that the President has refrained from expressing an opinion as to the merits of the application, it is clear that he regards the subject as one of far-reaching importance which, in the interest of the general public, should be disposed of as speedily as possible. In fact, he expressly disapproves of its postponement until September, as ordered by the commission. It is apparent that he thinks the application should now be granted.

We can not have the prosperity that is due and that would naturally result from the adoption of the new banking and currency system and the settlement of the tariff question until this problem is settled, and this has prompted the President's action. The railroads are the largest employers of labor of all our industries and, besides, they are big buyers of iron, steel, and lumber, which in turn gives employment to hundreds of thousands of men. These industries must shut down or reduce their force when the railroads are out of the market.

The hearing so far before the Interstate Commerce Commission has developed the fact that the shipper is opposed to the proposed increase in rates, because it affects his business. But there is a larger view. From the public's standpoint, the question is solely one of whether or not the increase is necessary to enable the railroads to properly handle the commerce of the country and give efficient service.

DECLARES SERVICE NOT GOOD.

We know, both from observation and from experience, that railroad equipment is run down and getting worse, and that the service is poor and constantly becoming more so. We know, too, that it takes money to provide equipment and that they can only get this by earning it or borrowing, which in turn depends on their ability to earn and repay. We know also that labor, materials, and everything has advanced, and from their annual reports we see that while their gross receipts are always increasing with the increased volume of commerce, their net income is ever diminishing. It may be that they are overcapitalized, but the commission is now engaged in the valuation of the roads as a basis for making rates, which they estimate will require years to complete. In the meantime the public demands reasonably good railroad service, and it is willing to pay its reasonable worth.

There has been some prejudice and misunderstanding in the past on the part of the people toward the railroads, which is happily disappearing. The railroads have not always been considerate of the public and the public has not always been fair to them. We must remember that the railroads are our servants and that they are indispensable to us. We can not confiscate them, and we can not make them render us good service unless we pay them for it. We should not forget that when we inflict a penalty or a hardship on the railroads we only punish ourselves. We pay the freight. We pay the labor from the section hand to the president. We pay the damage claims, the interest on their bonds, and for the graft or extravagance, if any there be, in management. They are allowed by law to earn all of the charges imposed on them and a reasonable return on the investment besides, and freight rates are prescribed accordingly. We are, therefore, interested in the railroads being capitalized at their reasonable value; in their being dealt with justly and fairly by the commissions, legislatures, and courts of the country, and in their having an efficient and economical management, free from any sort of graft. When the increase is granted it should be allowed on condition that the commission is given authority to supervise the expenditure of the money. Let the commission have full power to enforce efficient and economical service.

WOULD BENEFIT SOUTHWEST.

So far as this section of the country is concerned, the increase in interstate freight rates will be of advantage to it. As long as we have a low long-haul rate and a high short-haul rate the East will continue to do our manufacturing. When the reverse becomes true, we will do it ourselves. We would now be importing most of our goods from Europe but for the tariff, which caused manufactures to spring up in this country and enabled them to become established. The factory will not come nearer to us until there is a decided advantage to it to do so. Under present conditions the advantage is the other way. Apart from the fact that manufacturing is already established in the eastern section of our country and that there is more or less conservatism and inertia about making a change, there are many disadvantages to the manufacturer here. There is a scarcity of skilled labor and wages are higher. Credit is more limited and interest rates are higher. We have no water power and fuel is dear. The market is restricted, and the high short-haul rate and the low long-haul rate puts his powerful competitors in competition with him. There is no hope for manufacturing here except in a small and limited way until there is a readjustment of freight rates.

I have learned this in the hard school of experience. I, therefore, speak with authority on the subject.

GEORGE W. ARMSTRONG.

FORT WORTH, TEX.

—

THE NORTHWESTERN MUTUAL LIFE INSURANCE COMPANY OF MILWAUKEE, WIS.,
St. Louis, Mo., March 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Permit me to place myself on record before your honorable body as an ardent advocate of the proposed increase in freight rates which your commission has under consideration at this time.

I would remind you that the railroad bonds held by the various life insurance companies are materially affected, as well as the whole commerce of the country.

Trusting that this increase will be granted, I am,

E. B. STINDE.

—

THE DIME SAVINGS BANK,
Norwich, Conn., March 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of our directors held on Monday, March 2, the treasurer was unanimously instructed to urge you to grant the application of the railroads for permission to increase transportation rates.

This action was taken because this is a purely mutual savings bank, belonging to small depositors for whom the directors act as trustees without compensation; and because more than one-third of our deposits is invested in railroad bonds.

We have therefore viewed with alarm, the tremendous decrease in gross income and the very large increase in operating expenses, with a corresponding shrinkage in the market value of this class of savings-bank investments which has wiped out the sulplus of some banks and made it impossible for them at present to pay depositors in full.

The only practicable way of saving the railroads, and of protecting the savings banks and other security holders, seems to be the desired increase in rates; and the consensus of opinion, so far as we have heard, among all classes, including shippers, is that the request of the railroads is reasonable and ought to be granted.

Yours, respectfully,

F. L. WOODARD,
Treasurer.

—

MERCANTILE TRUST COMPANY,
St. Louis, March 3, 1914.

Hon. BALTHASAR H. MEYER,
Washington, D. C.

DEAR SIR: I was invited to listen to an address of Mr. Ivy L. Lee, of the Pennsylvania Railroad, before the City Club of Saint Louis. I was so impressed with the simplicity of his language and the forceful-

ness of his argument that I concluded to do all in my power to aid the railroads in general, and thereby aid the entire country and its people.

I am therefore appealing to you to grant the request of the railroads for a 5 per cent increase in rates.

Upon consideration, I concluded that a good way to bring about the desired result would be to publish Mr. Lee's address, which I did entirely upon my own initiative and without the slightest suggestion from Mr. Lee, or any one else. I mailed the pamphlet (copy of which I inclose) to a number of my personal friends and acquaintances, and in their responses I have been amazed to find such unanimous expression of opinion that the railroads should be granted the privilege of increasing rates as asked. It is my deliberate opinion that unless the railroads are permitted to increase their rates, financial ruin will follow the railroad situation generally, and injury to the greatest artery of commerce of the nation is bound to affect the whole nation and its people.

Hundreds of thousands of people in this country and Europe own bonds and stocks in the railroads of this nation. They were largely induced to make such investments owing to the fact that the railroads were subsidized to attract capital to build them. It was never dreamed that the railroads would not be permitted to charge an adequate rate for traffic to develop and support them and to pay interest to the security holders. The security holders are not only of the rich class, but also people of moderate means.

The delay in action upon the part of your commission has excited fear among railroad security holders. Many have thrown their stocks and bonds upon the market at a great sacrifice. Your delay to grant the increase is a notice to financial institutions that danger is brewing, and I firmly believe that disaster will follow unless the increased rates be granted.

As a consequence, and as a further hardship to railroads, interest rates to them have increased until today they have to pay from 1½ per cent to 2 per cent more for the use of money than commercial establishments.

There are four railroads running into Missouri now in the hands of receivers, with the prospect of many others being in this condition unless you act promptly.

There is no body of men in this country with a more solemn duty to perform than your commission, and I am quite certain, if the thinking people of the United States could be consulted, they would advise you to immediately grant the roads the increased rates without further delay.

Very respectfully, yours,

FESTUS J. WADE.

P. S.—I am sending a copy of this to each member of the commission.

—

FARMERS & MECHANICS SAVINGS BANK,
Middletown, Conn., Tuesday, March 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to advise you that we heartily approve of the letter sent your commission by White & Kemble, of New York City, under date of February 10, 1914.

As one of the mutual savings banks of New England, we are vitally interested in the action taken by you in the matter of providing some way so that the railroad corporations may increase their net earnings sufficiently to provide for their proper maintenance and their fixed charges.

This institution, having about $5,000,000 in assets, has invested in railroad bonds approximately $1,500,000, which, in percentage to assets, is much smaller than a great many other similar institutions, a number holding from 33⅓ to 50 per cent of their assets in these securities, and some as high as 75 per cent.

While a few years ago it was possible for mutual savings banks to show a big margin in the market value of railroad securities over the book value, these corporations have been so hampered by labor organizations and by legislation that if a large percentage of the banks were forced to liquidate to-day they could not possibly pay 100 cents on the dollar, and the working classes of New England, who largely constitute the depositors of these various institutions, would be the losers.

We seriously implore you to give to these railroad corporations the power, in some way, to raise the necessary net earnings so that their securities may once more be considered the same high-class investment that they have been during the years past, and that the market values may, in some measure, reach the figures which this class of securities commanded before having their troubles.

Yours, very truly,

C. H. LEACH,
Treasurer.

—

HARDWARE MERCHANTS' & MANUFACTURERS' ASSOCIATION,
Philadelphia, March 3, 1914.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to yours of February 17, permit me to answer as follows:

A. We do not believe that the present rates of transportation yield adequate revenues for common carriers.

B. We believe that it is only just that the 5 per cent increase asked for should be conceded.

1. This association has in its membership 80 large shippers of hardware and kindred products.

2. About 25 per cent of these are connected with one or more railroads by a private spur or siding.

3. Nearly all of these enjoy ferry or trap-car service.

They feel that inasmuch as, at a large expense, they have been compelled to erect their own sidings, and inasmuch as thereby the railroad companies are saved considerable money for storage at terminals, and that by reason of the ferry service the number of clerks and freight handlers at terminals is greatly reduced, there should be no extra charge made for this service.

Yours, truly,

T. J. FERNLEY,
Secretary-Treasurer.

—

MERCANTILE TRUST CO.,
St. Louis, March 3, 1914.

Hon. EDGAR E. CLARK, *Washington, D. C.*

DEAR SIR: I was invited to listen to an address of Mr. Ivy L. Lee, of the Pennsylvania Railroad, before the City Club of St. Louis. I was so impressed with the simplicity of his language and the forcefulness

of his argument that I concluded to do all in my power to aid the railroads in general, and thereby aid the entire country and its people.

I am therefore appealing to you to grant the request of the railroads for a 5 per cent increase in rates.

Upon consideration, I concluded that a good way to bring about the desired result would be to publish Mr. Lee's address, which I did entirely upon my own initiative and without the slightest suggestion from Mr. Lee or anyone else. I mailed the pamphlet (copy of which I inclose) to a number of my personal friends and acquaintances, and in their responses I have been amazed to find such unanimous expression of opinion that the railroads should be granted the privilege of increasing rates as asked. FESTUS J. WADE.

P. S.—I am sending a copy of this to each member of the commission.

—

NEW YORK, *March 2, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: A month or so ago my mother came to me and asked me to sell some of her P. R. R. stock. I asked her why. She stated that a woman friend of hers had said that her husband had told her that the Government would not allow the roads to raise their rates and that a reduction of dividends was sure. I told her that I thought the Government would be fair in the matter. After reading the editorial in the Times this morning and the one in the Commercial and Financial Chronicle of Saturday, I am wondering if I gave good advice. I hated to see the stock go, because half of it was bought by my grandfather 80 or more years ago and the other half by my father at various times during the last 40 years.

Why don't you let them raise their rates? Suppose they do make a little extra. Isn't Hon. Wm. J. Bryan, Secretary of State, working at night to make a little extra? I am trying all the time to make a little extra, and I don't believe you gentlemen would be averse to making a little extra.

I personally would not care to invest in any more railway securities, because if I can not specify what wages I will pay or what I will charge for the service rendered I am in a pretty fix.

Hoping and believing you gentlemen will do the right thing in this matter, I am,

Very truly, yours,

JAMES R. MAGOFFIN.

—

ONVILLE, LA., *March 2, 1914.*

Mr. GEO. B. MCGINTY,
Secretary, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Our attention has just been called to a letter from you under date of February 17, 1914, addressed to New Orleans Association of Turpentine Operators, saying that the above association advocated a general advance in freight rates.

The Covington Naval Stores Co., Ltd., hereby wishes to protest against any advance in freight rates, as the present rate is all that they are able to stand.

The writer was not present at this meeting when the subject was discussed or would have objected to such a measure at that time.

Ninety-five per cent of the turpentine operators operated at a heavy loss the past year, and from the outlook for the coming season they can not hope to make any profit this year. If freight rates are increased, we will have to take less for the product at the stills, thereby shouldering additional loss for this year. The naval stores business is not in position to stand any additional loss.

Trusting that you will use your influence against any increase in freight rates for the present, we are,

Yours, very truly,

COVINGTON NAVAL STORES CO., LTD.,
W. A. HOOD, *Vice President.*

—

ST. LOUIS, *March 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We will certainly appreciate your acting favorably on the 5 per cent rate increase asked by the railroads. We believe that the granting of this increase of 5 per cent is necessary and will prove to be a benefit to the entire country.

We haven't much sympathy with the railroads, on account of their methods of doing business, but we do believe that at the present time they actually need this increase in order to enable them to properly equip and operate their freight and passenger service.

Trusting that you may see fit to grant them this request, we beg to remain,

Yours, truly,

LINTON & SCOTT.
BEN B. LINTON.

RUTLAND, VT., *March 2, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As this bank holds among its assets railroad bonds to the amount of over $80,000, we wish to express our approval of the statements set forth in the letter of the Messrs. White & Kemble, of 55 Pine Street, New York City, which was addressed to your honorable body under date of February 10, relating to the proposed increase in railroad rates.

Very, truly yours,

THE MARBLE SAVINGS BANK,
By JOHN J. MURPHY, *Treasurer.*

BALTIMORE, *March 2, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I hope you will see your way clear to give the railroads the advance in freight rates they are asking for. If you have any idea that the business people of the country do not favor this advance send some one through the South and I assure you that you will find 90 per cent of the business men there in favor of giving them the increase.

Personally, I have practically no interests in the railroads, but I would like to see our country prosperous and the unemployed put to work. There is no doubt that something will have to be done, as in my humble opinion the way things are at present the railroads are slowly bleeding to death.

Yours, very respectfully, R. WALTER GRAHAM.

HAFNER MANUFACTURING CO.,
St. Louis, Mo., March 4, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is a matter of regret to the writer that your body has seen fit to defer the matter of passing definitely upon the request of the eastern railroads for a 5 per cent advance in rates.

I do not for a moment assume to find fault with your action in this matter, but it occurs to the writer that this matter should be disposed of as quickly as possible, in order that the business interests of the country may have the benefit of your decision.

It is the opinion of the writer and of a large number of business men of this city, with whom he is constantly coming in contact, that the advance of rates for the railroads is essential, and that the advance would redound to the benefit of the entire business interests of the Nation.

I sincerely hope that the desired decision will not be longer delayed.

BRISTOL SAVINGS BANK,
Bristol, Conn., March 4, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have read considerable in the papers with regard to petitions or requests that are before you with reference to increasing rates for railroad corporations.

About 25 per cent of our deposits are invested in railroad bonds. Our savings bank laws have allowed these for us, and we have considered them, as other savings banks have, we think, as among the best investments we could buy, considering their return and considering the facility with which they could usually be turned into cash.

For the last few years we see that the net earnings of the railroads are in many cases decreasing, while we know that their expenses, especially for labor, have been increasing. It seems to us that the railroads are entitled to increased remuneration for services which they render, and that they have got to have such increased remuneration if their expenses continue to increase, or they will soon be in bankruptcy. Some of them are there now. Some of them seem to be approaching there fast, and even those who are in a somewhat better condition can not go on for many years without a change for the better.

We have thought it perhaps not inappropriate to write as we have to suggest to you one line, that is, that the savings banks and savings bank depositors, who are greatly interested in the questions before you, are hoping that you may take such action as will tend to give, in the next few years, the railroads a living chance.

Yours, very truly, MILES LEWIS PECK,
Treasurer.

BALTIMORE, *March 4, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been studying the trend of events very closely for the past year and we believe that the tariff, currency, and income bills are the best pieces of legislature that were ever enacted in such a short time.

We believe that only two things remain to make the coming decade the most prosperous and profitable this country has ever seen—Mexico and railroad rates. The former we are frank to admit we do not know just what is the best to do, but we do feel that the eastern railroads should be granted the 5 per cent increase they are asking for, and thereby restore confidence in them and permit them to keep up their improvements and service and thus minimize the danger in travel both to the public and employees, for they seem to be retrenching from every side.

Hoping you will see the rate end of this communication as we see it, we remain,

Yours, very truly. H. E. HOUCK & Co.

THE H. A. FITZJARRELL CO.,
Baltimore, Md., March 4, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We, as a firm trading under the above name, request that the advance in freight rates, as requested by the various eastern railroad lines, be granted, as we feel that they are entitled to it and under the present status of affairs business has been very much stagnated.

When we figure that the Pennsylvania and the Baltimore & Ohio Railroads, as two lines employ at least 130,000 men on which rest the support of 500,000 persons and that quite a large percentage of their men are idle, it greatly affects the general business, and we feel that they are entitled to some redress, and we, as business people, are willing to stand our pro rata share of the increased freight rate, as we feel that the increase in business will fully justify it.

Trusting that you will give this your serious consideration, we beg to remain,

Yours, very truly,

THE H. A. FITZJARRELL CO.
D. FRED SOUDERS, JR.,
Vice President.

ALBANY, N. Y.

To CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

[Editorial of Albany Evening Journal, Mar. 3, 1914.]

"Statistics of railway expenses and earnings for the first six months of the fiscal year which began on July 1, last, show that the former increased $68,000,000 in that period, while the net operating revenues decreased $58,000,000. These results were from a business greater by $10,000,000 than that for the corresponding period of the previous year.

"As net earnings for the first half of the previous fiscal year were $568,000,000, the loss for the six months ended December 31, last, was only a little less than 10 per cent.

"But the Interstate Commerce Commission, disregarding the impressive showing made by such figures, is still cross-questioning the railroads while it holds in abeyance its decision upon their request that they be permitted to increase freight rates 5 per cent."

Please cut off all rebates of all kinds, includings the post office rebates.

Please give decision quickly on 5 per cent increase in freight rates.

Respectfully, C. P. BRATE.

ST. LOUIS, *March 3, 1914.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I have read the plea of Mr. Ivy L. Lee in behalf of the railroads, and I think he has presented very strong reasons why their request for an increase of freight rates should be granted. The increase they are asking for is very small and the difference to the ultimate consumer on what he buys would be infinitesimal. The people require prompt and ample service, and the railroads must be enabled to perform it. With the compensation they are now receiving it is not possible to make such improvements and additions as the constantly increasing business of the country demands. Corporations and firms engaged in other lines of business than railroad transportation receive a much larger return on their investments than railroad corporations, even if the increase now asked for is granted. Profits come out of the people in one case as in the other, and why should this country discriminate to such an extent between enterprises of its own people? That nearly all railroads need the increase asked for is, in my opinion, not debatable, and I think the Interstate Commerce Commission's investigation will show it. Unless the request of the railroads is granted I firmly believe many of them will have to go into the hands of receivers, and many other lines of business will suffer as a result. This country certainly does not want any more receiverships or business failures than it now has.

Yours, truly,

M. KOTANY.

CHICAGO, ILL., *March 30, 1914.*

Hon. JAS. S. HARLAN,
Chairman Interstate Commerce Commission, Washington, D. C.:

We believe the important factors operating against the revival of business have all been removed, with one exception—a decision in the so-called 5 per cent freight rate increase case. The opinion here is generally, almost universally, held that with this matter concluded the way will have been cleared for a real revival of general business, in view of the importance of which may we all hope for an early decision in this case?

BUTLER BROS.,
H. A. STILLWELL,
Vice President.

WINONA, MINN., *March 30, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We are informed that tariffs are preparing or have been prepared for filing with the commission, the effect of which will be a specific charge of $2 or more per car for setting cars on any sidetrack. This, presumably, is for the purpose of affording an additional source of revenue to the railroads, in pursuance of suggestions made in the hearing before the commission on the question of permitting the eastern railroads to make an advance of 5 per cent in certain rates.

Without entering into the merits of that question, though it is our opinion that such increase should be granted, we wish to protest as strongly as possible against the adoption of any such subterfuge plan as would be the effect of a specific charge for spotting cars on private sidetracks.

If, as we believe true, railroads are not in many cases receiving adequate rates let the rates themselves be advanced, instead of making an additional and specific charge for a service that in all fairness is inclusive in the commodity or class rates. We believe it can be conclusively shown that private sidetracks, as a class, and the switching service pertaining thereto, are a positive element of saving to the railroads. Imagine the situation, particularly in the larger towns and cities, were all private sidetracks eliminated and the railroads necessarily obliged to furnish terminal facilities and team tracks for the loading and unloading of all commodities now handled on private sidetracks. The cost of such additional terminals would be enormous, and the resulting congestion, we believe, would materially increase rather than decrease the cost of switching service.

In conclusion, we repeat that, as a company paying a large freight revenue to the railroads annually, we protest against the proposed charge and much prefer a straightforward advance in rates.

Yours, very truly,

STANDARD LUMBER CO.,
By ROSCOE HORTON, *President.*

CHARLES E. MERRILL CO.,
Auburn, Pa., March 30, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The few thousand dollars I saved from my labors are all invested in railroad securities. My investments are in the Minneapolis & St. Louis R. R., B. & O. R R., and the Lehigh Valley R. R.

The Minneapolis & St. Louis did not pay any dividends on its stock for years. The B. & O. will probably have to reduce theirs unless they are allowed an increase in the freight rates. Even the Lehigh Valley had such reduced earnings for the last six months that the dividend will have to be reduced. Between the labor organizations on the one side and the Government supervision on the other these railroads must pay big wages to their employees and are not allowed to increase their rates so that they can meet this additional outlay. These roads should be permitted at once to increase their rates sufficiently to meet this extra cost for labor and material, and if you do not want to do that then recommend that the Government take over the railroads and leave us poor men out of it with at least 80 per cent of our money.

Stocks and bonds have been going down until now the average holder of stocks or bonds is daily losing more than the interest amounts to. These security holders have rights, too, which this commission should consider carefully.

These people are entitled to reasonable returns for their investments. If they are to have nothing for the money they have thus given to construct and equip these railroads, then we are ready to let the labor organizations or the Government put their money in railroads and get no returns for it.

In the Lehigh Valley R. R. I hold one of the general consolidated mortgage bonds, which I bought at 98, and it is now selling for less than 90, and yet this bond only yields 4 per cent interest. I think of all parties interested in the construction and operation of a railroad the men who furnish the money should have the first consideration.

As it is the newspapers and the Government run the railroads, and the directors and officials might just as well go on a vacation.

I hope you can see your way clear at an early date to give these railroads the privilege to increase their freight rates at least 5 per cent. Even with that increase some will have plenty of trouble to meet all their just obligations.

Truly, yours,

C. A. RITTER.

—

PITTSBURGH, PA., *March 30, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are manufacturers and shippers of lime in carload lots exclusively, handling approximately 3,500 cars per year, and desire to enter a protest against the proposed charge for spotting cars, because such a charge would be unjust and unfair for the following reasons:

First. Lime being a low-priced product, the proposed charge would interfere with our business, due to the fact that same would have to be borne by ourselves, because the price of lime will not stand an added charge of $2 per car, and as there are comparatively few shippers of our product the burden would fall upon a few instead of being distributed among many.

Second. It is manifestly unfair to make the same spotting charge for all classes of freight, because the higher classes of freight are better able to stand an increase than sixth class.

Third. Our local conditions, with regard to spur tracks and sidings, are such that several spottings of the same car is sometimes necessary, and it would therefore be unjust to make several charges for the same car.

Fourth. We believe that all freight charges should be paid by the consignee rather than the consignor, thereby making a more equitable distribution of the proposed additional revenue to the railroads concerned in this case.

The above are just a few of the reasons why a spotting charge of $2 per car would work a hardship to our business, and we would respectfully ask that the increase of 5 per cent in freight rates be adopted instead.

Respectfully, yours,

NATIONAL MORTAR & SUPPLY CO.,
A. H. LAUMAN, *President and Manager.*

—

ROANOKE, VA., *March 30, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

Subject: PROPOSED INCREASE IN FREIGHT RATES.

GENTLEMEN: As we handle a goodly number of automobiles and pay considerable freight, we would like to be heard on the subject of the proposed 5 per cent increase in freight rates asked by the eastern railroads.

We believe that automobiles pay proportionately larger freight than almost any other commodity, our freight rate being from two and one-half to three times first-class freight rates. In the face of this fact, we trust that you will see your way clear to grant the railroads the proposed 5 per cent increase; in fact, on our part, we would rather pay 10 per cent increase in freight than for the petition of the railroads to be refused.

Yours, very truly,

VIRGINIA MOTOR CAR CO. (INC.),
By JAMES FRANTZ, *Secretary.*

—

TYRONE, PA., *March 30, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of our company this day it was decided that we would file a protest on the proposed charge for spotting cars, for the following reasons:

First. It would place the burden of the proposed increase on a few insteading of dividing it among a greater number.

Second. Lime is a low-price product, and the additional charges made to the manufacturers can not be added to the selling price and would seriously cripple the business.

Third. It makes the same charge on all classes of freight, which is unjust and unfair, as first and second class freight is better able to stand an increase than sixth class.

Fourth. We believe it would be difficult to make a just and satisfactory regulation to cover the car-spotting charge, owing to the varying lengths of spur tracks, the number of cars placed at a time, and number of switching operations necessary.

Fifth. We believe all freight charges should be placed at the receiving instead of the shipping end. We believe that a 5 per cent increase in freight rates would better preserve the proper relations between long and short hauls than a spotting-car charge.

This company handles approximately 7,000 cars per year. We would therefore protest against any charge for car spotting on private sidings and ask that the increase of 5 per cent to the freight rates be adopted instead.

Yours, respectfully,

AMERICAN LIME & STONE CO.,
By J. KING MCLANAHAN, Jr.,
Secretary and Treasurer.

—

ESMONT, VA., *March 30, 1914.*

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Apropos of the 5 per cent advance in freight rates sought by the railroads—

I am heartily in favor of such an advance in interstate rates, but I would like to make it contingent upon the establishment of adequate intrastate rates.

In Virginia our locals are too high in every instance, and practically prohibitive in many cases, and particularly where they touch the farmers' supplies and products. A single instance will suffice: I wanted to ship a carload of hay to Christiansburg from my station, a trifle over 200 miles. Rate is 25 cents per 100 pounds ($5 per ton!), whereas the through rate on hay Detroit, Mich., to Richmond, Va. (800 or 900 miles), is 20½ cents per 100 pounds. My station to Richmond (about 90 miles), 11 cents per 100 pounds ($2.20 per ton).

I have seen no reference to this side of the rate question in any reports touching the matter now under consideration.

With consistent local freight rates, a 10 or 20 per cent advance in most staples in interstate shipments would work no perceptible hardship on the average consumer. It is the confiscatory locals that hurt.

Respectfully submitted.

Very truly, yours,

EDWIN EARLE.

—

NEW YORK, *March 30, 1914.*

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: It is very comfortable to be able to believe that because things have gone along in a certain way for many years they are likely to go on in the same way for many years more, or for so long as anybody need look ahead; and that it is better so than to bother with change. Thus, we are continually counseled to compromise with things as they are. But there is an end at last to compromise. Things as they are become intolerable; they can not go on any longer in the old way. Correction follows.

We are now in that corrective period, and, among other things, the railroad situation has got to be corrected. First was the Interstate Commerce Commission, created expressly to represent the people against the railroads and to regulate rates, and, of course, to regulate rates by keeping them down. That was what the people wanted. The railroads protested; and it was awkward for them, because the regulation of rates began at a point where rates, by reason of excessive competition, were already very low. But they protested in vain. Then they made the best of it; that was in the spirit of compromise.

Then the public declared itself a third party to every dispute between the railroads and their employees over wages, and said strikes should not occur. A law was passed to provide for arbitration. Railroad strikes did cease, but at the same time the railroads lost control of the most important single factor of cost in the production of transportation, namely, the labor cost. Every threat of the employees to strike for higher pay brought about a call for arbitration under the auspices of the Government, and arbitration in every case meant "something for the men." The railroads protested, but again in vain, and went on making the best of it. That was again in the spirit of compromise.

Obviously two diverging lines must run ever farther and farther apart. It was impossible for one arm of the Government to continue keeping rates down, and another arm of the Government to continue putting wages up, without bringing the railroads face to face with a crisis in which compromise would be no longer possible. Everybody who does not employ labor wishes to see wages rise, thinking it makes for prosperity; everybody who does not own railroad shares wishes freight rates to stay low. In between are the railroads, unable to control their costs, their service, or the selling price of their product. It is for them a desperate situation.

Nobody at any time wishes to see "liquidation of labor," either by wage reductions or unemployment. It is the one commodity of all that has not yet been touched by liquidation. However, it is now clear that one of three things must happen. Either the Interstate Commerce Commission must allow the railroads to raise their rates, or the railroads must liquidate labor, or the Government must take over the railroads at last and tax the people to support them. They are not now self-supporting.

Unable to wait for the Interstate Commerce Commission to finish its deliberations, the railroads have begun to do the only thing left for them to do; they have begun to liquidate labor, not by reducing wages, but by cutting down forces. The New York Central and the Pennsylvania Railroad lines have reduced their forces more than 50,000 men in four months. Some of this unemployment, of course, is owing to the reduced amount of tonnage to be hauled, which has nothing to do with rates; but a great deal of it is directly owing to the fact that the railroads have not, on their present margin of profit, enough borrowing power to engage new capital for new works. It is the correction least to be desired, because unemployment converts just so many men from productive units into social liabilities; but there was no other way to meet the situation. If it does not convince the Interstate Commerce Commission, then we shall be compelled to say that the final solution will be for the railroads to sell out to the Government. The alternative is bankruptcy for many of them, and that is simply unthinkable.

Faithfully, yours,

A. A. HOUSMAN & COMPANY.

—

SHEFFIELD, MASS., *March 30, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Although we have, in conjunction with other lime manufacturers in this vicinity, entered our protest against allowing

the railroad companies to charge a switching or spotting expense for placing cars for loading and unloading on private sidings, we deem the matter of such great importance as affecting our interests that we conclude, individually, to address you in relation to the matter. While we admit that the railroad companies may and probably do require some additional revenue to enable them to meet increased cost of operating, we do not consider that carload shippers should be discriminated against in affording them the necessary assistance; in fact, we feel that such an action would, in the mildest terms, be unfair and positively inequitable, and we respectfully suggest and recommend that the railroads be allowed the 5 per cent increase in rates; then the burden will be generally distributed and will have no disturbing influence in business.

Yours, very respectfully,

BERKSHIRE HILLS COMPANY.
SOLON R. WRIGHT, *Treasurer.*

—

NEW YORK, *March 30, 1914.*

Hon. EDGAR E. CLARK,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: It is very comfortable to be able to believe that because things have gone along in a certain way for many years they are likely to go on in the same way for many years more, or for so long as anybody need look ahead, and that it is better so than to bother with change. Thus, we are continually counseled to compromise with things as they are. But there is an end at last to compromise. Things as they are become intolerable; they can not go on any longer in the old way. Correction follows.

We are now in that corrective period, and among other things, the railroad situation has got to be corrected. First was the Interstate Commerce Commission, created expressly to represent the people against the railroads, to regulate rates, and, of course, to regulate rates by keeping them down. That was what the people wanted. The railroads protested, and it was awkward for them, because the regulation of rates began at a point where rates—by reason of excessive competition—were already very low. But they protested in vain. Then they made the best of it; that was in the spirit of compromise.

Then the public declared itself a third party to every dispute between the railroads and their employees over wages, and said strikes should not occur. A law was passed to provide for arbitration. Railroad strikes did cease, but at the same time the railroads lost control of the most important single factor of cost in the production of transportation, namely, the labor cost. Every threat of the employees to strike for higher pay brought about a call for arbitration under the auspices of the Government, and arbitration in every case meant "something for the men." The railroads protested, but again in vain, and went on making the best of it. That was again in the spirit of compromise.

Obviously two diverging lines must run ever farther and farther apart. It was impossible for one arm of the Government to continue keeping rates down and another arm of the Government to continue putting wages up without bringing the railroads face to face with a crisis in which compromise would be no longer possible. Everybody who does not employ labor wishes to see wages rise, thinking that it makes for prosperity; everybody who does not own railroad shares wishes freight rates to stay low. Unable to wait for the Interstate Commerce Commission to finish its deliberations, the railroads have begun to do the only thing left for them to do; they have begun to liquidate labor, not by reducing wages, but by cutting down forces. The New York Central and the Pennsylvania Railroad lines have reduced their forces by more than 50,000 men in four months. Some of this unemployment, of course, is owing to the reduced amount of tonnage to be hauled, which has nothing to do with rates; but a great deal of it is directly owing to the fact that the railroads have not, on their present margin of profit, enough borrowing power to engage new capital for new works. It is the correction least to be desired, because unemployment converts just so many men from productive units into social liabilities; but there was no other way to meet the situation. If it does not convince the Interstate Commerce Commission, then we shall be compelled to say that the final solution will be for the railroads to sell out to the Government. The alternative is bankruptcy for many of them, and that is simply unthinkable.

Faithfully,

A. A. HOUSMAN & Co.

—

ZABRISKIE, MURRAY, SAGE & KERR,
New York.

To the MEMBERS OF THE INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: I feel it my duty as a citizen to state my views on the application of the carriers for increase in their rates. I believe that this increase should be speedily and unqualifiedly granted, and I find that this is the view of every fair-minded and disinterested thoughtful person whom I have met in the last six months.

Although I own a few shares of railroad stock, the amount is very small, and I believe that I can truthfully say that my views are unbiased by this fact. Nor does my firm represent in any way any railroad or railroad interest.

I greatly appreciate the toilsome and public-spirited work which your committee is doing in this matter, but feel that, if my personal experiences and associations are at all representative, so many thoughtful and patriotic men of affairs in all parts of the country, and in all walks of life, can not be wrong in their common conviction that this increase is demanded by necessity and that the question of further increases is an open one.

I trust that you will pardon my liberty in addressing you, but understand that the opinions of disinterested men are desired by your body.

Very respectfully, ALBERT B. KERR.

RICHWOOD, W. VA., *March 31, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: After due consideration as to the 5 per cent increase in freight rates, I wish to withdraw my protest, as I believe they, the railroads, are entitled to an increase in rates.

Very truly, yours. C. B. CROPP.

—

ALTOONA, PA., *March 31, 1914.*

Hon. JAMES S. HARLAN,
Interstate Commerce Commission, Washington, D. C.

Regardless of motives or causes, the retrenchment policy of the railroads will positively lead to a serious panic before May unless checked immediately. This statement is based on exhaustive expert investigation of panic of 1893, having its crucial momentum started in May. Each day, each hour, right now, is fraught with potent germs of geometrically increasing disaster of tragic proportions. In behalf of the masses of the people of our country, I appeal to your honorable body that Wednesday and Thursday may be given for conclusion of the railroad officials' testimony. Kindly read again my telegram of December 4. The prognostications therein proven true by events should give weight to predictions herein respectfully submitted.

W. E. RUSS.

—

ROCKVILLE, MD., *March 31, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The most important case to the greatest number of people before your commission at the present time is the petition of the eastern railroads for a 5 per cent increase in freight rates. I can see no reason why the commission should allow less important cases prevent the prompt consideration of this petition. The prosperity of the country seems to await and depend to a considerable extent upon your action. The railroads and the people are anxiously awaiting the decision, and in the meantime thousands of people are losing employment. When the regulation of rates was intrusted to your commission it was not intended that the railroads should not be allowed to make a fair profit, but merely that they should not be allowed to impose upon the people and grant special favors to some and not to others. It seems to be the general opinion in this part of the country at least that the railroads are entitled to this increase. If the commission does not promote the taking of such testimony as may be necessary and give such decision as may be indicated thereby promptly and with reasons therefor, it will lose the confidence of the public, as all other reactionary bodies who have held out against popular thought and sentiment have done.

The petition has already been pending long enough apparently to have gotten in all the evidence and given it such consideration as may be necessary.

I trust there is no feeling or hope among the commission of discrediting the administration by your delay.

Yours, very truly, J. ALBY HENDERSON.

—

AMERICAN PNEUMATIC SERVICE CO.,
Boston, March 31, 1914.

CHAIRMAN, INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIR: I take the liberty of calling your attention to a circular addressed to the stockholders of the Pennsylvania Railroad, copy of which I inclose herewith, containing statements of the president of that railroad company regarding the restrictions which make it increasingly difficult for the company to maintain its dividends and keep up its property. My interest is that of a stockholder.

You must realize that to refuse a request of the railroads to increase their rates, when an increase is necessary in order to enable them to pay fair dividends and maintain their property, is not fair treatment to the stockholders, nor to a large portion of the public whose welfare depends, to a large extent, upon the prosperity of the railroads.

A 6 per cent dividend is only a fair return to the stockholders, when the risk of smaller dividends is taken into consideration. Less than this will cause people to invest their money in bonds, and there will be no capital available to take the stock of railroad companies. The net earnings of a railroad should, in my opinion, be sufficient, not only to pay 6 per cent dividends on its capital stock, but to provide a sufficient sum for all betterments, so that the property can not only be maintained, but improved without drawing upon its capital account. When the earnings under efficient and economical management are not sufficient to do this, then the railroad company should be allowed to increase its rates.

You must bear in mind that it is impossible for a railroad company to adjust its expenses at all times to its traffic. During periods of prosperity the traffic becomes very large, and the companies must increase their facilities to take care of it, not only for their own interest, but for the interest of the public. When period of business depression follows the companies can reduce their expenses somewhat by reducing the number of their employees, but they can not reduce their plant and equipment, which were created for the conditions existing in the period of prosperity. In other words, they can not reduce expenses in proportion to the reduction of traffic. The freight and passenger rates, therefore, should be sufficiently high to carry the companies over periods of depression. If they are only able to earn 6 per cent dividends during periods of prosperity they will not be able to maintain that average at all times, the investing public will lose confidence, and the whole country will suffer.

It is apparent to me, as a casual observer, that the railroad companies are being too much restricted and that their requests for increased freight rates should be granted.

Respectfully, B. C. BATCHELLER.

—

HOTEL MULTNOMAH,
Portland, Oreg., April 1, 1914.

The Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The honorable secretary's notice of March 11, in reference to the 5 per cent increase in carriers' rates has been forwarded here.

I would be greatly in favor of giving the railroads a 10 per cent increase instead of 5. This would mean an instant return to great prosperity. At present there are over a million sturdy men out of work. I

happened to be in Sacramento, Cal., when the unemployed army were there and took the trouble to investigate what class of men these are and found a good many of them engineers, firemen, brakemen, switchmen, track layers, section hands, all willing and ready to go to work. A good many had two to four people depending on them for support, so there are really in the neighborhood of 4,000,000 people slowly starving.

The railroads promise to put most of these men back to work as soon as they hear something encouraging from Washington. This is my seventeenth year on the road selling goods, but never before have I found business so stagnant as now. All my customers tell me that they have no hope of business picking up until the railroads are allowed to increase their rates, and all these merchants would welcome such an increase, for the reason that it would quickly stimulate trade. The railroads, instead of taking trains off and laying off men, would put men to work, would start improvements, and a resumption of extensions, ordering new equipment, etc. All this would mean activity toward prosperity. No such hope from the shippers' side. They are not the kind able to do anything tending toward prosperity. What the country needs at present is prosperity, not a revolution. The greatest calamity would *befall this nation* if the decision goes against the railroads. Instantly another half a million men would be thrown out of work.

A question for Mr. Brandeis to answer: A Victor talking machine manufactured at Camden, N. J., can be purchased in Portland, Seattle, San Francisco, Chicago, New York, Boston, or anywhere else in the United States at exactly the same price that it is sold in Camden, where no freight has to be paid, and in some cases the freight charges are about $6 on each machine; yet the merchants close to Camden are filching the same price that the merchant in Portland is forced to sell for, so you see it is Mr. Brandeis's clients who are getting the graft and not the railroads. Give the railroads a big increase in rates all along the line from A to Z. Everyone knows that the railroads in the past four years have suffered all kinds of reverses. It is high time that they be given considerable sunshine. The faster the increase is allowed and announced the faster prosperity will set in; no hope otherwise.

The controlling of issuing stocks and bonds is quite a different matter. By all means this should be the case with the railroads. Nothing but good could result from such a move, that the Government should see that no such high-financing scandal should ever be perpetrated again like the 'Frisco deal. I am certainly in favor of that. But the increase of pay for labor and all sorts of material, taxes, and a million other items that the roads are forced to bear without being permitted to sell their merchandise, which is transportation, to offset these increases is certainly un-American, unbusinesslike, and a thousand other items too numerous to mention.

I shudder at the calamity that will befall this country should it be decided against the railroads, but it will mean great prosperity if it is favorable to them.

Most respectfully submitted.

Yours, very truly,

S. NIEDERBERGER,
A Chicago Traveling Salesman.

—

ST. PAUL, *March 31, 1914.*

Chairman HARLAN,
Of the Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As a patriotic citizen of this country and as a "booster" for its prosperity I desire to enter my petition for the quick decision of the Interstate Commerce Commission granting the increased freight rates to the railroads. I am constantly among the larger business interests of the United States and find a universal feeling among business men that business can not go ahead until the rate case is decided and in favor of the railroads.

I realize the insignificance of my appeal, but just the same it represents the expression of thousands of my business constituents and their one voice for the granting of the increased freight rates by your commission essential for the prosperity of the country.

Yours, truly,

A. T. HARKNESS.

—

MINNEAPOLIS, MINN., *March 31, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission.

DEAR SIR: In reference to the railroad companies raising the rates on the shipment of coal, which is now being considered before the Interstate Commerce Commission, wish to say: In my opinion, Mr. W. A. Clark, of Northampton, Mass., has mapped out the proposition as I see it. It simply would be, in my opinion, discrimination if the commission were to allow the rates asked for by the railroad company in regard to an additional charge for spotting cars.

Please read Mr. Clark's protest in the Black Diamond, March 28, 1914, and I believe you will take care of this matter in the way it should be taken care of.

Yours, very truly,

THE SULLIVAN COAL CO.,
F. K. SULLIVAN,
Proprietor.

—

BOSTON, *April 1, 1914.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The writer has read the address of the executive assistant of the Pennsylvania Railroad Co. before the City Club of St. Louis, which has been copied in pamphlet form, and if the facts and figures which Mr. Lee has used in this address are correct, as it is fair to assume that they would be from a man of his standing, it seems as though the railroad situation in general should be relieved or the depression must necessarily follow throughout the whole system of interstate commerce.

We have had locally a very good example of frenzied finance in railroading, but it is not to be assumed that this is a fair sample of railroad finance in general. There seems to be a persistent trend on the part of all of the State legislatures to thrust upon the railroad companies untold burdens without a thought as to the effect of such legislation, either upon the dividends of the railroads affected or apparently without serious thought as to where the fund with which to comply with such legislation may spring from, unseen as it were.

We would like to add our little mite in favor of less drastic legislation or relief to the railroads in the way of a percentage of advance to be allowed them in their rates. We hope that the voice of the business world may be such as to warrant some such procedure or sanction on your part as mentioned.

Respectfully, yours,

H. E. HOLBROOK CO.,
H. E. HOLBROOK,
President.

—

NATIONAL LIGHT & POWER CO.,
St. Louis, April 1, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This is just a note to respectfully urge that prompt and favorable action should be taken on the application of the eastern railroads for 5 per cent increase in freight rates.

General business conditions have been very unsatisfactory throughout the past year and there is every indication that the situation will not improve until the railroads are given some relief. Favorable action on the rate increase will do much to reestablish normal business conditions.

Yours, respectfully,

W. C. MOREHEAD,
First Vice President.

—

MONARCH METAL WEATHER STRIP CO.,
Detroit, Mich., April 1, 1914.

CHAIRMAN OF INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Have been a shipper for some years over the Wabash and other roads, and as a shipper have taken considerable interest in many of the legislative movements toward regulating railroad service, etc.

To be brief, I hope that your committee will find it possible to grant the railroads an increase of 5 per cent over present freight rates, as I feel that this will make it possible for them to finance certain improvements, which are absolutely necessary for the betterment of the service.

There is much room for this improvement, and from the standpoint of a shipper am more than willing to pay the increase asked for, if it will result in better transportation conditions.

Very truly, yours,

G. E. SHERMAN.

—

CONCORD, N. H., *April 1, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand that your commission is considering the advisability of making a switching charge for putting in and taking out cars for loading and unloading on the sidetracks of industrial concerns. We wish to protest against a proceeding of this kind for the following reasons:

First, because we own our own sidetrack, and keep it in repair. Therefore, the Boston & Maine Railroad has not been put to any expense for providing a sidetrack on which we load approximately 1,000 cars a year.

Second, since we provide our own sidetrack, the Boston & Maine Railroad is not obliged to maintain team tracks for the cars we load, nor have any money invested in such tracks.

Third, most of our shipments are carload shipments, so that the railroad gets a maximum benefit for the use of their cars.

Fourth, the small amount of less carload shipments which we have could easily be transported to the railroad freight house by auto truck, in which case we believe it would cost the railroad more to handle our heavy granite by hand in the freight house than it would cost them to put in and take out a car from our siding for such freight.

We believe that the railroads of this country, with the enormous investments they represent, and being so vital to the business of our country, should be allowed freight rates and passenger rates sufficiently large to earn a reasonable return on their legitimate investments. We presume the only manner in which it can be determined whether the investments by the railroads in the past have been wise or unwise is the physical valuation of the railroad properties. We realize that it will be some time before a physical valuation can be put on these properties, but in the meantime, if it can be proven that the railroads, generally or individually, are going to show real assets in excess of their capitalization and bonded indebtedness, we believe that the proportional increase in the freight and passenger rates should be granted previous to the final work of the physical valuation committee.

However, we do not believe in the proposed scheme to add to the railroad's revenues by charging for placing and withdrawing cars on industrial companies' sidetracks. We believe that the freight rates for transportation by the railroads should cover this item. If this proposition is put into effect, we are of the opinion that the railroads will be obliged to maintain sidetracks at industrial plants, and to also increase materially their freight terminal facilities. It will add to the bookkeeping and auditing departments of the railroads in collecting the charges for placing and withdrawing cars from sidetracks, which must mean an expense to the railroads, and will also add expense to similar departments in all industrial companies. We believe this scheme is a roundabout way of obtaining revenue for the railroads, which can just as well be secured directly by sufficient freight rates.

Yours, very truly,

THE JOHN SWENSON GRANITE CO.,
OMAR S. SWENSON.

—

MERCANTILE TRUST CO.,
St. Louis, April 1, 1914.

Hon. JAMES S. HARLAN,
Interstate Commerce Commission, Washington, D. C.

MY DEAR MR. HARLAN: The more I study and investigate the railroad situation, the more thoroughly convinced I am that every day your commission delays decision on the railroad rate cases, the country is being brought nearer to a panic.

I fully realize you are confronted with many difficulties; that the law requires you to have hearings; but unless you arrive at a speedy conclusion and announce a favorable decision, granting increased rates, you will surely bring on a panic, primarily because of the shaken confidence of the investing public throughout the world in railroad securities.

I base this assertion upon the following:

1. The railroads representing more than one-third of the commerce of the Nation, anything that threatens their prosperity is naturally reflected in every line of human endeavor.

2. Purchases by railroads of all commodities being so much greater than any other industry, when the railroads are hampered there is necessarily a falling off of business in all lines.

3. Large investors are very much alarmed at the demands for increased wages, safety appliances, better equipment—steel cars—elimination of grade crossings, and the honest and dishonest whims of legislatures of various States.

4. National and State banks, and particularly savings banks and insurance companies of the country, are groaning under heavy investments in railroad bonds on a declining market, subjecting these respective institutions to criticism by bank and insurance commissioners in the various States, thereby creating aversion to further investment in railroad securities.

5. It is clearly evident European investors are frightened and withdrawing their money from this country, selling back our railroad bonds and declining to increase their holdings.

6. It will be only a question of a short time until the small investor (who, after all, is the most important to the railroads) will likewise fear to invest in railroad bonds, thereby withdrawing this important power and influence in the building up of the Nation's greatest artery of commerce.

7. The banker who formerly carried railroad bonds as a subsidiary reserve, to meet sudden demands upon his exchequer, has found in the last seven years that they can not be relied upon as a subsidiary reserve, a constant loss being created by a diminution in market value.

8. To show you the weakened financial condition from the standpoint of the investor, I attach list of bonds, giving name of road, market price of the bonds on December 1, 1906, December 1, 1907 (being the most acute stage of the panic of that year), and March 1, 1914. You will note, in many instances, the bonds are selling lower in 1914 than in the midst of the panic. The difference in market value in 1906 and 1914 on the same securities shows a depreciation of about 10 per cent all along the line. I do not know how I can more forcefully place before you the alarm the investor feels about the present situation.

Respectfully, yours,

FESTUS J. WADE.

—

ALBANY, N. Y., *April 2, 1914.*

GENTLEMEN OF THE INTERSTATE COMMERCE COMMISSION: As I have read that Senator LA FOLLETTE has introduced a bill whose purpose seems to be to deprive the people of the United States of their constitutional right of petition, I hasten, before the blow may fall, to add my little appeal for fair play for the railroads.

Isn't it axiomatic that because they must pay more for everything they should be permitted to earn more? They have not the magician's gift of ability to grab dollars out of the atmosphere.

I am not a conspirator; I am only one of the many who, holding a few railroad securities, see their small possessions dwindling in value because the Government is trying to establish public ownership at private expense and at the same time seems determined to withhold the money necessary to meet the expense.

There are such people, you know, even though they have been little considered—I mean holders of railroad bonds and stocks.

ARTHUR LUCAS.

—

ROCHESTER, N. Y., *April 2, 1914.*

Hon. JAMES S. HARLAN,
Interstate Commerce Commission, Washington D. C.:

We are in favor of an immediate increase of 5 per cent for the railroads in the United States. March 30, Rochester Chamber of Commerce voted 491 for increase, 37 against; which is a fair average of how public opinion is running favoring railroad assistance.

ST. LOUIS, *April 2, 1914.*

Mr. J. HARLAN, *Washington, D. C.*

DEAR SIR: The attached editorial, cut from the St. Louis Times of March 31, indicates that the press of our city is awakening to a proper interest in the situation, and in turn the general public is being aroused to the fact that it is their problem, and it is for them to carefully watch to see that every phase of the matter is treated in purest justice and that nothing shall stand in the way of progress.

You may have seen this clipping, but for fear you have not, I take much pleasure in sending it to you, and hope that by a united effort we shall be able some time to eliminate discriminations and unjust legislation and work as a unit to bring out results that are beneficial and helpful to all.

Sincerely, yours,

CLARENCE H. HOWARD.

UNFAIR TO THE RAILROADS.

Notwithstanding the intimations received from Washington that President Wilson is in favor of an increase in freight rates and that it is the President's desire that the Interstate Commerce Commission should render an early decision in the matter, the commission has again postponed the date for hearing the shippers in opposition to the proposed increase. Furthermore, the commission has engaged counsel to represent it and present the case of the shippers against the railroads. Why the Interstate Commerce Commission should be prejudiced against the claims of the railroads is difficult to understand, since it was supposedly created for the purpose of righting the wrongs of the railroads.

The Interstate Commerce Commission is a quasi-judicial body, and as such ought to be unprejudiced and protect the rights of all parties in all matters which may come before it. Recently the commission employed an attorney to represent the Interstate Commerce Commission and the shippers in the hearing of the petition filed by the railroads for an increase in rates.

If the railroads are to receive a fair and impartial hearing, what occasion was there for the commerce commission to employ an attorney? Was it to enable him, as one who seems to be in political favor with the administration, to earn an extravagant fee?

Such action on the part of the commission does not appeal to fair-minded people, and if the shippers wish counsel to represent them in opposition to the proposed freight increase, such counsel should have been employed by the shippers and not by the commission. The duty of the commission is not to employ counsel, but, as judges, to pass upon the reasonableness and fairness of the claims of the railroads for increased freight rates, and the merits, if any, of the opposing claims of the shippers.

The employment of counsel by those who are supposed to pass upon the matter is a new departure in American justice, and can not meet with popular approval. Such action on the part of the commission immediately smothers the promise of a square deal to the railroads.

The St. Louis Times believes in fair play and a square deal, and condemns the action of the Interstate Commerce Commission as dangerous and as an attack upon American justice and the spirit of our jurisprudence.

—

ST. LOUIS, *April 2, 1914.*

Mr. E. E. CLARK,

Yours, very truly,

M. B. S. BUTTON CO.,
Per M. B. SHANTZ.

—

LAKE HOMES INCORPORATED,
Minneapolis, Minn., April 3, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In behalf of the members of the above company, of which I am secretary, I would petition you to grant the American railways the 5 per cent increase in freight rates which they not only need, but must have before they can branch out and make improvements which are necessary. In this part of the country, as is the case all over the United States, we are prosperous to a large degree in proportion to the prosperity of the railways. When the railroads are making extensive enlargements and improvements all lines of business seem to get the benefit. At the present time business conditions here are not what they should be. Reports from all lines of trade show a falling off of from 10 to 40 per cent from a year ago, and the prospects in the Northwest are anything but bright for the coming year.

It seems to us that the quickest and surest way to put the country on the right basis would be to grant the petition of the railroads at the earliest possible moment.

Hoping that this letter will reach the members of the commission, I remain,

Respectfully, yours,

F. E. LASLEY.

—

NEW YORK, *April 3, 1914.*

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I beg to inclose clipping from this morning's New York Sun, which I trust may prove of interest to you. Believe me,

Very respectfully, yours,

J. STEVENS ULMAN.

—

[From the Sun, Friday, Apr. 3, 1914.]

BIG SHIPPERS FAVOR INCREASE IN RATES—CHAMBER OF COMMERCE PASSES RESOLUTION FAVORABLE TO RAILROADS—STRAIGHT ADVANCE URGED—J. STEVENS ULMAN AND JOHN CLAFLIN TELL OF BENEFITS TO ALL INTERESTS.

Members of the Chamber of Commerce showed yesterday that they are in sympathy with the railroads in their efforts to get an increase in freight rates by passing a favorable resolution offered by J. Stevens Ulman. They also approved of the remarks of President John Claflin that the shippers would find the gains greater than the amount they would pay the roads under a higher tariff.

The chamber also unanimously supported the resolution offered by Samuel W. Fairchild for the creation of State police. In speaking of freight rates Mr. Ulman said:

"It is regrettable that the Interstate Commerce Commission has not yet seen fit to render a decision in this important matter, affecting not alone the railways themselves but directly and indirectly all lines of business throughout the country, and what is seemingly causing the delay is so many complex questions arising daily."

He added that in considering the matter of freight rates an alternative had been suggested which would authorize the railroads to make a charge for the service of "placing, removing, and spotting" of cars on private lines. This charge, he said, would probably not be less than $2 per car. Mr. Ulman pointed out that the shippers owning private lines or spurs were entitled to some reduction because in possessing such spur tracks they did not use the terminals of the railway companies.

"The carriers have the right to adjust their rates upon a basis of making a separate and distinct charge for the road haul and for delivery service, but until the carriers are ready to revolutionize the whole system of making rates, fixing separately the charge for road haul and station or track receipt or delivery, it would be obviously unfair to make an additional charge for the delivery on a private sidetrack when such service is already embraced, under the present method of making rates, in the through rate covering the entire service.

"It would further seem to me that industrial plants adjacent to railway lines were compelled to pay more for property than they would had not the lines been so located, and that by placing a charge for "spotting" of cars the value of the land of such plants is depreciated. I hardly believe that it is the intention of the commission to penalize shippers in any way.

"In granting a horizontal advance, such as the railways request, the commission places itself in a simple position for making reduction on appeals thereafter; and that in attempting to give a differing advance for different reasons they make the present confusion still worse."

Commenting on the resolution offered by Mr. Ulman, Mr. Claflin said:

"That is a proposition that is not complex and not difficult. Every one of us who is a large shipper, while he may feel that there would be imposed upon him some additional burdens, yet if he considers the effect on the community of some allowance to the railroads he will be certain that in the first place the community will be greatly benefited, and in the second place the gain to him personally will be far greater than the amount he will be called upon to pay the railroads."

Mortimer L. Schiff, chairman of the committee on commercial education, reported it was making progress and that the city and the stock exchange had shown willingness to cooperate with its efforts. Negotiations are being carried on toward the establishment of a college of commerce and administration and a museum of commerce and civics made possible by the pledge of $700,000 by one of the chamber's members.

Resolutions were passed voicing disapproval of the Maier bill now awaiting Gov. Glynn's signature. A resolution of Judge Charles F. McLean that the city of New York contribute $5,000,000 of the actual cost of improving the harbor facilities was amended and referred to the harbor and shipping committee.

The following were elected as members of the nominating committee: Augustus D. Juilliard, A. Barton Hepburn, Isaac N. Seligman, Philip A. S. Franklin, William A. Nash, Cornelius N. Bliss, Jr., and William Jay Schieffelin.

AMERICAN GYPSUM CO.,
Rochester, N. Y., April 3, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We wish to confirm telegram sent you yesterday as follows:

"We are in favor of an immediate increase of 5 per cent for the railroads in the United States. March 30, Rochester Chamber of Commerce voted 491 for increase, 37 against, which is fair average of how public opinion is running favoring railroad assistance."

The invariable opinion of everyone I have seen, without exception, is that the railroads should have an increase in freight rates; that they should not be persecuted, but should receive a fair deal.

A year ago now it was hard work for us to care for our business, but now it is the smallest it has been in years.

Why not give the railroads an increase, and then, after a thorough investigation, if they are not entitled to all of it, cut it down to whatever they are entitled to.

Trusting that they will secure the increase, I remain

Very truly, yours,

H. C. NOBLES.

TWIN CITY BOILER WORKS (INC.),
Bristol, Va., April 4, 1914.

Honorable SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We are informed that the railroad companies have a proposition pending before your commission to allow them to make a charge for placing empty and loaded cars on private sidings. As a business concern receiving shipments over the railroads leading into Bristol we wish to enter our protest against allowing the railroads to make any charges for placing cars on private sidings. This would result in a serious handicap to manufacturing enterprises as well as other concerns receiving shipments and making shipments.

We will say in this connection that we are not enemies of the railroad companies, and we are in favor of allowing them 5 per cent increase in freight rates, for which they are at present asking, and which proposition is now pending before your body of commissioners and hope that this increase in freight charges be allowed.

Yours very truly,

TWIN CITY BOILER & SHEET IRON WORKS (INC.),
By J. G. TILLEY, *General Manager.*

NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS ASSOCIATION,
Wausau, Wis., April 4, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The Northern Hemlock and Hardwood Manufacturers Association, consisting of 82 members in the State of Wisconsin and the upper peninsula of Michigan, with an annual production of over 800,000,000 feet of lumber, has had no opportunity, as a body, of discussing docket No. 5860, relative to the authorization of spotting charges, but we herewith submit, through our secretary, a brief statement of the conditions under which our members are carrying on their business, so far as these conditions can be covered by a general statement.

In our large membership the members are carrying on their business under many varied and peculiar conditions. Some operate their sawmills in cities or large towns more than 200 miles from their timber; others operate their mills in small towns within a few miles of their timber, and still others operate on their own logging railroads in their own timber. Some of our members are so located that they receive a portion of their logs by driving streams, and some are so located so that a considerable portion of their shipments of finished product are by water. Such a diversity of conditions implies a similar diversity of effects resulting from tariff changes that should be given careful consideration.

While the question of the 5 per cent advance has never been voted by our members, many of them feel that for the general welfare of the country the railroads are entitled to increased revenues to offset added expenses during recent years because of higher wages, and the installation of many safety devices, including steel cars, etc., that have been ordered by the Interstate Commerce Commission and various State commissions. Although for these reasons our association has not opposed the 5 per cent general advance in rates we want it distinctly understood that this shall not operate against us shall we later find it necessary to ask for reductions in lumber rates, because the lumber manufacturers of this section are thoroughly convinced that the rates they are charged are relatively higher than those upon a large number of other commodities, many of which compete most strongly with lumber.

The spotting charge at origin or delivery, or both, added to the existing rates on all commodities would favor long-haul as against short-haul shipments, and this in itself would affect some sawmills favorably and others unfavorably.

A spotting charge at origin or delivery assessed only against shippers from private tracks would, so far as the members of this association are concerned, lay on them a greater relative burden on the average than on shippers of other commodities.

The cost of the original construction and the cost of maintaining private tracks in lumber yards of shippers and receivers has been a matter of contract—formal or implied—between shipper and carrier, and were a spotting charge now authorized it would violate these agreements in such a way as to affect the earning of our vested capital and might, were no special remedies offered, in some cases amount to confiscation of property.

A discrimination in switching charges on private and public tracks would require many readjustments and alterations in the layout of our plants to escape undue penalization.

A spotting charge of a flat rate per car would discriminate against the small-capacity cars often supplied by the railroad companies when large cars are ordered, thereby giving the carriers power to make a virtual discrimination in rates by supplying one shipper with large cars and another shipper with small cars.

On the other hand, there exist free switching arrangements over private tracks of the shippers and over public tracks of carriers built for and used by single shippers on which the expense per car to the carriers is out of proportion to the revenue obtained under the published tariffs. There are situations where switching charges should be made, and it is at least theoretically fair and advisable for the commission to require future agreements made between shippers and carriers as to the construction, maintenance, and operation of cars over private tracks to be authorized by the commission.

We present the foregoing facts relative to the effect upon our membership of establishing switching charges on private tracks, but we recommend no specific action, feeling that the commission in its fuller knowledge and broader vision will not take any action that will impose an unjust burden on the lumber industry as a whole or upon any individual operator.

The foregoing statement is authorized by R. B. Goodman, president, and George H. Chapman, chairman of the railroad committee of the Northern Hemlock and Hardwood Manufacturers' Association.

Very respectfully,

R. S. KELLOGG,
Secretary.

NATCHEZ, MISS., *April 4, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We note through the press that you are considering the petition of railroads for increase in rates.

We are heartily in favor of such an increase, as we believe it would not only help the railroads but be beneficial to all the citizens of the United States in enabling the railroads to improve their roads and give better service. It will also undoubtedly be very beneficial to business in general.

Yours, very truly,

I. LOWENBURG CO.,
By E. SAMUELS,
Vice President.

PHILADELPHIA, *April 4, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: As a stockholder in several railroads in the eastern territory, I desire to enter my protest against your continued inaction in the rates case now before you. Your commission is seriously impairing and threatening my investments, and if your final decision is against the railroads my investments will be ultimately destroyed.

The members of your commission are the servants of the people and are bound to follow the public opinion. If you have your ears to the ground you can not have failed to know that the people desire an increase in the freight rates.

I beg to remain,

Respectfully,

L. ALBERT GRAY.

BOSTON, *March 24, 1914.*

Mr. HARLAN,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Perhaps the fact that I am a physician, and not a business man, a class with which you come in close touch, warrants me in writing you as I do.

The existing railroad situation seems to me alarming. Owing to good luck, rather than wisdom, I happened to hold no railroad stocks at the time when the clouds, which are now so thick over the railroad sky, began to gather. This fact, perhaps, enables me to speak with less prejudice than I could if I owned railroad stocks, either in New England or elsewhere. It is almost the last kind of security I should think of investing in as things look now.

If the railroads do not prosper the country can not prosper, and the railroads can not prosper if, while the Government, labor unions, and the public demand constantly increasing facilities of all kinds, the railroads, almost alone in the country, are not allowed to receive a compensation adequate to the service rendered. More than this, any private individual who behaved as the Government is behaving in the parcel-post matter would be called a swindler. Cavour is quoted as having said: "If we did for ourselves what we are doing for the country we should be great rascals."

The pith of all this, of course, is that, in my feeble judgment, the railroads should be allowed a substantial increase in rates with the least possible delay. If this be allowed I shall cheerfully pay whatever proportion of said increase may fall upon me, apart from the conviction that I shall be a sharer in the increased prosperity which will ensue to the country at large through said increase.

I remain, yours, truly,

F. C. SHATTUCK.

—

CHICAGO, ILL., *March 24, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

Subject: Advocate advance in freight rates.

GENTLEMEN: Our attention has been called to the change in sentiment of the public regarding advance in freight rates to the railroads, and as heavy shippers and manufacturers of materials used by the railroads, we wish to ask your most favorable consideration at an early date of this important subject, believing that business interests of our country and the welfare of the people can not be better served than granting the railroads the 5 per cent increase in freight rates requested.

Trusting that same will receive your favorable action at an early date, we remain,

Respectfully, yours,

THE ASHTON VALVE CO.,
J. W. MOTHERWELL,
Vice President.

—

THE GLENWOOD COMPANY, *Albany, N. Y.*

Chairman HARLAN,
Interstate Commerce Commission.

DEAR SIR: Our business this season is unusually dull. We haven't had such a depression in 10 years. We are sure if the railroads were allowed to raise their rates somewhat confidence would be restored and business would expand. The small advance asked by the railroads is so small that the effect would not be noticeable to the jobber and retailer, but would at once stimulate the investing interests, hence the reaction in the wholesale and retail trade.

Hoping for a favorable expression in the very near future.

Give business a boost.

Yours, truly,

VENDOME W. BATES.

—

BALTIMORE, MD., *March 25, 1914.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I fear that I have no standing before your commission, as I simply represent the plain citizen, the taxpayer, a hard-working man who during many years of constant work has been engaged in the endeavor to educate his children and to make some provision for them after his death.

I find myself to-day in the position that what money I have been able to lay by and invest in railroad securties is jeopardized, and that my life-insurance policies are in the same category, through the action of your honorable body in constantly reducing the tariffs of the different railroads, and practically taking the control of the transportation business from the owners thereof.

For many years the cost of transportation has been constantly increasing, owing to the advance of all material used in the construction and repairs of the railroad, and more especially to the periodical demands of labor for higher and still higher wages, which are always of necessity granted.

All these are, of course, to you a thrice-told tale, and nothing that I can say can make the facts more patent, or throw any new lights upon them to you and your associates.

You have only to examine the annual reports of the railroads to see that the cost of transportation has been constantly increasing, that the burden of taxation year by year has become more onerous, so that they are in the position of being forced by State and national laws to contribute more and more largely to the support of the community, while through the action of your commission their charges for service rendered have been constantly reduced from the time that your commission was organized down to the present.

The point, however, to which I wish to draw your attention is the manifest blunder from a poltical standpoint that the bankruptcy of the transportation system of this country would be to the Government itself.

When you remember the vast number of people, women and children, small investors, who hold the obligations of the transportation companies, that every man who has a life insurance policy or a deposit in a savings bank is being cruelly injured by your action, and that the day must come when you will be held to account for the disaster which you are bringing upon this vast army of people, it seems to me but a matter of prudence and common sense to awake to the fact that all these people are looking to you to see what your action is going to be, and that already there is throughout the United States a most deep-seated dissatisfaction at what you have already done.

I believe I have truthfully stated the attitude to-day of all people who hold the securities of or are interested in the transportation system of this country, either directly or through life-insurance policies or deposits in savings banks.

You can easily, I fancy, imagine the feeling of the people who are on the verge of starvation, having been discharged by the different railroads from inability to pay them, every railroad in the country being forced to curtail expenses in every possible direction.

The Baltimore & Ohio alone have had to discharge 6,000 men.

This one instance is sufficient to show you the gravity of the situation.

Every one of these men see daily in the papers that the solvency of the railroads is imperiled by the Interstate Commerce Commission.

Apart from the awful responsibility of wrecking the vast transportation system of this country, and checking all development and business enterprises, I should think the reflection that you are held responsible by all the unemployed for their misery, would be enough to shake nerves of iron.

Please do not think that I want to say anything that is rude or discourteous, but unfortunately there seems to me an atmosphere in Washington which prevents people from coming out of the clouds and getting their feet upon the firm ground of actual conditions and incontestable facts.

Yours, very faithfully,

CLARENCE C. WHITING.

—

CHESHIRE LIME MFG. CO.,
Cheshire, Mass., March 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of the Lime Manufacturers of Massachusetts, representing all in the State, and who handle approximately 10,000 cars per year, it was unanimously decided that the proposed charge for spotting cars would be unjust and unfair to them for the following reasons:

1st. It would place the burden of the proposed increase on a few instead of dividing it among a greater number.

2d. Lime is a low-priced product and the additional charges made to the manufacturers can not be added to the selling price and would seriously cripple the business.

3d. It makes the same charge on all classes of freight, which is unjust and unfair as first and second class freight is better able to stand an increase than sixth class.

4th. We believe it would be difficult to make a just and satisfactory regulation to cover the car-spotting charge owing to the varying lengths of our tracks, the number of cars placed at a time, and number of switching operations necessary.

5th. We believe all freight charges should be placed at the receiving instead of the shipping end.

6th. We believe that a 5 per cent increase in freight rates would better preserve the proper relations between long and short hauls than a spotting-car charge.

We would therefore protest against any charge for car spotting on private sidings, and ask that the increase of 5 per cent to freight rates be adopted instead.

Respectfully, yours,

WILLIAM FLAHERTY,
Secretary, representing the following manufacturers: New England Lime Co., Lee Lime Co., Hoosac Valley Lime Co., Cheshire Lime Mfg. Co., Farnam Cheshire Lime Co., West Stockbridge Lime Co., Berkshire Hills Lime Co.

—

ST. LOUIS, *March 25, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We are firmly convinced of the fairness and advisability of allowing the railroads of this country the 5 per cent increase in rates which they are asking for.

The cost of conducting the railroad transportation of this country has increased so rapidly that the railroads are not able to make sufficient earnings to finance themselves, thus holding up many improvements which are urgently needed in order to properly serve the public.

We hope that when this question comes to you for final decision that your commission will agree with our position and grant the proper increases.

Very truly, yours,

MONARCH METAL WEATHER STRIP CO.,
GEO. OLIVER CARPENTER, Jr.,
Vice President and Treasurer.

—

CHICAGO, *March 25, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

HONORABLE SIR: We are extensive shippers throughout the country generally and our freight bills are equally large. At least 75 per cent of our sales are with manufacturing industries and construction companies; the balance, 25 per cent, are with the railroads.

We simply wish to voice our sentiments as being enthusiastically in favor of the Interstate Commerce Commission granting the increase in freight rates as petitioned by the railroads.

We not only believe that they are honestly entitled to this increase, but we can impartially say that our best judgment is that the general business interests of the country not only are in favor of the increase being granted, but our general prosperity absolutely depends upon the granting of same. We speak, as we do, with all conscientiousness and impartiality.

There are very few of us who in any accurate measure comprehend the wonderful consuming power of an individual railroad system and consequently have not an intelligent conception as to how much the general interests of the country are dependent on the general prosperity of the railroads of the land.

We are pleased to submit our sentiments on this subject to you and sincerely trust the petition of the railroads will receive your favorable consideration.

Respectfully submitted.

A. C. TORBERT EQUIPMENT CO.,
By A. C. TORBERT, *President.*

—

MILL SHOALS, ILL., *March 25, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Now, to make a long story short, I am writing you and asking that, for the best of the whole people, you should grant to the railroads the 5 per cent increase in freight rates that they are asking. On account of increased taxation, floods, increased wages, laws requiring better and expensive equipment, increased cost of material, and especially all kinds of timber, and other things too numerous to mention, their profits surely have been greatly reduced. On account

of this I know that my business is suffering to a very large extent, and of course that finally lands back on the laboring man who cuts the timber from the stump at a small salary, which is at the best only a scant livelihood. I think that if the increase was granted business would at once get back to its normal stage, so why keep business stagnated any longer? Now, hoping that your honorable body will soon do something that will relieve the situation,

Yours, truly, OSCAR NEEDHAM.

—

MILL SHOALS, ILL., *March 25, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Business conditions in this community have been greatly affected the past few months from some cause. We have reason to believe that at least a part of it is caused by the necessitated retrenchment by the railroads, which to a great extent has brought to a standstill some of our best industries, viz, the lumber and timber business. Now, this directly reverts back to the day laborer who, with conditions normal, *barely* makes a decent living for his family by his labors. Now, we are in position to know that it has struck us a hard lick in this immediate community. Now, we think that on account of increased taxation and other hardships caused by recent legislation, that the railroads have without a doubt had their earnings greatly reduced. If we expect the moneyed men of our country to let loose of their money and put it into our great industries of our Nation, they must have a reasonable return for the same. Now, we believe that the interest of the whole people would be greatly benefited in the end if your honorable body would see fit to at once grant the 5 per cent increase that the railroads are asking, and we believe that by that action conditions would soon adjust themselves back to a normal condition.

Yours, truly,

BANK OF MILL SHOALS,
By H. L. FILES, *Cashier.*

—

F. BLUMENTHAL CO.,
NEW YORK, *March 26, 1914.*

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

HONORABLE SIR: I take the liberty of calling your attention to inclosed clipping, taken from the editorial column of the New York Times of March 25, and which I thought might prove of interest to you.

I trust when your commission finally sees fit to render a decision in the matter of the eastern freight rate advance case that they will see their way clear to make a general increase in freight rates, in accordance with the increased cost of upkeep of the railways instead of making a specific increase for the spotting of cars.

It would seem to me that industrial plants situated on railway lines and having their own tracks and for which privilege, when they erected the plants, were compelled to pay so much more for the property than they would have if the same had not been adjacent to railway lines, that it is a poor argument that such plants which are receiving spotting of cars free to-day have an advantage over those plants which are not adjacent to railway lines and have to cart their merchandise, and which plants not so advantageously situated were able to secure land at a much lower cost. Furthermore, by a charge for the spotting of cars you depreciate the value of land of such plants which are adjacent to railway lines, and I should judge it is not the intention of your commission to penalize the shippers in any way.

You have suggested in one of your previous letters to me that it was your thought that a brief of my views would be of assistance to the commission. I have been considering the advisability of drawing up such a brief, but I feel perfectly sure that your commission is so very thorough in its investigation of this question and are so thoroughly versed in regard to every phase attending it that a brief of my views could hardly be of value to you.

You are well aware of the fact that I have appeared before a great number of industrial bodies and chambers of commerce as well as before the Manhattan and Republican Clubs on this question, and your commission has received resolutions from these different bodies stating that they favor a rate increase asked for by the railroads, and above all things a desire was shown in all these resolutions that a decision be rendered as soon as your honorable commission could see their way clear to do so, and that such a decision would to a very great extent relieve the general business situation throughout the country of the state of uncertainty under which it is laboring. What is required to arouse general business from its present state of lassitude is a horizontal freight rate increase. The burden of such increase would then be spread over the widest area with the least possible pressure on the consumer.

It would seem to me in granting a horizontal advance the commission places itself in a simple position for making reductions on appeals afterwards. In attempting to give a differing advance for different reasons you make the present confusion still worse.

A point furthermore which I wish to call to your attention is that unless a horizontal freight increase be allowed that it will be almost impossible to refinance those railroad systems that are now in receivers' hands or hovering on the brink of bankruptcy.

If you are still of the opinion that it would be wise for me to formulate my ideas into a different sort of document, I wish to say that I am entirely at your command.

Referring to what I have stated about the different organizations I have appeared before on this rate question I certainly have come in contact during the past few months with diversified interests, and the general consensus of opinion has been that a revival of business in this country depends upon the decision to be rendered by your commission, and furthermore I have found that shippers generally concede that the railways should receive a recognition of their increased cost of operation by a general advance of freight rates.

Believe me,

Very respectfully, yours, J. STEVENS ULLMAN.

"FREE SERVICE" AND CHEAP FREIGHTS.

The railways have been prompt to take advantage of the Interstate Commerce Commission's advice to make a charge for services which the commission described as "free." The shippers who have been receiving for nothing the services estimated by the commission at $15,000,000 are equally prompt to begin their opposition. As a result the commission is now investigating the facts about the advice which it hesitated to put into an order. There is a pretty struggle ahead before the railways put that $15,000,000 into their treasuries and the chance is good that if the railways ever get it the cost to those using the railways will be several times the railways' receipts.

The basis for the prophecy is the Lehigh Valley's statement that whereas the railway gets less than 5 cents on vegetables for a haul of 344 miles, drayage within city limits is 15 cents. The railways' alleged "free service" is largely "spotting" and ferrying cars—that is, putting them into positions reducing the cost of team hauling. If shippers and consignees will not pay for free spotting and ferrying, the railways will deliver their goods upon the team tracks and wagons will replace the work done by locomotives. New York receivers may have to go to Jersey City for their goods, and deliveries on team tracks where there are any within the greater city will be managed with all the ease and celerity which accompanies haulage along West Street, where the teamsters wait longer hours than they drive.

The virtue of the 5 per cent advance in rates is that if the goods are carried the receipts are enlarged. The disadvantage of the attempt to collect $15,000,000 for free services is that the services were not considered to be free, that the payment for that sort of service is grudging, and that the attempt to evade the payment will add to the cost of the service and to the price of the goods more than the railways will receive. No doubt the railways are becomingly grateful even for the smallest favors and nobody but those who would have to pay the $15,000,000 would be sorry to see the railways get that installment of their deserts. But to get $15,000,000 for the railways at the cost of, say, $30,000,000 to shippers and perhaps another $15,000,000 for consumers of shippers' products would be a costly way of doing good to the railways.

—

WINCHESTER, VA., *March 26, 1914.*

Chairman HARLAN and MEMBERS
INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: If you have time to hear Mr. Thorne, you also have time to read the inclosed editorial, which represents the common-sense business view of the rate cases now before you. Please read it.

I have for years put my savings into good railroad stocks. In so doing I have been depending fully on the supervision which the commission has over the railroads. I have believed this supervision to protect me. In justice to me and to many hundred thousands like me you should allow the full advance asked. We depend on our dividends. We have been first producers, then savers, and there is no element in the country more worthy of consideration, if I do say it.

I firmly believe if you refuse this advance there will be first very hard times and prolonged depression, and eventually Government ownership and the downfall of the Republic.

I firmly believe if you grant the full advance your wisdom and large view will be amply demonstrated before the country within a few months.

Yours, truly,

MELVIN GREEN.

—

[From The New York Times, Thursday, Mar. 26, 1914.]

RAILWAY-RATE CASE DELAY.

The Interstate Commerce Commission is so sorry that it was unable to hear the testimony of Clifford Thorne, regarding the application of the railways to advance their rates that it has asked him to repeat it "in substance." If the railways desire to rebut this testimony, the commission will give them opportunity next month. If adjournments were what the railways wanted, how happy they would be. They first asked for this advance some years ago. The commission refused it for reasons since shown to be bad. Months ago the railways renewed their request, and the commissioners still want to be shown how to change their minds. To assist them they employ as their counsel the counsel whose argument they should regret accepting on the first application. As a friend of the court they admit to argument Mr. Thorne, chairman of the Railway Commission of Iowa and authorized spokesman for the commissions of the States of Iowa, Kansas, Nebraska, North Dakota, South Dakota, Arkansas, Oklahoma, and Missouri.

The list of States sufficiently indicates the sort of decision which would result from crediting the arguments advanced by Mr. Thorne. There is a double impropriety in hearing him as the representative of State commissions. The Interstate Commerce Commission has constitutional support in advising or even in directing the State commissions, but the State commissions have no such standing before the Federal commission. The State commissions represent neither shippers nor railways, and as commissioners they have antagonized the Federal commission, presuming to reduce the rates in their States which the Federal commission has declared to be reasonable in interstate commerce. The Interstate Commerce Commission is forgetful of the proprieties, if not of the legalities, of the case when it listens to such spokesmen. The Supreme Court listens to counsel representing litigants in the courts of the various States, but the Supreme Court never listens to State courts to plead in the person of its judges what the law ought to be, and particularly not to challenge the decisions of the Federal court.

The record of Mr. Thorne's original testimony ought to be available for the commission to read in its leisure, but he is asked to repeat it "in substance." Perhaps his revised version may be less insulting to the commission than his first, insisting that the records of the Federal commission were worthless. Commissioner Thorne's allegation was that the railways were padding their expense accounts. President Willard denied it on the spot. President Rea gave an indignant denial, which the Interstate commissioners would do well to paste in the tops of their hats. This charge which the commission wants to hear repeated concerns the commission even more intimately than the railways. The country has more confidence in the Federal commission than in the State commissions, whose spokesman is asked to repeat his slurs. But the country can not defend the Interstate Commerce Commission against itself. If it wishes to be regarded as a judicial body, it should act judicially, know when it is treated with contempt, and protect itself otherwise than by compliments to its traducers.

If the Interstate Commerce Commission has any confidence in itself, or in its accounts of the railways' condition, it is in a better position than any other authority to decide for itself forthwith, asking for no arguments. The official figures show that the commission has heretofore misjudged and acted in error upon the reports to it. That is the substance and the merit of the railways' appeal. The railways now are suffering one of the most serious reverses in their history. Their suffering is so severe that it is reflected among industrial investments. It can not be long before the country in general must suffer from the reductions of dividends in both railways and industrial

corporations. The Supreme Court itself has flinched from the results of the rigor of its law, and has reconsidered judgments which were impolitic. The Interstate Commission need not fear the country's reproaches for a retreat from its untenable position that it is infallible and must refuse advances of rates because it has been accustomed to do so.

This is a case where to give quickly is to give twice. It still seems probable that an advance of rates would increase revenues, but there will come a time when the reduction of the volume of traffic will nullify an advance of rates. The time to have advanced rates was when the railways first asked. Then trade was so robust that it could have paid and not missed the money. Now trade is in a decline, and an advance of rates is burdensome. No more could be asked of the commission than that its administrative acts should be as nearly right as its judicial decisions. More than half of them resist challenge. It is a good administrator who is right half the time, provided he knows his own mind and gives decisions with reasonable quickness after they are asked and the case is sufficiently presented. This case has been talked to death.

—

TOWNSEND GRACE CO.,
Baltimore, March 26, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Holding some stocks and bonds in railroads and being a large shipper by freight, I write to ask that you give relief to the railroads by granting their request for higher rates, and as soon as possible.

The railroads do not hoard money, but spend it when they have credit enough to get it. They are now in an embarrassing position, some with large amounts of money close to maturity and no credit to secure it, except on almost prohibitory terms. The railroad interest is probably second only to agriculture, and even big crops would be of little value if we did not have the railroads to haul them.

The granting of the small increase they ask for would practically and sentimentally have a good effect, for it would demonstrate that the railroads are at least going to have fair play. Their credit should immediately get in better shape and they would have the heart and courage to order at least necessary supplies to go ahead with necessary improvements which would benefit an army of people.

I fully recognize the good the commission has done by stopping rebating and discrimination. They now have the chance of doing nearly as good a thing by allowing the railroads to do their business at a reasonable profit, and the time to do it is now.

Yours, very truly,

WM. S. TOWNSEND.

—

BOSTON, MASS., *March 26, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

As a resident of California, temporarily visiting in Massachusetts, I beg to protest at the commission's delay in settling the eastern freight-rate question. The prosperity of the whole country is bound up in your quick action in the matter. While I believe in the Government ownership of the roads, the writer sincerely believes in meeting the present contingency with a just increase of traffic rates and wishes to add his little mite to the general protest at the hostile and dilatory attitude of the board. Take over the roads in time, but don't send the country to smash beforehand. Thirty days hence may be too late.

I will willingly pay my share of any increased rates laid down by the Interstate Commerce Commission.

Yours, respectfully,

GEORGE MORRILL,
17 Hastings Street, West Roxbury, Mass.

—

SPRECKLES, CAL., *March 26, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As a voter, a wage earner, and a consumer I urge upon you the strong advisability of granting an increase in railroad freight rates. My income is not received from any such employer, so that I do not speak from policy or instruction.

I have property in towns where railroad improvements have been started but not carried on, because of the pressure of immediate needs and the uncertainty of future developments. And I believe this experience may be met with in innumerable places.

The consuming public can be benefited in two ways: By decreasing its expenses and increasing its income. Both have their merits. But if by enabling them to cut down the disbursements you indirectly force them to accept a lessened wage or a reduced dividend, what has been accomplished? Something has been added to the top of the coverlet by shortening the bottom.

I know that on everything we wear and much that we eat there is a burden of transportation charge. But to increase it 5 per cent would be negligible, the increase would not be detected. Furthermore, if by granting this right to earn a fair return for service rendered I may enjoy my share of a new park at the railroad station, or may rent my house to a railroad employee, then the gains in acquisition will probably please me more than the infinitisimal freight increase will give pain.

I am closely concerned with a corporation depending for success on a fair protection accorded its product. The salary I receive from it looks larger than what I give it when purchasing its mildly taxed output. Likewise I am sufficiently familiar with one railroad to know that the useless expense it is compelled to bear because of unnecessary and inapplicable legislation and its lessened revenue through unwise rate restriction are enormous and should be eliminated. There are two sides to even the consumer's view.

Very truly,

L. L. PUTNAM.

—

ROCKWELL HOUSE,
Glens Falls, N. Y., March 27, 1914.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As an active business man, and proprietor of one of the largest commercial hotels in northern New York, I take the liberty of writing to you to urge upon you and the Interstate Commerce Commission the importance of giving to the railroads the advance of freight rates they are now asking for. By doing so at once I feel that it would restore confidence and relieve the business situation.

We are, and have been for the past few months, struggling with the poorest business that I have seen in this locality in a number of years, and if we do not get relief very soon I fear for the results.

My business is made up principally of commercial salesmen who sell goods directly to the trade, and there is but one opinion among them, and that is, if your honorable committee would grant the desired increase they are asking for it would do wonders to start the business.

I hardly think that your committee realize how bad business is. As an illustration: One year ago now we were averaging 100 guests a night, while at the present time we rarely have over 25, which means a great loss to us; and the same holds good with all other business places in our section. It is one universal complaint by every business house in our city that Washington must do something to relieve the situation.

I am inclosing you an editorial from the New York Times, and if you have not read it I trust that you will take the time to do so, as I think it is a very fair plain statement of the facts.

Trusting that you will take no offense at what I have written and treat what I have said in the same spirit that I intended it, I am,

Very truly, yours,

GEO. M. TAYLOR.

—

MUSCATINE, IOWA, *March 27, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We understand that your honorable body have up for consideration the adjustment of the present revenues of the railroads, and it has been called to our attention that the railroads contemplate preparing a tariff for switching at terminals. It is our opinion that this would work a hardship upon anyone who owned a sidetrack, and would be in a measure discriminating against them.

In our opinion it is quite apparent that the revenues of the railroads at this time are inadequate, but we believe the equitable basis of adjustment would be an increase of rates on all commodities.

Yours, very truly,

W. G. BLOCK CO.,
F. O. BLOCK, *Secretary.*

—

LA SALLE, ILL., *March 28, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

The Portland cement industry depends upon railroads as largest consumers. Diminishing orders during last few years now stopped entirely account financial difficulties of railroads. Numerous cement mills down for lack of business, with others to follow. Other industries similarly affected. To relieve present conditions and prevent entire demoralization of business, immediate action granting of 5 per cent raise respectfully urged.

GERMAN-AMERICAN CEMENT WORKS.

—

CITY OF BALTIMORE WATER BOARD,
Baltimore, Md., March 28, 1914.

Hon. Mr. CHAIRMAN,
Interstate Commerce Commission,
Washington, D. C.

GENTLEMEN: I am aware that some people on the outside of important "boards" ask foolish questions, but I would like your committee to read the inclosed clippings. I, for one, would not put out $1 of capital in any enterprise with the present condition of affairs in this country. Something should be done at once by your honorable party.

Yours, very truly,

TELFAIR W. MARRIOT.

—

EAST ORANGE, *March 29, 1914.*

J. S. HARLAN.

DEAR SIR: It may be that in the mass of facts concerning the request for increased railway rates some things have escaped your notice or have not occurred to you.

Mr. Brandeis is evidently taking the stand that since there exists waste in the case of the roads there should be no increase. Was the same ground taken in regard to the increase of pay of the railway employees? Were they wasting some of their pay, so that if so they might not need the increase?

Should the taxpayers of the country refuse to pay so much and be right in so refusing because a great deal of their money is wasted by the Federal and municipal governments? It surely is wasted. There is bound to be some in all large organizations. Does the commission ever waste time or money? Not purposely, of course, but it is there just the same.

In regard to "spotting charges," I venture to say that the new order will result in all the large plants doing their own spotting and only the small ones, who handle less than 15 or 20 cars per day, will pay the roads for such service. If you know anything about spotting costs you will see that a plant which handles 100 cars a day can save a lot of money by doing its own spotting—some $6,000 a month, I figure. In such case, where would the roads receive much of an increase?

As one who is interested only in seeing the roads treated fairly, I hope they are allowed all they ask for. It certainly would do no harm and it very probably would do a great deal of good. I, for one, would like to see the matter treated in a broad-mined way, remembering that railways are probably not as wasteful as shippers or other business men and that they are of more benefit to the country at large.

Very truly,

W. H. UNDERHILL,
14 Harvard Street, East Orange, N. J.

P. S.—I suppose you have so much business on hand that you can hardly pay attention to outsiders, but I feel constrained to write because of the general feeling among business men I know in favor of the roads being granted what they ask for.

—

THE MILLIKIN NATIONAL BANK,
Decatur, Ill., May 21, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIR: We wish to urge the necessity of giving some relief in the way of increased rates to the railroads of this country. They have been compelled, as you are aware, to advance wages paid to employees, and unless they are allowed to increase their rates, will soon become bankrupt, and their stockholders, who are distributed all over the country, will suffer from this disaster.

Respectfully,

O. B. GORIN, *President.*

BOSTON, *May 22, 1913.*

GEO. B. MCGINTY, Esq.,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As a manufacturer of textile fabrics for distribution all over this country, I am interested that the railroads be in a position to handle my output with dispatch and with safety, and therefore I feel, with all existing conditions, the higher prices for labor and the higher cost of everything that goes into the operation of railroads in the way of materials, etc., that they are entitled to charge higher rates for their transportation, the same as I would expect my customers to pay when I have to pay higher rates for my labor and for the wool which I use in making my fabrics.

I therefore earnestly request that your honorable commission will give the subject of an advance in rates to the railroads very serious consideration and allow them to charge such increase in rates as will enable them to keep their lines in condition for efficient operation and to return a sufficiently fair amount of dividend to their stockholders, so that *they* can continue to get increased capital for their extensions and improvements.

HAMILTON WOOLEN CO.,
By C. A. COLEMAN, *Treasurer.*

—

FIRST NATIONAL BANK,
Wichita Falls, Tex., May 22, 1913.

CHAIRMAN INTERSTATE COMMERCIAL RAILWAY COMMISSION,
Washington, D. C.

DEAR SIR: I understand that the railway companies of the United States, or a greater portion of them, are asking for the approval of the Interstate Railway Commission for a raise in interstate rates of an average of 5 per cent.

At present, while the price of all railway material appears to be advanced and while the demands upon the companies for increase of wages is being urged by every one of the railway organizations and most of our State legislatures are imposing additional burdens upon the railway companies in some respect by requirements for better service, more cars, and other like things, which, while possible, yet are frequently beyond the ability of the railway companies to grant, I am very much inclined to think that the prayer of the companies should be granted and that they should be given some additional revenues, and as one citizen will say that I would be glad for your honorable body to grant that prayer if, in your judgment, the reasons for it advanced by them, on proper hearing, appears sound.

Yours, respectfully,

R. E. HUFF, *President.*

—

[Personal.]

NEW PLANTERS HOTEL,
Augusta, Ga., May 22, 1913.

President WOODROW WILSON,
Washington, D. C.

DEAR SIR: For the interest and welfare of the United States of America, I wish to call your attention to an unjust sentiment which prevails against corporations, especially railroads, as is well known, has existed for quite a while. It's a disgrace and paralyzation to our civilized Republic. We now have railroad commissioners to settle, as I say, only against railroads, for nearly always they do; and these commissioners have been born with such spirit hereditary or instilled into them, for either they or their forefathers have gotten about $45 for a little poor bull calf which just a few days previous to the railroad killing him they would have tried their utmost to sell to a neighbor for $8. And for another example of the "live and not let live" spirit existing against railroads is: Nearly every time employees demand an increase of wages they get it, or some increase, and when a reduction of freight or passenger rates are asked of the commissioners they are reduced. On the other hand, if the railroads ask to be allowed to increase their rates they are denied. In short, the railroads have the brunt to bear; they have no protection in an employee liability bill. It should be plainly seen if you keep the railroad's "nose on the grind rock," "just ebbing the tide," by such unfair treatment, then I say you are killing people, for if such were not grinding them so unjustly they could keep their tracks in good condition and have better all around equipment; then wrecks would be rare.

I am, most respectfully,

C. SMITH,
A Traveling Salesman.

—

THE SOUTHERN ILLINOIS NATIONAL BANK,
East St. Louis, Ill., May 23, 1913.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: East St. Louis is the second city (70,000 population) in the State of Illinois, and is the termini of 21 railroads.

We are directly interested in the welfare and future prosperity of our railroads. To us the railroads are the life of our community, and it is all important to us that they should be afforded that which is necessary to their existence.

We heartily approve of their request for a horizontal raise of 5 per cent in their rates, and beg of you that their request be granted.

To us it is a serious question and the welfare of our community is directly affected. Prosperity with the railroads means prosperity with us. The reduction in wages means a stifling of conditions here, and I do trust that your commission will give due consideration to what this question means, not only to our community, but to all other communities depending upon railroads, as we are.

Yours, very truly,

H. D. SEXTON,
President.

—

THE CITIZENS' BANK,
Portland, Oreg., May 24, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I cannot help but feel that it is time that something was done about the railroad rates. There seems to be a general depression all over the country and the railroads are unable to raise funds, and considering all the labor troubles, I believe the railroads should be allowed to make a reasonable increase in their rates to offset the increasing demands of all railroad men. I believe that every citizen should take a hand in this matter and lend some little encouragement to the railroads to offset the prejudice which exists among so many people in this country. So I heartily indorse the increase of 5 per cent and believe it will be of material benefit to the country at large.

Yours, truly,

N. U. CARPENTER,
President.

—

PITTSBURGH, PA., *May 27, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the proposed rate advances on eastern railroads, as a manufacturer of the Pittsburgh district, we write to express our approval of a moderate increase in freight rates.

We believe the time has arrived when this action might well be taken in justification of the railroads' position, and that it would work no hardship on the shipping interests. As we read railway statements the net operating income has been steadily decreasing during the last few years while expenditures have been constantly growing, due to increased cost of labor and materials, as well as to the operations of certain laws calling for the employment of additional men to perform a specific duty previously carried out by a lesser number. Our judgment is that if the net income of railroads continues to show a shrinkage their borrowing power will be so impaired as to seriously interfere with the securing of credit on a basis to justify the continuance of a policy of improvement and expansion so necessary to the country's general good.

We trust, therefore, it may be the pleasure of the commission to grant a slight increase in freight rates on the present occasion.

Very truly, yours,

FORT PITT MALLEABLE IRON CO.,
FRANK J. LANAHAN, *President.*

—

NOWATA, OKLA., *May 30, 1913.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: It occurs to me that the petition of the railroads for a flat raise on all freight duties would be correct, and that the courts would be justified in granting this order in view of the fact that railroad building is now to a very great extent stifled and we are not having the necessary development of the country that we should have. If the granting of this order would stimulate railroad building, especially in the Southwest, I believe that your honorable body would be justified in granting their request.

Yours, very truly,

W. A. CHASE.

—

ASH GROVE, MO.

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are writing you to urge upon you the need, as we believe, of permitting the railroads of the United States to raise their rates 5 per cent as desired by them. I will say to you gentlemen that we are merchants carrying a stock of $30,000 to $35,000, and of course not going to personally profit by increased freight rates, but knowing how our own expenses of doing business have increased in recent years, and knowing how much has been demanded of the railroads in the way of improved service, and equipment for their safety and that of their employees, and of the increased wages to the employees, etc., and without claiming any very intimate knowledge of the railroad business, we feel convinced of the justice of their contention, and that we are on safe ground and acting intelligently in urging that the railroads be permitted means of meeting increased costs that we are all aware of.

Yours, truly.

W. T. CHANDLER & SONS STORE CO.,
Per W. T. CHANDLER, *President.*

—

BROOKLYN, N. Y., *May 30, 1913.*

Hon. CHAS. A. PROUTY.

DEAR SIR: Please read the inclosed slips. If there had been railroad men on the Interstate Commerce Commission, men that had seen 25 to 30 years' service in the railroad business instead of lawyers, you would not see the San Francisco Railroad in its present condition today. I knew this would come last fall when I wrote you. There are others just like it. Ten per cent advance in rates would not hurt any family of six more than $2, and save the savings banks of this country and estates. What conditions will some of these banks be in when they mark down the price of their bonds on July 1? But few of them will be able to pay 2½ per cent unless they have ship carpenters on their board of directors—some should pay none. I hope something will be done at once before some in Boston get the credit of putting some more roads in the hands of a receiver.

Very respectfully,

CHARLES HART,
908 Lincoln Place.

Railroads can not advance pay 10 per cent and then 7 per cent and 15 per cent on this high cost of living and pay more for their supplies, and when that has been done compel them to reduce rates instead of telling them to advance same moderately; 5 per cent east and west would prevent a crash within a few months; 10 per cent would save them forever.

—

PITTSBURGH, PA., *June 4, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The writer believes that at the present time it would be for the welfare of the country if the proposed rate advance on eastern railroads were allowed. We believe that it would work very little hardship on the shipping interests if the increase is moderate.

From the railway statements we read, we note that the net operating income has gradually decreased during the last few years, and the expenditures due to the increased cost of labor and materials and the necessity of employing additional men to perform the duty formerly carried on by fewer numbers has steadily increased the operating costs.

This seems to have shrunken the net income of the railroads to such an extent that soon their borrowing power will be so impaired as to interfere with their securing credit on a basis to justify them in continuing their improvements and expansions necessary to the country's general good. We hope therefore it will be the pleasure of the com-

mission to grant a moderate increase in the freight rates on this occasion.

Yours, very truly,

M. B. SUYDUM CO.,
R. S. SUYDUM, *President.*

—

CHICAGO, *June 7, 1912.*

Hon. C. A. PROUTY,
Washington, D. C.

MY DEAR SIR: For two years I have felt like writing and giving you my views as to freight rates. I never have owned railroad stocks, which if sold, would pay our average freight charges for one week here and at Montpelier, but it has seemed to me that the best interest of the country generally, leaving alone the railroad interest, required an increase in the rates charged for handling freight, which would enable the roads to provide equipment, track, and terminal facilities to meet the increasing business of the country.

Only an exceptionally mild winter prevented great loss and inconvenience the past season, and it does not seem that the business of the country can anticipate adequate accommodation until the roads are allowed to collect more money for the service. As I say this has been my belief for the last two years, and it is all the while being confirmed.

This letter is not being written at the suggestion or with the knowledge of any one living, and I simply give it to you as my judgment and conviction as a man and handler of grain.

Yours, truly,

E. W. BAILEY.

—

PITTSBURGH, PA., *June 9, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We understand that you wish to know the opinion of manufacturers regarding the increase of rates asked by the railroads.

We employ about 700 men and have about 70,000 tons of freight per year, counting what we ship out and receive, and we believe that if you grant the railroads the increase asked for by them it will be good for our business.

Respectfully, yours,

UNION SPRING MFG. CO.,
LEONARD G. WOODS, *President.*

—

BOSTON, *June 10, 1913.*

Hon. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We write to urge upon you the advisability of allowing the Boston & Maine Railroad and other New England roads to advance their carrying charges on freight so as to correspond with their increased outlay for maintenance and higher wages they have been compelled to pay in order to operate their roads.

We are large shippers and receivers of freight over the Boston & Maine Railroad and other New England lines. We do not object in the slightest degree if we have to pay a little advance in our transportation charges, and we are sure our customers feel the same. The enforced economies which are now necessary for the transportation companies to put in practice in order to keep out of bankruptcy is only done at the cost of poorer service. We are very certain that nobody carrying on any kind of business can give something without an added return.

Kindly do what you can in this direction, and greatly oblige,

Yours, very truly,

STONE, TIMLOW & CO. (INC.),
SHENK-ADAMS CO.,
By ALBERT H. STONE, *President.*

—

BALTIMORE, *June 18, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As large shippers who prepay all their freight, and are hence vitally interested in freight rates, we feel it the duty of your honorable body at this most trying time in the history of railroads, when disaster portends and shipping facilities are in danger of being curtailed, due to lack of ability to raise money to make necessary repairs and provide for needed facilities, to grant the railroads the 5 per cent increase they ask. Our railroads are the backbone of commerce, and to endanger their growth and normal development spells danger for the shipper. Every item of expense of the railroads has been increased by law and by pressure of public opinion, while their income has been curtailed by the same elements. There can only be one result of such tendencies, and that is receivership and reduction of facilities, both disastrous to shippers. Business is still good, although curtailment has been evident for some months, and if threatened attacks upon business by the Government, together with tariff uncertainties, is augmented by continued attacks upon common carriers, business contraction and loss of confidence, followed by hoarding, will inevitably ensue and conditions akin to 1893 will be most likely. The sense of all people we have come in contact with is in favor of granting railroads the increase asked for.

Yours, very truly,

SHARP & DOHME.

—

SENECA FALLS, N. Y., *June 18, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are manufacturers and shippers and appeal to you that you allow the railroads of the country to advance their freight rates. The credit of the railroads is gradually dwindling, and we believe if you do not grant them an increase in freight rates they must face a crisis.

It seems to us there are two great factors which count for prosperity in our country. One of these is the agricultural crops, the other is the success of the railroads. We had large crops last year, and if the railroads had an increased revenue we would now be enjoying unbounded prosperity in this country.

The railroads are the backbone of good business. They have been handicapped by restrictive legislation, they have been compelled again and again to raise wages, the cost of equipment has advanced, they have suffered flood losses, crew bills have been passed, and they have been prohibited from advancing their rates, although they are expected to improve their service. It seems as though the limit has been reached. If our railroads are to continue to do a profitable business they should be allowed to place upon the public, through higher rates, some of this additional burden they have been compelled to assume.

The business condition of the railroads affects many other lines, and they have been largely curtailed for a long time. We have had so much "trust busting," "tariff tinkering," and "railroad smashing" it would seem as though all this should be discontinued and give business a chance.

If our legislators and those in authority only knew what was in the hearts and minds of the business men of our country and would act accordingly a brighter day would dawn for the American people. We hope for your favorable consideration.

Yours, respectfully,

H. W. KNIGHT & SON.

—

CHICAGO, *June 19, 1913.*

To the CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: While our company is not a shipper of heavy tonnage, we are greatly interested in the prosperity of the entire country, and believe that the country can not have great prosperity unless the railroads prosper, and many of them are not now in a prosperous condition, not because of a lack of tonnage, but because of the many increases in wages and the high cost of materials which they have to buy.

We therefore hope that the increase in rates asked for by the railroads will be granted by your commission.

We in the West believe that fair crops this year and an increase in rates granted to the railroad companies will almost insure continued prosperity for the entire country.

Yours, very truly,

WAHL ADDING MACHINE CO.,
C. S. ROBERTS, *President.*

—

THE CITIZENS NATIONAL BANK OF CORINTH,
Corinth, Miss., June 24, 1913.

The SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Please pardon me for calling your attention to the request of the railroads for permission to make a horizontal raise of 5 per cent in their rates, which I believe is entirely reasonable, and I believe the request should be granted, for if our railroads are not permitted to operate on a profitable basis the business and commerce of our country generally would be very much corrupted.

Very respectfully,

JNO. F. OSBORNE, *President.*

—

BIG STONE GAP, VA., *July 22, 1913.*

Hon. C. C. MCCHORD,
Interstate Commerce Commissioner,
Washington, D. C.

MY DEAR SIR: I am not, as you probably know, a railroad attorney; my chief clients are shippers, mining and manufacturing companies, yet I take the liberty of writing to you as a member of the commission to say that I believe under present conditions the railroads of the country, certainly the eastern roads, ought to be allowed to make a reasonably uniform increase of rates. So long as the increase is uniform no particular industry or shipper can complain of discrimination. The price of practically everything else, including money, has advanced, and common justice to the railroads seems to demand that they should be allowed to make an increase. I have had occasion to discuss this subject frequently of late with my friends, who represent many interests and shades of opinion, and I think the sentiment is pretty nearly universal among thinking and reasonable men that the railroads ought to have some relief.

At the suggestion of some of these friends I take the liberty of writing this to you, believing that you gentlemen of the commission want to know, and are entitled to know, public sentiment gathered from many sources.

I may repeat here what I said to you in person in a recent conversation in Washington, that your commission is the biggest single force, with the possible exception of the Supreme Court, in our national life to-day, for good or bad, to the mass and to the average man.

My interest in the subject and my belief in the fairness and the rectitude of the commission is my excuse for writing you.

With highest personal regards, I remain,

Very sincerely, yours,

R. T. IRVINE.

—

BOSTON, MASS., *August 27, 1913.*

INTERSTATE COMMERCE COMMISSIONERS,
Washington, D. C.

GENTLEMEN: I respectfully pray that your board authorize the New York, New Haven & Hartford Railroad Co. to increase the rate it may charge for freight and passenger service.

A few years ago, relying upon the assurance of the Commonwealth of Massachusetts that the stock was worth substantially more than $125 a share, my wife and I paid $2,500 for the right to subscribe to 100 shares of New York, New Haven & Hartford stock at $125 a share, so that our stock cost us $150 a share. The income from this stock amounted to $800 a year, which we have relied upon to pay for the education and support of our children.

As you know, the New York, New Haven & Hartford Railroad Co. has already cut is dividend to 6 per cent, and it appears as if it will have to cut its dividend to 4 per cent per annum. The railroad is doing a good business, but your board will not allow it to increase the charges for services proportional to the increased expense for labor, material, and borrowed money required to carry on the business.

In a recent statement I understood that your board advised the stockholders not to worry about the value of the New York, New Haven & Hartford stock. If the stockholders are to be relieved from worry and from actual loss, your board can at least do its share by authorizing reasonable increases in rates.

I respectfully point out to your honorable board that the question as to whether the officers of the railroad company may have made mistakes in the past or not has absolutely no bearing on the fact that the railroad and everybody else has to pay more for materials, labor, and borrowed money now than used to have to pay. Also, that I did not rely upon any statements of the officers of the road when I bought the stock, but relied upon the implied guaranty of the Commonwealth of Massachusetts that at $125 a share the stock was a perfectly safe and sure investment.

I hereby make a personal appeal to the members of your board to sweep away technicalities and act with fairness and common sense for the benefit of myself and other stockholders whose savings have been invested in the New York, New Haven & Hartford Railroad Co. stock at prices of $150 or more per share, with the belief that the Govern-

ment authorities would protect their interests to the extent of permitting the railroad company to earn $8 dividends per share per annum.

I respectfully call your attention to the fact that immediate action is necessary if you intend to adequately protect the interests of the stockholders.

Respectfully, GILES TAINTOR.

—

PITTSBURGH, PA., *September 13, 1913.*

EDGAR E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: In regard to the 5 per cent increase in freight rates, for which the railroads east of the Mississippi River are petitioning you, we would say, as large shippers over the various railroads (our shipments of coal and coke during 1912 amounting to approximately 3,000,000 tons) that we believe that the railroads are entitled to and should be granted the increase asked for, and when this matter comes up before you, we trust that it may have your favorable consideration.

Yours, very truly,

J. H. HILLMAN & SONS CO.
J. H. HILLMAN, Jr.,
President.

—

PHILADELPHIA, *September 24, 1913.*

Mr. EDGAR E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: We understand that the railroads east of Chicago are endeavoring to secure your commission's approval of a 5 per cent advance in freight rates.

As sellers and shippers over some of these railroads of a large tonnage of bituminous coal, we are naturally greatly interested in rates of transportation, but, as business men, we can not see any wisdom or justice in a policy or practice either of legislation or administration, the natural if not the necessary result of which is not only to prevent healthy and hearty development of a great industry, but to handicap it in an illiberal way so that a condition of prosperity grows insecure and vitality becomes endangered.

The railroads of this country constitute a great industry and a very beneficent one.

We think we are expressing the belief of most of the men who conduct successful enterprises in this section of the country when we state that we believe the railroads east of Chicago need this advance, and that they should be permitted to make it.

We share with many others the belief of the solidarity of business interests—no one of them can suffer long without the others ultimately suffering, and with them the interests of the people. Railroads, in our judgment, should be allowed to exact liberal rates for transportation in order that there should be the greatest freedom of growth and development, if this results in better service to the country, with better facilities, and with better results for all.

Yours, very truly, J. H. WEAVER & CO.

—

THE CONSOLIDATION COAL CO.,
Baltimore, September 25, 1913.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: This company being among the largest miners and shippers of coal in the United States, I am taking the liberty of writing you in connection with the petition of the eastern railroads, requesting your honorable body to grant them an increase of 5 per cent on all rates.

The Consolidation Coal Co. produces and ships about 12,000,000 tons of coal per annum. We have in operation 12 mines in Somerset County, Pa., and 43 mines in the Fairmont region, West Virginia, both of these fields depending entirely upon the Baltimore & Ohio Railroad Co. for transportation facilities; 11 mines in the Georges Creek region, Maryland, depending upon the Cumberland & Pennsylvania Railroad Co., which connects with the Baltimore & Ohio Railroad Co., Western Maryland Railroad Co. and Pennsylvania Railroad Co.; 4 mines in the Millers Creek region, Johnson County, Ky., which depend upon the Chesapeake & Ohio Railroad for their transportation facilities; 14 mines in the Elkhorn coal field in Eastern Kentucky, 8 of which depend upon the Sandy Valley & Elkhorn Railway (the Baltimore & Ohio Railroad) and 6 upon the Lexington & Eastern Railway (Louisville & Nashville Railroad).

The markets for these coals are the industries located in the Eastern States, England, Egypt, Mediterranean ports, South America, Mexico; also St. Louis and the great Middle West, and via the Great Lakes to our large storage ports at the head of the Lakes, where the coal is distributed during the winter months throughout the Northwest; therefore, with this variety of markets and the number of fields widely separated, we can view the situation more generally perhaps than an industry which is more local in the disposition of its product.

In 1907 for the first eight months we mined in our Fairmont field 4,247,333 tons; at that time we had 41 mines in operation, since which time we have spent in equipment and opening additional mines $1,019,542.75; for the first eight months of 1913 we have produced in our Fairmont field 3,439,255 tons, showing a decrease in face of all these expenditures and additional mines of nearly one million tons.

In 1907 there was no question of marketing coal if it could be produced. The same condition has absolutely prevailed in 1913, and as the physical capacity of our mines has largely increased in the last six years, the reason for this decrease must be sought elsewhere, and I think we can make this clear to your mind.

In 1907 in the Fairmont region we had 41 mines, and the total number of mines in the region was 68; since that time there has been a large increase in numbers and physical capacity of mines, so there are now 135 mines in operation in this region, and, therefore, while the total amount of coal produced in the Fairmont field has increased, yet owing to the inability of the carrier, the Baltimore & Ohio Railroad Co., to furnish us with equipment to load the product of our mines, our tonnage has steadily decreased.

As the industrial development of that region increased and expanded, the equipment of the Baltimore & Ohio Railroad Co. was required by law to be distributed pro rata, and notwithstanding the fact that in the last three years President Daniel Willard, of the Baltimore & Ohio Railroad Co., has expended on rebuilding the line and furnishing equipment nearly one hundred millions of dollars, with the exception of Mondays we hardly ever receive sufficient cars at all of our mines in the Fairmont region to have a full day's run, and on many days at least half of our mines are shut down for want of cars.

At the present time on our lake obligations, which have to go forward before the close of navigation, we are behind 700,000 tons, and the car shortage, week by week, is becoming worse instead of improving.

Most of the railroads have failed to furnish the equipment that is absolutely essential for the coal operators to be in position to give steady employment to their men and fulfill their contract requirements to the consumers.

It is claimed by the railroads and it seems to me with reason, that unless their rates are advanced they will be unable to make even an attempt to furnish the necessary equipment and transportation facilities along their lines, and the fact stares us in the face that if this is not done that the industries which ship large volumes of freight must look with fear into the future. For this reason we feel that their petition should be granted, and while it applies on coal as well as on other commodities, we think that this increase will be justified by enabling the railroads to provide transportation facilities to their shippers, which is absolutely essential not only for the shippers' welfare, but for the welfare of the general community.

A large amount of the increase of freight rates on coal from, and other commodities into, the regions in which this company's operations are located, will fall on this company, and as an illustration the 5 per cent advance will, at least, cost this company $75,000 per annum on its Lake coal alone. As we have done, and are doing, a large export business and have sent in the past hundreds of thousands of tons of coal to the Mediterranean and other foreign ports, in this case will it also be, in the future, a direct loss to this company, as the price on such shipments is a delivered one, and therefore the higher the freight rate the more the price of coal at the mines must be decreased to meet with the competition from England and other countries, and the same applies, as I have stated before, to the coal which goes via the Great Lakes during the season of open navigation.

Undoubtedly there are, in our opinion, several unfair and unjust differentials between the regions existing under the present tariffs, but these can be taken up in the future with the commission after a general increase is granted practically as well as before an increase is granted, and it is our intention, unless some fair adjustment is made between the railroads in this connection, to take up some of the questions in the future with your honorable body.

The coal operators, to get the production of their mines to the market must have something more than a freight rate—they must have transportation facilities, and if the railroad companies are unable on the present rates to obtain sufficient funds, (and it will require large sums) to provide themselves with ample cars to perform their public duty, which is to provide each and every shipper along their lines with ample transportation facilities, then we think that the general freight rate increase should be granted, even if it does increase the cost of transportation to ourselves and others.

Very respectfully, yours, J. W. WHEELWRIGHT,
President.

—

TOWER HILL CONNELLSVILLE COKE CO.,
Uniontown, Pa., October 1, 1913.

Hon. E. E. CLARK,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: On the question of the general advancement of 5 per cent on freight rates which is before your commission, the Tower Hill Connellsville Coke Co. is in hopes that the Interstate Commerce Commission may see the advantages that will come to the various business interests of the country by granting the increase asked for in freights. We are of the opinion that there has been great improvement made in matters of transportation, brought about by the Interstate Commerce Commission, which has benefited the railroads as well as the shippers.

The difficult problems which have come before you, and the wisdom with which they have been solved, is appreciated, I believe, by a vast majority of shippers. Some evils and, as in the Coke case, some discriminations, still exist, but we believe these can be more easily corrected when the total revenue received by the railroads is sufficient, in the opinion of the commissioners, to allow such corrections to be made.

Respectfully submitted.

L. W. FOGG, *General Manager.*

—

PERKASIE, PA., *October 1, 1913.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: I am a commercial traveler and desire to state that the business men of the country express themselves as in favor of advance in freight rates to insure dividends on the investments in railroad stocks. It is a plain, simple proposition, "more profit or failure."

Yours, truly,

W. C. ERWIN.

—

BERWIND-WHITE COAL MINING CO.,
New York, October 8, 1913.

Mr. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The urgent application of the railroads east of Chicago for your commission's approval of a 5 per cent advance in freight rates is a matter of common knowledge.

Companies in which I am greatly concerned are sellers and shippers over some of these railroads of a very large tonnage of bituminous coal, and, as business men, we are naturally deeply interested in railroad rates, facilities, and methods upon which depend economical and efficient transportation and distribution. It is quite natural that those who are daily brought face to face, in a practical way, with the varied problems that confront those engaged in the large industries consequent upon the growth and development of our country should look at the matter of transportation rates differently from those whose environment and activities are such as either to narrow the scope of view or to make the consideration of the matter theoretic, philosophic, or academic. But it would seem that clear-thinking men in this country should find it difficult to justify any policy of legislation or administration that tends to prevent healthy development of important and beneficent industries or that treats them in such a way as to shake the foundations of their prosperity and menace the continuity of healthy and hearty life.

Perhaps no industry has contributed more to the material advancement and prosperity of our people—at large and otherwise—than the railroad industry. The railroads have not only sought to keep pace with progress and development; they have most frequently been the leaders in and instigators of progress and development.

It is my judgment that they should be treated in a liberal and not an illiberal way; that they should be allowed liberal rates for transportation, and that they should not be cribbed, cabined, and confined by vexatious restrictions that deprive them of the means of free and healthy growth and development and fetter their best efforts to render satisfactory service with increased facilities and adequate accommodations.

It is my belief that the railroads east of Chicago need the advance requested; that no good end will be subserved by withholding from them the privilege of making it; and that good to all—shippers included—will be the result of the increased earnings to come from such advance.

Yours, very truly,

EDWARD J. BERWIND, *President.*

—

CARBON STEEL CO.,
Pittsburgh, Pa., October 10, 1913.

To the CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I will say, in regard to the Carbon Steel Co. and also several other enterprises in which I am interested, including the Western Coke Co. and the Pittsburgh Iron & Steel Foundries Co., all of Pittsburgh, that we are not opposed in any way to the advance of 5 per cent which is asked for by the railroads of the country.

I believe that it is in the interests of general business that the railroads should have this advance, as they have been cut down so in their rates and the cost of labor has increased so in the last few years that I do not think it possible that they can continue to do business without some increase of rates or heavy reduction in expenses.

As all business depends more or less on the railroads for their business, I believe it is nothing but right that they should be given enough revenue to pay a fair interest on their investments and also sufficient income, in addition, to insure their credit, which has been very largely impaired in the last two or three years.

Very truly, yours,

CHARLES MCKNIGHT, *President.*

—

CHICAGO, *October 11, 1913.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: I wish to know if there is a possibility of a rate increase for the railroads in the near future. The heavy increase in operating expenses seems to be the cause of the railroads' inability to pay dividends to stockholders and in some cases they have a hard time to raise enough money to even pay operating expenses. I am a stockholder in the Rock Island Co., and upon investigation find the cause of their financial difficulties seems to be in the reduction of freight and passenger rates from 3 cents to 2 cents a mile and the heavy increase in expenses. What is left for the stockholder? I invested all I have in Rock Island and would hate to lose all my earnings, and what relief is in sight for the stockholders of railroads in like condition? Are we not entitled to a fair interest on our investment?

Any information would be greatly appreciated, and thanking you in advance, I am,

Very truly, yours,

OLIVE BUTTSBACK,
526 Unity Building, Chicago.

—

PITTSBURGH STEEL FOUNDRY CO.,
Pittsburgh, Pa., October 15, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: We understand there has been an effort made by the eastern railroads to have 5 per cent increase in freight rates.

This question has not been brought up to me in any shape or form by the railroads, but we are fully of the belief that they are entitled to it, and as shippers of a considerable quantity of material we are willing that they should have it. We believe they are justified in asking for it and we wish to be regarded as in favor of their request.

Yours, very truly,

PITTSBURGH STEEL FOUNDRY CO.,
STEWART JOHNSTON, *President.*

—

1064 WILLOUGHBY AVENUE,
Brooklyn, N. Y., October 16, 1913.

Honorable CHAIRMAN INTERSTATE COMMERCE COMMISSION.

DEAR SIR: I have been tempted to address you, hardly knowing whether there is any sense or propriety in it, hoping that any ignorance on my part, of the subject, will be kindly excused.

As I understand it your honorable board was appointed to look after the interests of all concerned in railroad affairs. I am but one of thousands of men and women of modest means who, for lack of larger capital or time to devote to other interests, have invested their savings in railroad stocks. I have been for a long time in the unhappy position of seeing a continual depreciation and loss of return on my investment. It appears to me that the present and future welfare of those in my position have not received due consideration; and that our injury, vast in the aggregate, must be ultimately shared by the country in general.

If the laws so limit the railroads that they can barely earn expenses, then our lot will be hard indeed. Surely it is to be hoped that your commission of well-intentioned and honorable men will find a means to overcome this condition of distrust and anxiety overhanging those interested in the welfare of railroads.

Respectfully, yours,

F. W. WEAVER.

—

THE MCCONWAY & TORLEY CO.,
Pittsburgh, Pa., October 16, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand that your commission will soon have before it for consideration the question of allowing the eastern railroads to make an advance of 5 per cent in the present freight rates, and inasmuch as we are shippers and payers of freight to the extent of approximately $80,000 per year, it occurs to us that we have a right to be heard on the question, and we therefore take the liberty to address you this communication in regard to the matter.

When we take into consideration the requirements that have been imposed upon the railroads of the country in relation to the adoption and maintenance of safety appliances, with the largely increased pay rolls as the result of compulsory advances in the rates of wages of all classes of their employees, and the compulsory requirement of additional employees, which from the operators' standpoint of the railroads were unnecessary, and then consider that the railroads have not been allowed to make any increase in their rate of charges to meet these increased expenditures, the condition presented is one without a parallel in any other known line of business or commercial activities.

In our manufacturing operations we have found during a period of the last two years that our average rate of wages has been increased practically 33 per cent, and this taken in connection with advances in the prices of all raw materials entering into our products have compelled us to make advances in the prices of our goods, and had we, as manufacturers, been debarred from making any advances in the prices of our products we should simply have had to shut up our shop and go out of business; but looking these conditions squarely in the face, and without any desire to increase our costs of manufacture, we are most heartily in favor and would most strongly urge that the allowance in freight rate which the railroads are asking be given your favorable consideration and granted. The question is one of vital interest to us, since if the railroads are denied the sought-for relief, and in consequence are compelled to adopt a policy of retrenchment and of cutting down of expenditures to the lowest limit with a curtailment of orders for equipment, the condition thereby created will be a most serious one for us and for every other manufacturer of anything in the railroad line or for any line of manufacture that is in any way contingent upon the prosperous operation of the railroad systems.

The steady falling off in business in our line, not only at our own plant, but in the plants of many others in the same lines of business during the last two months, seems to indicate to us the approachment of a considerable period of very lean and unsatisfactory business, and unless something is done to counteract this tendency the only possible result will be a largely decreased operation, with reductions in the number of working force as well as reductions in the rates of compensation, so in the final analysis it is plainly seen that the people who suffer the most will be those who lose their jobs and have their rates of wages reduced.

We fully believe that the rate of increase which the railroads are asking is entirely warranted by the increased costs of operation to which we have referred, and again we say that we most strongly urge that the relief they seek shall be allowed.

In closing it may not be out of place to say that we are writing this letter entirely on our own initiative and without any suggestion or request from anyone connected with the railroad industry.

Yours, truly,

THE MCCONWAY & TORLEY CO.,
STEPHEN C. MASON, *Secretary.*

—

UNION STEEL CASTING CO.,
Pittsburgh, Pa., October 16, 1913.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Our shop is employed almost exclusively in furnishing castings for steam locomotives and until recently ran to full capacity. We are now running only 35 to 40 per cent of our capacity and can only furnish employment for about one-half of our 1,200 employees.

We are informed that one of the reasons why purchases by the railway companies have greatly decreased during the past few months is the increased expense to the railroads because of increased cost of labor, etc., without corresponding increase in revenue. We know that labor has increased materially, as well as other items of expense, and we would like to urge that the eastern railroads be granted the 5 per cent increase in freight rates for which they have asked.

We are large shippers, but wish to be fair with the railroad companies and are especially anxious to keep our own shop going and furnish employment for our men.

Yours, respectfully,

UNION STEEL CASTING CO.,
C. C. SMITH, *President.*

—

PENN STEEL CASTINGS & MACHINE CO.,
Chester, Pa., October 17, 1913.

To the MEMBERS OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The present lull in the steel-casting business has prompted us to analyze the cause of same, and our conclusions compel us to write you in defense of the railroads. We believe the railroads are the only business corporations to-day who, regardless of their investments, cost of operation, upkeep, etc., do not have the power to fix a price on the service they afford their customers, no matter what the necessities of the business indicate.

Public sentiment and outside demands have increased the rate of wages of their employees from time to time which, without a corresponding increase in income, has necessarily reduced the earning power of the railroads. As a result renewals and repairs of rolling stock and equipment have been retrenched upon to such an appalling magnitude that if a stop is not presently effected actual danger will confront the public through inefficient equipment.

At this writing this retrenchment has seriously decreased the business of locomotive and car builders and, needless to add, as these industries are a barometer on steel foundry products, has resulted in a flatness in our business which is worse than we have encountered for years.

This condition appears to be becoming general with all lines of manufacture connected or affiliated with the production of materials used by the railroads, and we want to put ourselves on record as heartily advocating the granting to the railroads of the privilege of increasing their rates as the exigencies of their business demand.

We thank you for your kind consideration of the above matter and beg to remain,

Yours, very truly,

PENN STEEL CASTINGS & MACHINE CO.,
W. S. BICKLEY,
President and General Manager.

ROBERT G. DAVISSON,
221 Jefferson Avenue, Brooklyn, N. Y., October 20, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am the owner of a few shares of railroad securities for which I depend almost entirely for my subsistence. I was formerly in the mercantile business, but having become totally blind I was compelled to give it up. Noting from time to time the additional charges put upon the railroad companies and fearing that the time may soon come if these additional charges continue that there will be a reduction in the dividends made by the companies, to the injury of those like myself who are holding securities, I write to ask you that if the companies request from you the privilege of advancing their rates that you will treat them fairly, thus enabling them to continue the dividends they have been recently paying and prevent inconvenience to those holding their securities. As to my identity and responsibility, I would refer you to George W. MacIbeary, connected with the house of Henry Clews & Co., corner of Broad and Wall Streets, New York.

Thanking you in advance for what you may do in this direction, I am,
Sincerely,

R. G. DAVISSON.

—

EDWARD LOWBER STOKES,
104 South Fifth Street, Philadelphia, October 21, 1913.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: It is my opinion that the railroad companies of the United States are justified in demanding an increase in freight rates. This opinion is shared by almost every normal business man that I have seen.

While I do not own a single share of stock in any railroad company, I believe that it is most important for the welfare of this country that this matter should be adjusted satisfactorily to the railroads; otherwise the only alternative would seem to be a stiff reduction in the cost of labor.

Yours, very truly,

LOWBER STOKES.

—

PENNSYLVANIA COAL & COKE CORPORATION,
New York, October 22, 1913.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At the request of the New York Central officials, we beg leave to put before the members of the Interstate Commerce Commission our impression regarding the request of the eastern railroads to be permitted by your commission to make a general advance of 5 per cent on freight rates. We understand that their request includes an advance in the rates on bituminous coal.

Our corporation is a miner and shipper of approximately 3,000,000 tons of bituminous coal annually—about 1,200,000 tons over the Pennsylvania Railroad lines and about 1,800,000 tons over the New York Central lines. We operate 32 mines—22 in Cambria County, 5 in Indiana County, 3 in Clearfield County, and 1 in Blair County. Practically all of this tonnage is marketed in the eastern, New England, and tidewater markets.

Our observation is that the Pennsylvania and New York Central lines have not provided, in the way of equipment, additional tracks and terminal facilities for the business they are called upon to handle in our line. The gradual increase in the business that is constantly taking place is making their lack of equipment and facilities felt in our business in a very direct and costly manner.

We believe the railroads should be equipped with the necessary facilities to meet a reasonable maximum demand. As an illustration, the demand for a full allotment of cars and the working of our mines to their capacity usually begins about the 1st of September and lasts until about the 1st of April, and it is at that particular period of the year that we suffer.

The result of the above conditions is that operating costs at the mines are largely increased, and there is unquestionably a great economic waste in the method of producing our coal resulting therefrom. Another important point in this connection we believe to be the fact that on some railroad lines, particularly on the lines of the Pennsylvania Railroad, there is a large percentage of the coal cars that are owned and operated by coal operators. Our company operates 700 private cars. While these cars are operated by us at an actual loss, they are necessary under present conditions in helping to run our operations more steadily. We believe this practice has resulted in great harm to those operators who are not in a position to furnish their own equipment. Some coal companies own or control sufficient cars to run their operations exclusively with them. The result of some operations running steadily, while others are working intermittently, is that labor naturally drifts to the steady working operations, and the labor remaining at the other operations has good reason for dissatisfaction with its earnings. The result is constant unrest. The railroads should own all of the equipment operating on their lines. It would be much better for the average operator and the labor he employs if such were the case.

We agree with some of the arguments that are made on behalf of the railroads, and believe your commission would be justified in permitting the advance they request. In order that no new and additional complications in the rate situation be introduced, we believe the increased rate should apply to all of the railroads operating from the coal regions. It seems quite apparent that the railroads have had a large and legitimate increase in their operating costs due to the increased rates paid for labor and higher costs of the general material used in railroad work, together with the large increase in local, State, and national taxes. For some time the railroads have been unable to sell their securities at the rates for money prevailing for so many years. The increased cost of their money is a large and additional factor of expense, and they should have sufficiently remunerative rates for the traffic they carry to be enabled to pay current rates for money, all in order that they may do their financing when the legitimate needs of their business require additional expenditure. We believe a general advance in the railroad rates would not adversely affect the business interests of the country, and that the time is now here when such an advance would not only be beneficial to the railroads and their credit, but that the effect of such an advance would lend greater stability to the capital invested in railroads, and enable them to so handle their business as to improve the welfare of the people generally.

Yours, very truly,

T. H. WATKINS, *President.*

—

THE 100% RAIL JOINT CO.,
Philadelphia, October 23, 1913.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I respectfully urge that, in determining the railroad-rate question, your honorable body may give most serious consideration to that phase of the question which touches most intimately the interests of a body of manufacturers so large that the measure of their prosperity may truthfully be said to be an accurate index of the industrial condition of our country. The industries to which I refer are so closely related to the activities of our railways that any physical, economic, or legislative influence which is detrimental to the welfare of railways as a whole invariably reacts in almost identically the same measure upon our industries.

The very serious question, which you have under consideration, therefore concerns us so keenly because it is of such vital import to the railways. I believed this firmly three months ago, but now, after having just returned from a trip of nearly 10,000 miles, on which I have come in contact with the highest executive officials of many of our largest railway systems, I am still more firmly convinced that if you do not extend some assistance to the railways, in the way of a reasonable freight rate increase, there will be many of them who will find themselves shortly in such serious straits that they will be forced into the hands of receivers, in spite of the exercise of such rigid economies as are in themselves a detriment to the physical good of the properties.

Undoubtedly, there are rich railway systems which could weather the adverse effect of your refusal to grant any increase, but in any event our allied industries are bound to be in precisely the same category; some will continue to prosper to a lesser extent than formerly, others will find it hard to derive a net income upon investment, and still others, constituting a very large number of worthy industries, will not find it practicable to make ends meet.

Such disastrous consequences must not be measured by you in terms alone of the actual amount of the increase which you are asked to grant. They must be measured in the effect which this amount of increase will have upon the continuance of activity, meaning the employment of labor and the circulation of money on the part of such industries as would otherwise be compelled to greatly curtail or entirely discontinue such activity.

Industry must be kept on the move, and I respectfully urge that the most fallacious argument which has been advanced against increase is that which says that the reason that many industries do not prosper to a greater extent than they do is because of wasteful or antiquated methods used in the prosecution of the business. This is only half the truth; but, even granting that it might be so, is that any justification for throttling the industry without any attempt to apply a remedy which would put it on a sounder basis? Present conditions require something a little more moderate than a death sentence.

Trusting that these comments may be of some use to you, I beg to remain,

Respectfully, yours, W. PATON THOMSON, *President.*

—

THE CROSBY FRISCIAN FUR CO.,
Rochester, N. Y., October 25, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Time was when we thought the railroad companies were robbers, and we think they were to some extent, because they had everything their own way; but railroads that do an interstate business—and they all do—come under your regulations.

Our freight bills are a considerable item, and taking a hard-headed business view of it, we are not anxious to have them increased more than necessary, but we believe the railroads are entitled to consideration in asking for increased freight rates when we take into consideration their increased expenses in several directions.

We are willing to have our freight rates increased if it will tend to keep the railroads in good, healthy condition, for the country depends on transportation. If transportation breaks down, business will be crippled beyond redemption. We think the railroads are extremely modest in their request for advanced rates.

THE CROSBY FRISCIAN FUR CO.,
G. N. CROSBY, *President.*

—

WM. WATERALL & CO.,
Camden, N. J., October 28, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: A sense of justice and a desire to discharge my duty as an American citizen, interested in the rights of all the people, prompt me to write you expressing my personal views in favor of granting a reasonable increase of rates to the great eastern railroad systems, which, with their vitalizing forces extending over the whole country, have become a necessity for its commercial, industrial, and agricultural interests.

After 54 years of business experience, I can personally appreciate the conditions that confront the railroad companies, with their increased operating costs and difficulty of maintaining efficiency of equipment, especially in securing capital, unless they can show satisfactory earning capacity, as it seems to be inevitable that the people, through their Government, will demand physical valuations of the railroads. It would seem to be the fitting time to readjust on an equitable basis the rights of both parties concerned in the matter of rates of public carriers, who use the highways of the Nation under charters granted by the people.

My sincere hope is that the railroads and general business interests of the country, with the assistance of the Government, will soon be traveling in harmony toward justice and prosperity.

Very respectfully, yours,

WM. WATERALL.

THE WEST VIRGINIA RAIL CO.,
Huntington, W. Va., November 1, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the question of the proposed blanket advance of 5 per cent, as shown in tariffs published by lines in the Central Freight Association and trunk line territory, effective November 15, 1913: In view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional hardships imposed upon the carriers by both National and State legislation, whereby they are compelled for the safety of both passengers and freight to add new appliances and improved equipment, and the general advance in the price of all commodities, we would recommend that the advance of 5 per cent mentioned above receive the approval of your honorable commission and that the tariffs as published by the various railroads and filed with your commission be permitted to become effective on November 15 or the earliest date possible thereafter.

Very truly, yours,

THE WEST VIRGINIA RAIL CO.,
H. A. ZELLER, *General Manager.*

THE MILLER SUPPLY CO.,
Huntington, W. Va., November 1, 1913.

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the question of the proposed blanket advance of 5 per cent, as shown in the tariffs published by the lines in the Central Freight Association and trunk line territory, effective November 15, 1913: In view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional hardships imposed upon the carriers by both National and State legislation, whereby they are compelled to add for the safety of both passengers and freight, new appliances and improved equipment, we would recommend that the 5 per cent advance above mentioned receive the approval of your honorable commission and that the tariffs as published by the various railroads and filed with your commission be permitted to become effective on November 15 or the earliest date possible thereafter.

Yours, truly,

THE MILLER SUPPLY CO.
WM. J. HARVIE, *Secretary.*

NOVEMBER 2, 1913

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: We earnestly hope that the increase asked for by the railroads will be granted, because we have come to the conclusion, as many others in our locality have done, that said request is perfectly fair and just.

Yours, very respectfully,

R. E. ESTEP.
C. E. DAVIS.
DR. THOS. S. DAVIS.
RAY GARDNER.

NORVELL-CHAMBERS SHOE CO.,
Huntington, W. Va., November 3, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the question of the proposed blanket advance of 5 per cent as shown in the tariffs published by the lines in the Central Freight Association and Trunk Line territory, effective November 15, 1913. In view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional hardships imposed upon the carriers by both national and State legislation, whereby they are compelled for the safety of both passengers and freight to add new appliances and improved equipment, we would recommend that the advance of 5 per cent above referred to receive the approval of your honorable commission, and that the tariffs as published by the various railroads and filed with your commission be permitted to become effective on November 15, or the earliest date possible thereafter.

Yours, truly,

NORVELL-CHAMBERS SHOE CO.,
JNO. E. NORVELL, *President.*

KENOVA LUMBER & SUPPLY CO.,
Kenova, W. Va., November 3, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the matter of the proposed increase in freight rates by the lines in the Central Freight Association and Trunk Line territory, effective November 15, 1813, beg to say that in view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional hardships imposed upon the carriers by both national and State legislation, whereby they are compelled to add for the safety of both passengers and freight, new appliances and improved equipment, we would recommend that the 5 per cent advance above mentioned receive the approval of your honorable commission, and that the tariffs as published by the various railroads and filed with your commission be permitted to become effective on November 15, or the earliest date possible thereafter.

We beg to remain, yours, very truly,

W. E. MINTER, *General Manager.*

HAGEN, RATCLIFF & CO.,
Huntington, W. Va., November 4, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the question of the proposed 5 per cent advance as shown by tariffs published by the lines in the Central Freight Association and Trunk Line territory, effective November 15, 1913, wish to advise that in view of the increased expense in the cost of raw materials, the advanced wage scale demanded and granted to various employees and the additional hardships imposed by both national and State legislation, whereby they are compelled, for the safety of both passengers and freight, to add new appliances and improved equipment, we recommend that the 5 per cent advance mentioned above receive the approval of your honorable commission and that the tariffs, as published by the various railroads and filed with your commission, be permitted to become effective on November 15, or the earliest date possible thereafter.

Yours, very truly,

HAGEN, RATCLIFF & CO.

SEHON, STEVENSON & CO.,
Huntington, W. Va., November 5, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the question of the proposed blanket advance of 5 per cent, as shown in the tariffs published by the lines in the Central Freight Association and Trunk Line territory, effective November 15, 1913: In view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional safeguards imposed upon the carriers by both National and State legislation, whereby they are compelled, for the safety of both passengers and freight, to add new appliances and improved equipment, we would recommend that the advance of 5 per cent mentioned above receive the approval of your honorable commission, and that the tariffs, as published by the various railroads and filed with your commission, be permitted to become effective on November 15, or at the earliest date possible thereafter.

Yours, truly,

SEHON, STEVENSON & CO.

H. R. WYLLIE CHINA CO.,
Huntington, W. Va., November 7, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commercce Commission,
Washington, D. C.

DEAR SIR: Relative to the question of the proposed blanket advance of 5 per cent as shown in the tariffs published by the lines in the Central Freight Association and trunk line territory, effective November 15, 1913, in view of the increased expense in the cost of raw material, the advanced wage scale demanded and granted to various employees, and the additional hardships imposed upon the carriers by both national and State legislation whereby they are compelled, for the safety of both passengers and freight, to add new appliances and improved equipment, we would recommend that the advance of 5 per cent mentioned above receive the approval of your honorable commission and that the tariffs, as published by the various railroads and filed with your commission, be permitted to become effective on November 15, or the earliest date possible thereafter.

We sincerely think the railroads are entitled to this consideration, as they are certainly a great factor in this country when it comes to the matter of development and extension of business, and with everything considered we think that they are entitled to the advance requested not only for their benefit, but for the general benefit of the country and business conditions.

Very truly, yours,

H. R. WYLLIE CHINA CO.
H. R. WYLLIE, *President.*

THE T. H. SYMINGTON CO.,
New York, November 7, 1913.

Mr. EDGAR E. CLARK,
Member Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: You may be interested in a manufacturer's point of view on the question of the proposed rate increase, which I am sending you under separate cover.

Yours, very truly,

T. H. SYMINGTON.

HUTCHINSON LUMBER CO.,
Huntington, W. Va., November 8, 1913.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In connection with the proposition for 5 per cent level advance on tariffs of the Central Freight Association and trunk line territory, effective November 15, 1913, will say that so far as we are concerned we offer no objections to this advance.

Yours, truly,

HUTCHINSON LUMBER CO.
By ROBT. S. HUTCHINSON.

MARSHALL WINCHESTER & CO.,
Baltimore, November 10, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: A careful review of existing conditions in our railroad, financial, and commercial world, and a reasonable sense of the dangers ahead, prompt me to refer you to my letters of November 18, 1912, February 19 and March 28, 1913.

I stand for a raise of 10 per cent in freight rates on all commodities and on all lines and to and from all points.

Wisdom requires it and a glance at the real situation proves beyond all cavil that wicked and deliberate folly alone will prevent the granting, at once, of the 5 per cent asked by the railroads.

Ample time for a study has been given and I beg of you to take a broad view, unshackled by prejudice or by technicalities.

I beg that you prevent coming true Mr. Roswell Miller's prophecy: "I do not look for a change in this attitude until disaster comes upon the country in consequence of disaster to the railways," as quoted in my letter to you, dated March 28, 1913.

I am, dear sirs, yours, very truly,

MARSHALL WINCHESTER.

HENRY PHILLIPS,
Syracuse, N. Y., April 5, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I am interested in the question as to an increase in the freight rates for the railroads. I believe that the country can afford

to deal generously with them in the present situation. I am not interested financially in any railroad corporation, but I am concerned greatly in the present business outlook, and I believe that with the granting of the 5 per cent increase in freight rates there would follow a substantial resumption of confidence on the part of all classes of business men. I do not believe that the basis of all the country's present ills is to be ascribed to the freight-rate question, but unquestionably it forms an essential consideration.

I believe that the wild and senseless hammering of corporations on the part of professional agitators, the reckless talk about the influence of Wall Street, and the so-called "interests" is largely accountable for the pessimism which has seized all minds and that there can be no relief until there shall come from such authoritative bodies as that of the Interstate Commerce Commission and the public service boards of the several States a pronouncement which will serve as a warning that the insane vaporings of demagogues finds no sympathy with these commissions. You have the confidence of the public in this momentous problem now before you. Your conservatism, I am sure, appeals to all level-headed men of affairs. At the same time there is deep concern, I find, throughout these parts in the proper determination of the freight-rate question. I hope and believe that you will resolve the question with as great expedition as possible and that the outcome will result in increased confidence in your body and in greater hopefulness in the future of the country's business.

Sincerely, yours,

HENRY PHILLIPS.

—

CHARLES A. RIDGELY & CO.,
Chicago, April 6, 1914.

Mr. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I am so impressed with the importance of the pending railroad rate case now before your body that I wish to put several facts before you, one of which has just come to my attention.

One of my friends, a Canadian, has just returned from Europe, and while there visited London, Paris, and Antwerp. While in Europe he saw a number of important financial men as well as individual investors, and wherever he talked investments, he advised me, so far as American securities were concerned, he was met with the argument that until your body has decided the matter you are now considering they did not care to invest in our securities. They stated that from all the information they could get, unless the railroads were given a freight advance they did not want any American investments until time had developed whether the railroads could live on the rates they were now getting.

The other idea in my mind is that we have experimented for some time on the present basis of rates, and we all know the condition of business existing to-day. Personally I believe the railroads are eminently justified in their request for additional revenue. Let us concede that there may not be an absolute necessity for an advance; would it not be wise to experiment by granting them an advance? If later it should develop that more revenue was not needed by the roads, then the present basis of rates could easily be restored and the country know exactly what the conditions are.

I think there is no question but that there would be an immediate improvement in business if an advance was granted.

Thanking you for such consideration as may be given this letter, I am

Yours, very truly,

CHAS. A. RIDGLEY.

—

R. H. STEARNS & CO.,
Boston, April 7, 1914.

JAMES S. HARLAN, Esq.,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR MR HARLAN: Being an entire stranger to you and of course being entirely lacking in detailed information with regard to the question of rates of the railroads I have hesitated to bother you with my opinion, but I trust you will take this letter in the spirit in which it is written.

Of course I am not without appreciation of the fine work that the Interstate Commerce Commission is doing, but I do feel very deeply that we can not have any prosperity in the country unless the railroads are prosperous, and I feel very emphatically that at this time, in order to be prosperous, they must have substantial increase in rates to at least partially counterbalance the greater expenses that they are under. I hope you and the other members of the commission will see your way clear to relieve the railroads in this respect, and as soon as it can reasonably be done. I say this, although from the nature of my business it is important to me to have as low rates as possible. I can not, however, feel that this should weigh in the balance against such rates as will give the railroads a reasonable chance to be so prosperous that they can give the best of service.

Respectfully,

F. W. STEARNS.

—

THE ROBESON CUTLERY CO.,
Rochester, N. Y., April 7, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission, Washington, D. C.

HONORABLE DEAR SIR: We believe firmly that the railroad companies are entitled to an advance in freight rates, which they are seeking, and hope that the commission will give their request most careful and favorable consideration.

Very truly, yours,

THE ROBESON CUTLERY CO.,
L. S. YOUCKES, *Vice President.*

—

BALTIMORE, *April 7, 1914.*

Mr. JAMES S. HARLAN.

DEAR SIR: I wrote you some time ago appealing to you in behalf of my fellow workingmen, myself, and our families for you and your associates to bring this railroad-rate trouble to a close so that we can get back to work. The trouble does not seem any nearer settled now than it was a month ago. We were working on half time for a while, now many of us are out entirely, with no prospects of work. Things are beginning to look desperate, and many of the men are making many threatening remarks. Our work is in the steel mill, but depend much on the railroads for work, and when things are dull we are down and out. We do not care a snap how this thing is settled just so we get back on our jobs. I am sure you fellows could rush this thing through if you wanted to, and if you had as much feeling for our children as you have for your own, you would soon find a way of fixing things up. Those fellows Brandeis and Thorn would like to make the people believe they are their friends, when anyone with an ounce of brains know they are enemies to the workingmen and the country, or they would not drag this thing out so long and at the expense of the mechanic, the laborer, and their families. I am at this moment surrounded by 40 or 50 good, honest, sober, skilled mechanics, nearly every one of us with families from 1 to 10 children, with no work, little or no money, while every one of you have fat jobs and living in palaces. We do not begrudge you this, but do not think it fair play to put us on the bum. If there is any sympathy or the right spirit of manhood in you fellows you will settle this thing very quick and save much distress.

Yours, truly,

FRANK BORDOHOE.

—

E. J. CHAPMAN,
Rochester, N. Y., April 7, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I am in favor of the railroads having an immediate increase of 5 per cent in freight rates and believe that if your commission will so decide, and at the earliest possible time, the depression in business now prevailing throughout the country will disappear and that a revival in trade will take place immediately.

Yours, truly,

E. J. CHAPMAN.

—

MINNEAPOLIS, MINN., *April 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: In investigating the condition of the railroads, before deciding that rates should not be increased, the commission ought to find out the number of railroad men who have been without work this winter. The railroads claim they can not afford to send freight, and engines are standing idle. My father, who has been a machinist for the Chicago, Milwaukee & St. Paul R. R. for over 25 years, is working four days a week and eight hours. He earns about $50 a month and supports a family of three. In these days of high living that means pretty scanty living and going without everything but the necessities of life. Other men who have worked for the company less time have been laid off entirely. They are scattered all over the country, and, in some cases, their families are in want here in Minneapolis.

Please do not think only of the wealth of railroad owners, but look into the condition of the men working for them who are now in want. It looks now as if the men will be put on even shorter time if the commission does not come to a quick decision. We do not care to have the railroads regulated at our expense. This winter has been the hardest one for us since 1894, and we don't know what we shall do unless conditions are different very soon.

All of the Middle West can tell the same story. Investigate the number of railroad employees out of work, and the number getting starvation wages. Those figures will mean something to you. We who get our living from the railroads look to you men to help us.

Yours, truly,

WANDA T. FRAIKEN.

—

CUMBERLAND, MD., *April 8, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIRS: I take pleasure here to write you a few lines in regards to freight rates for the railroads and for the benefit of the country at large.

At first, I don't care to try and influence you men in what to do, but let us take the condition of our country to-day. There are almost one-fourth of our population to-day out of employment, and good skilled men with good trades, and can not find a job any place, even on street cleaning, or in fact you can not buy a job. The railroads just have the bottom knocked out of everything. They have laid off thousands of men, and they have practically crippled every kind of industry. What are us poor people to do? For instance, take my own case. I have a family of five children and our two selves, seven in all, to eat and clothes to buy, and a rent to pay of $20 a month, and have not had a day's work to do for 10 weeks; willing to work; want to work, and just about crazy because I have no work. How am I to support my family? I am a carpenter and can not get a job at cleaning streets or anything. And this is just the fix that thousands upon thousands of poor people are facing to-day. The railroads are just going to put things in such shape that people will soon have to start to do depredation, because how are poor people to get anything to live on? I would suggest to you noble men, and in the name of our Heavenly Father, to give the roads an increase in rate and have it settled, and let the people live and let the country prosper.

It is a shame to civilization and to our country the amount of starving people we have. Gentlemen, you may think that I am connected in some way with the roads, but I take oath between me and God and man I am not interested in them in any shape or form. What I want is to have work to support my family.

Kindly give this your full attention, and trust you may settle the trouble at once. I thank you all.

I remain,

WM. H. BONE.

—

DOBLER & MUDGE,
Baltimore, Md., April 8, 1914.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Referring to the application of the railroads for an increase in freight rates, allow me, as one of many hundreds of thousands of men of small means in this country, to express my views on the subject.

There is one feature in the situation that seems to me has not been properly emphasized; that is, the interest of the small individual holder of securities in railroads.

Some two or three years since the writer was made a trustee of a small estate, the securities of which were turned over to him, the greater portion of which consisted of investments in the Baltimore & Ohio Railroad common stock. There were four beneficiaries of this estate;

one a widow of very small means, one an elderly maiden lady absolutely dependent on the income of the estate, one an elderly married woman of very small means, and the fourth a man of some 60 years of age making a small salary.

The Baltimore & Ohio Railroad, in their February statement, showed a loss of over $1,000,000 in their gross and over $400,000 in their net.

If this railroad is compelled to discontinue their dividends it would mean serious loss to the above-mentioned parties.

Yours, very truly,

FRANK MUDGE.

—

103 EAST SEVENTY-FIFTH STREET.

The INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: I heard you one afternoon a few weeks ago when in Washington. I could not help but feel that in your deliberations you can not fully realize how depressed the country is and that "While Nero was fiddling, Rome was burning." One witness told you that afternoon how high the rates in England, Germany, and other countries of Europe are. Also how much lower the wages are than in this country. It seems to me that if the railroads asked for 25 per cent increase instead of the 5 per cent they would not be unreasonable. I am disinterested, as my money is in the savings bank until I invest in foreign securities, unless, of course, times improve.

Yours, truly,

ROSAMOND BURR.

APRIL 8.

—

LIMESTONE PRODUCTS CO.,
McAfee Valley, N. J., April 8, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are shippers of limestone for fluxing purposes; our material is heavy and bulky and is loaded on a private switch in car lots; it commands an average price of 50 cents per gross ton f. o. b. cars at quarry.

We wish to enter our earnest protest against the petition of the railroads regarding the charge for placing or spotting cars on switches:

First, because it is discriminatory against car-lot shippers, who must of necessity load on spurs and switches; second, because the railroad service rendered can not be supplied by private enterprise on a switch 1,000 feet in length, and the switching is an integral part of the car movement; third, because a spotting charge of $2 on a carload whose total value is less than $20 f. o. b. is prohibitive and destroys our business.

Fourth. Because this charge if allowed can not be considered as freight to be paid by the consumer, but must be borne by the producer without adding in any particular to the service that has been rendered heretofore by the railroad.

We do not object to the request of the railroads for a 5 per cent increase in rates, as this seems to bear evenly on all, but we do protest against carload shippers from private switches having an unjust and inequitable burden placed on their business in the effort to shift the rate increase largely on this class of shippers.

Yours, truly,

WALTER S. SHELDON, *Vice President.*

—

TELFAIR W. MARRIOTT,
Baltimore, Md., April 8, 1914.

Mr. CHAIRMAN, *Washington, D. C.*

DEAR SIR: Inclosed you will find an article.

OHIO BUSINESS MEN POINT OUT CAUSES OF DEPRESSION.

"Too much legislation" and "failure to advance railroad freight rates" are the maladies that are afflicting the business of the country, according to 300 representative Ohio business men, reported in the Ohio State Journal. This opinion was expressed in letters written to the secretary of the Ohio Manufacturers' Association, in reply to inquiries sent out by him asking for their views on the business situation.

Every reply indicated "below normal" conditions. Many of the writers gave the percentage of operations in their plants, the average being about 52 per cent, while estimates as to the condition of business generally averaged 66 per cent of capacity. Every letter attributed this state of affairs to the activity of legislators and to the present plight of the railroads.

"There was not in all of the 300 expressions of opinion," says a writer, "a single one that did not urge the immediate increase of railroad rates. This is a more important feature of the answers when it is considered that the manufacturer is probably the largest producer of freight revenues. Of course, the price of the product must cover this, but the manufacturer has to advance the money to pay before he receives his return."

Yours, truly,

TELFAIR W. MARRIOTT.

—

PHILADELPHIA, *April 8, 1914.*

LOUIS D. BRANDEIS, Esq.

SIR: This is written in full realization that the chances are against its reaching you or enlisting your attention. The writer is one among the many millions who by hard work and frugal living have saved sufficient of their earnings to become "investors" to the extent of maintaining small policies of life insurance or putting aside some part of the said earnings in the savings banks, and who are learning how their interests are being injured more and more as month after month passes without action by the committee you represent, while enormous amounts of depreciation are being charged off by such institutions as those mentioned and all rights and equities therein correspondingly impaired, just as the business of the country is being held back by the same cause.

While there is apparently little hope of escape from the policy under which a host of innocent people are made to suffer for the misdeeds of a few designing and dishonest men, there is at least one plea open to the many: In Heaven's name, let your committee cease its fiddling, Nero-like, and permit the country to adjust itself to their edict, be it what it may.

Yours, truly,

D. W. WILLIAMS.

—

ROANOKE, VA., *April 9, 1914.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR MR. CHAIRMAN: I take the liberty to make this appeal to you asking that you use your good influence toward granting the railroads the 5 per cent freight-rate increase. I feel that it is my duty to place this before you at this late hour, as I understand from the newspapers that the rate testimony is all in.

If the railroads do not get the 5 per cent increase, what will happen to the poor railway clerks, who are making less than $100 per month? They will either be cut off or their salaries reduced. What can they do if they are living in a railroad town as this and have no position and with a family dependent upon them for their livelihood? Are they not human beings?

The railway enginemen, conductors, and trainmen, etc., have their union and they receive protection from the Interstate Commerce Commission, and in most cases their demands are granted.

It is not my business how much more others are getting, but I beg that you allow the 5 per cent increase, so that we poor clerks be sure of our present positions.

It is not that the rich men suffer, but it is the one who is trying to make an honest living with a small salary.

Trusting you will grant this petition in behalf of the railway clerks, I am,

Very respectfully,

A. RUSSOW, Jr.

—

AMERICAN BLOWER CO.,
Detroit, Mich., April 9, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The American Blower Co. wish to express themselves as unreservedly favoring the 5 per cent freight rates increase asked for by the carriers of the official classification territory.

Our plants, four in number, are located as follows: Two at Detroit, one at Troy, N. Y., and a branch, known as the Canadian Sirocco Co., at Windsor, Ontario, all of which you will note are served by the petitioning lines.

Our products are blowers, exhaust fans, stationary engines, air purifiers or humidifiers, steam traps, pipe-coil heaters, special machinery.

We hold no brief for the railroads in their past misdeeds and know full well that your committee, acting as a judicial body, will render a decision based solely on the evidence adduced.

Just as there is a Henry Ford in the manufacturing world, there may be a few isolated cases among the group of roads that do not need the increase.

Manufacturers have for the past several years felt the upward trend in cost of production. Similar conditions prevail as regards the railroads.

The blower-system manufacturers would be among the first to strenuously oppose any proposition which would materially increase the cost of marketing their products.

Very truly, yours,

AMERICAN BLOWER CO.,
By P. H. LYNAHAN,
Traffic Manager.

Approved.

JAS. SAYLIS, *President.*

—

LEHIGH VALLEY RETRENCHMENT.

As a step in its retrenchment policy, Lehigh Valley will shortly make application to the public service commissions of Pennsylvania and New York for permission to take off several trains which in the course of recent years were put in service at the order of the commissions and which from the beginning of the service have been unprofitable.

—

PENNSYLVANIA'S RETRENCHMENT.

Philadelphia: The annual saving of train-miles by the Pennsylvania Railroad, as a result of its policy of retrenchment and cancellation of passenger trains, will be approximately 4,140,000 miles. Of this amount, 2,040,000 will be on the eastern lines and 2,100,000 miles on the lines west of Pittsburgh.

The trains taken off the lines west of Pittsburgh, on the Pittsburgh, Fort Wayne & Chicago Railway, is the first step taken on the company's western lines to reduce the number of trans in operation.

The number of trains that have either been taken off, or will be shortly, on the eastern lines is 118. The saving of train miles as a result of the cancellation of these 118 trains will be 170,000 miles per month, or 2,040,000 miles per annum.

—

NEW YORK CENTRAL LINES NET FOR FEBRUARY FELL OFF $3,434,852.

Two months, net, $2,326,817, compared with $9,415,836 in 1913, a decrease of $7,089,019.

February gross was $18,923,278, against $22,316,484; decrease of New York Central & Hudson River gross $740,878, and of net $723,665; reduced net for Lake Shore, Michigan Central, and Cleveland, Cincinnati, Chicago & St. Louis.

—

RAILROAD CREDIT AND THE COMPETITION FOR CAPITAL—W. H. WILLIAMS, OF DELAWARE & HUDSON, SHOWS THE INTERSTATE COMMISSION HOW CARRIERS ARE HANDICAPPED—HIGHER INTEREST RATES, IMPAIRMENT OF SAFETY, LARGER COMPETITION ALL FACTORS OPERATING AGAINST ROADS—BETTER RETURNS NECESSARY IF TRANSPORTATION LINES ARE TO KEEP PACE WITH NATURAL GROWTH OF BUSINESS.

Washington—W. H. Williams, third vice president of the Delaware & Hudson Co., presented to the Interstate Commerce Commission a pamphlet on the subject of railway credit and increased competition for capital. Conclusions reached therein are summarized by him as follows:

"1. There has been a general increase in the interest return demanded of investment securities, and at the same time the railroads have been forced to meet growing competition in the investment field from the so-called public utility and industrial enterprises, which are able to offer the higher rates of interest, and from Government sources, which have increased their demands for capital and have raised their tax rates in order to make their demands effective.

"2. The ability of the railroads to secure new capital has been impaired by the reduction in the factor of safety. Investors have noted the increased proportion of the total financing depending upon bond issues, and the failure of the additional capital invested during recent years to earn any or an adequate return.

"In view of the foregoing, it is submitted that the public interest demands, so far as possible, a rectification of conditions which have

produced these results, for the reason that if the railroads are unable to recoup the heavier cost of new capital that they are compelled to meet, it is inevitable that they must be unable to obtain the additional capital regularly needed from year to year in order to provide facilities for the normal growth of business and the improvements essential to increased safety."

Mr. Williams said that he had recently completed investigations which show that the competitive position of the railroads in the struggle to obtain capital out of the general investment fund has been impaired by (1) increases in the public and private demand for capital; (2) increases in the rates of interest offered for loans to municipalities; (3) decline of the credit of railroad companies; and (4) enhanced credit of securities resting upon manufacturing enterprises.

The following tables are introduced in the pamphlet to show that the general interest rate has risen, and that securities offering the highest return (the so-called "low-grade" securities) have come more into popular favor:

Bonds, rate of yield, per cent.

Year.	Government.	Public utility.	Industrial.	Selected R. R.	Eastern R. R.
1913 (6 months)	3.91	4.90	5.35	4.41	[1]4.47
1912	3.85	4.80	5.18	4.26	4.30
1911	3.80	4.77	5.17	4.21	4.26
1910	3.77	4.79	5.25	4.21	4.26
1909	3.61	4.71	5.16	4.08	4.11
1908	3.70	5.11	5.90	4.30	4.42
1907	3.70	4.91	5.76	4.30	4.31
1906	3.43	4.56	5.18	4.01	4.04
1905	3.29	4.43	5.19	3.91	3.93
1904	3.30	4.60	5.81	4.05	4.03
1903	3.25	4.63	5.69	4.10	4.06

[1]Covers first eight months.

Preferred stocks' rate of yield per cent on market quotations.

Year.	Railroad.		Industrial.	
	Bid.	Asked.	Bid.	Asked.
1913 (first 6 months)	4.95	4.81	6.42	6.29
1912	4.73	4.59	6.16	6.09
1911	4.72	4.56	6.25	6.12
1910	4.69	4.47	6.23	6.08
1909	4.49	4.38	6.13	6.05
1908	5.07	4.84	7.09	6.78
1907	4.92	4.68	6.97	6.72
1906	4.29	4.21	6.32	6.21
1905	4.22	4.13	6.34	6.25
1904	4.54	4.43	7.33	7.23
1903	4.57	4.43	7.27	7.16

The pamphlet says: "In general it can be stated that since 1909 there has been an almost uninterrupted depreciation in the market price (based on yields) of the funded indebtedness of the principal railroads that are concerned in the present petition for higher rates."

The following table summarizes the average yields of all bonds except convertibles of five eastern railroads:

Year.	Baltimore & Ohio.	New York Central.	Pennsylvania.	Reading.	Lackawanna.
1913 (8 months)	4.690	4.378	4.118	4.273	4.406
1912	4.456	4.222	4.041	4.194	4.213
1911	4.389	4.202	4.025	4.121	4.106
1910	4.378	4.133	3.938	4.159	4.106
1909	4.225	4.046	3.897	3.937	3.917
1908	4.556	4.191	4.191	4.215	4.218
1907	4.412	4.084	4.066	4.165	4.234
1906	4.194	3.818	3.848	3.885	3.907
1905	4.074	3.746	3.788	3.797	3.727
1904	4.217	3.774	3.876	3.866	3.825
1903	4.268	3.737	3.993	3.890	3.847

The pamphlet says: "The income returns offered by railroad preferred stocks has increased steadily since 1909, and for the six months of 1913 the yields were, with the exception of the panic year 1908, the highest in the period. The industrial preferred stocks, on the other hand, with the exception of the panic year, have appreciated in value, so that their return to the investors has been less than the average for 1903–1907, inclusive.

"The ability of the railroads to raise new capital has been impaired to considerable extent by the following:

"1. The inability of many railroads to issue further prior lien obligations as the mortgages on their existing lines and other property have become closed.

"2. The decrease of net earnings, due in part to decreases in rates and in part to higher operating costs.

"3. Inability to obtain any increased return after increasing total investment.

"4. Legal restrictions on railroad securities as investments for savings banks, trust funds, and insurance companies.

"5. Discrimination against railroad securities in the matter of exemption from taxation as contrasted with State and municipal bonds.

"6. Risk attending railroad enterprises."

LEBANON, PA., *April 9, 1914.*

To Chairman and Members of Interstate Commerce Commission, Washington, D. C.

GENTLEMEN: I have been watching your action regarding the proposed 5 per cent increase asked for by the railroads.

That man Brandeis may be a good lawyer and a good authority on brandy, but I do not believe he knows the A B C of railroading.

He would pretend to know something about anything he was paid for; for example, he would try and show you the cold-storage men are doing the proper thing (provided he was paid for it) by letting them buy up all the dressed meats and eggs imported. Tell him to sit down and give the people a rest.

I am a railroad man in my fifty-third year, senior car demurrage clerk for the Cornwall & Lebanon Railroad, a branch of the Pennsylvania Railroad; Mr. A. D. Smith is the president and general superintendent, subject to Mr. C. M. Shaeffer, superintendent Philadelphia division, Pennsylvania Railroad, at Philadelphia.

At present I am home building up my exhausted strength due to overwork.

My superiors do not know I am writing this; am doing it purely out of good will for my fellow man, both rich and poor, for the good of the commerce of our land.

This is my second letter to the commission. Railroads throughout the United States have been compelled to advance salaries and wages to their employees to keep the men in good bodily condition; prices have advanced, due to combines, on the every-day articles used for food, some even three times as high as formerly. If a man does not get enough to eat he can not give a good day's work. If a cow does not get her full rations her milk yield will be accordingly; this applies to the higher beast—man.

Look at the increased cost of lumber railroads are bound to pay for station buildings, ties, and other improvements.

The cost of clerk hire, time, delay to business, and other expenses they are put to to furnish the Government, showing how much it costs to run a car a mile, how much per passenger a mile hauled, and salaries paid, how much to haul a ton of freight per mile, how much per hour paid track foremen, how much per hour paid trackmen, ad infinitum—all nonsensical work—which costs the railroads of the country millions of dollars in time and prestige.

If you men want to earn your salaries, get after the Coffee Trust. I think you have hammered the railroads enough for being bad boys. Give them the crumb they ask for. Do not starve them to death. Don't be tyrants.

I'll wind up by giving you a little story. It happened at Cornwall, Pa., on the Cornwall & Lebanon Railroad: A German, a native of the Province of Wurttemberg, was asked by a lot of young Lebanon lawyers, who had gone to Cornwall for a good time one evening, where he came from? He said, "Wurttemberg." "Then you are one of those d—— dumb 'swopes" with yellow feet?" "Yes," said he. "Now, let me ask you wise young men a question: Who drew the plans for the Brooklyn Bridge?" "We don't know," replied they; and several other questions which they could not answer.

"I will ask you one more, then, and I am finished: Some time ago God Almighty and the devil had a lawsuit about a stone wall. Who do you think won it?" "Oh, of course, God," replied the lawyers; "No," said the German, "the devil did, because he had all the lawyers." Moral: Don't be guided by tricksters.

I consider some of the heads of railroads the brainiest men of our land. Please give them a show.

Very respectfully, yours,

GEO. S. PENCE.

—

THE E. D. CLAPP MFG. CO.,
Auburn, N. Y., April 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I have recently been looking over the labor cost of iron forgings and freight paid in 1904 as compared with 1914, and I believe that if the concern with which I am connected could not get more advance in prices of goods than the railroads have been able to get, we should have been out of business long ago. Our labor costs have advanced 40 per cent in the last 10 years, whereas the outward freight rates which we pay have only advanced 5⅔ per cent.

I find that the fourth class rates to principal western points in the last 10 years have advanced as follows:

Cincinnati, 20 cents to 21 cents per 100 pounds; East St. Louis, 29 cents, no change; Indianapolis, 21 cents to 23 cents; Chicago, 23 cents to 25 cents; Columbus, 18 cents to 19 cents.

On these five points east of the Mississippi and north of the Ohio, the advance has been only 6 cents on 100 pounds, which averages 1⅕ cents to each place, or from $1.11 to $1.17. This is 5⅔ per cent advance. Railroad rates on our shipments of iron forgings have always been reasonable. There has been no advance for several years in rates on soft coal and coke, of which we use and sell 10,000 to 15,000 tons a year. The former is carried about 350 miles at 7.8 cents per hundred and the car has to be drawn back empty the same distance. This is only about .44 cent per ton per mile. There must have been great distress and many failures among manufacturing interests if no more advance on selling prices of goods could be secured than the railroads have been able to under the Government supervision. It seems to me that every manufacturer and merchant has as much interest as the railroads in advocating a reasonable advance in rates.

Very truly, yours.

D. E. CLAPP.

—

THE ALLING & CORY CO.,
Rochester, N. Y., April 10, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Learning that other business houses are expressing their opinion as to the propriety of an increase of 5 per cent in freight rates, which matter is before your commission for decision, permit me to say that our company believes that the request of the railroads is not unreasonable and that we should be glad to see it granted and to pay the increase on our shipments. We are among the largest freight patrons of the railroads in the city of Rochester.

Very truly, yours,

THE ALLING & CORY COMPANY,
JOSEPH T. ALLING, *President.*

—

LITTLETON, N. H., *April 10, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I trust you will see fit to allow the railroads to substantially increase their rates at an early date as you feel safe so to do.

A good big rate will not only allow the various roads to favor the large shipper, resume paying dividends on watered stocks and the money that has been stolen from them by the different devices known to financiers, but more important than all, will make at least 200,000 new

Socialist voters in addition to the 1,000,000 now voting for that party and of which the writer is one.

Trusting you and I may live to see the railroads owned by the people (they have several times paid for them), I am,

Respectfully, yours,

M. H. CARDINAL.

HEINE SAFETY BOILER CO.,
St. Louis, April 11, 1914.

Mr. LOUIS D. BRANDEIS,
Care of Brandeis, Dunbar & Nutter, Attorneys, Boston, Mass.

DEAR SIR: Your letter of April 3, addressed to my father, Col. E. D. Meier, was received here just as he left for his country home in Connecticut. The colonel, on account of poor health, has been obliged to give up business, at least for the present, and just before he left he referred this letter to me for attention, but I have only returned to the city to-day.

I am not quite clear what information it is that you desire. Before the colonel wrote you on March 27 I had given him figures of our freight rates for last year, taken from cost of freight paid by us, as shown by our books, which showed that the switching charge would make an increase of about 10 per cent in our freight rate for the St. Louis plant alone, which would be approximately correct for our other plant.

In our opinion a general increase of 5 per cent in all freight rates would tend to raise the price at which we would have to sell our product by a very small margin and would not affect us disadvantageously, because all manufacturers would be working under the same conditions.

The switching charge, however, would increase our cost about 10 per cent and take a larger proportion of the increase wanted by the railroads from manufacturers of our class than from other manufacturers.

If the above does not answer your letter of April 3, will you kindly communicate further with us?

Yours, very truly,

HEINE SAFETY BOILER CO.,
C. R. D. MEIER, *Vice President.*

EASTER SUNDAY, *April 12, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Kindly read the following from the New York Herald. Allow the railroads what they are asking for and there will be less wrecks.

They need plenty of money, and many lives will be saved.

Respectfully,

BOSTONIAN.

FIFTY-MILE NEW HAVEN EXPRESS WRECKED, BUT SAND BANK SAVES LIVES OF 200—TWO ELECTRIC LOCOMOTIVES JUMP RAILS NEAR HARRISON, N. Y.

Whirling along at a speed of about 50 miles an hour, the Green Mountain Express over the New Haven Railroad, which left Grand Central Station at 8 o'clock yesterday morning, jumped the rails east of Harrison, N. Y., an hour later and fell into a ditch alongside. There were nearly 200 passengers in the crowded train, a great part of them women, but not one was hurt. They owe their lives to a soft, sandy bed which supported a freight siding paralleling the main line. This kept the front cars from overturning and the rear cars from telescoping on the steel frames ahead. The electric zone was closed, and traffic was tied up for nearly five hours.

Drawn by double motors, the express train left the New York terminal with a large crowd of eastern travelers. There were two steel mail cars back of the locomotives and two wooden passenger cars forming the rear of the train. These two cars were crowded. The first stop of the train from New York was scheduled at Bridgeport. The express was running at high speed, but at Harrison it slowed down slightly to take a long curve east of the village. The engine driver was just straightening out on a fast stretch of the roadway in the township of Rye when the front motor left the rails.

MOTOR PILES UP IN DITCH.

The four-rail roadway is paralleled at this point by a freight siding, which is almost like a separate roadbed. A 10-foot ditch, about 4 feet deep, runs between the two. The front motor pulled the trailer after it, and the two plowed into the sandy bank for about 200 feet before the leading motor buried its prow deep and piled the second motor against it in V-fashion. The two steel mail cars left the rails. Their trucks dug so deep into the bottom of the ditch that they merely carcened about 15° and remained leaning against the bank.

Thirteen mail clerks were at work, under John Flinn, chief clerk. They were thrown about the cars, but Charles Hackett was the only one injured in any way. He suffered a slight twist of the back, but was able to leave for his home later.

The two passenger cars bumped off the rails, but did not tumble from the roadbed. The men and women were tossed about, but no damage was done in these cars. Charles F. Murphy, the engine driver, was thrown against the front of his motor and suffered slight cuts about the face.

RELIEF OUT IN 10 MINUTES.

The motors when they left the rails tore down two of the suspension frames of the catenary system, one of them falling upon the first motor. Automatically the high-power current was shut off, and the accident was recorded in the nearest dynamo station. Wrecking crews were sent out at once, but as the officials did not know the extent of the break in the feed wires they took the precaution to shut off the power between Mamaroneck and Stamford. No trains were run over this section of the road until nearly 2 o'clock in the afternoon.

The mail clerks, engine driver, and the conductor, Smith Warren, went to the assistance of the passengers and helped the women from the cars. All the passengers were gathered in a group, a relief train was out in 10 minutes, and all were carried to Rye. Thousands of persons from 50 miles around hurried to the place in automobiles. The Boston Post Road was one solid line of traveling automobiles from New York to the scene of the wreck. The wreck was at the bottom of a long, sloping hill, and from this amphitheater the automobilists watched the work of clearing the roadway.

PORTSMOUTH, N. H., *April 12, 1914.*

HONORED SIR: I have just been reading a perfectly reliable report of an interview with a man high up in Democratic political circles. The interviewer told the interviewed of the widespread anxiety and distress existing among the small stockholders in certain railroads and other corporations, living in New England and the Middle States, and asked him if this administration proposes to utterly destroy the value of such securities. In reply the interviewed said he did not believe there was any such "anxiety, etc., because if there was said small stockholders would have come on to Washington with them." This reply shows a marked degree of ignorance of conditions in the regions affected. Let me state my case. I am a widow of over 70 years in age. My husband was an educator engaged in various positions of teaching. We saved what we could from a small salary that we might have provision for old age. There is not much in New England in which one can invest, such as land or mines as in the West. What we did invest there was lost. Massachusetts savings banks seemed the safest. The interest was 3½ or 4 per cent, yielding small returns. Our railroads had the confidence of the people and deservedly; they paid 5 and 6 per cent. We needed all we could honestly get for our money, and bought a few shares, and also in a reliable corporation. I am now living on my small income. I have to use money sparsely. The reduction of dividends naturally lessens an already small support. The prospect of an entire cessation, as the case in some railroads in which many of my friends have small holdings, naturally alarms us. I have in mind the cases of a great number, personally known to me, where there is much anxiety as to the future and much distress at present conditions. There are thousands and tens of thousands in the class which I represent. Why was it a crime for us to invest in these properties? In many cases these shares were inherited from men who in former years gave of their hard-earned money for shares, because the roads were new and pressed for money for completion. We feel that we are being cruelly dealt with by this administration and by you. You would like to hurt some few who are very rich. You can't do it even if it was right. But you can and do oppress and crush the poor and old seemingly to vent your spite on those you consider your enemies.

We "small stockholders" are not an ignorant people. We read and we know and think. We know that the men who have gone to Washington to tell you how we feel and the true state of the case are honest men and true, even if they are officials of the roads and heads of corporations. We have been expecting you would heed our remonstrances as we have voiced them through them. Now we are told we must come to Washington or write. We are not able financially. We are not a people much accustomed to writing to Congressmen, so we have not written, but we feel, and are waiting for relief.

Respectfully,

Mrs. CLARA FLETCHER.

COLUMBUS, OHIO, *April 12, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: There are just 8,000,000 of us just in this condition to-day. Your commission can answer this question, What is the cause of it? Will you people answer? I have always been a Democrat, but I have got enough, and there is not a railroad man in the country but what has a plenty. Please look on this cartoon and then give your answer. Don't delay it any longer. Either starve us or give us work. This 5 per cent increase will give us all plenty of work.

From one who is up against it.

A WORKINGMAN.

BALTIMORE, *April 13, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Why not render a decision granting an increase in freight rates at once, and save the unfortunates who have invested in their securities from further loss and possible ruin. It is not the railroads that are being hurt or the railroad officials, but the thousands of innocent investors that are the sufferers. Could not the reformation of the railroads be gone about in such a way as not to ruin thousands and thousands of their security holders who have invested in their stocks that the Government has allowed them to issue? Why not be more rational with the railroads and trusts in view of this fact?

Very respectfully,

GEO. COSTELLO.

METUCHEN, N. J., *April 13, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Please find inclosed an editorial from to-day's New York Tribune. In the latter part especially it refers to your commission. I can assure you that the Tribune is usually very correct in its views, and on the matter of your long delay it expresses the sentiment of papers generally and of the country, and our citizens who have invested in our railroads, as nearly 90,000 have done in Pennsylvania Railroad, are the sufferers for your unnecessary delay.

I remain, yours, truly,

Rev. N. I. M. BOGERT,
Rutgers College, Class of 1864,
(or 50 years ago).

UNION BROOM WORKS,
Millersburg, Pa., April 13, 1914.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: As a manufacturer and a stockholder in the Pennsylvania Railroad Co., we urge you to grant the 5 per cent increase. The loss to labor as well as business is more already than it would amount to for some time. It is like a strike, both lose; and by their increase of wages and safety appliances we think they are entitled to the increase.

Yours, truly,

C. DAY & BRO.

A. J. POLK & SON,
Millersburg, Pa., April 14, 1914.

INTERSTATE COMMERCE COMMISSION.
Washington, D. C.

GENTLEMEN: As a stockholder in the Pennsylvania Railroad Co. I wish to add my entreaties to the host that you no doubt have already received—that you grant the 5 per cent increase in the freight rates.

Since the insistence upon so many new and approved safety appliances is agitated, and in many cases compulsory for legislation covering a multitude of small matters, take, for instance, the sanitary drinking cup and a number of far more important matters, it seems no more than right to a business man to allow the railroads to in some manner make up the deficit caused by the necessary outlay for these improvements.

Trusting that the opinion of the public will become so strong as to make the above action necessary on your part, I am,

Very respectfully, yours,

CHAS. POLK.

—

TAYLOR INSTRUMENT COS.,
Rochester, N. Y., April 16, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The railroads of the United States are in their present financial condition as much through the fault of the people at large as through their official acts.

Through our inadequate laws the wildcat financing has been allowed, but the present condition is one of vital interest to all.

We feel strongly that the business unrest which seems to be growing day by day hinges very largely on the question of the success or failure of the railroads.

The advance in question would be widely distributed, not being a serious tax on any one concern, but in the aggregate being enough to take care of the actual needs of the railroads.

It would seem that the people of the United States were indirectly responsible for allowing the railroads to be in their present condition, and should do their part in trying to improve the situation; and simply as a matter of equity we, as a business concern, would like to express to the commission our opinion that the railroads are entitled to the increase in freight rates asked for.

Yours, truly,

TAYLOR INSTRUMENT COS.,
H. J. WINN, *President.*

—

THE NEW HOTEL MORRIS,
Birmingham, Ala., April 16, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: For the country's sake give the railroads a chance; show that Government regulation can be a success and save the poor, countless thousands of widows and workers who have put their all in railroad common-stock issues and are being reduced and impoverished by present railroad conditions; ignore the political demagogue of the LA FOLLETTE type and the cheap, notoriety-seeking jackleg lawyer and others of the Brandeis-Thorn caliber; give us good service, railroads, and equipment to be proud of and a prosperous country.

Yours, truly,

R. R. HAND.

—

LAMAR, CLINTON COUNTY, PA., *April 16, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Please read. A day-wage worker, 36 years volunteer advocate of cooperative railroad building and greater freedom to operate them at the rate and means of traffic feeder from resources of mines, quarry, clay, sand, iron ore, forest, furnace, forge, and mill, and storage of flood waters in mountain basins for power, light, and public supply; or the coal mines and electrification plant for railways and light, etc., at one rate to everyone, from railroad or other corporation in unionism of open commerce.

Such equitable freedom for capital and labor by you would be in touch with our State utilities railroad commissioners' permit for corporation earning power, 6 per cent per annum at the investor rate doing public service; and there is no such indicated earning power, as per receipt for 1 case of wine, from Pier 10, New York, via Central of New Jersey, Philadelphia & Reading, New York Central, and this Central Railroad Co. of Pennsylvania, for the whole distance; weight rate, 100 pounds,, 39 cents; therefore please grant higher rates to help build more railorads and save life, to oblige,

Yours, faithfully,

JAMES WOLFENDEN.

—

HART-PARR CO.,
Charles City, Iowa, April 17, 1914.

Hon. B. H. MEYER,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: I have yours of the 8th and was much pleased to hear from you. If I am fortunate enough to be in Washington while you are there, I shall certainly avail myself of your kind invitation to look you up and renew our old acquaintance.

I have noted carefully the contents of your letter, and I note from the papers that final arguments on the petition of the eastern roads for a 5 per cent increase in their rates will be made the last week in April. I, as well as all other business men, am extremely anxious to see this matter decided as quickly as possible. There seems to be so much depending upon it.

As I told you in my previous letter, I personally know that all the railroads in the country are facing a serious shortage of business at the present time, and it has been getting worse and worse for the last six months. As a matter of fact, general business is very poor throughout the country Most newspapers say as little about this as they can, but the facts are that business is decidedly poor, and that it has been getting poorer right along for the past six months. There was a litle spurt of better feeling in January, but since that time things have backslid into a much worse condition than before.

There is a general feeling, and I think it is founded on good sense also, that if the eastern roads should have their petition granted in whole or in part it would exert a most profound influence in setting the wheels of progress in motion again in the United States. If the railroads get this increase, they will feel like going ahead and spending many millions of dollars for new equipment and improvements. This in turn will set the wheels going in all steel mills and railway-equipment factories and will have a very great influence in pulling us out of the hole into which we seem to be rapidly falling.

Now, many people would not think that this was any justification for an increase in the railway rates; but, personally, I can not see why it would not be justified. It will add materially to the prosperity of the country and whatever does that is a benefit to the entire country. I know, and you know, that in Germany it is quite customary for the Government to come to the relief of the railways or great manufacturing interests in times of stress and adjust the rates so as to benefit one or the other, as seems best for the general interest of all Germany. As a result, Germany is the most prosperous and most developed country that I visited on my recent European trip. Why shouldn't this good German idea be used in the United States, and why shouldn't the railways be granted a little increase in rates if it is going to be a material help to the prosperity of the whole United States? I believe this point is worth considering in connection with the present situation.

Very truly, yours,

W. H. WILLIAMS.

—

MACON, GA., *April 18, 1914.*

GENTLEMEN: I inclose you clipping from Brunswick Banner regarding the railroad rate petition for increase. I think some increase should be granted the railroads. I think this increase will stimulate business and give the unemployed something to do. My people are shippers and do not own any railroad stocks. We ship over 100,000 bales of cotton and perhaps 50,000 tons of fertilizer every year, but we believe in giving the roads a fair deal. I think an increase will cause such a wave of prosperity over this country that everybody will be satisfied. As it is now, everything is depressed, stocks are down to the breaking point, and business men do not know how to proceed. I believe the business men in this section are in favor of the increase, and certainly hope the commission will decide that way.

Respectfully,

FAY BASHUISKI.

—

SILVER AVENUE,
Lamar, Clinton County, Pa., April 18, 1914.

Plea, greater freedom to railroads to build more.

Hon. WINTHROP M. DANIEL,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: Without knowing your appointment, yesterday wrote to commissioners relative to "greater freedom to railroads to build more." The opinions of the writer, a mechanic and during his 31 years a day wage worker, advocacy of cooperative railroad building, eastern and western central Pennsylvania, the short-line route between soft and hard coal and vast resources of iron ore, clay, limestone, and sand of near-by mingling that needs unison of railroad mining to use the material economically in its most appropriate use at least cost to produce for commerce. Such a procedure would be building railroad over and under mountain and deep railroad cut through ridge containing the world's best iron ore for cutlery, battleships, or shot of greatest density, the former most useful to build, yea, in mountain, valley, towns, and cities of long, bright life of the people.

By equity rule of the Nation to grant railroad the increased freight rates and a more equalizing classification of charges on high-grade goods by comparing charges year 1869: Groceries, that includes wines and beer, the rate from New York and Philadelphia to points on Bald Eagle Valley, Pennsylvania Railroad, was 46 cents per 100 pounds. In addition, stations like Mill Hall, Howard, etc., added 15 cents to each shipment under 1,500 pounds as commission, and now the rate is straight 39 cents per 100 pounds or less. The writer frequently receives a case of wine, American, from New York to Lamar via Central Railroad of New Jersey, Philadelphia & Reading, New York Central, Central Railroad Co. of Pennsylvania, for 39-cent rate at 100 pounds for three railroads' pay to handle it with care, and if any loss by pirates or accident pay the owner from these burdens how made. It's a great problem to me that have noted wage increase on railroad workers double the amount from year 1869.

Equalization for each class of freight for its value and risk to handle should be increased 25 per cent, and as an all-around increase of 5 per cent on coal, iron ore, structural steel, etc., of small units of labor in comparison with cutlery and goods in bottles, etc. A higher tariff would encourage home industrials, a commission-house increased price on Sweden porter, 20 per cent; it has forced me to brew and bottle 235 pints.

Yours, faithfully,

JAMES WOLFENDEN,
An English-American.

[Inclosure 1.]

CENTRAL RAILROAD CO. OF PENNSYLVANIA.

[Via Central Railroad of New Jersey, Philadelphia & Reading, New York Central, and this road ———.]

Initials: 3				
Shipper: Dewey	D'head, 1/28/14			

Charges must be paid on delivery of freight.
Received payment for the company.

J. E. ALTERS, *Agent.*

All carload freight will be subject to a charge for car service of $1 per car for each 24 hours detention, or fractional part thereof, after the expiration of 48 hours from the time of its arrival.

Original paid freight bills should accompany all claims for overcharges, loss, or damage.

Draw check to order of the Central Railroad Co. of Pennsylvania.

[Inclosure 2.]

THE INTERMEDIATORS OF TRADE AND RAILROAD RATES—NATIONAL INTERSTATE TRADE COMMISSIONERS.

MY DEAR EDITOR WATCHMAN: Your ideals of equity government, "State rights and Federal Union," to be in touch with honorable means of requirements to rule its internal affairs in such a way that don't involve dishonor to National Government; that collects a revenue on spurious goods, or the supervisions on equitable trade between States, having different statutes, nor the invasion against national rights to

protect those in Government employ from a vile liquor trade, etc., are too numerous to name.

The drastic order of Navy Secretary Daniels that no liquor be allowed in its services will speedily cause an awakening on what are requisite wholesome drinks of digestion, to eat more food free from clinkers, whereby to obtain sobriety and standard of any nation, and in the meantime of the test on prohibition against pure grape juice, wines, or the plain roasted barley and hop brews, ferments and preservative by can sugar free from blue, it will be the means of causing indigestion, stomach trouble, and nervousness, to force the use of vile habits, tobacco and brandy, whisky smuggling to relieve temporal, and never-cured nervousness.

Yours, faithfully,

JAMES WOLFENDEN,
Lamar, Pa.

—

J. W. COULSTON & Co.,
New York, April 20, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We are in favor of the railroads having an immediate increase of 5 per cent in freight rates, and believe that if your commission will so decide, and at the earliest possible time, the depression in business now prevailing throughout the country will disappear and that a revival in trade will take place immediately.

Very truly, yours,

W. S. COULSTON.

—

STANDARD OIL CLOTH CO.,
New York, March 10, 1914.

Brief or statement; subject, car spotting.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This company has five factories located in official-classification territory, all of which have private sidings or switch tracks.

(a) Three factories with one main siding, having two or more branches, owned jointly with railroad companies, our company owning as high as 80 per cent of original cost.

(b) One factory, with one main siding and branches, owned exclusively by ourselves.

(c) One factory, with one main siding and branches, owned exclusively by railroad company, with realty easement for trackage rights.

When all of these sidings and spurs were constructed it was thoroughly understood that the rate in carloads covered from point of origin to point of delivery on these sidings, and that all these rates were based on the general average of delivery, as they must necessarily be under any conditions.

It is our opinion that a car-spotting charge is not the proper method, in theory or principle, to give transportation companies more revenue, and would work an injustice to thousands of shippers of low-priced commodities, as well as to the railroad companies themselves.

Under a ruling of this character the burden would fall on about 70 per cent of the shippers.

This company has never opposed a reasonable rate advance, that will furnish more revenue for transportation companies.

We are of the opinion that the same object can be arrived at by a slight advance on existing rates, and thus all shippers bear their proportion, and not create the dissatisfaction and bitterness that would entail by a car-spotting charge.

The persuading argument is that if a car-spotting service charge is made, then the railroads should purchase all the private sidings. This would be manifestly an injustice, and would involve and tie up millions of dollars needed for betterments. On the other hand, it would be an equal injustice to permit transportation companies to derive revenue from private investments.

If it is determined that railroad companies must have more revenue, and in that case it would seem the logical thing to do would be to make a pro rata advance on all classes of freight.

Very truly, yours,

STANDARD OIL CLOTH CO.,
M. F. ANDERSON,
Traffic Manager.

—

[Telegram.]

THE WASHINGTON TERMINAL CO.,
Philadelphia, March 10, 1914.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.:

On behalf of the Pennsylvania Railroad Co., I desire to deny promptly and positively the statements reported to have been made by Clifford Thorne, chairman of the Iowa State Railroad Commission, that the maintenance accounts of the Pennsylvania Railroad Co. may and have been manipulated with facility, and that it has attempted to mislead and deceive the public and your commission as to the true tendency of the net earnings and net corporate income for the year 1913. At the very first hearing of the advanced-rate case on November 24 last the attention of the commission was specifically called to a comparison of the maintenance of way, equipment, and other operating expenses as between 1913 and previous years, and the commission were publicly advised at that time that the Pennsylvania Road system would present to the commission full and ample testimony covering every one of these points, and are prepared to do so as soon as carriers are permitted to be heard.

SAMUEL REA.

—

NEW YORK, *March 11, 1914.*

His Excellency WOODROW WILSON,
President of the United States:

I take the liberty of contributing my little share of knowledge and a few facts governing my trade, with the unfortunate result that more journeymen tailors are out of employment this winter than ever before.

In January you have given us to understand that you are not averse to letting the railroads have an increase in freight rates, and I wonder whether you realized the beneficent influence which your utterances had, not in the stock market, but in restoring the lost confidence of the buying people. I could show you the results in my sales book.

Since then the Interstate Commerce Commission has again postponed its decision as to freight rates, with the most disastrous results to stockholders and the public in general. People who have invested their savings in gilt-edge—so called—bonds and stocks of railroads are afraid to spend any money except for the most necessary expenses, not knowing how endangered their income is. Have these people no right whatsoever? Are not these same people going to pay their share of the increase in rates? Is it not by far better that the workingmen pay their little share toward the increase and have plenty of work than have no work and save a penny or two—from what? As long as I have been in business—14 years—I have never seen such a number of unemployed tailors calling and begging for work. I can not give them any, and my brother tailors are in the same position.

Not only is the tremendous buying power of the railroads cut off, but the officials of these roads are afraid of cuts in their salaries and are curtailing expenses; the supply people and their employees are not doing any business and are not buying anything; and who bears the tremendous burden of this shrinkage of purchases? Not the man with money, not we master tailors who have made a little money, but the common workingman, who is eating up the little savings of years or starving himself and his family. Does your excellency not realize the tremendous responsibility which is yours on account of the postponement of the Interstate Commerce Commission?

Has your excellency no compassion with our workingmen? I have, at considerable sacrifice, kept my married men tailors in pay, but I must let some of them go this week. Men in my trade with less conscience have made wholesale discharges, and the effect of it all is depression of business, with its accompanying evils; and why? Because a handful of shippers, who would add the cost of increase to their merchandise, are opposed that the railroads should have their increase and we our business, and they, in their ignorance, not knowing that prosperous times will more than repay the whole population for the small additional cost.

I beg your excellency to carefully weigh whether it is right that the whole Nation should suffer thus because a few shippers and the Interstate Commerce Commission is opposed to the means of restoring confidence and business.

Very respectfully, yours,

G. K. GEORGE.

—

LAKE PLACID, N. Y., *March 16, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I earnestly urge you to grant the railroads their 5 per cent increase in rates for the general good of business throughout the country.

The expenses of all business concerns have increased, and the railway companies have been heavily burdened by additional expense during the past few years and are greatly in need of the increase in rates, and I, as proprietor of two hotels and a payer of considerable freight and express, and that, too, in a territory where the rates are heavy for distance of haul, request your immediate action on the railway-rate question.

I have suffered like the rest, but am perfectly willing to accept the extra burden for the good of our country, and all the Adirondack hotel men will agree with me.

Hoping for your favorable consideration, I am,

Yours, truly,

—

NEW YORK CITY, *March 16, 1914.*

Hon. EDGAR E. CLARK,
Chairman, etc.

MY DEAR SIR: I acknowledge with sincere thanks your courteous and satisfactory answer to my letter of last week.

I feel sure that your commission will meet this most important issue before you in a spirit of passionless justice.

I wrote you on an impulse, feeling that my position is one of many thousands of men and women whose health and usefulness depend on their receiving from the Government oversight of the railway corporations, in which their little principal is invested, a certain protection. My own investments were made after careful inquiry, and I have received for many years the return in income expected. Now, it is in part withdrawn. I believe that this is largely due to the increased charges on these corporations made mandatory by the United States Government. All I and those I represent ask is that our interests be duly noted in your equitable adjustment of conflicting conditions. We are vicarious sufferers now for the evil wrought by criminal mismanagement. As far as possible, those guilty should be punished. Doubtless the statute of limitation prevents this in large measure.

But as great an injustice is possible if these properties are prevented by the Government from carrying on their work so as to make a fair return to their owners.

I am, yours, sincerely,

JOSEPH R. DURYEA.

—

TRADE & TRANSPORTATION BUREAU,
Washington, D. C., March 16, 1914.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

MY DEAR MR. CHAIRMAN: You will probably be interested in the correspondence inclosed herewith relating to rate conditions as they are regarded by Commissioner Coyle, of the Business Men's League, of St. Louis, Mo. I am therefore submitting to you his correspondence reaching me relative to the matter, because it outlines quite clearly the position of his league, and also shows a willingness to line up its business affairs in harmony with the commissioners' final decision. The memorandum with these papers is a copy of some suggestions the writer made to Mr. Coyle relative to matters that are in the hands of the commissioners now.

Very truly, yours,

W. B. BARR.

—

THE BUSINESS MEN'S LEAGUE OF ST. LOUIS,
St. Louis, March 13, 1914.

Mr. W. B. BARR,
Manager Trade and Transportation Bureau,
Washington, D. C.

MY DEAR BARR: I thank you for your letter of the 5th inclosing a copy of memorandum outlining your views with reference to the terminal-services feature of the eastern rate case.

I think your views cover the case very clearly and no doubt will assist the commission materially in reaching a conclusion as to the suggestions which may properly be made to the railroads with respect to this

particular feature. The more I study the case as a whole the more complicated and far-reaching it appears in its consequences.

With respect to the general situation—that is, to its effect upon the business of the country—it would seem as though action might be taken on the 5 per cent advance proposition promptly and this particular feature now under consideration left for subsequent investigation. Looking to the future, however, it would seem that inasmuch as the question is under consideration the investigation should be so thorough respecting all of its phases that in any wise come within the province of the commission to investigate that when a final decision is made it may not only give the railroads that to which they shall be entitled, in order to enable them to render adequate service to the public and maintain their credit, but that there shall be left no conditions, so far as it is possible to eliminate them, wherein there is unjust discrimination between individuals, between communities, or between commodities.

This, of course, would be ideal, but it is questionable whether the country can stand at this time a thorough investigation to this extent. As you know, personally I would be in favor of extending the investigation along other lines also, as suggested in my letter to Mr. Barlow, copy of which I sent to you at the time and an extract of which I am inclosing herewith. Some of these lines, I presume, could not be followed by the commission under the present limitations of their authority, but sooner or later I believe the commission will have, or should have, sufficient jurisdiction to extend their investigations to cover such phases. However, officially and speaking for the bureau, our attitude is that we should furnish the commission all of the facts in our possession, or obtainable, that they may desire, without prejudice, and try to adjust our business affairs in accordance with their decision.

With kind regards, I am,

Yours, very truly,

P. W. COYLE,
Traffic Commissioner.

[Inclosure.]

MEMORANDUM RELATING TO THE OPERATION OF INDUSTRIAL LINES AND THE SERVICE OF TRUNK LINES AS TO SPOTTING, SWITCHING, ETC.

The situation at present is not perfect, but is vastly improved over any condition in the past in that it more nearly gives a satisfactory service and at a cost not unduly discriminatory generally speaking. In its ramifications so many influences are entitled to consideration as to a material change in the manner of handling business that in all fairness to every interest much time must be consumed in reaching a just conclusion. There is no denial of the fact that the matter should have the attention of the Interstate Commerce Commission at the proper time and in a manner that will finally determine what surplus services are rendered, in how far they furnish a discrimination possible of elimination without producing other inequalities, and what for any surplus service is a reasonable charge. These considerations, in our belief, are not determinable in blanket form, so called, but more by a specific examination of the conditions at each of the more important transportation centers. This because the community growth is from different causes and is surrounded by varying conditions. An analysis of any other sort, it would seem, can not claim any scientific merit. Looking at the matter as stated, it is our belief that consideration of these factors in the earnings of carriers might very properly be subsequent to the question of an increase in the carriers' rates, thus aiding in more settled business conditions and granting to your commission such reasonable opportunity to consider them with the deliberation that questions of permanent efficiency and economy require. This conclusion respectfully submitted is not based on any premise that the past history of the appealing carriers is free from criticism, and in fact admits the justice of a great deal of it, but arises from the opinion that the settlement of the petition for an advance in rates is paramount at this time on the merits of the petition as relating to existing conditions.

It is further our belief that the question of surplus service will now, because of its agitation, be the subject of conference between trunk lines and shippers and owners of industrial lines, to the end that voluntarily those arrangements existing without a basis of economy or efficiency will be abolished, and that those retained on the merits of service rendered will be able to satisfy your commission of their value.

ROCKWELL HOUSE,
Glens Falls, N. Y., March 15, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

TO YOUR HONORABLE BOARD:

I can not resist sending to you newspaper clippings which voice the sentiment of 100 per cent of my guests.

I am in the hotel business, and have been for the past 35 years, and conduct one of the largest commercial hotels in northern New York. My patrons are largely made up of commercial men who sell goods directly to the trade; and there is but one sentiment with them, and that is that the railroads should be allowed the 5 per cent increase of rates that they are now asking of you.

In their judgment, as well as my own, it would act like magic to the business of this country, and possibly avert a panic, for I feel that we are surely drifting into one if they do not get it.

We in this section never saw the general business so bad. My business is 50 per cent less than it was a year ago at this time; and unless the powers at Washington do something to relieve the present conditions I fear failure and ruin is in sight for business men.

Trusting that my humble appeal will receive some consideration at your hands, I am,

Very respectfully,

GEO. M. TAYLOR.

STONE-ORDEAN-WELLS CO.,
Duluth, March 14, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to present to your honorable body an informal complaint against the proposed charge for so-called spotting of cars by carriers on industry sidetracks privately owned or railroad owned.

Owing to the limited time that has been allotted us for the compilation of statistics, we are not in a position to present a comprehensive review of our own situation.

In the year 1913 substantially 1,650 cars were spotted for unloading. This does not cover extra service performed by carrier in shifting cars on our own tracks, an accurate record of which we have not in our possession, nor could we obtain without sufficient time for a thorough review of our files.

We most respectfully call to your attention the fact that, topographically, Duluth would only permit of enlarged terminal facilities at a tremendous expense on the part of the carrier if the private siding were eliminated. A fair proportion of the track space occupied by carriers having terminals in Duluth are built out into the bay, using in consequence a sand ballast. It has been necessary to do this at a great expense, for the reason that the surrounding country, being hilly and rugged and filled so substantially with solid rock, the cutting of the same has been practically out of the question on the part of the carrier.

We think the private siding, particularly in our own locality, has filled a need both for shipper and carrier, and the abolishment of the same would cripple either in equal proportion. We do not think conditions are similar relative to this matter throughout the country, and for this reason hearings should be held at numerous points designated by yourself, giving all shippers an opportunity to present their views typical to their own locality.

The situation in Chicago has made it such that every foot of space that is available is utilized by railroads, and surely at times of congestion, which are very frequent, the private siding has served as an outlet to what may have proved a disastrous terminal condition.

We think the trend of thought in your body, and effort by carriers, has been to promulgate a rate amply sufficient to cover terminal expenses. The general advance of 5 per cent in official-classification territory should meet this need.

Commissioner Harlan, in his concurring opinion in the Associated Shippers of Los Angeles case, cited in part as follows: "The general rate schedule of carriers have been adjusted on the theory that the rates should be fixed high enough to warrant carriers in including the spur-track service without extra charge, and not on the theory that additional revenue would be available from that source. The carload rate of carriers to and from a given destination by an established custom includes the switching of the car to and from the store door on spur tracks directly connected with their respective terminals."

We take the liberty of citing the above quotation of Mr. Harlan's merely as an illustration of the fact that it has been the general idea that the through rate included terminal compensation. We think that this fact has been established many times by the commission.

In conclusion, our prayer is that the shippers throughout the country be given more time to present their views on this subject. It is of vital interest both to the carrier and the shipper, and we do not think should be decided without thorough investigation.

Yours, very truly,

STONE-ORDEAN-WELLS CO.,
By BRUCE TER BUSH, *Traffic Manager.*

WASHINGTON, D. C., *March 14, 1914.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

SIR: In the consideration of the eastern railroads for permission to increase their freight rate it is earnestly hoped that the interests of the thousands of small investors whose savings have been invested in the stock of the companies in the hope and expectation that the dividends would give them a living may have more attention than appears from the public press to be the case at present.

Issue after issue of short-term notes and additional bonds have been made by some of these roads to meet expenses, by reason of the fact that the rates now charged for transportation are not sufficient to meet the increased cost of labor, material, and necessary improvements. These additional issues certainly reduce the value of former issues outstanding and have already served to cause reductions of dividends, and my information leads me to believe that in certain cases all dividends are to be withheld for an extended period in order to accumulate a sufficient fund with which to extend the business to meet public demands.

As one of these stockholders, I earnestly hope that our interests may not be sacrificed in the matter and that we may have a "square deal" from those who are handling the matter.

Very respectfully,

THOS. P. GRAHAM.

2410 Eighteenth Street NW.

NEW YORK, *March 13, 1914.*

The CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: I respectfully submit:

1. That the railroads have been compelled to pay largely increased wages without an equitable increase of freight rates.

2. That the Government has called on them for largely increased mail service without an additional compensation. Against this there has been no increase in rates.

3. Taxes have increased, and the cost of all supplies. In view of these facts, I believe that the question of tap lines and other so-called free services should not be brought up now. At best there are two sides to these tap-line cases. What the railroads need is immediate increased revenues. If a 5 per cent increase proves eventually to be too much, it is easily cut down, and in the meantime any advantage to the railroads will do no more than help offset the extra expenses cited in paragraphs 1, 2, and 3. The newspapers cite opposition to rate increases. I have discussed the question with nearly everyone I know, all of whom are shippers by rail in lesser or greater degree, and I find no opposition, but, on the contrary, approval of the full increase asked.

I am not interested, directly or indirectly, in any railroad.

Respectfully,

J. V. BENDUS.

JERSEY CITY, N. J., *March 13, 1914.*

Hon. EDGAR E. CLARK, *Chairman.*

DEAR SIR: As a small investor in railroad securities, I have been deeply interested in the effort that is being made by the railroads before the Interstate Commerce Commission to secure the right to make an advance in freight rates. Several members of my family are owners of some few thousand dollars of railroad stocks and bonds, on which they are largely dependent for a living. The dividends on some have been reduced, among them St. Paul; and since the recent statement made by the commissioners about St. Paul's system of accounting, which seems to have been spread broadcast, both here and abroad, we have felt that the holders of railroad securities were not receiving the consideration they are entitled to. We all are, whether users of the

railroads' services or owners of their securities, citizens of our common country and entitled to equal consideration and protection of our property rights. It seems to me the question whether or not the railroads should be permitted to raise rates is one of fact; they either are or are not receiving sufficient compensation for their services. I assume that the commissioners have all the facts before them, or can obtain them, which would enable them to determine this question. I can not see why shippers—either manufacturers, merchants, or farmers—should have any voice in the matter. Of course, we all know that every shipper wants his goods carried as cheaply as possible and that every State railroad commissioner desires the lowest possible rates for his State. But the shipper is not in position to know whether the railroad can or can not afford to carry his goods at a given rate.

There have been, no doubt, many things done by railroad officials that were wrong, but these things are of the past; and whatever the sins of the officials were, they were to a large extent, if not wholly, against the stockholders and not against the shippers or users of the property. I realize that I have no more right to ask for an increase in rates than a shipper has to ask that they be not raised, based on a question of cost and service rendered, for I have not the facts on which to base such a claim, but assuming that the railroads are being economically managed, I, as a stockholder, feel that the stockholders should be heard and their rights considered in the settlement of this question.

Very truly, yours,

SAMUEL REID,
146 Harrison Avenue, Jersey City, N. J.

—

PICTORIAL REVIEW,
New York, March 12, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As an American citizen, a business man, and stockholder in a corporation that does a large shipping business, I would respectfully call your attention to an open letter in this morning's New York American asking fair play for the railroad in the matter of freight rates. I have talked upon this question with many business men, some of them very large shippers and the feeling is unanimous that the railroads are not getting a square deal. If the business men of the country, on whom the burden, if any, must fall, are in favor of paying higher freight rates as a matter of simple justice, what, in the name of common sense, objection can be made on the part of your commission? The prosperity of the country, in the minds of many business men, absolutely depends upon an upward revision of freight rates, and that it may be done quickly.

Very truly, yours,

ARTHUR T. VANCE.

[Inclosure.]

FACT AND COMMENT ON FINANCE AND BUSINESS.

[By B. C. Forbes, business editor.]

A knowledge of current conditions and of possible dangers impels me to address the following open letter to the Interstate Commerce Commission:

Gentlemen of the Interstate Commerce Commission:

Are you aware that, partly owing to your course of action, the country is in peril of suffering an upheaval disastrous to labor, to the railroads, to investors, to industry, to the public at large, and to the administration?

Do you realize that in your hands have been placed responsibilities comparable only with those devolving upon the Supreme Court of the United States?

You have been given control of the greatest industry in the country—its system of transportation—on whose welfare depends, directly or indirectly, the welfare of every man, woman, and child in the Union.

You are responsible to Congress alone.

You are more than a quasi-judicial body; there have been reposed in you administrative functions of the gravest importance.

Now, rightly or wrongly, your actions have created the very general belief that instead of holding the scales of justice even between the railroads and shippers you have become an antirailroad body.

In ruling—perhaps wisely—against the increase in freight rates applied for in 1910 you gave reasons which were supported by arguments and statistics embodying serious misrepresentation of facts. Your misuse of figures on that occasion raised doubts in well-informed minds of your desire—or your ability—to be strictly impartial in dealing with large railroad and financial problems.

Since then the position of our railroads has grown distinctly worse.

The confidence of investors, both in Europe and at home, has been so shaken that many roads are to-day in a parlous financial state.

During the years 1914, 1915, and 1916 maturing railroad obligations alone will call for upward of $1,000,000,000—this without providing one dollar of additional capital for any purpose whatsoever.

How debts falling due are to be met and new capital necessary to maintain solvency is to be raised are problems now exercising grave concern in the financial and railroad world.

Whether these problems can be handled without plunging the country into general disaster depends in large measure upon the course you choose to follow. The eyes of financial Europe and of thinking American citizens are upon you at this moment, anxiously awaiting announcement of your policy.

The state of mind existing to-day in the most responsible circles is not conducive to that speedy return of prosperity which the deplorable prevalence of unemployment and discontent renders so extremely desirable.

Without overstating the facts, it can be said that those who are charged with the task of directing and managing the country's railroads are in danger, if further denied the cooperation of the Government and your body, of abandoning as hopeless all efforts to overcome multiplying difficulties.

I beg you to ponder these words uttered this week by Samuel Rea, president of the Pennsylvania Railroad:

"This statement is not made to predict calamity, but it is made to prevent calamity."

There is more need than you perhaps realize for efforts "to prevent calamity."

What are you gentlemen of the Interstate Commerce Commission, you guardians of the Nation's railroads, doing to prevent calamity?

One of your number has just caused to be published, in sensational manner, charges of "serious irregularities" against the Chicago, Milwaukee & St. Paul Railway, which "irregularities"—confined wholly to bookkeeping—were committed several years ago, and pointed out at that time by the financial press.

Has it taken you three years to discover what the financial press discovered immediately the company issued its annual report?

If not, why is the subject treated by you so sensationally at this unfortunate juncture, when the solvency of numbers of railroads and the position of the railroads as a whole are occasioning so much concern and militating so strongly against a revival in business which, if much longer delayed can not but lead to unhappy consequences to Government and governed alike?

Not content to aggravate the unrest by harking back at this juncture to a three-year-old incident admittedly indefensible, you add the alarming statement that "in may instances" similar irregularities have been perpetrated.

Why this vague, panic-breeding allegation?

Are you concealing wrongdoing by many other roads?

Is it your intention to explode these bombs periodically, whenever your fancy or what you may regard as expediency dictates?

Why single out one railroad for exposure and shield many others you know to be equally guilty?

Can you not see how disquieting is the effect of your very serious allegation?

How are investors to know that the road whose securities they hold is not one of the many who have juggled their accounts to flimflam the public?

The St. Paul's shares shrank $9,000,000 in market value on your unexpected and alarmist announcement.

Are other stocks to be forced down equal amounts from time to time, whenever you see fit to expose the many guilty companies?

Gentlemen, I ask you to consider whether the time for purposeless recrimination has not passed.

I ask you to consider whether the time has not come to cease destructive action and to concentrate upon a constructive policy.

You have before you, and have had before you for many months, an application by Eastern railroads for permission to increase their freight rates 5 per cent.

The railroads have cooperated with you in supplying all needful facts to judge their case.

Can you not expedite your deliberations?

An attempt has been made of late to cite other avenues of relief and the impression has been spread that the railroads have been "discovered" indulging in various practices calculated to unreasonably deplete their income.

You gentlemen know that these practices, one and all, have been done in accordance with established usage and under arrangements never once prohibited by you.

Yet I am not aware that you have put the public right in their conception of the position, although a statement from you would have clarified the atmosphere and tended in some degree to allay the antirailroad sentiment now so prevalent and so injurious to the whole Nation.

Abolition of these various entrenched practices can not be ordered or effected hastily. Exhaustive investigation will be necessary before overthrowing the status quo.

Hence no adequate relief can be obtained at this time from such sources, although later on substantial readjustments may be possible for the benefit of the railroads.

I would respectfully ask you to consider the advisability of granting, at the earliest possible moment after the conclusion of your present hearings, the increased rates petitioned for, supplemented, if need be, by a statement that if developments ameliorate the circumstances of the railroads the higher rates may be canceled at some future date.

A patient is beyond medical aid once he has died.

—

LISTMAN MILL CO.,
La Crosse, Wis., March 12, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Our attention is called to the fact that the special investigation now being conducted by your commission in connection with the application of the railroads for a 5 per cent increase in their rates brings out the question as to whether the railroads should or should not charge for switching, placing, or delivery of cars by delivering and unloading on industry side tracks privately owned or railroad owned.

We are not opposed to the advance in rates, but we are distinctly opposed to any extra charge for such service as now rendered us by the railroads entering our city, as it will deprive us of the value of our investment in terminal facilities and transfer it to the carrier, and we ask that the commission refrain from definitely and finally concluding this matter until such time as a full hearing after due and adequate consideration in respect to the territory in which the shippers are located has been given.

We thank you for your consideration of this, and remain,

Very truly, yours,

LISTMAN MILL CO.,
C. J. MARBOE, *Treasurer.*

—

GERMANTOWN, PA., *March 12, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Reading a New York paper this morning I came across the inclosed article by Mr. Forbes, headed "Fact and comment on finance and business." This seems to me to be so forcible, logical, and apropos to the present distressing condition of business, finances, and particularly as it affects the railroads that I felt like passing it on to your distinguished body, and hope the sentiments expressed therein might be appreciated by your commission.

Respectfully, yours,

GORDON S. CARRIGAN.

FACT AND COMMENT ON FINANCE AND BUSINESS.

[By B. C. Forbes, business editor.]

A knowledge of current conditions and of possible dangers impels ue to address the following open letter to the Interstate Commerce Commission:

MARCH 12, 1914.

THE CITIZENS BANK,
Portland, Oreg., March 16, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Your notice of March 5 at hand stating that there will be a meeting of the full commission on March 30. I wish to assure you that my opinion has not changed on railroad rates. If you wish to encourage business conditions, I believe the advanced rate asked by the railroad companies should be granted at this time. Their expenses, on the other hand, are unlimited and they have had no recourse whatever.

Yours, truly,

N. U. CARPENTER, *President.*

—

McMASTER-CARR SUPPLY CO.,
Chicago, March 17, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am advised by the Hon. CHARLES M. THOMSON, Member of Congress from the tenth Illinois district, that you have exclusive jurisdiction over the proposed 5 per cent railroad rate increase.

The writer has given this matter considerable thought and attention, and now believes that favorable action on this rate increase would do more than any one thing that could happen at the present time in the United States to better the business conditions.

Under the circumstances I sincerely hope that favorable action will be taken on this matter at the earliest possible moment.

Sincerely and respectfully, yours,

JOHN S. WHYTE.

—

MANSFIELD CENTER, CONN., *March 17, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Kindly read inclosed, cut out from New York Tribune. Strange to me why, instead of railroad and the country prosperity, you so long keep back and force wrong economies. Men discharged and country loss.

Truly, yours,

C. H. LEARNED.

—

MARCH 21, 1914.

Mr. C. H. LEARNED, *Mansfield Center, Conn.*

DEAR SIR: This will acknowledge receipt of your letter of March 17 in regard to the commission's investigation in the matter of increases in freight rates.

Your letter will be brought to the attention of the commission and filed with the record in that proceeding.

Respectfully,

———, *Secretary.*

—

GREEN MOUNTAIN LIME CO.,
March 17, 1914.

The honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

We beg to enter a most urgent protest against the proposed plan for making a charge for "spotting" cars upon private sidings. We, in common with many other shippers, have invested several thousands of dollars in providing shipping facilities for the railroad, with the understanding that there would be no charge for switching under certain conditions.

It is manifestly a great injustice to penalize carload shippers of low-price commodities instead of having the cost shared by higher-priced commodities, which are to a great extent luxuries.

We respectfully insist that the plan would be entirely unfair and inequitable.

We believe that the Lime Manufacturers' Association has taken a broad view of the matter of increased revenues being necessary for the railroads, and has gone on record in favor of the 5 per cent increase in freight rates asked, but we certainly can not favor a plan which would put the expense entirely upon the individual manufacturers in such a way that it could not be distributed.

Most respectfully submitted.

GREEN MOUNTAIN LIME CO.,
By JOSEPH A. PECK, *President.*

—

SHOCKOE MILLS,
Richmond, Va., March 19, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: There has been a great deal recently said, written, and in the papers about your considering the trap-car service and car-switching service now recommended by the railroads. I hope it may be the pleasure of your committee not to interfere with this. Take, for instance, Richmond; the railroads haven't the track facilities here to anything like handle the business, and parties have put in private tracks to their warehouses to relieve the railroads. To enforce a rule of this kind on as cheap commodities as those we handle it would be prohibitory. We handle considerable crushed stone, on which the whole carload would only amount to about $10 or $12. We handle lime, and the freight is frequently more than the net amount the bill amounts to. You can readily see the importance of this if you take a carload of stone or coal which is comparatively cheap when compared to a carload of leather or liquor of about $15,000 or $20,000. Their proportionate amount would be small, while $2 on $10 would be 20 per cent.

I heartily approve of allowing the railroads the 5 per cent advance. This would bear equally on all shippers, as the rates are proportioned on the value of the goods and the service rendered. We are interested in several manufacturing plants in the country manufacturing lime. We would have to pay, as I construe the law, $2 trackage on all coal brought in for manufacturing, as well as all lime loaded to be shipped. It would amount to, using strong language, a confiscation. I do not see how it is possible for manufacturing plants to live under such ruling.

Very truly, yours,

WARNER MOORE.

FOND DU LAC TABLE MANUFACTURING CO.,
Fond du Lac, Wis., March 19, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the arguments before the Interstate Commerce Commission on the subject of advancing freight rates and that the advocates claim the railway companies are doing too much free switching, etc., will say we wish to protest against any change in the rates as outlined by the advocators.

We concede that some revision of the rates are justified, owing to increased operating expenses, but if we are to pay for switching of cars we certainly are discriminated against, and in addition we have to pay demurrage on delays in unloading, all of which makes a burden for the consumer who is now being taxed to death; furthermore, the railway companies will exact all these charges, and then frequently a car, after being emptied, will remain for a week on our sidetracks before it is removed in spite of our demands to have the empties taken out. It appears to us that this is too much a one-sided matter; if we are to store the empties they should in return make no switching charge, and if they have not ample warehouse facilities the railway companies should not demand charge for trap cars.

Trusting that you will give this matter your most careful consideration and relieve us of this proposed burden, and greatly oblige,

Yours, truly,

FOND DU LAC TABLE MANUFACTURING CO.,
C. F. KARSTENS.

HEINE SAFETY BOILER CO.,
St. Louis, March 19, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Since wiring you on February 28 relative to switching charge, a further complication on this proposed charge of $2 per car has come to our attention.

We have manufactured a large number of tanks for the Barry-Wehmiller Machinery Co., who take the tanks as we manufacture them, add their castings and other machinery to them, and ship them to their customers. Besides the approximate 10 per cent increase in freight rates based on our books for the year 1913, it occurs to us that in the case of such work as we do for other machinery houses, this 10 per cent increase in freight would be considerably exceeded. For example, if a $2 freight charge were paid on the ore at the mine, a second charge at the plate mill when the car was switched in, a third charge when the car of plate left the plate works, a fourth charge when the plate was received at our plant, a fifth charge when the tank left our plant for Barry-Wehmiller Machinery Co., a sixth charge when it was switched into Barry-Wehmiller Machinery Co.'s plant, a seventh charge when it left their works, and an eighth charge when it was switched into consumer's siding at destination—this class of work would carry a very much greater increase in freight rate than the proposed 5 per cent.

We are thoroughly in sympathy with giving the railroads 5 per cent increase, but we respectfully submit to your honorable body that the $2 freight charge would work a discrimination against shippers of our class.

Yours, truly,

HEINE SAFETY BOILER CO.,
C. R. D. MEIER, *Vice President.*

E. J. MCALEER & CO.,
Philadelphia, March 3, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are of the opinion that a charge for placing cars on sidings would be unjust, for the reason that many firms, as ourselves, doing business in a city have given up valuable space for siding purposes, and thereby save the railroad companies just that much room at their terminals. Where an elevated viaduct is used the cost for erection and maintaining siding is considerable and should be considered. Likewise the fact that in order to get sites where sidings can be had firms go to outlying locations, thereby relieving the congested districts where extensions to yard terminals would be expensive for the transportation companies.

Ferry-car service, we think, is as much of a convenience to the railroad companies as to the consignees or shippers, as many small lots of merchandise can be handled at one time, the distinction being about as if a comparison were made between wholesale business and retail business. A percentage of increase in rates treating all alike would to our mind be fairer than adding the charge at a place where so much outlay has already been made.

Yours,

E. J. MCALEER & CO.,
Per E. J. MCALEER.

CHENANGO VALLEY SAVINGS BANK,
Binghampton, N. Y., February 20, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am in receipt of a copy of the letter written to you by Messrs. White & Kemble, 56 Pine Street, New York City, relating to freight rates of railroad companies. I am writing you to say that I have carefully read the leter referred to and give it my hearty and unqualified indorsement. The railroad companies have been the "under dogs" for a considerable time, and their expenses have been mounting until I deem it necessary that they have authority to increase their earnings. This has been my sentiment since the agitation begun. It is in no way dictated either by what Messrs. White & Kemble write, or by any railroad corporation. I am writing as president of a savings bank and a manufacturer, who freights a considerable quantity of first-class merchandise over the roads, and have been in business almost 50 years.

With respect, I am, yours, very truly,

GEORGE A. KENT.

NEW YORK, *February 13, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I note it reported in the papers that protests were filed by our company on the 11th instant against the 5 per cent advance in freight rates requested by the eastern railroads. We shall be glad to have you advise us if this newspaper report is in error. If such a protest has been filed in our name, we kindly ask information as to who filed the same. As we wrote you on January 22, we think the railroads entitled to the advance requested. Therefore, instead of protesting against the advance, we are heartily in favor of it.

Yours, very truly.

THE CENTRAL FOUNDRY CO.,
WADDELL CATCHINGS, *President.*

WATERBURY, CONN., *February 16, 1914.*

DEAR SIR: Why don't you let the men go to work? Thousands of them are waiting for you gentlemen to say the word. Grant the railroads that 5 per cent, and in 30 days there would be work for everybody. You can relieve this great suffering, and immediately, if you will.

Sincerely,

N. F. FENN.

THE MIDDLETOWN SAVINGS BANK,
Middletown, Conn., February 18, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We respectfully beg leave to suggest that conditions affecting railroad securities at the present time, especially the demands of labor and the general public—the former for increased compensation, the latter for safety appliances, rapid passenger service, and freight accommodations—tend to impair the value of such securities now held by savings banks and also to make them undesirable for future investment. It can not be overlooked, however, that such service by the railroads effects a reduction of the cost of manufactured articles, food, and fuel to consumers and provides a home market for western productions.

In view of these facts, it would seem as if an increase in freight rates, equably adjusted to meet the conditions, would be fully justified.

All special rebates or favoritism of sections, individuals, or corporations, all combinations for stock jobbing or other manipulation, all subsidiaries supplied by directors, managers, or others in control of a railroad from which they obtain a profit, should properly be subject to your honorable commission and be forced to recognize the rights of the public.

Very truly, yours, GEO. A. COLES, *President.*

CLEVELAND, TENN., *February 9, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Question 1. It is our understanding that no two carriers build industrial spurs on the same basis. We did our own grading and furnished the ties and the railroad furnished the rails. We keep up the track.

Question 2. We get one switch a day, two cars at a time.

Question 3. Done at a less cost to the railroad than loading on their siding, as they would have to probably pull 10 to 20 cars before they could get to ours; and they have no expense of keeping up track.

Question 4. It is material benefit to us and saves expense to the railroad.

Question 5. It would be very unwise to make a charge for this service, and only the railroad would benefit by it, whereas they are put to no extra expense whatever for making these switches.

Question 7. Milling in transit is an extra charge of 2 cents per hundred pounds for this privilege, which we think is 1 cent higher than it should be, as the service is very limited.

Question 9. Charges are more than adequate.

What the roads need is a uniform advance in freight rates all over the United States. This puts everybody on an equal footing, and there is no fair-minded man that would say, with labor as high as it is, that they are not entitled to an advance. They buy more material than all other industries put together, and the country is going to stand still until you gentlemen make up your minds to give them this advance. In the meantime the business world is stagnant. While, on the other hand, if granted, we will have a great year of prosperity. Everybody thinks this, and that is what it takes to make prosperity.

Yours, very truly,

CLEVELAND LUMBER & MFG. CO.,
Per B. M. WEBB, *Secretary.*

NEW YORK, *February 9, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: With reference to docket No. 5860, I. & S. docket No. 333, covering rate increases in official classification territory. It has come to our attention that our company is probably listed as a protestant against advances as proposed in rates on cast-iron pipe and fittings, this understanding probably being brought about by our letter of November 3, in which we asked that in the event the commission should take action denying or suspending the general 5 per cent advance in all rates in the eastern territory that they include in their denial or suspension the advanced rate carried in supplement No. 3 to Mr. M. P. Washburn's cast-iron pipe tariff No. 7, I. C. C. No. 121.

We would like to make ourselves clear before the commission that in asking for suspension of the proposed advances in the above-mentioned supplement it was not our desire to protest the general advance. On the other hand, we wrote you several days ago stating that in our judgment the present conditions justified the advances asked for by the eastern carriers. Our letter of November 3 was written only to ask that in the event the advanced rates on cast-iron pipe and fittings from other producing points in the eastern territory were denied that the advances proposed in Mr. Washburn's I. C. C. No. 121 be also denied, so as to protect the southern producers.

In other words, we do not desire to protest the proposed advances in rates on cast-iron pipe and fittings only in so far as to ask that any advances on this commodity may be uniform from all cast-iron pipe producing points.

Yours, very truly,

THE CENTRAL FOUNDRY COMPANY,
By M. J. MOLONEY, *Traffic Manager.*

CHICAGO, ILL., *February 7, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have your circular giving notice of matters to be taken up before the commission February 12 and 14, and desire to briefly state our position in the matter.

We favor a slight increase in railroad transportation rates, not exceeding 5 per cent, and believe the railroads are entitled to that. We figure our goods, as a rule, delivered at destination, and on that basis it would hardly be necessary to advance our selling prices. We feel, however, that we should not be charged for any service on our small loading or spur track at our factory. Such service should be included in the transportation charge. If such service is charged for in addition to an advance in the freight rates, it will necessitate placing the burden ultimately on the consumer by an advance in selling prices.

Yours, very truly,

NORTH WESTERN EXPANDED METAL CO.,
HOWARD W. FOOTE, *General Manager.*

—

GEORGIA PINE TURPENTINE CO. OF NEW YORK,
New York, February 8, 1914.

EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Along with many other shippers and investors, I believe the time has come when the community should be more fair to the railroads.

It seems to have gotten to be now a condition where "every man's hand is raised against the railroads."

Such a spirit, even if we care nothing for the rights of the railroads, is bound to injure the country at large, and the shippers as well.

I hope your commission will see its way clear to grant the advance asked for by the carriers.

Very truly, FRANKLIN S. CLARK.

—

WHITEHEAD BROS. CO.,
New York, February 5, 1914.

OFFICE OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

Your Docket No. 5860.

GENTLEMEN: We understand the above refers to the commodity rates on sand, gravel, and clay, and that on February 9, 1914, the protestations regarding increased rates applying to the above will be heard.

We are quite large shippers of these commodities, and during the past seven months have heard considerable in relation to the proposed advance of 5 per cent on these rates. While it may be possible that there are many instances where these freights are out of line or too high, considering the value of the commodities, we think that the general 5 per cent advance is necessary, and there would be time to take this matter up on the rates to the points that are out of line and have them equalized after you have passed the increases and have them become effective.

We desire to state that our company favors the increase at this time, as we think that the general 5 per cent advance is necessary for the business welfare of this country. It is very evident that railroad expenses are increasing and net earnings are diminishing rapidly, with the result that railroads are not extending, and can not afford to purchase equipment, and inasmuch as their equipment purchases directly affect many lines of business, including our own, we feel that if they are enabled to go ahead, as the would probably do under the advanced freight rates, it would be of benefit to all.

Yours, truly,

WHITEHEAD BROS. CO.,
By GEO. B. WALKER.

—

FEBRUARY 5, 1914.

HON. EDGAR D. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

HONORABLE SIR: I herewith take pleasure in inclosing a set of resolutions addressed to your honorable body, and which resolutions were adopted at a meeting held at the Manhattan Club of this city on this date.

Believe me, very respectfully, yours,

J. STEVENS ULMAN,
Chairman of Meeting.

—

[Inclosure.]

NEW YORK CITY, *February 5, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

Whereas the value of the Nation's farm products during the year 1913 reached unparalleled totals and the export trade of the United States in those staples touched figures never before attained, and further, the balance of trade in favor of this country is a large one, we are nevertheless at the present time facing an unusual condition, where, in accordance with the statement of the Department of Commerce and Labor recently issued, the percentage of unemployed labor is greater than it has been in 17 years, and business in general throughout the United States is in a depressed condition; and

Whereas money is abundant for manufacturing and commercial purposes, nevertheless manufacturing industries are lagging, brought about largely by lack of confidence and belief that the railroad systems of the United States are not in a position of keeping up their properties to the highest state of efficiency; and

Whereas, furthermore, the parties hereto affixing their signatures, in meeting held at the Manhattan Club, New York City, on Thursday, February 5, 1914, represent purely and only manufacturing and commercial interests that pay freight to the railroads for carrying of their merchandise, nevertheless said parties affixing their signatures hereto are heartily in favor for themselves and for the respective firms and corporations which they represent, of paying and acquiesce in the advance asked for by the Eastern railroads, and feel particularly that until such time as a decision is rendered by the Interstate Commerce Commission that business will continue in a depressed state: And therefore be it

Resolved, That the parties affixing their signatures hereto acquiesce in the advance in rates, if found necessary, by the Interstate Commerce Commission in order to provide business with efficient service, restore general confidence throughout the country, decrease the percentage of the unemployed; and further be it

Resolved, That those parties affixing their signatures hereto urge particularly upon the members of the Interstate Commerce Commission to decide with the least possible delay the vital question before them, so that if they see fit to grant the increase asked for, general business may speedily have the stimulating influence of vigorous railway purchases, and thereby stimulate all lines of manufacturing and commercial business.

FALL RIVER CHAMBER OF COMMERCE,
Fall River, Mass., February 6, 1914.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: By vote of the board of directors, I am ordered to inform your commission that the Fall River Chamber of Commerce is in favor of granting to the railroads the permission asked by them to raise their freight rates generally 5 per cent. This action was taken at a meeting held on February 3, and followed the recommendation of the chamber's committee on transportation.

Very truly, yours, WILLIAM A. HART, *Secretary.*

—

HOUSTON, TEX., *February 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The question of allowing the railroads of this country to increase their freight rate 5 or 10 per cent is, I believe, one of the most important and vital questions being considered by your honorable body or any other court or governmental body in this country to-day, bearing on the business prosperity of the Nation.

The proposition has been discussed pro and con by the railroads, the manufacturers, the jobbers or wholesalers, by the politicians of all grades and degrees, but not publicly by the ones who pay the freight, the consumers. I take the liberty of addressing your honorable body as one of the latter, and give you my reasons for wanting the request of the railroads for an increase of from 5 to 10 per cent in freight rates granted.

I consider the most important thing in this country is agriculture, and the next is transportation, or the railroads. The prosperity of this whole country and all of its inhabitants are directly dependent on them, and whatever affects the financial condition of the railroads, whether it is to their advantage or detriment, is reflected and felt by all lines of business. They occupy the same relation to this country and Nation as the arteries and veins do to our bodies. They carry the life-sustaining forces to every portion of our bodies to sustain life in every member and part of the body, and if you hinder or retard the circulation, the body suffers in proportion to the interference. So it is with the railroads; the retarding influences that are preventing them from getting the necessary funds to keep the roads in proper physical condition, to make extensions and betterments to meet the ever-increasing demands of our growing business and commerce, and to pay the fixed charges, operating expenses, and a fair profit on the capitalization, will retard the prosperity of practically all business in the same ratio, or proportion. When the roads are prosperous and making money, the country as a whole is correspondingly so, and there are fewer idle men.

A condition now exists with the roads that needs treatment. No matter what the cause, we are confronting a condition that must be met in the proper manner, and that promptly. There are retarding influences that are affecting roads that are very active to-day, which, if allowed to continue, will seriously affect the continued prosperity of this country, and I believe that an increase of freight rates 5 or 10 per cent would immediately destroy or dispel those conditions that now threaten us. The tariff and currency bills have been passed by Congress, with their attendant hopes of prosperity, but I believe that we can insure the prosperity of this country as in no other way at the present time by the above-mentioned increase. I am ready and willing to pay my part of the premium, if you will only permit me. I have calculated the number of pounds of everything that my wife and myself eat, wear, or otherwise use in a year, and I take the present freight rates on these things from New York, Chicago, New Orleans, Kansas City, and Fort Worth and find that the total freight paid by me in one year amounts to approximately $11.04, and an increase of 5 per cent would only mean an additional expense of 55 cents a year, and an increase of 10 per cent would be $1.10 a year, an amount so small as not to affect me in the least if I paid it, a very small premium to pay to insure me

an income of several thousand dollars a year and prosperity, for there would be a difference of several thousand dollars a year in my income or earnings if, through not allowing this increase in freight rates, there should be more receiverships in some of our large systems of railways, and consequent disturbance of business to the extent of a panic. So why take a chance of letting this condition go on to the breaking point, when it would be too late to avert a calamity? There are several hundred thousand men in this country to-day out of employment. Do you suppose that one man out of all that great number would hesitate to pay 50 cents, $1, or $5 to insure them a job that would pay them average wages for a year? They would be only too glad of the opportunity of doing so, and I have the honor to respectfully request that you permit me, as a consumer who pays the freight, and as an American citizen who wishes to insure his own prosperity by paying to the railroads of the country an increase of 5 or 10 per cent in freight rates on what I consume and is handled by them; and I believe I voice the views of the larger majority of the consumers, who pay the freight.

Yours, respectfully,

J. M. HEAD.

RAVENEL-GABBETT LUMBER CO.,
Valdosta, Ga., January 26, 1914.

Mr. W. G. BRANTLEY,
General Counsel for Southern Railroad Association,
Washington, D. C.

DEAR SIR: We want to go on record with you as being thoroughly in sympathy with the railroads in their effort to get 5 per cent increase in freight rates on all articles asked for, including the commodity we handle. The general tendency in past 10 years has been to reduce railroad rates in freight and passenger, and the fact that all materials used by railroad companies have advanced very materially does not seem to appeal to the general public, as it should. The development of our great country and its general prosperity largely and to a great extent depends upon the prosperity of the railroads. We want every territory, and especially in our southern country, honeycombed by railroads, and their prosperity means additional railroads, and consequently advanced value of millions to undeveloped territory. Wish you could use our company in some legitimate way toward advancing the railroads' interest.

Yours, truly,

RAVENEL-GABBETT LUMBER CO.,
S. D. RAVENEL, *President.*

THE NEW ENGLAND BOX CO.,
Greenfield, Mass., January 31, 1914.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your schedule of hearings calls for the presentation of evidence regarding lumber and forest products on February 21 and 22.

Our company is one of the large handlers and producers of these products in New England, our own consumption amounting to about 30,000,000 feet, and in addition to this we are obliged to handle in the shape of by-products approximately 10,000,000 feet, so our total handling per annum is about 40,000,000 feet. Consequently I feel that our company occupies a position of some importance relative to this subject, and I am taking the liberty of expressing our company's views to you by letter, as owing to other engagements I shall not be able to be in Washington at the time set for the hearing.

This matter was brought before our directors at their annual meeting and was carefully discussed. The consensus of opinion was that the advance of 5 per cent asked by the railroads is entirely in keeping with conditions that exist at the present time; and we feel that while our business, like many others, can not stand very much more traffic charge, at the same time the question of equity and justice to the transportation companies demands that we bear our share of this burden.

The one question which arose was whether the hearing was to be on the question of the blanket increase of 5 per cent, and the decision, whatever it might be, based on this application, or whether there were to be ramifications in connection with switching charges, demurrage, or other subjects that might affect the rates indirectly.

Assuming that the first proposition is the only one under consideration, and that the decision will be based on whether the railroads will receive the blanket increase of 5 per cent, we wish to put ourselves on record as being in favor of this increase.

Personally I regret that I can not be present at the hearing to state our position before the commission. If this letter is of sufficient importance or interest to you, so you care for more information, would say that the writer has personally appeared before Commissioner Prouty on three different occasions, the last time being at the hearing in Boston, October 22 or 23; and while I appreciate that owing to the number of witnesses that appear before Commissioner Prouty he may not be able to identify the writer, a reference to my evidence submitted at that time may serve to fix it in his mind, so he can give you some information.

I wish further to state most emphatically that this decision has been arrived at by our company after due deliberation, without consulting with any other companies in the same line, and is the reflection of our personal opinion and judgment.

The writer has the honor to serve as president of the Western New England Chamber of Commerce, but wishes to have it distinctly understood that in no way does the opinion expressed herein reflect the views of that organization, as he has no authority to speak for that body.

Very truly, yours.

THE NEW ENGLAND BOX CO.,
B. W. PORTER, *President.*

L. BRENNER & CO.,
Lebanon, Pa., February 12, 1914.

The CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: It is the sentiment of the scrap-iron trade in this vicinity that it must be to our benefit if your commission would allow the increase asked by the railroad companies on freight shipments, due to the fact that it would stimulate business in general. For your information we wish to inform you that Lebanon is the second largest scrap center in this country. There is at least 50,000 tons of scrap handled per month, and I am positive that all the dealers and brokers of this city are hoping that the increase asked by the railroad companies are granted. We remain,

Respectfully, yours,

L. BRENNER & CO.,
By L. BRENNER.

PITTSBURGH, PA., *January 24, 1914.*

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: Please send me a copy of Tariff Circular 18A on the "Fundamental law on interstate and intrastate commerce."

I also will be glad to have a copy of the last available issue of the annual printed report of the commission. If necessary to do so, I will secure the O. K. from our Representative, Hon. STEPHEN G. PORTER.

Please also advise as to the probable date on which the commission will announce its decision in regard to railroad increase on rates. The sentiment of the public and that of many business men handling important affairs are in favor of some advance, as it appears this is about the only large factor that keeps the business in a quiet state. The uncertain future is worse than no advance or a slight increase. When we all know where we stand, then we can adjust ourselves accordingly.

Yours, very truly,

H. C. H. WEIDNER.

ROCHESTER, N. Y., *January 26, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: From a paper manufacturer's standpoint, and for the reason that I feel sure great and lasting benefits will accrue to the general business interests of our country, I respectfully ask that the request of the railroads for a 5 per cent advance in freight rates be granted by your honorable body.

Very truly, yours,

J. M. WALMSLEY.

KNEELAND-MCLURG LUMBER CO.,
Phillips, Wis., January 26, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Though we are manufacturers and shippers of some 50,000,000 feet of lumber and other forest products per annum, and any raise in freight rates would directly reduce our present income, we believe that in justice to the roads over which we are shipping and doing business they are entitled to a reasonable raise in freight rates, that they may be enabled to make the necessary and long-delayed improvements; in fact, most of them use considerable lumber in those improvements, and for the past several months their purchases have dropped to almost nothing, and in the long run we believe that we would be benefited by any reasonable raise given them.

We are located on the Soo Line Railroad, though our product is distributed by many other roads throughout the Middle States.

This appeal to you is made without the knowledge or solicitation of any railroad company, and trust that it may have your favorable consideration.

Yours, very truly,

KNEELAND-MCLURG LUMBER CO.,
D. M. KNEELAND, *President.*

CROCKER BROS.,
New York, January 26, 1914.

EDGAR E. CLARK, Esq.,
Chairman of the Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As shippers of from 75,000 to 100,000 tons per annum in normal years of ferro manganese from New York, Boston, Baltimore, Philadelphia, New Orleans, and Galveston to producers of steel at inland points, likewise as representatives of shippers of some 300,000 tons per annum of pig iron from furnaces in Pennsylvania, New York, Virginia, Tennessee, and Alabama, we desire to go on record before your honorable body as favoring under proper regulations the uniform advance of 5 per cent in commodity rates as now requested of you by the railroads of the country, believing this advance if granted to the railroads will be used for legitimate purposes to enable them to improve their facilities for business, and the results to our people at large will be so advantageous as to justify you in acceding to their prayer at the present juncture with all possible speed.

Submitting our views, which we believe are in line with the bulk of the large producers in the country to-day, and sincerely hoping the request of the railroads will not be refused by your honorable body, we remain,

Very respectfully, yours,

CROCKER BROS.

JAMES P. SMITH & CO.,
Chicago, January 27, 1914.

To the Chairman and Board of Commissioners of Interstate Commerce,
Washington, D. C.

ESTEEMED AND HONORABLE SIRS: As a fair-minded merchant and close in touch with the business affairs and conditions now prevailing, and purely from a viewpoint of justice, I think the interstate body and administration should approve most sincerely of a 5 per cent advance in freight rates to the railroads. Conditions justify this increase. Wages, material, operating expenses, equipments, safe guarding from accidents—everything has increased operating railroads.

Yours, very sincerely and most respectfully,

GODFREY H. BALL.

[Copy for Mr. McGinty.]

JULIEN STEVENS ULMAN,
New York, January 28, 1914.

EDGAR E. CLARK, Esq.,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have been informed that up to and including March 5 assignment has been made to different lines of industry for argument before the Interstate Commerce Commission regarding the advance in freight rates asked for by the eastern railroads, and that the date of March 2 is assigned for hides and leather.

I am under the impression that those appearing before your honorable body desire to argue against the advisability of allowing the increase asked for. I beg to say that the corporation of which I am first vice president, feels favorably disposed toward an allowance of increased freight rates, and I therefore take the liberty of asking

whether you would consider it advisable for me to appear before your commission on March 2, with the intention of presenting my arguments for the allowance of an increase.

——— ———.

NEW YORK, *March 20, 1914.*

Hon. E. E. CLARK, *Washington, D. C.*

DEAR SIR: I am writing to you as an investor in railroad stocks to ascertain if something can not be done for the great body of men and women who have invested their savings in such securities and have seen their revenues from this source steadily diminish. There are thousands of people like myself, who have used this means to provide for their old age, and as we have no means of appearing before you in a body to represent our side of the case, I am addressing this letter to you with an appeal to be fair to the investors in the disposition of the rate cases.

Yours, truly,

SYLVAN LEHMAYER,
206 West Eighty-fifth Street, New York City.

BALTIMORE, *March 25, 1914.*

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I see from a published statement of the Interstate Commerce Commission that additional hearings on the rate question will be had April some day or other. Suppose you had a boy desperately ill from excesses of dissipation or seriously injured from an accident in a recklessly driven automobile—anything you wish—but hurt, injured, needing aid. You send for the doctor and pray him to give the boy something to make him better—to make him well. Instead of acting the doctor starts an academic discussion of the evils of giving a boy too much money to spend at college; of permitting him to indulge in the excesses of gambling, intemperance, and other vices; and how, if you had done this, that, and the other, your boy would be a fine, healthy, vigorous, prosperous man instead of lying there in that condition; that he could give him a stimulant that might help his heart and possibly pull him through, but that stimulants were bad—an artificial thing—and the only right course to pursue was the true, proper one where such expediences were not needed.

Would not you say, "For God's sake, Doctor, stop talking; give my boy something; save him; and I will try to bring up my other children so that they will never be exposed to the dangers this boy was and thus permit such a condition to arise in their lives. Give a stimulant; anything to resuscitate him; and once convalescent and restored to health I will follow any good, healthy diet you prescribe."

What is the wisdom of you and your associates discussing what economies could be effected, what wrongs could be righted, what improper financial methods have been pursued, etc., in the conduct of railroads, while industrial prostration and financial stagnation and doubt and all the negatives of the business world attend your proceedings.

Whatever the causes the facts exist. The railroads—mind you, not the offending presidents, directors, holding companies, or whatever you like, but the stockholders—men, women, savings banks, institutions, etc.—need help, aid, credit now.

Give them the increase, get them convalescent, and then show them the error of their ways and place them on any basis that may finally be proven equitable.

I am, sir, yours, respectfully,

C. MORTON STEWART,
Eccleston Post Office, Baltimore County, Md.

(Now farming at Shanan Farm, and member of firm of C. Morton Stewart & Co., formerly engaged in Brazilian trade, shippers of flour and coffee.)

H. R. WYLLIE CHINA CO.,
Huntington, W. Va., March 9, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to enter our protest against any charge being made for car placing or spotting service. We really think that that work is part of the delivery that the railroad should look after, as it is necessary that cars be located properly for shipping and unloading. We have been strong advocates of the proposed 5 per cent increase in freight rates, and think the railroads are entitled to the 5 per cent increase, but we do not think that any charge should be made for spotting or trap-car service.

Very truly, yours,

H. R. WYLLIE CHINA CO.,
H. R. WYLLIE, *President.*

BOSTON, MASS., *March 21, 1914.*

The CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Five per cent freight rate advance. I think it should be granted.

"The laborer is worthy of his hire." Luke, 10:7.

"Thou shalt not muzzle the ox when he treadeth out the corn." Deut., 25:4.

The railroads are entitled to be paid for their service.

The charge of inefficiency is not a sufficient reply. We are all more or less inefficient, but we get our pay just the same, and the railroads should have theirs.

Yours, respectfully,

A. V. PHILLIPS.

MANUFACTURERS' CLUB OF THE CITY OF WILLIAMSPORT, PA.,
Williamsport, Pa., January 14, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a regular meeting of the Manufacturers' Club of the City of Williamsport, Pa., held on January 13, 1914, the following resolution was unanimously adopted:

Whereas the Interstate Commerce Commission is now considering application by railroads in official-classification territory for permission to advance their freight rates uniformly 5 per cent; and

Whereas the Interstate Commerce Commission will act upon the application, affirmatively or negatively, according to fact whether the railroads actually need higher rates or can effect economies by more efficient management to meet higher costs and provide extension of facilities; and

Whereas the Manufacturers' Club of Williamsport is incompetent to judge the question of fact, and therefore incapable of voicing sentiment favorable or unfavorable to the application; and

Whereas it is believed that the uncertainty as to whether permission to advance freight rates will be granted or denied is retarding general business of the country: Now, therefore, be it

Resolved, That the Manufacturers' Club of the City of Williamsport, Pa., respectfully urges the Interstate Commerce Commission to render a decision as speedily as possible, to the end that confidence may be quickly restored; and be it further

Resolved, That a copy of these resolutions be sent to the members of the Interstate Commerce Commission.

CHAS. C. KROUSE, *President.*

STATE BANK & TRUST CO.,
San Antonio, Tex., May 22, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Owing to the fact that wages have increased and the price of all material used in the construction of railways is also increased, I respectfully urge that the railroads of this country be allowed to increase their rates 5 per cent, which would be a small matter to the public, but, on the other hand, it would enable the railroads to take care of their obligations and at the same time improve their present service. I think this nothing but right, and I am not interested in any railroads, except as a citizen who desires to see all industries treated in a fair way. I feel sure that after an investigation that you will agree to this advance if the facts justify it.

Thanking you in advance for your consideration, I beg to remain,

Very respectfully, yours,

THE CHICAGO ASSOCIATION OF COMMERCE,
Chicago, October 22, 1913.

Hon. CHARLES C. MCCHORD,
Commissioner Interstate Commerce Commission.

MY DEAR SIR: By direction of the freight traffic committee of this organization, I am inclosing copy of the resolutions adopted by said committee at their meeting on October 9, 1913, in respect to the proposed general advance in freight rates in the so-called official classification territory.

Copies of these resolutions have been mailed to the other members of the Interstate Commerce Commission.

Yours, very truly,

H. C. BARLOW, *Traffic Director.*

[Inclosure.]

Resolutions adopted by the freight traffic committee of the Chicago Association of Commerce at their meeting held October 9, 1913, in respect to the general advance in freight rates in the so-called official classification territory.

Whereas the railroads in the so-called official classification territory filed a petition with the Interstate Commerce Commission to reopen the so-called general rate advance case (heard and decided adversely to the carriers about two years ago) to the end the carriers in said territory be permitted to advance all interstate rates 5 per cent; and

Whereas said petition has been denied and in lieu thereof the commission will proceed to a general inquiry into the subject; and

Whereas the freight traffic committee of the Chicago Association of Commerce has held many meetings to consider and determine their attitude respecting the question, which they recognize as of great importance to the members of the association, the carriers, as well as the public at large: Now, therefore, be it

Resolved, That the attitude of this committee is as follows:

First. The committee is in sympathy with the plan of having the question adjudicated by the Interstate Commerce Commission, that body to determine from the facts the necessity for said proposed advance and the reasonableness of the rates to be established thereby. The committee look upon this proposed advance in the all-rail rates as experimental. If the benefits arising therefrom are mutual and of a permanent nature, the increase may be justified. If, on the contrary, the results are not permanent and a request for another increase in rates follows, it will demonstrate that advances in rates do not meet the issues involved nor provide a remedy for existing conditions.

Second. The committee especially invites the commission's attention to the fact that the movement toward higher transportation charges in official classification territory has in the past fallen to an undue and unreasonable extent upon the rail-and-lake rates. If the claim of the carriers be conceded that increased cost of operation, taxes, and a return upon additional capital justifies some increase in all-rail interstate rates, we respectfully submit that such claim can not and does not apply to the rail-and-lake rates, which have been advanced three times since 1900 (a total of approximately 11 per cent) without any change in the all-rail rates, which fact not only debars the claim that a fixed relation exists between the all-rail and rail-and-lake rates that requires them to be similarly changed, but establishes the further fact that traffic moving under these rates has already contributed in full measure to any reasonable advance. We therefore are irrevocably opposed to any advance in the present rail-and-lake rates: Be it further

Resolved, That a copy of this resolution be sent to the Interstate Commerce Commission.

PERKASIE, PA., *March 27, 1914.*

INTERSTATE COMMERCE COMMITTEE:

Yours in regard to extended time for witnesses received. Please expedite the hearing as much as possible. We are on the "ragged edge," and earnestly pray for early relief.

Yours, truly,

W. C. ERWIN.

NEEDHAM, MASS., *January 1, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington D. C.

GENTLEMEN: Am writing to inform you of the desperate need of increasing freight rates on the Boston & Maine Railroad Co. immediately, if this road is to be saved from receivership. Doubtless you

are not aware of the situation here, where the public is constantly clamoring for quicker and better freight service, involving enormous expense of upkeep and operation. I have talked with Boston bankers, who inform me that they see no reason why the rates maturing in February should be renewed. They appear to be unwilling to extend any further credit to the Boston & Maine. Some of the very men in the Boston Chamber of Commerce who have been recently opposing the increase of freight rates and seeking to put this road into receivership, were by themselves and their agents some six or seven years ago recommending the purchase of the common stock of this road at $130 per share and over. There are many innocent investors here who were told by bankers that this stock was something perfectly safe, and there are many women, children, and churches and other institutions that have invested therein. It looks as though certain financial interests have for some purpose sought to take advantage of the large floating indebtedness maturing soon, and the poor earnings, coupled with the enforced increase for labor, to curtail and cut off its credit and force it into receivership. If your board is not to be under the suspicion of working with and furthering the interests of these financial persons who are seeking receivership for this road to clear out innocent stockholders, it should grant the increase forthwith.

If the public, which is now trying to force this road to spend over $10,000,000 more now for improvements, is so urgent in its requests, is it not fair that this road, which is supported only by the poor territory of Maine and New Hampshire, through which it runs, should be allowed, from the public and its wealthy shippers, such rate increase as is necessary for it to continue to operate without receivership? Is it fair that the stockholders, who are receiving now no income, should lose also their principal because the wealthy shippers who use these lines are unwilling to pay a fair price for the work which they compel the carrier to do for them? Their contention is absurd, and, I believe, prompted both by a desire to cheat the road and to wreck the road.

If the commission can not now grant a rate increase for this road, to save it from receivership, the time for Government ownership has arrived. Why not let the Government pay the stockholders for their shares, and stop this fraud and stock trickery and the wrecking of railroads by bad men of wealth.

I sincerely trust and hope that your commission will act before it is too late. Ten million dollars of notes mature in February, and I am satisfied, from what I have been told, that unless leave is obtained immediately from your board to increase freight rates, this floating indebtedness can not be renewed.

Trusting that you will give your immediate attention to this matter in the interest of the people of New England, I am,

Yours, truly,

H. B. MACKINTOSH.

—

PATERSON, N. J., *January 16, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Justice to the railroads and to the people who have their money invested in railroad properties. I hope your commission will see fit to decide to allow the railroads to make the very necessary increase on freight rates. How many railroads, or, rather, what a small percentage of them, are able to pay to the investors in their properties even banking interest on the investment? Do you think that such a condition should exist? If some of the big fellows have succeeded in overcapitalizing and made a big rake-off for themselves, these people should be forced by law to return their ill-gotten gains, and it should not be the innocent investor who puts in his hard-earned dollars in an effort to get a little ahead for the rainy day that should have to stand the blunt of their misdeeds.

Freight rates seem to me to be very low, and I oftentimes wonder how the roads can afford to carry the merchandise they do for the payment received and risk run, when consideration of additional upkeep and expense is thought of. In fact, for the good of the country as a whole, I think additional rates should be allowed.

Respectfully, yours,

WM. E. STORMS.

—

NEW YORK, N. Y., *January 28, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is the universal opinion of the business and professional men whom I meet that your honorable body should grant the prayer of the eastern railroads and allow them to increase freight rates 5 per cent.

Yours, respectfully,

G. L. CHRISTIAN.

—

PERKASIE, PA., *January 31, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: The inclosed, from Philadelphia Ledger, express the sentiments of the business community as I find it.

Mr. Charles Feigenfurs, manufacturer furniture, expresses himself as follows:

"I would think that the commission would yield, hands down. My experience of over 30 years enables me to read the feelings of the business community. The 5 per cent permission looks very small and should be granted without further discussion."

Yours, truly,

W. C. ERWIN.

[Inclosure.]

GLORIOUSLY DRUNK? "NO!" SHOUTS GOMPERS—WILD DISORDER MARKS CHARGES AGAINST AMERICAN FEDERATION HEAD IN MINERS' CONVENTION—MOYER ALSO ATTACKS LABOR BOSS.

INDIANAPOLIS, IND., *January 30, 1914.*

Scenes of the wildest disorder marked to-day's session of the convention of the United Mine Workers of America, which heard Duncan McDonald, secretary-treasurer of the Illinois miners, assert that Samuel Gompers, president of the American Federation of Labor, was "gloriously drunk" during the Seattle convention and on other occasions, Gompers's denial, and the reiteration by Charles H. Moyer, president of the Western Federation of Miners, that if the copper strike in Michigan failed it would be due to the lack of financial assistance given by the American Federation of Labor.

The delegates showed little sympathy for Gompers, and he said he was being tried "before a jury whose minds were already poisoned." Every point made by Moyer and McDonald was wildly applauded.

THE UNION LEAGUE CLUB,
New York, February 24, 1914.

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission.

DEAR MR. CLARK: The writer, with many others, desires to express to you and impress upon you the well-known fact that the prosperity of the railroads and the prosperity of the whole country are inseparably connected. I am sure that everyone will concede this point.

The small advance asked for by the railroads will be so well distributed that it will naturally fall lightly on the masses, while, on the other hand, it will be a great help to the railroads, and both directly and indirectly help the masses by a general improvement in business. Wage earners—employees in general—as well as investors, who furnish the means, and hundreds of thousands of others—widows and children and dependents—all of them will benefit.

A great bulk of the manufacturers, as you know, favor the advance. They will be helped by the general benefit of improved business.

If the railroad companies have erred in certain ways in the past, is it within reason that the present generation should be punished? Pray consider this point.

With permission to increase rates, bear in mind the millions of people—artisans, laborers, mill hands, etc.—in other words, the great teeming masses of this country, will all share in the benefits derived. The whole country would thrive. What more can be desired?

Surely your commission want to help the country. That is your object. Why delay the decision? The populace at large ask it. The whole country, from coast to coast, will say "Amen" and bless you for your labors. Give the railroads what they ask as speedily as possibly.

Asking your kindly consideration to these points, I am,

Yours, very truly,

HENRY E. SMITH.

—

EVANSVILLE MANUFACTURERS' ASSOCIATION,
Evansville, Ind., February 23, 1914.

Hon. GEORGE B. MCGINTY.
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The board of directors of the Evansville Manufacturers' Association in meeting February 10 indorsed the proposed advance of 5 per cent in freight rates in official classification territory and voted to recommend to the next general meeting of the association that the action be ratified. The general meeting of the association was held on February 19, with the result that on motion duly carried the action of the board of directors was concurred in.

This association was actuated to indorse the advance, believing that it will stimulate business throughout the country and have a general salutary effect.

J. C. KELLER,
Secretary.

—

WATERTOWN, N. Y., *February 23, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

HONORABLE GENTLEMEN: A petition signed by hundreds of worthy workingmen in this city and northern country praying that your honorable board will look favorably toward granting to the railroads the right to increase their freight rate 5 per cent has been placed in my hands, and when completed will be sent to you. I can not say more, but will leave all to you. What a blessing you can confer to us—a blessing to many a worthy man and family in this manufacturing town.

Sincerely, yours,

FLOYD L. TRUAX.

—

PERKASIE, PA., *February 22, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Referring to the 5 per cent advance in freight rates—on which subject you sent me a circular which came to hand this a. m.—I desire to say that I do not think that it was the desire or expectation that there would be a decision of a scientific nature which would require several months or years deliberation. I think that those who submitted the request for the 5 per cent advance in freight rates expected an affirmative answer, say, in 24 or 36 hours, and I believe that such a verdict would be as near right as you can get it. The delay has cost the loss of many millions of dollars to the business interests, who have with bated breath held their ear to the ground hoping and praying for a prompt decision.

I hope that you will decide to give an immediate answer and so relieve the business interests of the uncertainty of the promised verdict. I am a commercial traveler and voice the above sentiments of the business men I continually come in contact with. Business is suffering because of the delay in your verdict.

Yours, truly,

W. C. ERWIN.

—

THE HARTFORD TRUST CO.,
Hartford, Conn., February 21, 1914.

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your circular of February 19 is at hand and noted. Please give my compliments to Commissioner Harlan and say to him that the people in this vicinity and throughout the State of Connecticut are so weary of the delay in advancing freight and possibly passenger rates to a point where our especial carrier, the New York, New Haven & Hartford Railroad Co., can obtain the revenue to carry out the mandatory and necessarily expensive orders of the Interstate Commerce Commission as to safety appliances, steel equipment, better terminals, etc., that they fear the patient will die while the doctors wrangle.

There are more than 25,000 stockholders—many of them women living on their incomes—and some are completely discouraged and are selling their stock at serious loss, fearing the situation will be worse. They also are entitled to fair treatment on your part.

Will you grant them a living return on their investment in the spirit of fair play?

Sincerely,

RALPH W. CUTLER.

F. BLUMENTHAL CO.,
New York, February 21, 1914.

Hon. JAMES S. HARLAN,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: I take pleasure in acknowledging receipt of the copy of your valued favor of the 17th instant, sent to me by Senator O'GORMAN (your original letter which you state as been sent to me direct not having been received).

In your valued favor you state that my several letters to the commission and the President have come to your attention; that you have given directions that they be filed of record in the proceeding known as the eastern rate-advance case; and you furthermore state that it is not entirely clear whether I desire to be heard generally in oral argument in this case or to present testimony on the issues involved.

In reply I beg to state that, as you are aware from the correspondence referred to, as well as from different resolutions received by your commission I have taken an active interest in the measure under consideration, in so far as having addressed different chambers of commerce and trade associations, suggesting that they aid your commission in arriving at a decision by a frank expression of their views toward the increase asked for by the railroads. At these meetings I have come in contact with diversified interests, representing many lines of business, and I thought it would be of interest to your commission to receive my report on the score.

As far as I can learn the general consensus of opinion is that until such time as the Interstate Commerce Commission sees fit to render a decision in the matter involved that business will continue in a state of lassitude.

My interests are entirely manufacturing and commercial, and it is my desire to see business in a prosperous condition throughout the country, which, unfortunately, it is not at the present time, and which can hardly be hoped for until there is cause for reemployment of the large number of the unemployed.

If you are of the opinion that I could in any way assist the commission in their study of the question, I should judge the proper time for me to be heard on the general questions will be when the matter is set for argument, and if you desire my presence be good enough to advise me in accordance.

With assurances of my esteem, believe me,

Respectfully, yours,

J. STEVENS ULMAN.

PORT JERVIS BOARD OF TRADE,
Port Jervis, N. Y., February 21, 1914.

Hon. E. F. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: At a meeting of the Port Jervis Board of Trade held February 10, 1914, the members of which are composed of the leading manufacturers, merchants, and heaviest shippers in this city, the following resolution was unanimously adopted:

"*Resolved*, That the Port Jervis Board of Trade is in favor of the granting by the Interstate Commerce Commission of the application of the railroads for permission to increase their freight rates 5 per cent, believing that such increase is necessary because of business conditions and the increased expense in operating these railroads. An advance in freight rates is essential to railroad betterments, transportation facilities, and satisfactory service. The secretary is hereby directed to communicate this resolution to Hon. EDMUND PLATT, our Representative in Congress, and to the Hon. E. F. Clark, chairman Interstate Commerce Commission.

Respectfully submitted.

WM. H. NEARPASS,
Secretary Port Jervis Board of Trade.

INDIANAPOLIS BRUSH & BROOM MANUFACTURING CO.,
Indianapolis, Ind., February 17, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

TO YOUR HONORABLE BOARD: We earnestly pray that you will grant the 5 per cent in freight rates to the railroads, and that you will do this immediately, if possible. We believe that if you could hear the voice of the individuals throughout the country that you would not hesitate in doing this at all.

We ship and pay our own freight on an average of over three carloads of manufactured and raw material per week, and wish to say that we are heartily in favor of this increase. It will not advance prices in our line, but will lessen our profits slightly, which we are willing to have lessened for the benefit of the laboring public.

Thanking you, we remain,

Very truly,

GEO. LEMAUX, *President.*

HANCOCK GRAIN CO.,
Philadelphia, Pa., February 19, 1914.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As large shippers of grain for both domestic and export use we are intensely interested in railroad transportation. As a matter of fact our business depends on the ability of the railroads to render satisfactory service—in supplying cars, in prompt movement, and everything that pertains to the transportation of grain.

We wish to go upon record as being absolutely and unequivocally in favor of your commission granting the advance in rates requested by the eastern railroads. This will work no hardship to this trade or to the public generally and will enable the railroads to keep abreast of the times and render the service that is necessary to meet the requirements of to-day.

We trust your commission will promptly render a decision in favor of the railroads in this important matter.

Yours, truly,

HANCOCK GRAIN CO.,
GEO. G. OMERLY, *President.*

---

262 NINTH AVENUE,
New York, February 19, 1914.

Chairman CLARK, Esq.,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Over 2,000,000 idle in this country when by a stroke of the pen we could have the greatest prosperity this country has ever experienced. I have always voted the Democratic ticket, and am in favor of Government regulation, but think every man is entitled to a reasonable return on his money. The mistake is that railroads are considered as corporations, whereas in reality the people are the owners of them; hundreds of thousands of our population are their owners. Are we not entitled in "this free and enlightened country" to a fair return on our money?

How much would 5 per cent increase in freight rates cost? One hundred million dollars. That is $1 per person. That would permit the railroads to raise $2,000,000,000. That would give employment to every workingman, investors would put money into new enterprises, everyone would be prosperous and happy. Is not $1 per annum a small item to pay for such a condition? I would be willing to pay for 10 persons (although I have little of this world's wealth), and I am sure that tens of thousands of others would be glad to do the same.

Respectfully,

S. I. GORDON.

JAMES P. SMITH & CO.,
Chicago, February 19, 1914.

Hon. Chairman CLARK,
Interstate Commerce Commission, Washington, D. C.

ESTEEMED SIR: I have duly received your favors and acknowledgment of my letter of some weeks ago. I still maintain my position or ideas as to the necessity of granting the railroads an advance of from 5 to 10 per cent in rates for the general good of the country. Every merchant I talk with is in favor of the roads' request. I have been in business 45 years; voted since 1874, generally always for a Democratic President. I believe we have a good one now. We have experienced a lot of "new things" since last March, and business has been anything but good, but will come out all right. We have taken a lot of medicine. Now let us have a little stimulant that will help all—labor, merchants, etc.

Sincerely,

GODFREY H. BALL.

THE SHUMATE RAZOR CO.,
St. Louis, February 26, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The writer has given the matter of the 5 per cent increase in railroad rates considerable thought and is impressed with the fact that the railroads deserve some consideration in this matter. The writer's experience in his business indicates conclusively that the cost of production, as well as material, has steadily increased for the past years, and he feels that the railroads have without doubt had a similar experience. He therefore feels it his duty to write your honorable body as above.

Very truly, yours,

FRED S. ROTH.

THE SOMERSET BOARD OF TRADE,
Somerset, Pa., February 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: Inasmuch as the request of the eastern railroads for a 5 per cent freight-rate increase is a matter deserving the attention of all the citizens of the United States, the Somerset Board of Trade, at its regular meeting held Friday evening, February 13, 1914, after a full and complete discussion, declared its position by the passage of the following motion:

"That the board of trade of Somerset, Pa., petition the Interstate Commerce Commission to grant the railroad companies the 5 per cent freight-rate increase requested by them."

We submit the foregoing action of the Somerset Board of Trade to you for your consideration and for the purpose of showing you the feeling and position taken by the business men in this district.

Yours, very truly,

J. H. BEERITS, *President.*

Attest:

W. CURTIS TRUXAL, *Secretary.*

MANLEY CARRIAGE CO.,
St. Louis, Mo., February 25, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We concur in the recommendations to you, made by Festus J. Wade, president of the Mercantile Trust Co. and Mercantile Bank, of this city, urging you to grant the 5 per cent increase in the rates asked by the railroads.

We must live and let live in this world if we expect to profit and be good citizens.

Yours, very truly,

MANLEY CARRIAGE CO.,
By J. D. MANLEY.

MANSFIELD CENTER, CONN., *February 24, 1914.*

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: I trust that you will see the want and necessity of increased freight rates. The railroads are scrimping every way. Many hundreds of workmen turned off and thousands of stockholders trembling in fear that they will lose their dividends and means of support. The New York, New Haven & Hartford Railroad has gone bankrupt by their stopping all dividends, and the suffering or want of their thousands of stockholders; and last Saturday their great depot in Hartford was burned, and a loss of $300,000.

Please hurry up the increase in railroad rates.

The railroads know their own business better than shippers.

Very truly, yours,

CHAS. H. LEARNED.

SAVINGS BANKS WANT FREIGHT RATES INCREASED—MANY RAILROAD SECURITIES HELD BY THESE INSTITUTIONS HAVE DECLINED IN VALUE.

NEW HAVEN, CONN., *February 20.*

Requests reached local savings banks to-day to join with similar institutions in Massachusetts, New York, and Vermont in an attempt to influence the Interstate Commerce Commission to favor increased freight rates, in view of the decline in railroad securities, many of which are held by these institutions.

SUMMIT, N. J., *March 20, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: If you do your duty you will give a decision on the 5 per cent rate question before July, and by so doing save us poor people from losing all of our money.

Very truly, yours,

C. H. ADAMS.

[From the New York Herald, March 16, 1914.]

SECURITY PRICES—SPRING WEATHER LIFTS EMBARGO FROM TRADE—STOCK MARKET IMPROVES NOTWITHSTANDING THE CONTINUED "HOLD-UP" OF THE RAILWAY COMPANIES BY THE INTERSTATE COMMERCE COMMISSION.

"When the sap begins to run up the trees buy stocks" was a favorite aphorism of the lamented "Uncle Daniel" Drew. The higher temperature of the last week throughout the country had lifted the embargo the storms had placed on transportation and cleared the way for a revival of industry and trade.

The stock market, all things considered, was very strong and nearly all active issues are substantially higher than a week ago. Mexico was virtually ignored as a speculative factor and the statistical news was favorable—decrease in the number of unused freight cars, an increase in the Steel Corporation's unfilled tonnage and a decrease in the supply of unsold copper, although this was due to decreased production.

As a matter of fact the only distinctly impressing factor in the situation is the Interstate Commerce Commission's holdup of the needed advance in railway rates. The poverty to which the roads are thus condemned renders it still impossible for them to dispose of long-term bonds on fair terms and resort to issues of notes continues to be necessary. In view of the high rates paid for the money thus borrowed it must be regarded as a deplorable expedient.

Inability of the railways to buy supplies directly affects the iron and steel interests and a score of industries of which these are the basis. Everybody now admits that the country can not be prosperous unless the railways are permitted to prosper, and yet the holdup is continued. But for the pernicious activity of legislators and officials "dressed in a little brief authority" there would be no army of unemployed and trade would to-day be booming. One of the great express companies has been driven into liquidation by mischievous legislation and "regulation," the lawmakers at Albany are again tinkering with the inheritance tax, and Congress is starting a new "investigation" of the cotton and grain exchanges. Why not let the country have a rest and give the people a little time to attend to their business?

[From the New York Herald, March 7, 1914.]

THE RAILROADS AND THE NATION.

Leslie's Weekly, in an editorial which we reprint in part to-day, speaks with great earnestness on the railroad outlook. It lays stress upon the situation in the Interstate Commerce Commission, where "every proposed freight increase by the railroads has been uniformly and promptly suspended, while every demand for an increase in wages has had to be satisfied." Leslie's asks, "How long can this situation last?" It strongly defends the passage of Representative Levy's bill to expedite the decisions of the Interstate Commerce Commission.

We agree with Leslie's in its expression of hope that this measure will pass. We also agree with the statement that it should be unnecessary, and the exigency itself should compel immediate and favorable action.

In the summary of revenue and expenses of steam railroads in the United States for December, 1913, of the calendar year, prepared by the Bureau of Railway Economics at Washington, appears the following summary:

"Returns for December, reduced to a per mile of line basis and compared with the returns for December, 1912, show a decrease in total operating revenues per mile of 5.2 per cent and an increase in operating expenses per mile of 0.1 per cent. Net operating revenue per mile was less by $61, or 16.9 per cent, than for December, 1912, while that for December, 1912, was 10.4 per cent greater than for December, 1911.

"For the calendar year 1913 total operating revenue per mile increased 3.7 per cent and operating expenses per mile 7.3 per cent. Net operating revenue per mile decreased $183, or 4.4 per cent, while that for the calendar year 1912 was greater than for the calendar year 1911 by 5.1 per cent. Operating income per mile decreased $239, or 6.6 per cent."

1850 NORTH TRIPP AVENUE,
Chicago, Ill., Sunday, April 26, 1914.

DEAR SIR: I am a poor workingman, but thought I would send you just a line as to the situation out in the Central West.

Nearly 500,000 workingmen, like myself, await your decision on the rate case for the railroads. If against them, it means to all of us, get out with your families and starve; if favorable, it means bread and butter for us all; that is all.

Yours, truly,

CHAS. W. SEARLES.

APRIL 27, 1914.

GENTLEMEN: Why is it that you are so inexpressibly slow in deciding the rate case. Why don't you decide it at once. Many of us were put off, as railroads gave no orders to our shops. They are deserving of an increase. Why wait any longer? Don't let the whole railroad world suffer if one robs the public like the New Haven. Why wait until they are in the hands of receivers and then decide? Why wait until the horse is stolen and then lock the door. So you have investigated so long. Please decide it to-day. Your slowness in acting astounds the business world and convinces them that you hinder business.

Respectfully,

J. C. TODD.

EXHIBIT F.

MANY LETTERS HAVE BEEN RECEIVED FROM PERSONS SEEKING AN ADVERSE DECISION IN THE RATE-ADVANCE CASES.

A considerable number of letters were received from small shippers and freight payers protesting against a rate advance. Many of these letters suggest that economy on the part of the railroads would make a rate advance unnecessary. These letters show that the public at large has had comparatively little to say in this controversy. Some of the letters point out that the railroads have substantially increased their rates during the past few years.

NEW ORLEANS, *March 7, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We have seen a letter from you, under date of February 17, 1914, addressed to the so-called New Orleans Association of Turpentine Operators, saying that you had been advised of the passage of a resolution by such an association asking the commission to allow a general increase in rates to railroad companies throughout this territory.

The undersigned company is very largely interested in the production of naval stores. Upon inquiry it finds that the resolution you mention was passed by a bare majority of two in a gathering of turpentine operators which represented only a small proportion of all the operators in this section. We are satisfied that a very large majority of such operators are very much opposed to an increase of railroad rates as mentioned in the resolution you have referred to. Our company is very much opposed to any such increase in rates, and vigorously objects to the spirit of the resolution referred to.

It is our opinion that if the railroad companies the country over had not made issues of stock and bonds which, to the layman's mind, seem so utterly out of proportion to the actual physical values of their properties, they would not be in the position of having to appeal to the commission for an increase in rates. It is our view that the burdens now carried by the people on account of such methods of financing are heavy enough without further increasing rates.

Very respectfully, yours,

UNION NAVAL STORES CO.,
W. J. L'ENGLE, *President.*

FRANKLIN, MINN., *April 5, 1914.*

Hon. G. B. MCGINTY,
Washington, D. C.

DEAR SIR: If the Interstate Commerce Commission are of the belief that the carriers should be granted an advance in the rates after hearing all the testimony offered on the part of receivers and shippers of freight throughout the country, then the only fair thing to do is to grant the advance on all classes and commodities. We don't think it fair to charge $2 for spotting a car at a coal shed or elevator, as the cost to the railroad companies is very small to spot cars on a sidetrack. The train crew can spot half or a dozen cars in a very few minutes.

Yours, truly,

FRANKLIN FARMERS' ELEVATOR CO.,
GEO. FORSYTH, *Secretary.*

BOONE, IOWA, *April 7, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: As shippers of considerable freight and express to all parts of the United States and to some foreign countries, we are vitally interested in the proceedings and rulings of the Interstate Commerce Commission. Will you kindly place our name on your permanent mailing list for copies of the proceedings and rulings of the commission to which we may be entitled?

In regard to increasing of freight rates in favor of eastern roads, we are most earnestly against it until the railroads discontinue the discriminating of rates, charges, and service, and until a more efficient handling of freight is obtained. A more intelligent and systematic handling of their business would save them the enormous expense of inefficient clerk hire which they now have, and uniform rates enforced against all shippers alike would also net them additional revenue.

Trusting we may receive what literature that would be of assistance to us in making our shipments according to law, we are,

Yours, very truly,

THE F. W. FITCH CO.,
By ROBERT A. WILLIAMS,
Shipping and Traffic Manager.

HOUSE OF REPRESENTATIVES,
Harrisburg, Pa., March 12, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This month Pennsylvania Railroad charged me $52.18 for shipping one car of mine ties from Huntingdon, Pa., to a point in Fayette County, in same State, about 150 miles. The mine ties, if none are docked, will bring me $127.85.

And yet the poor railroads demand permission from you to raise rates. Let them squeeze the water out of their stock and run their business properly and they can reduce their rates and still earn substantial dividends.

H. B. DUNN.

OMAHA, NEBR., *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Regarding the frantic efforts of the railroads to allow the increase of freight rates.

It is my opinion that this should not be allowed.

If watered stocks were eliminated from railroad securities, fair and larger dividends could be paid on maximum values of properties and greater improvements added, higher wages paid, and more safeguards added.

The Delaware, Lackawanna & Western has paid about 25 per cent dividends, because they were not allowed to overcapitalize. The Union Pacific Railroad paid 10 per cent dividends on their common stock when same was watered, as I understand, two to three times. What does that mean on a proper basis of capitalization?

Some may refer to English railroads. It would do no harm to those in this railroad matter to read a book on English railroads, written I believe by a man (English) named Jean. This shows the cause of high operating expense and what led up to that state of affairs.

Yours, truly,

M. O'MARA.

This brutal laying off of men is simply to "make their bluff stick" and action which you people could devise, should be taken to "call

their bluff." It is all due to gross ignorance of consequences. A little taste of real industrial revolution is apparently the only phenomenon that can appeal to their dulled senses.

—

SAN FRANCISCO, CAL., *April 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand that there is an attempt being made by the railroads at the present time to secure an increase of 5 per cent on all freight rates.

If this is a fact, we wish to hereby voice our protest to any such proceeding, as we are at present charged a double first-class rate on optical goods, or $7.40 per 100 pounds. This rate, as it stands, is almost prohibitive, particularly in view of the fact that most of our goods are rather heavy and bulky, such as leaded field glasses, etc., and on the average amounts to all the way from 4 to 8 per cent of the cost of the goods themselves.

Furthermore, when you take into consideration the fact that these same goods can be sent to us by express and delivered to our door without any additional expense of cartage or insurance for $10.40 per 100 pounds, we think you will agree with us that the rate as it stands now should be reduced rather than increased. Furthermore, the additional time necessary to send goods by freight is from 12 to 15 days, which must also be taken into consideration.

Should there be any further information you desire along these lines, we shall be very glad to furnish it.

Thanking you for your kind consideration in this matter, we remain,

Yours, very truly,

R. MOHR & SONS,
Per J. A. WIRTNER.

—

CHICAGO, ILL., *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Your honored attention is referred to supplement No. 10 to division sheet No. 6, for L. A. Lowrey, agent, Chicago, tariff No. 20-D, effective January 1, 1914 (no I. C. C. number), in which the Chicago lines granted Belt Railway, of Chicago, increase in switching rate 20 per cent, carload rates increased from $2.50 to $3, and empty rate from $1.25 to $1.50 per car, also Belt Railway tariff, I. C. C. No. 50, effective April 1, 1914, makes further increase. This eats up from 10 to 15 per cent of Chicago railway lines proposed increase of 5 per cent, but increase allowed Belt Railway enables that line to add to their vast holdings of real estate that paralyzes home building along its line, and these real-estate holdings are creating an uncontrollable industrial switching monopoly here that will be a public menace.

If rates are increased 5 or 50 per cent the "big fellows in Wall Street" and the high-salaried officials of the railroad will absorb for themselves practically all the increase, and the workingmen and their families who ride little on trains, and never in Pullmans, will largely pay the increase. If you believe in fair play and justice don't increase, but reduce rates.

JOHN M. BROWN.

—

KALAMAZOO COLD STORAGE CO.,
Kalamazoo, Mich., April 10, 1914.

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As president of the Kalamazoo Cold Storage Co., and chairman of the executive committee of the Watervliet Paper Co., I am interested in the railroad-rate question that is before your honorable body.

I have given this matter considerable attention, and I sincerely hope that you will not allow any increase in the freight rates until at least the railroad properties have been appraised. I believe after the appraisement has been made that it will plainly show that the present railroad freight rates are at least as high as they should be. I also believe that the attitude of the press is being unjustly influenced by the railroads.

I have many other arguments that I might place before you which I do not consider necessary, as I am convinced that after a thorough investigation the facts will not warrant any increase in the present rates.

Yours, respectfully, JAS. B. BALCH.

—

PENNSYLVANIA MANUFACTURERS' ASSOCIATION,
Philadelphia, January 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am inclosing copy of a letter received from one of our members in Mount Union a few days ago, feeling sure that you will be glad to consider the arguments he makes.

Very truly, yours, WALTER LINN,
Associate Secretary.

—

MOUNT UNION, PA., *January 13, 1914.*

PENNSYLVANIA MANUFACTURERS' ASSOCIATION,
202 Franklin Building, Harrisburg, Pa.

GENTLEMEN: We hope our association will place itself on record against a 5 per cent increase of freight rates on the eastern railroads. Such action "robs Peter to pay Paul." It does not create wealth.

Now that the struggle is on between American manufacturers and the foreigner for the world's markets, nothing should be done to limit the area of distribution of American goods. Rise in freight rates would have this effect. The railroads are not scraping on bottom like small manufacturers, neither are they practicing the rigid economy that they would have the public believe from their newspaper campaign.

Any rise of freight rate will mean a tremendous tax to all of us. We can not put this on the consumer like former years, since we are up against world-wide competition. Those of us located midway between great terminals have never enjoyed cheap transportation. Long-haul transportation has greatly cheapened in this country, but those of us who have had short hauls have never had this benefit of constantly lower rates. Our freight rates have crept steadily upward for years.

An increase of freight rates will again invite an attack of the labor unions for a major share of the increase. We would not object to this if the man ramming ties got a part of the increase; however, the men "higher up" always absorb this.

We are emphatically opposed to higher freight rates, and we think that the manufacturers of Pennsylvania should awaken to the seriousness of the situation. It means about $250 annually to us on coal alone.

Yours, truly,

MOUNT UNION TANNING & EXTRACT CO.,
EDWARD M. GREENE, *President.*

—

NEW YORK CITY, *January 13, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: It has been suggested to us that we write to you in regard to the subject above mentioned. Our information is that a good many business men feel that if the plea of the railroads for an increase in freight rates is allowed by you that it will have a good effect on business in general, and that for this reason and others the increase should be allowed. We do not share in this opinion. If the argument were a sound one, we might apply it still further and offer to the owners of the vessels that carry our lumber an increase in freight rates, and we would not stop there, but would proceed to pay a higher price for our supplies and for our labor. This policy would tend to distribute more money, which would eventually come back to us, but while increasing a distribution of money it would not add to the wealth of the country. It is like trying to pull one's self up by his boot straps.

The proposition is simply to shift the burden of expense from the railroads to the shippers, and any advantage thus gained is temporary and superficial. If the railroads were coming to the Government for assistance to finance a new railroad project to develop some new territory or to increase the distribution of manufactures, and thus add to the wealth of the country, we would offer no objection, but in our minds we make a very sharp distinction between shifting expenses and developing wealth. We are not in favor of the former and we are in favor of the latter. In our opinion the industry and business of this country is burdened with about all the expense it can stand, and if we continue to increase this burden and then try to raise the prices of commodities we will soon have to meet competition from various sources that will make us regret this act. If we could forever pass the burden on to the next fellow, objection might not be raised, but that policy must be stopped sooner or later.

In the North American Review for January there is an article by Mr. W. Jett Louck on "Plight of the Railroads." This article states the facts much better than we can. We have no means of testing their accuracy; they accord with our judgment and understanding of the matter. However, we can not agree with the conclusion that Mr. Louck comes to. It seems to us that after drawing a strong indictment he fails to follow it to its logical end. We see no justice and no necessity for imposing on industry and commerce the penalties which ought to be visited upon the railroads for their own sins. It is true that the public will have to suffer for the sins of the railroads in any event, but it is time that unscrupulous financiers, selfish and petty politicians, and arrogant labor leaders should learn from such an authority as your commission that they can not forever pyramid expenses onto the railroads and then transfer them onto commerce and industry. If you fail to enforce this lesson upon them its enforcement will only be deferred until the action of economic law brings about the same result. For our part, we are willing to have the matter tried out now, and we hope to see a refusal of the plea of the railroads by your commission, and then let the matter be worked out along economic lines. We remain,

Yours, truly,

A. C. TUXBURY LUMBER CO.,
By CHAS. HILL, *Treasurer.*
NORTHERN LUMBER CO.,
By CHAS. HILL, *Treasurer.*

—

PIPESTONE, MINN., *March 21, 1914.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In the consideration of the demand of the carriers for increased revenues we would like very much to have you take into consideration the following things:

When the present rates were fixed the railway companies were hauling loads one way and hauling empty cars back; now the cars are, as a usual thing, loaded both ways, with the exception of live stock.

They are hauling a greater tonnage with the same amount of help; modern equipment enables them to do this.

We are paying every cent now we should on hauling freight. Let them pull off some of the high-priced advertising and some of the high-salaried men they have out soliciting business, and some of the many other what I would call unnecessary expenses.

We think that the railway companies are asking too much in this continual demand for permission to increase freight rates.

Trusting that your commission will weigh everything carefully before permitting an increase, we beg to remain,

Yours, very respectfully,

DEMARAY & MUNCE,
Per J. DEMARAY.

—

ATLANTA, GA., *December 28, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I beg to enter a protest against the granting to railroads the privilege of advancing rates 5 per cent at any time in the near future, for the following reasons:

First. It will amount to a direct tax of 5 per cent on the farmers and day laborers of the entire Nation, the ultimate consumers who will have to pay this advance, if you allow it; and at this time, after a year of depression and hard times, it will be a great handicap to the great mass of producers; in fact, it will amount to a tax of 10 per cent on the farmers, as they will have this 5 per cent to pay on merchandise received and 5 per cent on their produce that they will have to ship. And this would be an injustice to them, as nearly all legislation for the past years has been for special interests and against the producers of the Nation. It would amount to further discrimination against the tillers of the soil, and if their interests are not looked after by those in power this Nation will begin to decay.

Second. The amount and the purposes that railroads request this raise in freights for can be easily taken care of by themselves, as follows: By economies in the vast amount of expensive red tape, by economies in salaries to useless officials, and by the use of funds that have

been taken from railroad properties in millions by watered stock, and by returning some of this to the physical property for development and extensions. After the inner working of railroads has been laid bare, as in the case of the Santa Fe and the New Haven Railroads, it has been clearly demonstrated that the earnings of railroads have been grossly diverted from their honest use, and have been squandered by officers and directors who have used them for personal gain and as a mere plaything—operated and controlled by men who know nothing of railroading as a business and who care only for them to the extent that they may be forced to earn money in any manner for illegitimate purposes.

Despite the fact that certain yellow journals are being bought by corrupt financiers, and they have a staff of writers who seek to shape public opinion by their puerile efforts, the great mass of people of this Nation are more awake than ever before and will look to you to give them a square deal.

On behalf of thousands and hundreds of thousands in the South, the West, and the East, I beg you to not allow any raise in freight rates during the year 1914 at least.

Yours, truly,

N. K. SMITH.

—

WICHITA, KANS., *April 10, 1914.*

Hon. G. B. MCGINTY, *Washington, D. C.*

DEAR SIR: We understand the railroads are trying to get an increase in freight rates and also make an extra charge of $2 for setting cars.

We wish to make a protest against any advance in freight rates, especially on coal, grain, and hay; also against allowing them to make an extra charge of $2 for setting cars.

We think the rates are already too high. Attached to this letter we will give you some of the rates as now in effect from different points to Wichita.

The consumer of coal now has to pay a high price for his coal on account of the high freight rate that the dealers have to pay to get the coal here.

Trusting that you will not allow the railroads to force this injustice on the people, and assuring you of our faith in you acting with justice to all parties concerned, we are,

Yours, respectfully,

GOOD-HILLYARD COAL & FEED CO.,
By J. W. HILLYARD,
O. W. GOOD.

—

MOUNT UNION, PA., *November 25, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We want to add our protest against a probable raise of railroad rates which came before your commission yesterday. We are familiar with the railroad arguments and we are in sympathy with their unfavorable financial showing.

However, a raise in rates does not create additional wealth, but robs the general shipper to the profit of the railroad.

It is time to halt. The railroads are spending too much unnecessary money. They are still managing their properties on too extravagant and altruistic lines. They are continually increasing their capital which is the biggest charge against their extravagant management. No manufacturers can do anything of this kind. Nearly every shipper is up against the same trouble that the railroads are now suffering from. The Pennsylvania Railroad is still extravagantly wasteful of labor and materials. We see it every day. Passes ought to be cut out and let everybody pay their fare like the rest of us have to do.

During the past 25 years the freight rates on hides, leather, coal, etc., that go into our costs have been revised upward—never downward. If the rates are now advanced, it is not likely they will ever come down. The American shipper is on an export basis and he can not afford to have his transportation increased.

Let the railroads practice economy. The rest of us have to do this. It is a sensible thing to do. They are already giving good service—much better than necessity demands. Let them stop issuing securities. A slowing down with them will do them good as well as have a sobering effect upon the country in general.

Yours, truly,

MOUNT UNION TANNING & EXTRACT CO.
EDWARD M. GREENE, *President.*

—

CHICAGO, *October 27, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We beg leave to present before your honorable board our protest against any advance in freight rates as per tariffs filed with you to go into effect on November 15.

The contemplated advance in freight rates was said to be about 5 per cent, but we find that in most cases the advance is substantially more than 5 per cent. We have not as yet been furnished with all printed tariffs so we can present you with our definite protest and prove that the contemplated advance is more than 5 per cent.

Under the circumstances, we will request your honorable commission to suspend application of the new rates and give shippers reasonable time to file their objections and prove that the advances are unreasonable and will work to the detriment of manufacturers and exporters of American products.

Respectfully submitted.

ATLANTIC EXPORT CO. OF WISCONSIN,
THEO. A. HAUSCHEL,
Vice President and General Manager.

—

SYRACUSE, N. Y., *March 20, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are against an increase of freight rates to the railroads. They are much better off than we are. Only by the hardest work and closest economy can we make ends meet. We do not think we should be asked to pay higher freight rates.

Yours, truly,

SYRACUSE STEAM PACKING CO.

JACKSON LUMBER CO.,
Lockhart, Ala., April 11, 1914.

LOUIS R. BRANDEIS,
Attorney, Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We desire to submit the inclosed protest against the advance in the lumber freight rates as proposed by the eastern roads, and, if in order, would be glad to have you place it in the records.

Very respectfully,

W. S. HARLAN.

—

COMPARATIVE RATES ON LUMBER IN CASE OF PROPOSED 5 PER CENT INCREASE IN RATES.

The question of advance in lumber rates, included in the 5 per cent rate increase between points north of the Ohio River, involves the through published rates from points in the Southwest, and while the lumber manufacturers of the Southeast, as a rule, are not wholly opposed to the advance in general rates, if it is definitely shown that the railroads stand in need of more revenue, they are brought face to face with the fact that if rates on lumber north of the river are advanced, the present relation of rates as between points north and south of the river will be disturbed, and the manufacturers are confronted with the possibility of another advance for the lines south. A comparison of proportional rates from points in the Southeast to north and east, under the present relations, show that the lines north already receive a rate per ton-mile considerably in excess of that accruing to the lines south.

The following table gives the present rate in mills per ton-mile from Virginia gateways, through which our lumber moves, to representative points in the East, based on published arbitraries:

	Miles.	Rate.	Yield.
Potomac Yards, Va., to New York City	227	13	0.01150
Potomac Yards, Va., to Elmira, N. Y	292	12	.00822
Potomac Yards, Va., to Albany, N. Y	369	12	.00650
Potomac Yards, Va., to Baltimore, Md	40	4	.02000
Potomac Yards, Va., to Philadelphia, Pa	135	5	.00740
Potomac Yards, Va., to New York City, water rate	227	9	.00793
Richmond, Va., to Pottsville, Pa	345	13	.00754
Richmond, Va., to Williamsport, Pa	333	15	.00900
Richmond, Va., to Allentown, Pa	317	13	.00820
Richmond, Va., to Paterson, N. J	351	15	.00854
Norfolk, Va., to New York City	345	12	.00695
Norfolk, Va., to Philadelphia	255	8	.00628
Norfolk, Va., to Boston, Mass	579	15	.00520
Norfolk, Va., to Norristown, Pa	280	10	.00714
Hagerstown Junction, Md., to Harrisburg, Pa	93	5	.01075
Hagerstown Junction, Md., to Reading, Pa	147	7	.00952

As compared with southern lines' proportion of same through rates:

	Miles.	Rate.	Yield.
Lockhart, Ala., to Potomac Yards, Va	986	21	0.00426
Lockhart, Ala., to Richmond, Va	870	18	.00414
Lockhart, Ala., to Norfolk, Va	887	18	.00406
Lockhart, Ala., to Hagerstown Junction, Md	908	21	.00460

The proportional rates to the lines south will vary some, but they are generally lower than the rates shown above, and would make a greater difference in favor of the lines north.

We are not in possession of local rates on lumber from the Virginia gateways named to the representative eastern points named, but the local rates are no doubt 1 cent or more per 100 pounds higher than the published arbitraries, in which case the local rates to points shown would carry around 0.01000 per ton-mile, which should be compared with the following table.

Rates in mills per ton-mile from Lockhart, Ala., to Virginia gateways, based on regular local rates.

	Distance.	Rate.	Yield.
To Potomac Yards, Va	986	26	0.00527
To Richmond, Va	870	22	.00506
To Norfolk, Va	887	22	.00493
To Hagerstown Junction, Md	908	25	.00550

The construction of rates is a matter outside of the endeavors of lumber manufacturers, and they are not sufficiently acquainted with conditions entering into the science of rate making to say what is and what is not a profitable rate However, under present conditions the lines in the South, with comparatively light tonnage, it is reasonable to assume, make a fair return on hauling lumber. If they realize profit on this tonnage on the rates shown above, it, of course, stands to reason that the lines North find a greater profit, because they realize a higher per ton mile rate. In this connection it was given in carriers' testimony before the commission in Interstate Commerce Commission Investigation and Suspension Docket 145, April 2, 1913, regarding the question of reasonableness of rates between Lockhart, Ala., and other points and Washington, D. C., and Baltimore, Md., that the southern carriers considered a normal rate on lumber from Lockhart, Ala., to Richmond and Potomac Yards, Va., on through rates to be 19 cents and 22 cents, respectively, although they have at present through rates in effect yielding them less.

Lumber averages 45,000 to 50,000 pounds per car. It has an average total value of $350 per carload in case of entire loss. The railroads get on an average of $7 per thousand feet for hauling lumber from Lockhart, Ala., to eastern points, or over one-third of the average mill price.

Lumber from southeast Alabama goes to the East in competition with woods from the Carolinas, Virginias, Eastern States, and Canada, besides coastwise shipments from the Gulf and South Atlantic States. An advance in rates, even though uniform from all points, would affect the

southeastern all-rail points adversely, because of the lower mill price these mills would have to accept to get in on a competitive basis with those mills at nearby points. As the rates now stand, the mills in this territory have to accept a lower mill price than those more favorably situated, and it would appear reasonable that the carriers should give the long-haul points a proportionately better rate than the nearby mills.

We are not in possession of rates on coal, iron, sand, stone, builders' hardware, cement, and other builders' supplies, on which low rates generally are assessed, to compare with the lumber rates, but it will, no doubt, be found that lumber already bears its share of the burden and should not be increased.

JACKSON LUMBER CO.

—

PHILADELPHIA, *March 20, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The papers speak of one of the President's callers of yesterday telling him the net earnings of railroads in 1913 decreased $33,000,000. If that caller had wished to be just, he would have had statistics showing the net decrease earnings of the merchants, manufacturers, and real estate holders of the country for 1913. If he had done that, the losses of the railroads would appear very small in comparison. Now the railroads are trying to squeeze the business of the country to make up losses which are due to poor business and mismanagement.

The merchants and manufacturers of the country should demand a reduction of 5 per cent on present rates to enable them to lessen their net losses, which the railroads could well afford to grant if they were to squeeze out the water.

Very truly, yours,

TAYLOR & SON.

—

COSHOCTON, *November 7, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Under October 31 we wrote you a letter protesting against the prospective raise of 5 per cent in the freight rates which is threatened us on November 15. We took the liberty to ask you to acknowledge receipt of this, but have not heard from you so far.

In looking over again this proposition, we find that virtually that advance of 5 per cent in freight rates would amount to at least 10 per cent on our freights, as the 5 per cent raise is understood to be applied not only on the finished products, but also on the material, and we once more beg to protest against any raise in the freight rates for reasons named in this letter and also in our letter of October 31.

Yours, very truly,

THE COSHOCTON GLASS CO.,
H. LIEWER, *President.*

—

NEW YORK, *January 27, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Before granting higher rates to railroads it would be well to know the rates paid by the M. D. T. Co. to the New York Central Railroad, by the Star Union to the Pennsylvania Railroad, and other such cases. I suppose that these close corporations are making the profits that ought to be made by the railroads and distributed to their stockholders.

Very respectfully,

O. M. CREGO.

—

MILWAUKEE, WIS., *March 21, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We are informed that the railroads have applied to your commission for advanced rates and the imposition for spotting service and trap cars.

Understanding that the railroads must look for revenues to make the investment pay we would not object to a higher freight tariff, if such an increase of earnings was an absolute necessity. But the history of every great railroad system in the country speaks against it. An advance of rates or any other increase of income taking the shape of a special tax levied on the public to cover up shady transactions is not justifiable. It is a matter of common knowledge that the stock of every railroad company in the United States is watered to the tune of an average of 40 per cent. No wonder, then, that the earnings are not sufficient to declare a fat dividend.

Is the shipping public responsible for this condition? Certainly not. Let the purchasers of fraudulent bond and stock issues take their medicine; they have bought stolen goods, some novel kind of green goods or counterfeit money, and they should stand the consequences of their folly. Take the water out of the stock and a handsome dividend will come to the surface.

In the face of recent disclosure in the investigations of some railroad manipulations in the East, this howl for higher rates is a monstrous impudence. Years ago, before the Government took a hand in railroad affairs, the rapacious railroad magnates used to lay heavy tribute on the traffic they handled. Now, they want the Interstate Commerce Commission to pull the chestnuts for them out of the fire. Will the commission stand for it?

We are opposed to an advance of rates. Our own case regarding the matter of loading and unloading cars on our factory track is doubtless analogous to many others and therefore we shall not go into details.

We enter our protest on gneral principles as stated above.

Yours, very respectfully,

THE R. J. PREUSS CO.

—

PE ELL, WASH., *April 14, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Regarding proposed increase in freight rates.

The writer would like to have our firm placed on record opposing same, believing that an increase in freight rates will eventually result only in an increase in wages paid to railroad employees, and as this class of labor are now receiving higher wages than any other under similar conditions, and also as prices on all commodities they have to purchase are on the decline, we think that it would be an injustice to the people as a whole to taxe them with a greater freight rate, when no lasting good to the railroad companies themselves will follow.

Also, we believe that the higher the freight rates the smaller the amount of goods shipped, and often a cheaper rate brings a greater net earning to a railroad company.

We realize that the present advance only contemplates railroads east of Chicago; however, if an increase is allowed east of Chicago, an advance west will eventually follow, hence as shippers we believe we are interested, and desire to register our protest agaist same.

Yours, truly,

YOEMANS LUMBER CO.,
By W. C. YOEMANS, *President.*

—

THE LORD & BUSHNELL CO.,
Chicago, February 4, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: As a private citizen, I desire to express my gratitude and thanks to your commission on the way you are handling the subject of the advance in railroad freight rates. There is no question that abuses by the railroads in the use of the public's money have been innumerable, and that to run their business as any corporation should run their business they should earn a fair return for their stockholders on present rates. They have been willing and anxious to grant favoritism to various shippers. At the present time in lumber, which is my business, they are granting a milling-in-transit privilege which can be construed as nothing else but a rebate, as they are performing a service on the rough material on long hauls, and allowing them to take it in and ship a number of pounds of manufactured or higher-class material out at the same rate. The whole lumber schedule is a most iniquitous tariff. For example, we have to pay as much from Little Rock, Ark., to Chicago on lumber as we do from Galveston, Tex. Then, again, we have to pay as much for rough square timber shipped in flat cars as we do for doors or manufactured material. In some cases the value of the material may be $5,000 per car and in other cases not over $100 per car. In the one case open, cheap flat cars can be used, and in the other case the very highest type of box car is necessary to protect the goods.

Then, again, the buying of equipment by most roads is done in the most expensive manner possible, as officials are allowed to place so many patents, and oftentimes they are interested in these patents to a greater extent than in the road, thereby increasing the cost of equipment and the cost of maintenance, owing to the multiplicity and duplication of repair parts required to be carried in stock.

It is extremely gratifying to see the progress that you are making in correcting these evils, and for one I desire to thank you most heartily.

Yours, very truly,

FREDERIC T. BOLES.

—

BALTIMORE, MD., *June 3, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: Apropos of the 5 per cent increase in freight rates petitioned for by the transportation companies of this section of country, we respectfully represent that while rates for labor in manufacturing plants are hardening, hours of labor shortening, tariff protection lessening, and home market narrowing is not an appropriate season to further restrict the earnings of those upon whom the increase will so heavily bear.

Yours, truly,

WM. E. HOOPER & SONS CO.,
JOHN R. DORSEY, *Secretary.*

—

JUNE 18, 1913.

Mr. G. H. INGALLS,
Chairman of Committee Representing Central Freight Association Carriers, Chicago, Ill.

DEAR SIR: The executive committee, being advised by its special committee representing the chamber at the conference on May 21, 1913, and giving due consideration to the grounds on which the increase in rates is asked and the arguments advanced during the conference by the committee representing the carriers, by formal action at meeting on Thursday, June 5, 1913, approved of the following as expressing the conclusions and attitude of the chamber:

First, as to interstate rates: As expressed at the conference on behalf of interests represented by the chamber, the proposition involves questions of such magnitude and is of such wide scope as to preclude full and clear understanding necessary on part of the business interests of single communities to form safe conclusions or express a definite opinion as to whether the financial needs of the carriers warrant any increase in rates, and therefore the Indianapolis Chamber of Commerce asks that no advance be made in present rates until the question has been submitted and passed upon by the Interstate Commerce Commission.

Second, as to intrastate rates: The existing adjustment of class rates between points in Indiana imposes an unjust discrimination upon the commerce of this State, is wholly prejudicial to the Indiana jobbers and distributors and in favor of outside jobbing and distributing centers. The carriers have denied the just appeals of shippers for relief during the past seven years and persistently refused to act in remedying the unjust and harmful rate conditions.

Under these circumstances the carriers' appeal for the advance in Indiana local rates is wholly illogical, unreasonable, and without merit, and the Indianapolis Chamber of Commerce will strenuously oppose any advance.

———— ————, *General Secretary.*

—

THE CHAZY MARBLE LIME CO.,
Chazy, N. Y., January 30, 1914.

CHARLES A. PROUTY,
Commissioner, Washington.

MY DEAR MR. PROUTY: Your letter of the 2d, stating you were leaving the Interstate Commerce Commission, comes as a great surprise to me. I am very sorry to hear it, unless you are going to serve the public in some other capacity, then it is not so bad.

There is a whole lot to this asking for an advance in rates by various railroads, and about any way you turn can be found an argument against it.

In private business or small corporations when assets are stolen or squandered the owners have had to take their medicine, but the rail-

roads seem to think they are exempt. I have had a lot to do with the eastern roads—the Delaware & Hudson, the Boston & Maine, Maine Central, and New York, New Haven & Hartford, New York Central, and Boston & Albany. They all have a joker in this traffic business. I am just hard-hearted enough to want the New York, New Haven & Hartford, with their leased line, to find their way out on the present rates, which are ridiculously high. We are paying them 80 cents a ton for a haul from South Framingham to East Walpole, 18 miles, and $1 a ton from the same point to Fall River, 46 miles.

I am obliged to you for handing the letter to Mr. Harlan.

Very truly, yours,

C. H. JONES.

TIFFIN, OHIO, *December 24, 1913.*

To the INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: The railroads are certainly waging a campaign to win the public for an increase in freight rates. In the hearing before your honorable body they are reported as having claimed an increase to be necessary in order to provide funds for improvements. Let them squeeze out some of the water in their capitalization and they will not need so much money for dividends. For one I think freight rates are high enough. Coal from western Maryland to Tiffin, costs $1.45 per ton freight. The managers and directors of railroads have exploited the people for many years. I think they ought to be compelled to disgorge their ill-gotten wealth. I commend the stockholders of the Frisco system in getting after the directors. In many cases, at least, it is nothing more than continuous robbery to compel the public to pay dividends on watered stock. To water the stock of a corporation ought to be made a penitentiary offense. If there is an increase in rates I shall do all I can in advocating the complete control of all railroads by the Government, and, if necessary, let the Government take them over at cost and so squeeze out the water.

Fictitious valuations have increased the cost of living until salaried men can scarcely make ends meet. No wonder that workingmen ask for increased wages. Railroads have played a large part in bringing their present trouble upon them. I believe in fairness and justice, but there is no fairness and justice in compelling the public to pay dividends on fictitious capital.

Yours, sincerely,

JAS. S. FREEMAN,
133 East Perry Street.

RHINELANDER, WIS., *October 21, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

YOUR HONORABLE BODY: Your letter of October 18, file 37, in which we requested information regarding C. N. Fulton's agency tariff, 100–H, I. C. C., A–97, proportional rate tariff covering classes and commodities Chicago to the Ohio River. This tariff is effective November 15, 1913, and we wish to ascertain as soon as possible, and you can send us a collect wire, if you wish, advising us if this tariff has been postponed, canceled, or any other action which would prevent its going into effect on November 15.

We also desire same information regarding supplement 16 to tariff 21–A, published by W. H. Hosmer. This is supplemental to the lumber tariff, which also shows an increase on a basis of 5 per cent. Mr. Hosmer publishes this under agent of the western trunk line, No. I. C. C., A–276

As far as our opinion is concerned we object to this increase, based primarily on the fact that a large percentage of cars are collected in excess to the tariff rates now in effect, resulting in claims part of which are never collected.

When the carriers arrange their account so as to prevent overcharges, then we are in favor of a 5 per cent increase.

Yours, truly,

MASON-DONALDSON LUMBER CO.,
S. E. ALVORD.

NEW CASTLE, PA., *October 25, 1913.*

G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We are in receipt of your letter of the 24th, relative to the 5 per cent advance on lumber in official classification territory, which, according to the Baltimore & Ohio tariffs, will take effect November 15. When we received these tariffs on October 20 it was the first that we had notice of any intention of raising the rate. We consider it an outrage, especially in the face of the declining market in lumber and also the high rate that we are already assessed. There being no order suspending these advance tariffs seems to indicate that they will go into effect.

We would like to know whether the inquiry ordered by the Interstate Commerce Commission is now in progress. There seems to be no date set for a hearing, and we would like to know if there is liable to be a hearing in which the manufacturers of lumber will be accorded the privilege to present their arguments. Would also like to know how these arguments should be presented—whether in person by some representative representing the manufacturers, or whether each manufacturer should protest as he desires, individually, by mail. It is our personal opinion that some concerted effort should be made to prevent this increase, and what we want to know is the best plan to go about it.

Your prompt reply will be appreciated.

Yours, truly,

G. G. STITZINGER & CO.

CHICAGO, *October 30, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are builders of brick chimneys, manufacturing our material at Waynesburg, Ohio, and Terre Haute, Ind. About two and a half years ago the railroads, under the guise of "adjustment," raised our rates approximately 15 per cent, claiming to us that this additional revenue was needed in the operation of their business.

We are now advised that, effective November 15, the railroads propose an additional 5 per cent increase in these rates, adding fractions which in some cases make the increases figure a little more. While we do not attempt to combat the railroads' claim that additional revenue may have been needed, we feel that this raise is unjust in the case of brick manufacturers as a whole, owing to the fact that we recently sustained this large advance under the cause of "adjustment," but we feel that this additional advance which they propose is unreasonable.

We do not have the railroads' tariffs before us, but we understand that the railroads have filed tariffs with you showing these advances, and we wish to enter our protest and respectfully urge you to prevent the railroads from putting into effect the present proposed general advance of 5 per cent.

We have a large number of contracts on hand taken on the basis of present rates, and the loss will be a serious one to us if the railroads are permitted to put these plans into effect.

Yours, respectfully,

THE HEINE CHIMNEY CO.,
By KENNITH HEINE, *President.*

CHICAGO, ILL., *November 3, 1913.*

G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We beg to acknowledge receipt of your valued favor of the 27th ultimo and thank you very much for same.

We sincerely trust something will be done to prevent this increase in rates, as we believe it will harm western business to a great extent.

Yours, very truly,

NORTHERN COAL & SUPPLY CO.,
J. H. HARMON, *Vice President.*

HARDWICK, VT., *November 10, 1913.*

Mr. CHARLES A. PROUTY,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Please accept our thanks for your kind favor of the 6th. We knew that you had recently resigned from the commission, much to our regret, knowing as we did your familiarity with and friendly feeling toward industries in Vermont, but we ventured to write you for this very reason, that we felt that we could rely upon your friendly interest in the proposition from our standpoint.

We feel that while the roads must be placed in a position to make fair earnings, it is relatively as important, though in a smaller measure, perhaps, that the industries on which the roads depend for their earnings should be placed on a paying basis, and in an industry such as our own the question of freight is a very serious one necessarily.

Thanking you for the courtesy of your letter and kind interest you have shown in the past, and congratulating you upon your new position, we are,

Yours, very truly,

WOODBURY GRANITE CO.,
GEO. H. BICKFORD.

HARDWICK, VT., *November 10, 1913.*

Mr. JOHN H. MARBLE,
Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Your kind favor of the 5th is duly received. We shall be very glad indeed if you will keep the interest we have in the matter in mind when the hearings come to a head, and trust that the outcome will be no injustice to the industries on which the roads themselves have to depend.

Having been here in person you realize more than others, perhaps, the importance the freight item has in the granite industry, particularly when located, as this industry here is, at a distance from the large markets, and anything that can be done promptly to relieve us of any additional burdens along this line will be appreciated.

Yours, truly,

WOODBURY GRANITE CO.,
GEO. H. BICKFORD.

RIVERSIDE, IOWA, *March 27.*

Hon. G. B. MCGINTY,

DEAR SIR: I understand the Interstate Commerce Commission has up for consideration the advancement of rates on all classes and commodities of freight. This seems to me an unfair thing to do, as the coal costs us an awful price the way it is. And, besides, I think they ought to be compelled to set a car without extra charge. As it is an impossibility for us to deal in coal unless the cars are set, and if managed right, it is of little bother to them, and besides, if they were set on any track, they are bumped around everywhere, and sometimes in places where we can not get at them. I am writing you just as I see it, and think they have enough advantages in this line without any advancement in charges in any way.

Yours, truly,

J. T. MEEKS.

Westgate, Iowa, March 27, 1914.

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As we see by the daily papers that there is before the Interstate Commerce Commission considering if there should be an advancement of rates on all classes and commodities of freight in tariffs.

To my judgment the present revenues of the carriers are adequate as they are now. And I wish before you would give your consent to advance the rates to consider who has to pay the advance of rate.

Yours, respectfully,

W. C. MATTHIAS.

ST. LOUIS, *March 31, 1914.*

Hon. RICHARD BARTHOLDT, M. C.,
Washington, D. C.

DEAR SIR: Within the last few months the tariff protection has either been entirely withdrawn or else reduced to a point where it is no longer able to afford any benefit to the farmer, stock raiser, and feeder, with the result that heavy losses have been shouldered upon the real producers of the wealth and prosperity of our country.

To-day cattle are a drug on the market and can not be sold on a basis which will return the cost of the feed which has been used to fatten them, without considering the use of the money invested while they were being fed. This year, for example, the farmers are facing the same competition in the home market with Canadian oats and Argentine corn which they experienced the past year, and the disastrous results to the financial welfare of the agricultural community which has been experienced during the worst general crop failure in this generation is well known. The results which may be expected from this foreign competition in our markets when we have a normal crop is

sure to be disastrous. Also, we have only begun to receive shipments of Australian and Argentine beef and mutton, and yet the results have been as stated above. When the movement of the meat products from these countries gets well under way, the prospects of the live-stock owner and feeder certainly will not improve.

Under such conditions and the certainty of such a future, we feel it would be imposing an unwarranted and most unjustifiable hardship upon our farmers to further increase their burden by permitting any increase in freight rates, as necessarily the shipper must assume the transportation charges in marketing his product. If any action or readjustment of rates is to be made, the deplorable condition which confronts the farmer and stockman certainly demands relief, at least as to the expense necessary in getting his product to market and getting his supplies back.

We, therefore, solicit your kind assistance toward saving the wealth-producing portion of our country from this proposed unjustifiable burden.

Very truly, yours, PAYNE & BECKER.

—

NATIONAL COUNCIL FARMERS' COOPERATIVE ASSOCIATIONS,
OFFICE OF SECRETARY-TREASURER,
Colo, Iowa, March 28, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This council, which is composed of the State associations of farmers' cooperative associations of six States, and whose principal business is the handling of grain, desires to hereby enter a protest before your honorable body against the 5 per cent increase in freight rates asked for by the railroads of the eastern territory, which case is now before you, and in this petition of protest we represent the desires of our members in Illinois, Iowa, Minnesota, South Dakota, Nebraska, and Kansas, and also the same class of organizations in North Dakota. We especially protest against the increase in freight rates on grain for the two following reasons:

First. Because of the present high rates that grain now carries as compared with the present rates on other commodities, and because we object to the rates on grain shipments being made to carry any part of the burden that should be carried by the rates on other commodities.

Second. Because if this increase is allowed in the eastern territory, it will be immediately asked for in the other territories, and a precedent will be established that will later affect the entire country and the rates on all shipments.

We believe the increase in freight rates on grain to be unnecessary for the three following reasons:

First. Because they are now high enough in comparison with present rates on other commodities.

Second. Because it is possible for the railroad companies to increase their income from grain shipments under the present rates by making a real practical effort to reduce their losses on that business by reducing their losses in transit, and that this can be done by providing better car equipment and by better preparation of cars for loading, because the expense of such preparation will be far less than the amount of the present losses in transit.

Third. Because the railroad companies can increase their income from the grain business at the present rates by making a more reasonable demurrage charge for cars which will be high enough to prevent the holding of cars loaded with grain, as is now done under the present charge of $1 per day for storage purposes, because it is profitable for the owner of the grain to do so, while the income for the railroad company is only a very small part of the average daily earning capacity of a freight car.

We humbly submit this protest for your careful consideration.

Very truly, yours,

J. W. SHORTHILL, *President.*
W. J. RAY, *Secretary.*

—

MARYLAND HOTEL,
St. Louis, Mo., March 30, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I would like to inquire why you have permitted the gambling and robbery that has been going on for the past 10 years or more in Rock Island financing. The condition of affairs has been known to everyone in the Central West, and certainly can not be unknown to you. Is it because you have not the power to order an investigation? This corporation has become a byword as being a Wall Street gamble and not a railroad, and yet they are joining in with the rest of them in the howl for an advance in rates. Yes; rates which, as you well know, have been already advanced in thousands of instances, both directly and indirectly, by means of raising classifications and other well-known methods, and any railroad head who makes the statement that rates have not been raised is stating what is absolutely untrue. I do not now remember a single item in the business with which I am connected that the rate is not higher now than 10 years ago, some rates to the extent of nearly 100 per cent; these rates referring to shipment from eastern seaboard to the Twin Cities. In the writer's opinion it would be unfair and unjust to the people to grant any increase in rates to any railroad in the United States

Does the Burlington need it, earning 14 to 18 per cent on its capitalization of two hundred millions, which you will recall was immediately doubled when "Jim" Hill got hold of it? Why does the Pennsylvania need it when it has invested forty or fifty millions in stocks of other roads? Where did it get the money? Was it not from surplus earnings? If so, why not use these, or part of its surplus, to pay its dividends? Isn't that what a surplus is for? Or, again, why should the people of the West be taxed in the shape of increased rates for building palatial hotels in New York or elsewhere for the New York Central?

Look at this matter in another way. Does anyone guarantee me a profit in my business in years of bad trade or in panic years? Why should the people be taxed to provide dividends to owners of railroad stocks? Did they not buy these stocks with their eyes open? Are they the only class of people who should be paid dividends when they make a mistake in judgment? If in my business I buy several carloads, we will say, of a certain commodity in Europe and the market goes against me, have I not just as good a right to ask that my loss be made good to me by taxing the community to do it? By looking at the matter in this way you will see how absolutely unjust it is. Let the stockholders of railroads bear their own losses, if they have any losses, which I very much doubt. They bought the stock on their own responsibility.

It is the same old whining cry of the special interests, "Tax the people for my special benefit."

Respectfully, A. W. LAUGHLIN.

OREGON, ILL., *December 27, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The different railroad companies east of the Mississippi River have issued tariffs proposing to raise rates on sand, all kinds, 5 per cent, and to become effective during the month of March, and we understand you are at present investigating the advisability of allowing the increase.

On this question of sand rates, before granting or disallowing the increase, we wish to call your attention to that portion of Ohio lying east and southeast of a line drawn between Cleveland and Cincinnati and extending about 50 miles in the same directions along the Ohio River in West Virginia.

To the district mentioned above the sand shippers along the Chicago, Burlington & Quincy Railroad at Millington, Oregon, Ottawa, Utica, and Wedron, Ill., have had no reduction into this territory in the past six years, while the sand shippers along the Pennsylvania Railroad at Granville, Mapleton, McVeytown, Mill Creek, Newton-Hamilton, Ride, and Vineyard, Pa., and from Berkeley Springs and Hancock, W. Va., along the Baltimore & Ohio Railroad. Sand pits into the above territory have been granted three or four different reductions, so that we have been gradually shut out of the district to the advantage of the Pennsylvania Glass Sand Co. and Pennsylvania Pulverizing Co., having plants in Pennsylvania and West Virginia, in which companies Mr. Cassatt, son of the deceased President Cassatt, or the Pennsylvania Co., is interested.

This company (National Silica Co.) have now expended about $235,000 in building and developing property here, and before beginning work we had our attorney, Mr. P. M. Smith, of Wellsville, Ohio, inquire of your commission if we could depend upon the same reduction from sand pits in Illinois, shipping east into the district referred to, as might be granted to the sand pits from the east shipping west into the territory named.

We were given to understand that we would get such benefits or the railroad companies would have to show that it cost more to haul freight one way over their lines than it does the other way over the same lines, hauling the same material.

Now, we have been shut out of business that we need, and before granting or not the increase asked for by the railroads, we would ask that the rates be corrected to the points stated and that the western shippers be given the reductions the eastern shippers have been given within the past six years or that the rates on the eastern shippers be put back to their original rates in effect at the time we began building our plant.

Will you kindly see that this letter is placed with the committee having these matters in charge, and that acknowledgment of its receipt is made to us, and very greatly oblige.

Very truly, yours.

THE NATIONAL SILICA CO.,
W. G. STEVENSON,
Secretary and Treasurer.

—

ST. LOUIS, MO., *December 29, 1913.*

GENTLEMEN OF THE COMMISSION: I see that the "business" men of this city advocate an advance in freight rates. They pay no freight. It is "Jones" who pays—the consumer. These business men seem to think they are the whole cheese. The common people are so hard at work trying to make a living that they do not get any hearing. The railroad thieves have stolen hundreds of millions from the people of this country through watered stock and fake sales to fool the people into buying their stock. If they can't run the railroads without further gouging us, let them sell out to the Government, and when the Government does buy they want to get from the assessment rolls of the past 10 years what the railroads have given in under oath as the value of the roads in each county and pay them one-tenth of the total, which would be a fair average.

Don't let them raise the rates at all.

Very truly, yours,

JOE HILL,
Box 100, Birds, Ill.

—

CLEVELAND, OHIO, *December 30, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Adverting to your series of interrogatories addressed to the railroads of eastern classification territory, in relation to the petition of the roads for an advance of 5 per cent in their freight rates, we understand the commission expects to learn, among other things, "the extent to which the directors and officials of railroads have other financial interests in the transactions of the carriers, and it is desired to determine to what extent intertwining interests prevail and what influence, if any, this practice has had in increasing railroad costs."

The undersigned respectfully asks your honors to investigate the transactions between the railroad directors and officials of railroads named below, through which long-term contracts have been made with the American Creosoting Co. and the Federal Creosoting Co. for the treatment of railroad crossties:

Rock Island-Frisco Lines.
Cleveland, Cincinnati, Chicago & St. Louis Railway.
Lake Shore & Michigan Southern Railway.
New York Central & Hudson River Railroad.
Delaware, Lackawanna & Western Railroad.
Lehigh Valley Railroad.

Under separate cover we send you three pamphlets entitled "Some Facts About Treating Railroad Ties." We trust you will find these useful in conducting such investigations as you may be pleased to make regarding these transactions.

Very respectfully, yours,

THE W. F. GOLTRA TIE CO.,
W. F. GOLTRA, *President.*

—

MONASKON, VA., *January 29, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In the hearing of the question of 5 per cent advance in railroad rates now pending, believing myself to be as much a party at interest as any shipper as I am both a producer and consumer, I venture to call your attention to the limit of $40,000 per mile put on the building of 1,000 miles of road in Alaska, and ask you to compare same with capitalization of roads asking this advance. Are we, the

common people of the present and all future generations, to continue to pay dividends on all water that has been or may be injected into the stocks of our common carriers?

Respectfully,

C. D. DILLIN, *Farmer.*

—

THE POSTAL PROGRESS LEAGUE,
Boston, Mass., December 8, 1913.

GEORGE B. MCGINTY, Esq.,
Secretary Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: It has been called to the attention of this body that Mr. James L. Cowles has appeared as secretary of the Postal Progress League before the Interstate Commerce Commission in the railroad hearings. The Postal Progress League desires to place on record with the Interstate Commerce Commission that it is not in accord with the views or policies presented by Mr. James L. Cowles to that body; and, furthermore, has directed Mr. James L. Cowles, through its executive committee, that he has no right to express such views in the Postal Progress League's name.

The Postal Progress League is against the views expressed by Mr. James L. Cowles; has no brief to present on the subject of railroads; and only considers matters pertaining to postal reforms. I am directed by a majority of the subexecutive committee, to whom this subject properly belongs, to request that it be spread upon the minutes of your railroad hearings and be made public at the next hearing.

Very truly, etc.,

T. GLOVER FILLETTE,
Vice President and Member of Executive Committee.

P. S.—I will thank you for an acknowledgment of this letter.

—

PIPER-HOWE LUMBER CO.,
Minot, N. Dak., March 31, 1914.

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We wish to protest against any change, particularly advance in rates on commodities shipped into North Dakota. We believe the rates are sufficiently high, and, if anything, should be reduced. We particularly protest against any charge for spotting cars on sidetracks, which charge we believe to be sufficiently taken care of under their present rates.

Yours, truly,

R. J. PIPER, *Treasurer.*

—

HAVANA, ILL., *March 31, 1914.*

GEO. B. MCGINTY, *Secretary.*

GENTLEMEN: Regarding the 5 per cent rate increase by the railroads and their laying off large numbers of employees, why do they not lay off some of the desk and chair holders who are sons, relatives, or friends of high-salaried officials, who are given nice, easy jobs at good pay, and who would not be missed, as far as their services go. Has it ever occurred to the commission to investigate the amount of the officials' salaries, all the way down to the lowest employee, especially the office force? The Chicago & North-Western Railroad would be a good example. It would be better to lay off some high-salaried official, as there are thousands who are competent and would jump at a chance to take their places at half.

Yours, truly,

GRANT M. SLOAN.

—

BLAIR, KANS., *April 1, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We are just in receipt of a general letter from Mr. H. L. Laird, secretary of the Northwestern Retail Coal Dealers' Association, advising that the Interstate Commerce Commission has before it for consideration, with reference to the advancement of freight rates on all commodities. Believing that all traffic rates are sufficiently high on the present basis, we would urge you to use your influence against such a measure.

Yours, very truly,

GORDON LUMBER CO.,
By WM. C. MAAG.

—

TILLMAN, LA., *March 9, 1914.*

Mr. GEO. B. MCGINTY, *Washington, D. C.*

DEAR SIR: With reference to a general advance in freight rates on naval stores, we wish to say that we emphatically disapprove of any advance in freight rates on naval stores in this territory, in view of the very low prices that we have been receiving for our naval stores for the last two years. A higher freight rate than the present one would, in my opinion, mean practically the ruin of all of the operators in this section.

Therefore we earnestly beseech you to disregard any resolution or proposition that might have been made by a very few of the turpentine operators, and not a representative number at all.

Trusting that this matter will have your kind attention and due regard, we are,

Yours, very truly,

DIXIE TURPENTINE CO. (LTD.),
By G. W. COOPER.

—

PITTSBURGH, PA., *March 6, 1914.*

The INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: I am inclosing clipping concerning the increase in freight rates. I do not see the justice in raising money by burdening business. Why not lower their dividends and let the stockholders bear the burdens for once? I see the Pennsylvania intends building a $25,000,000 station in Chicago. Why, if they are in such straits, should they assume such a debt? Taking off those trains is only a bluff, they will be resumed as soon as a decision in their favor is declared.

Very truly,

MRS. ANNA DAVIS,
Cypress Street.

—

[From the New York American March 5, 1914.]

WHERE RAILROADS CAN FIND REVENUE.

In commenting upon the application of the railroads for permission to raise freight rates, the American has persistently urged two propositions: 1. That the increase should be shown to be necessary. 2. That the necessity should not have arisen as the result of dishonest or predatory management of the railroads involved. In the course of the hearing on the application for an increase of rates, Brandeis has succeeded in bringing to light evidence that some of the railroads which most loudly protested their obedience to the interstate commerce law have, in fact, been violating it. Favors granted to big shippers have been shown to be equivalent to rebates. Elevator privileges, traffic concessions, switching charges, a host of small items in a railroad bill for transportation, have been so juggled as to result in a very material discrimination in favor of the big shipper and against the little fellow. Brandeis not only shows that this results in the practical revival of the deadly rebate, but, further, that if these practices be abandoned the railways' gross revenues would be increased by from 5 to 7 per cent—by just about the amount that the roads wish to gain by the advancement in rates.

—

DENNY, HILBORN & ROSENBACH,
Toledo, Ohio, March 5, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The railroads at the present time are asking for an increase in their freight rates, and I do protest against such increase until such time as the railroads feel that it is their duty to give to the traveling public an increase in accommodations.

I am not a manufacturer, but travel for a concern that is a very large shipper, and will relate what happened to me on February 6, and ask you if it is right treatment to receive.

On February 6 I left Cleveland over the Big Four Railroad for Columbus. As I carry a personal trunk I wanted to buy a ticket for Columbus so that I could check my trunk through but I had to stop at Galion for a couple of hours, but the railroad would not sell me a ticket through with the privilege of the stop-off. I bought the ticket to Galion and, of course, that is as far as they would check my trunk. When we arrived at Galion it was raining very hard, and my trunk was taken off the train and put on the truck and left in the rain for exactly 20 minutes, and when I arrived at Columbus and opened the trunk there was some water on the inside, and some laundry spoiled, and other things. If you write the railroad company they will reply and say that your letter was received and the same will receive their attention, and that will be the last you will hear from it.

Why can't a ticket be sold from one point to another with the privilege of a stop-off, if the legal rate of fare per mile is charged?

Why can't a C. P. A. mileage book be honored on the train and baggage checked on same without having to exchange same for a ticket? They do that in all States east of Ohio.

Awaiting your reply.

Very truly, yours,

_____ _____,
1737 West Berks Street, Philadelphia, Pa.

—

TOLEDO, OHIO, *April 6, 1914.*

The honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In reference to the letter of the Ohio Manufacturers' Association, under date of March 25th, addressed to your honorable body, as a member of the association, we desire to put ourselves on record as opposed to the sentiment expressed in the letter in support of the proposed horizontal increase in rates. While we believe there are some roads that are in justice entitled to an increase, we believe that this should be applied on certain commodities and in certain specific instances only. We see no reason why shipping interests should be forced to contribute to roads that are already prosperous in order that benefits may be given needy carriers.

Very truly, yours,

THE CONTINENTAL SUGAR CO.,
W. B. ROSEVEAR, *General Manager.*

At a meeting held by Local Watertown Socialist Party, Monday evening, February, 9, 1914, the following resolutions were unanimously adopted:

"Whereas the Interstate Commerce Commission has now before it the question of the increase of freight rates; and

"Whereas the chamber of commerce has gone on record in favor of the proposed increase of freight rates, notwithstanding the fact that in the past they were supposed to be laboring not only against an increase but for a decrease; and

"Whereas we believe it inconsistent that the chamber of commerce reverse its attitude and go on record in favor of said increase, knowing full well that the proposed increase will be added to the cost of production charged up and paid by the consumers: Therebore be it

"*Resolved*, That Local Watertown Socialist Party do hereby go on record as opposed to the proposed increase of freight rates; and be it further

"*Resolved*, That a copy of these resolutions be forwarded to the local press and to the Interstate Commerce Commission; and be it further

"*Resolved*, That a copy of these resolutions be forwarded to Congressman Luther W. Mott, with the request that he use his best endeavors to have an act passed in Congress giving to the Interstate Commerce Commission power to make the watered stock of no value, thereby eliminating the necessity of the proposed increase of freight rates; be it further

"*Resolved*, That we suggest to the consumers, who at present pay all the freight rates, to write their objections to the Interstate Commerce Commission and to their Congressman."

LOCAL WATERTOWN SOCIALIST PARTY,
FRED E. SISSON,
Secretary, 30 Fairbanks Block, Watertown, N. Y.

—

THE SOUTHERN COMMERCIAL CONGRESS,
Washington, D. C., February 21, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: To grant the railroads' request for a 5 per cent advance in freight rates would be an awful blow to the South especially. We are already laboring under exorbitant freight rates by comparison. The per ton mile rates in the South on most commodities is now more than double the rates prevailing in the North. Here freight rates have been so prohibitive by comparison that it has been impossible for the South to obtain capital for commercial development. The old river

base rates have proven a curse to the South. The rates are probably low enough to river points. The railroads claim that these low river point rates are necessary to meet "water competition" and yet river competition is only a memory and if a well-known fact to all students that the railroads are responsible for the desertion of the river traffic, and that it was not abandoned because of low rates.

The trouble with the railroads is not due to low rates, but rather to excessively high rates which have made development impossible and to over capitalization and to the further fact that the policy of the railroads have alienated the friendship of a people who desire to be friendly with these transportation properties. These southern railroad properties have made no efforts to keep in the good graces of their patrons. Their policy has been to contest every move the people have made for better conditions. They do not take the people into their confidence on any matter whatsoever.

What we need is more modern railroading methods, the elimination of the enormous expenses of maintaining legislative lobbies, the elimination of the expenses of unnecessary retainer fees, the elimination of the expense incurred in thwarting the rights of the people, and these expenses are enormous. In fact we need men at the head of these properties who will keep in touch with the people and modern practices.

No doubt these railroad properties are subject to many injustices, but this is inevitable when they so conduct their affairs that the people can not feel a friendly pride in them.

To grant the request for a 5 per cent advance, or any advance whatsoever, would to my mind be a great injustice to the people and in the end prove a curse to the railroads themselves.

Rates should be reduced and a general readjustment made on a scientific basis, just alike to the people and the railroads. Neither the people nor the railroads can prosper as they should without mutual friendship and confidence, and this is impossible under present conditions in the South.

I sincerely believe that conditions have reached that stage when the railroads can not of themselves bring about these necessary reforms which will give them the necessary confidence of the people. The strong arm of your commission must reach out and enforce these reforms in justice to both railroads and the people.

I recently listened to the attorneys of the Illinois Central and Louisville & Nashville railroads in their pleas of opposition to remedial legislation in Kentucky, and their arguments would have been a reflection on the intelligence of a kindergarten class. It was the old plea that the railroads were private property and that the public had no right to dictate even in things essential to the public welfare. It was the plea that they did not need any legislation to safeguard human life, because the managers of these properties were big-hearted men, who would exercise all necessary precaution to this end. It was the plea that they did not need to be told when depots were decaying and unsanitary, that they had experienced men to decide such questions. It was the plea that they alone should control these properties without legal restrictions. I repeat that such arguments were puerile and would be an insult to the intelligence even of school children.

Your commission has the confidence of the people. We do not desire that the railroad properties be treated unjustly, but we do desire that their methods be reformed, and that we of the South be given as good rates and service as those prevailing in the North. If the population of the South has not kept pace with the North, as it has not, it is due to transportation discrimination. The plea that one method of basing freight rates should obtain in the South and an entirely different method obtain in the North is so ludicrous that it is not laughable.

I hope you can not only see your way clear to decline to grant the advance asked, but that in due time you can put into effect practices which will reorganize the entire railroad management of the South.

Yours truly,

JOHN FRANKLIN BIBLE.

CHICOPEE FALLS, MASS., *November 1, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been unofficially advised that the bituminous coal carrying roads, such as the Baltimore & Ohio Railroad, Pennsylvania Railroad, New York Central lines, and others, have filed tariffs whereby rates from various Pennsylvania and other points have been advanced approximately 14 cents per ton, same to be effective on or about November 15, such advanced rates canceling rates now in effect to the following points:

Springfield, Mass.; Westfield, Mass.; West Springfield, Mass.; Mittineague, Mass.; Brightwood, Mass.; Chicopee Falls, Mass.; Chicopee, Mass.; Willimansitt, Mass.; Holyoke, Mass.; Palmer, Mass.; Ludlow, Mass.; Indian Orchard, Mass.; North Wilbraham, Mass.

We have not the specific tariff references by number or otherwise—not having been able to obtain them. We, however, wish to enter protest against this advance and request that these tariffs each and every one of them be suspended until proper hearing and investigation can be had on same. You will, no doubt, be able to locate these particular tariffs and we would request that they be suspended on the ground that rates now in effect and which have been in effect for years are sufficiently high to warrant a reasonable revenue return to the interested lines and connections and that the commodity on which this advance they propose to make is one that should bear the lowest possible rate for the reason that it is one of the most necessary of all commodities in both industrial and other fields.

The rate, it would appear to us, is not justified by any conditions now existing. Will you kindly advise whether or not tariffs complained of will be suspended?

Very truly, yours,

THE HAMPDEN COUNTY TRAFFIC ASSOCIATION,
F. R. LYMAN, *Secretary Executive Committee.*

MINNEAPOLIS, MINN., *April 6, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I am certainly not in favor of advancing freight rates any more as it will be a hardship on the consumer.

Yours, respectfully,

GEO. T. FROST.

KREIS & HUBBARD,
Chicago, February 14, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Please enter opr protest against freight-rate increase for the eastern railroads.

Favorable indorsements by trade organizations represent only the opinions of small committees, as the large majority of members are rarely consulted and have no opportunity to register a vote either way in the consideration of the question.

Respectfully,

KREIS & HUBBARD.

RUSSEL CREGO & SON,
New York, February 9, 1914.

PROTEST.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: This is to protest against increase in railroad freight rates. Before such increase is granted, it seems to me—and I believe that I voice quite a general opinion—that the officers of railroads should reduce their salaries, and many special privileges of the "wheel within the wheel" should be stopped.

The New York Central & Hudson River Railroad should first comply with the laws of the State. As I understand it, this company owns and operates a parallel line—the West Shore—contrary to the provisions of its charter and contrary to the laws of the State.

Yours, truly,

O. M. CREGO.

LUDINGTON, MICH., *February 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: It is to be hoped there will be no favors granted to railroad companies, but rather further reductions. The whole thing amounts to this on the part of the railroads: To tax the people for their iniquities, such as extravagance, watered stock, trying to outdo other roads, million-dollar residences, and salaries 10 times more than they earn. They never cut their own salaries to meet expensse, but are always trying to make one cheap employee do two men's work. Elliott's talk about "sheds," "harness buckles," and they can't manage their own business is all rot and childish. Let the roads run less passenger trains and not so fast; there is no need of it, only because some other road does it. Business don't demand it; it is to satisfy the numerous fools that want too much. The Hartford & New Haven system would not have been hard up only for trying to hog up everything. Let them come out at the hole they went in at, or sheriff's sale would be a wholesome dose to transportation companies and a great benefit to the country. The people do not wish to subsidize the railroads, to redeem watered stock that went to make a few rich, and divide up dividends.

Very respectfully,

R. J. MERSHAN.

MARTINSVILLE, VA., *February 7, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We desire to file formal objection to the increase of 5 per cent of the rates on telephone pin and brackets, pole steps, etc.

Our business is already hampered, and we are greatly burdened with excessive rates, and any increase would be a great hardship to us.

We have for years been seeking lower rates, especially from the Southern and Norfolk & Western roads; and the records of the freight departments of these carriers would show this.

Please let me know at once if this formal objection is in the form which would be considered by you.

Yours, truly,

B. F. & R. P. GRAVELY,
BENJ. F. GRAVELY.

BUSINESS MEN'S ASSOCIATION OF HOMESTEAD, PA.,
Homestead, Pa., January 28, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: At a meeting of our association, held January 27, I was instructed to advise you that a resolution had been passed by the association protesting in a general way against the 5 per cent increase in freight rates asked for by the railroads.

Yours, truly,

D. J. CRAWFORD, *Secretary.*

Protest against the railroads' pending demand for a universal increase in freight rates.

BASIN, WYO., *January 24, 1914.*

DEAR SIRS: I have been appointed as a committee of one to send you the following petition as a protest against an advance in freight rates. We feel that if the railroads would figure their earnings on their actual investments instead of on so much watered stock they would be making a great deal more than the present farmer.

Yours, truly,

F. B. REFFNER,
Secretary and Treasurer Farmers' Union.

The honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

We, the undersigned farmers and representatives of the producing and consuming interests of the United States, hereby respectfully protest against any general or percentage flat increase of freight rates indiscriminately upon all the railroads of the United States, application for which is now pending before your honorable body. We believe that rates should be so adjusted as to insure the same fair compensation to labor, brains, and capital employed in transportation that they can earn in agriculture, manufactures, commerce, or other legitimate industries:

F. B. Reffner, Basin, Wyo.; W. S. Leland, Basin, Wyo.; Geo. Livingston, Basin, Wyo.; C. R. Spencer, Manderson, Wyo.; G. H. Hoffman, Basin, Wyo.; G. W. Gibbs, Basin, Wyo.; Todd. Calvert, Basin, Wyo.; John E. Wrigley, Manderson, Wyo.; Chas. F. Renner, Basin, Wyo.; I. S. Avery, Basin, Wyo.; Ed J. Tatman, Manderson, Wyo.; Guy Sowers, Basin, Wyo.; Mabel Livingston, Basin, Wyo.; Edna Tatman; A. B. Wrigley; Mamie B. Hoffman, Basin, Wyo.; J. L. Olson, Basin, Wyo.; Nellie E. Rogers, Basin, Wyo.

HACKENSACK, N. J., *January 23, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We wish to offer some arguments against the proposed advances in railroad freight rates over the eastern part of the United States.

Our business is manufacturing railway equipment, entirely for the export trade. We already suffer a handicap, as we have to pay the domestic freight rate of 16 cents per 100 pounds from Pittsburgh to our works on steel, because we fabricate for exporting. Much similar material shipped from Pittsburgh and vicinity through New York for export takes the export freight rate, which, including lighterage, is 10½ cents per 100 pounds.

The tendency of this discrimination is to make us buy our raw material in Europe.

We believe the general tendency to advance freight rates in the United States will be to hamper export business. We believe it will increase the purchase of foreign material for use along the coast.

The volume of business among manufacturers is, beyond all else, the possible cause of cost reduction. We believe, under rigid management, the volume of business among the railroads should also reduce their cost of handling freight per ton per mile. The volume on the railroads has increased. We believe both the capital and labor interests allied together to run the railroad business of the United States should depend upon their volume and efficiency for their profits, and not on advancing freight rates, which are sure to hamper export business.

We speak of export business because we wish to call your attention to the fact that the United States is, and will be in the future, distinctly dependent on its export business for its prosperity. As we consume more of our raw material at home we must depend upon the exportation in larger volume of our manufactured goods.

The export freight rates in the United States on raw material handled from interior points to the seaboard are already higher than similar rates for similar distances in European countries, which are our chief competitors.

We examined, not long ago, the export freight rates on steel and iron material from the Liege district in Belgium and from the Dusseldorf district in Germany to Antwerp and to Rotterdam, including lighterage, and we found the rates astonishingly below any similar charge for the same distance in this country.

We do not question the fact that adjustments in freight rates in the United States may have to, occasionally, be made, involving both advances and reductions in individual cases; but the idea of an arbitrary advance on all rates ultimately, undoubtedly, to cover the entire United States is a high-handed piece of business and is not justified by any legitimate condition now apparent in the United States.

Our business is small, largely because an exclusively export business is a difficult thing to operate in the United States against European competition, but we find on looking over our business for 1913 that an advance of 5 per cent in our freight rates would have equaled an amount greater than all the taxes we paid for the year—local, State, and national—including our income tax. This shows the sinister and misleading attitude of the railroad company in arguing that the advance amounts to so little, as applied to articles of commerce. Of course it is small on a keg of nails; it is still smaller on a spool of thread; but in our case it at one stroke more than doubles our total taxation, and this without in any way giving us compensation.

We can imagine no answer but a shrug of the shoulders and a remark that the whole organization of the railroads in the United States can not be held up or ruined to support a few manufacturing exporters.

We have no doubt there are plenty of domestic arguments against this advance in freight rates, but we wish only to press the export phase of it.

The prosperity of the United States is absolutely dependent on a large balance of trade in its favor. An examination of the trade balances of the last 25 years will show that as our balance of trade declines our prosperity declines. The panic of 1893 followed a period of small trade balances; the depression continued until the increased trade balances in our favor again brought prosperity in 1899. A moderate depression in business in 1903 followed the decreased trade balance in our favor of 1902. The slowing down of business in 1911, bringing with it great depression in the steel and iron industries, may be charged to the small trade balances of 1909 and 1910, which together were less than the trade balance of 1908 alone. The astonishing spectacle of 1912 of brisk business right through an exciting presidential campaign—a thing practically unknown in our previous history—in our judgment, was caused alone by the handsome trade balances of 1911 and 1912.

We have had a world of unsound railroad financiering in the United States for many years. We believe the present proposed 5 per cent general advance in freight rates to be another unsound scheme of finance.

Respectfully submitted.

THE GREGG CO. (LTD.),
WM. C. GREGG, *President.*

—

Resolutions.

Resolved, That the name of this association be Jefferson County Farmers' Society of Equity, and the legal abbreviation shall be "Jefferson Co. F. S. E."

Whereas the success of a farmers' association depends upon complete cooperation between every branch of its organization: Therefore be it

Resolved, That we in no wise neglect our duties to the locals, the State, or national organizations, and in this connection it shall be the aim of this county organization to affiliate with the State in building great central supply houses from which the locals may draw their farm supplies at the lowest possible cost and market their crops to the best advantage, and further to cooperate with the State to formulate a financial system for all the locals by which money may be advanced on crops in advance of the returns on sales, and further to work out with the State the plan for a uniform series of warehouses, elevators, and cellars. We favor the incorporation of the State and promise it our aid and support.

Whereas partisan politics has proven the bane of representative government: Therefore be it

Resolved, That this association commits itself to the interests of no political party, but that we work unitedly for the election of such persons to office as will favor our cause and industry and give the farmer class a square deal in industrial legislation. Our politics shall be founded upon the man and not the party, and our platform of principles shall always include economy, honesty, and efficiency.

Whereas it is reported in the public press in the State of Idaho that some of its citizens are petitioning the governor to call a special session of the legislature; and

Whereas the farmers, who are the principal taxpayers, see no urgent need of an extraordinary session: Therefore be it

Resolved, That we oppose the calling of a special legislature at this time or any time unless the demand is very urgent and the necessity self-evident.

Whereas this county organization is formed to assist the locals in buying supplies and in selling crops for the farmers and to help make effective the plans of the State and national organizations: Therefore be it

Resolved, That it be our highest purpose to induce the individual members of the locals to transact all their business in buying farm supplies and in selling farm products through their regularly organized association, if satisfactory means are provided for such transactions, rather than deal on the outside.

Whereas in the past trusts and combines have worked a hardship upon the farming interests: Therefore be it

Resolved, That we will not knowingly support any trust or combine that is detrimental to our interests, provided ways and means are supplied for the satisfactory transaction of our own business through our own organizations.

Whereas the freight rates on farm products in this northwestern country are already too high in order for farmers to receive fair compensation upon products shipped: Therefore be it

Resolved, That we oppose the raising of freight rates by the Interstate Commerce Commission.

Whereas the business of the world is done largely on borrowed capital; and

Whereas the farmers of this country owe the banks in the neighborhood of $6,000,000,000, with an average annual interest approaching 8 per cent, amounting to the stupendous sum of over $400,000,000—a sum sufficient to build two Panama Canals—a year: Therefore be it

Resolved, That we petition our Members of Congress to hasten the establishment of agricultural credit banks whereby money may be loaned to farmers on long time at a low rate of interest, and with optional payments at any time the farmer is able to take up the debt and offers to do so; be it

Resolved, That a copy of these resolutions be sent to the State headquarters of the Farmers' Society of Equity, the governor of our State, the Interstate Commerce Commission, and our Members in Congress.

J. S. BONHAM,
H. E. POOLE,
ARTHUR GOODY,
Committee on Resolutions.

—

ROCHESTER, PA., *January 5, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: There is a great deal of talk, pro and con, about allowing the railroads to advance their freight rates 5 per cent. They make use of one argument—that business has fallen off and therefore their receipts will not run so high and thereby wish to raise freight rates to make up for their losses.

Now, if you will kindly look at it from our standpoint: The manufacturers' business has fallen over 50 per cent and he isn't even allowed to make a scale of prices and live up to this scale but must compete. Therefore, when business is dull the competition is more severe and the manufacturers are bound to lose money in times of depression.

We can not see why the Government would take the railroads under their wing and guarantee them against loss and turn right around and make the manufacturer pocket his own losses and also make up any deficiencies to the railroad company. Hardly looks fair. If the Government wants to take the railroad on their knee and coddle them, why not nurse the manufacturer a little instead of trying to drive him out of business?

Furthermore, of course you can not be ignorant of the fact that Pittsburgh has always been discriminated against in the matter of freight rates, and she is to this day. Take, for instance, the hauling of coal from Pittsburgh and West Virginia points to the Lake. Thirty years ago the railroads hauled stoves to Chicago, New York, and Albany for 18 cents, to-day the rate is 33. Cleveland, 30 years ago, was 8 cents per hundred, to-day it is 19 cents, and yet they want to raise these prices on us 5 per cent. Thirty years ago a locomotive hauled 17 cars and 10 tons, which was the maximum capacity, making it impossible for any engine to haul over 170 tons. To-day one locomotive will haul

from 50 to 80 loaded cars with a 50-ton capacity. Now, there is no business in the United States that has had this advantage that could not make a lower price to-day than formerly, instead of doubling their freight rate.

Thirty years ago a large percentage of the people rode on passes; another percentage got 1,000-mile books for $10 each; another percentage, who shipped a great deal of freight, got large rebates. Now, all this business has been stopped; no passes, no cut rates, no rebates. One engine and crew hauls twenty times the load. Now, how under the sun a railroad can figure that they are losing money is more than the writer can tell, and we believe to-day that a railroad property handled is the best paying institution in the United States, not even barring the Standard Oil Co.

Furthermore, it seems that at the present time the railroads are attempting to show that business is worse than it is. At Conway yards we understand they laid off a lot of engines and crews. We also understand there are 9,000 cars waiting distribution. We believe your commission should look into some of these matters, and if they would take the trouble to send a man to Conway yards they would see for themselves.

Furthermore, according to their own statements the railroads have made more money than ever before, and this thing of them making a threat to get their 5 per cent, should they be allowed to carry it through, will certainly be against the expressed wishes of the people of the United States at the election of November, 1912, when Woodrow Wilson was elected President of the United States, and if you wish to know anything further about these freight rates of 30 years ago and to-day, we have our books running back 34 years. We should be very glad to show them to any representative whom you might send here, or we would be willing to send them to you at any point you desire. We believe the stockholders of the manufacturing plants of the United States have just as much rights as the railroads, and we believe that your commission, when they look carefully into the matter, will see it the same way.

Trusting we have not tired you with our lengthy explanation, and expressing a willingness to go deeper into the matter if you so desire, we remain,

Yours, truly, OLIVE STOVE WORKS.
Per J. M. EAKIN.

P. S.—We have had freight on the road since December 18, from which we have not heard. If business is so slack on the railroad why don't they deliver our freight?

—

THORNDIKE, ME., *December 19, 1913.*

To the honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

We, the undersigned farmers and representatives of the producing and consuming interests of the United States, hereby respectfully protest against any general or percentage flat increase of freight rates indiscriminately upon all the railroads of the United States, application for which is now pending before your honorably body. We believe that rates should be so adjusted as to insure the same fair compensation to labor, brains, and capital employed in transportation that they can earn in agriculture, manufactures, commerce, or other legitimate industries.

Martha A. Small, Thorndike, Me.; H. M. Small, Thorndike, Me.; F. H. Hasty, E. L. Bartlett, Mrs. B. A. Gross, B. A. Gross, Henry Small, O. J. Farwell, jr., Howard N. Hannon.

—

BRIDGE PLAZA, LONG ISLAND CITY, N. Y.,
December 1, 1913.

Mr. LOUIS D. BRANDEIS, *Washington, D. C.*

DEAR SIR: I am opposed to increase of railroad freight rates, and thought perhaps some suggestions might possibly be of value to you in your fight.

First. In many cases the present fast freight and express rates on garden vegetables are as much as the farmers get for raising the vegetables. See the rate from Florida, Georgia, and California to New York and Chicago. Any increase of these rates will further increase the high cost of living.

Second. The freight rates from Memphis, Tenn., for instance, to New York will average about $125 per carload. Now, 40 carloads make a trainload, making $5,000 cash in freight for one trainload from Memphis to New York. The distance is about 1,200 miles; the speed is, say, 20 miles an hour, or 60 hours. At an average of $3 for each man's time of 8 hours and 6 men to a crew, makes $135 as total expense for labor. Now double this as the proportionate cost of all other expenses for labor and we have $270 as the total cost of earning $5,000 in freights, excepting, of course, interest and dividends, and this is done in about three days of actual time. Now, what other active business can show such returns; and remember, all freights are cash on the spot. Certainly farming nor general merchandise pay any such returns.

If you will figure rates from California to all Missouri River points, you will find they pay as big returns as the Memphis rates, or maybe more.

Third. The disclosures of how the Frisco Railroad officials exploited the railroad company for their own private gain is a common experience; where the ventures worked out, the officials got the money; when the ventures failed, they issued more stocks and bonds and asked for increase of freight rates to make them good. Farmers and general business men have no such ready relief as loading a company with all the stocks and bonds it is possible to sell.

Fourth. Look at the colossal fortunes made by such railroad kings as Vanderbilt, Gould, James J. Hill, Harriman, and many others. Where in all America have farmers made any such vast fortunes? Can you name one? Besides, these people spend vast sums each year for living expenses, and save over and above these expenses. So we need no further increase in freight rates for them.

Fifth. Examine carefully reports of railroads when the officials wish to boost the price of stocks and now, when they wish to boost the freight rates, and I am sure you will see quite a difference.

Sixth. See the charges made by English and German railroads for similar services.

Seventh. The papers report Mr. Schwab as saying the freights from Pittsburgh to New York on steel were the same as from Rotterdam to New York by ship. Three thousand miles the same as 500 miles. Looks as though that needed no increase.

Eighth. See what the railroads are now assessed at for taxation, and, taking that as a basis of value, what interest do they pay at present rates? The assessed value is a supposed expert estimate of its actual value, not the amount of stocks and bonds.

Ninth. Some will say farming and railroads should not be compared, but more people and more money are in farms than in railroads, and it is a very important branch of business. The larger ought not be squeezed for the benefit of the less.

Very truly, yours,

T. M. GALBREATH,
Long Island City, N. Y.

—

TERRE HAUTE, IND., *November 17, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is our understanding that the railroads are contemplating a 5 per cent advance in freight rates, effective some time during the present month, and while we are not in position to give facts and figures that will show that the railroad companies are not justified in securing such an advance, at the same time we feel in a general way that our present rates should not be increased. Our main hope is that your honorable body will investigate the matter carefully and not permit any unreasonable advance to be made.

Yours, very truly,

THE NORTH BALTIMORE BOTTLE GLASS CO.,
By H. B. TERRY, *Assistant Secretary.*

—

COMMERCE CLUB,
St. Joseph, Mo., November 17, 1913.

Suspended class and commodity rates, official classification territory, Docket No. 5860, I. and S. No. 333.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: On behalf of this organization, I am directed to enter protest against the proposed rate advances on the grounds that the present rates of these carriers are, in the opinion of our members, as great as should be charged, and that such advances, if allowed, would place an unreasonable and undue burden on the traffic of this community when moving to or from official classification territory.

It will be greatly appreciated by us if the commission take cognizance of this protest and accord it a place in the record of the case.

Thanking you in anticipation of favorable consideration,

Respectfully,

H. G. KRAKE,
Commissioner, Commerce Club of St. Joseph.

—

CINCINNATI, OHIO, *November 12, 1913.*

Docket No. 5860. Investigation and suspension docket No. 333.

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: With reference to your circular of November 8, regarding rate increase in official classification territory.

We find that the freight rates now are so high that it is almost impossible to do business, and with the margin of the manufacturer cut by the reduction in the tariff we believe that freight rates should be lowered rather than raised.

We earnestly protest against any increase whatever.

Respectfully,

THE "ICY-HOT" BOTTLE CO.,
G. P. ALTENBERG, *President.*

—

CHICAGO, *November 5, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been receiving various lines' tariffs showing an advance in rates on all classes and commodities, effective November 15, 1913.

We wish to protest against the proposed advance in rates by carriers. The commodities in which this company is interested in principally are sand, gravel, fire brick and clay, tile, cement, etc. We have a large number of contracts for sand and gravel which extend to March 1, 1914, based on the rates in effect at the present time, and if obliged to deliver this material on the new rates it would work quite a hardship on us.

All the commodities referred to above, as a general rule, are loaded by the shipper and unloaded by the consignee. Therefore we believe the proposed increase in rates should not come from advancing same on such low-grade commodities as sand and gravel. We therefore petition to have the proposed advance in rates suspended until an investigation can be made by your honorable body as to their reasonableness, and beg to remain,

Yours, very cordially,

THE GARDEN CITY SAND CO.,
F. K. WHITE, *Traffic Manager.*

—

THE TORRINGTON BUSINESS MEN'S ASSOCIATION,
Torrington, Conn., November 8, 1913.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

HONORED SIRS: At the meeting of the Torrington Business Men's Association on Thursday evening, November 6, 1913, it was unanimously voted to petition your honorable board to prevent, if possible, any proposed increase in freight rates by the New York, New Haven & Hartford Railroad, inasmuch as, in the judgment of the members of this organization, such increase would be detrimental to the business interests of Torrington and the other towns of this section.

Thanking you for your favorable consideration of this petition,

Yours, respectfully,

A. H. WILCOX, *Secretary.*

—

THE TIDEWATER COAL & COKE CO.,
Vivian, W. Va., October 31, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been advised by the Norfolk & Western Railroad that a general advance of rates is to be made on November 15 of this year.

The undersigned represents the Tidewater Coal & Coke Co. and the King Coal Co., whose properties are situated on the main line of the

Norfolk & Western Railroad in McDowell County, W. Va. We believe that the advance in rates they speak of would not only be an injustice but ruinous to our business.

We trust that you will suspend judgment until a hearing can be had before your honorable body.

Thanking you, we are,

Yours, truly,

C. H. BOARDMAN.

COSHOCTON, *October 31, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are notified that the railroads intend to raise their rates to go into effect November 15, and as we understand it the raise is to be 5 per cent. We must say that we have heard very little about that prospective raise and we only heard about it casually; queer to say, we did not read anything about it in the newspapers.

We herewith beg to protest emphatically against any raise on bottles for the following reasons:

The present rates on bottles are fully high enough and should give the railroads full remuneration for their respective hauls.

We, furthermore, call your attention to the fact that for many years bottles were classified under sixth class, while for the last four or five years the rate on bottles has been raised from sixth to fifth class, which was a very substantial raise in the freight rates, and we can not stand for a new increase.

We can not stand for any higher freight rates, as we have to sell our products at an exceedingly low figure.

Incidentally we will add that all our contracts for delivery till July 31, 1914, are practically made now and have been made based on the old freight rates and we, therefore, could not afford to pay now a higher freight rate after all our contracts are made.

Finally we wish to say that on account of the new tariff which reduced the duties on bottles from 30 to 40 per cent, we do not know yet to what extent foreign competition is going to affect us, but we know that we will have strong competition. If in addition to the low tariff the freight rate should be raised, it would doubly affect us and handicap our sales to a great extent and possibly prevent future sales of our products.

Will you do us a favor and give these statements your due consideration? And we sincerely hope that the Interstate Commerce Commission will positively not allow any raise in the freight rates. Kindly acknowledge receipt of this. Thanking you in advance for your courtesy, we are

Yours, very truly,

THE COSHOCTON GLASS CO.,
Per H. LIEWER, *President.*

PHILADELPHIA BRANCH, GRANITE CUTTERS' INTERNATIONAL ASSOCIATION OF AMERICA,
Philadelphia, October 30, 1913.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: In protesting against increase of freight rates to take effect November 15, we desire to call your attention to rates from Bedforr and other stone-shipping points of Indiana to the East.

The rates on rough and cut stone are the same, while the weight of cut stone is one-third less of that of rough, the railroad is out that much revenue, all other articles are classified with a difference between rough and the finished product, and before the advance of freight are allowed the railroads should adopt a more logical basis for making advances.

Yours, truly,

THOS. MAGUIRE.

NEW YORK, *October 30, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been advised by the Chesapeake & Ohio Railway Co. and the Virginian Railway Co. that, commencing with date of November 15, 1913, new freight tariffs will become effective, involving an increase over present rates of what we understand will be equivalent to 5 per cent. This proposed increase, if put into effect, will work considerable hardship on such shippers of coal from mines located on these railroads as now have contracts for delivery of tonnage extending over the coal year ending April 1, 1914, and on certain other contracts, such as those with the Navy Department, Panama Railroad, and steamship companies, expiring at later dates, or carrying to end of the calendar year 1914. These contracts were made under existing tariffs and in the well-founded belief that the railroad companies' freight rates, being already profitable to the carriers, would not be changed by way of increase thereof.

As we have not been informed that the new freight tariffs have been suspended by action of the commission, we ask, therefore, that your honorable body may order a suspension of the new freight tariffs, as proposed, until the reasonableness or otherwise of the rates shall have been duly investigated and determined.

Yours, respectfully,

THE CHESAPEAKE & OHIO COAL & COKE CO.,
By S. R. RITCHIE, *Vice President.*

EPHRAIM CREEK COAL & COKE CO.,
New York, October 29, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This company is a producer of coal on the line of the Chesapeake & Ohio Railway near Thurmond, W. Va.

We are in receipt of tariffs issued by that company, effective November 15, making a horizontal advance of 5 per cent in freight rates on all coal shipments originating from the New River district. This proposed increase if put into effect would work considerable hardship on shippers of coal located in this district who have contracts for delivery of tonnage covering the coal year ending April 1, 1914; these contracts were made under the existing tariffs in the belief that the railway company's freight rate on coal, being already profitable to the carriers, would not be changed in the way of an increase.

We would respectfully ask therefore that your honorable body may order a suspension of these new tariffs, as proposed, until the reasonableness or otherwise of the increased rates have been investigated and determined.

Respectfully, yours,

M. C. JONES, *Treasurer.*

CONNEAUT, OHIO, *October 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand that all roads anticipate advancing freight rates on molding sand on November 15, and, if such is true, wish to register a most emphatic protest as to date that the rate will become effective.

The general and division freight agents on the roads in which we are interested have been advised many times that it works a very great hardship on the sandman to advance rates at any time between April 1 and the following February 1, more especially at this time of the year, for we have many unfilled contracts and orders on which the price is a delivered one, and which we must complete at price named.

The proposed advance, if same becomes effective on the different roads on which we operate, will cost this company not less than $600, if same becomes effective on the date noted above. We hope that you will be able to defer this advance until February 1.

Yours, very truly,

THE OHIO SAND CO.
U. E. KANATEL, *Secretary.*

MINNEAPOLIS, MINN., *October 28, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Regarding the increase in rates asked for by 52 eastern railroads, please do not forget the manufacturer, like ourselves, and the many retail merchants who ship all freight L. C. L. and pay first-class rates, which are now high enough.

If any increase is allowed, it should come on full carloads and on such commodities as have been handled at cost or less.

Thanking you in advance for your consideration to this feature of the matter, we are,

Yours, very truly,

MINNEAPOLIS KNITTING WORKS,
C. E. OVENSHIRE, *Manager.*

UNIONTOWN, PA., *October 28, 1913.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Notwithstanding the diminished demand for lumber and forest products and consequent declining market, we find the various railway lines over which we have been shipping have issued new tariffs on these commodities, effective November 15, which contemplate an increase of 5 per cent over and above the rates now being carried.

This increase under normal conditions is, we think, unwarranted. A careful scrutiny of the existing tariffs will, we think, develop the fact that the revenue derived by the transportation lines on forest products is relatively higher than upon almost every other special commodity hauled. Indeed, in many cases, particularly on intrastate business, the sixth-class rate is religiously and unjustly adhered to.

The increase contemplated means a great burden to us—in fact, greater than the present state of the market will stand. We draw from many directions and will be so seriously affected that we believe we are justified in asking the commission to direct the suspension of the increased rates until at least we can prepare statements showing how burdensome and how unjust, not only to us but to all other lumber jobbers and manufacturers, the 5 per cent increase will prove.

During the past year we have paid freight charges on shipments from one point alone approximately $60,000, so that your commission will readily see to what extent this advance will affect us.

Another feature to which the commission's attention is respectfully directed is the additional loss which will have to be borne by this company and other jobbers on stock sold for future delivery based upon the old rates of freight in the contemplated advance.

Yours, very truly,

PALMER & SEMANS LUMBER CO.,
By E. H. CRANE,

UNIONTOWN, PA., *October 28, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The advance of 5 per cent, based upon which the railway companies have issued new tariffs on lumber and forest products effective November 15, is, we think, not only particularly inopportune at this time, when business throughout the country is decreasing in volume, but entirely uncalled for, so far at least as the tariff on lumber, lath, shingles, mine timber, etc., is concerned, since the rates which are now in effect are, owing to existing conditions, higher in many cases than the business justifies.

We are confronted at this time with the fact that building operations throughout the country are being held up. The demand for our products is therefore greatly reduced. It has fallen off 20 per cent approximately in the last 60 days, and we think we voice the sentiments of every other sawmill operation in this and other territory when we say that what is needed on our output is not an advance but an equalization of rates.

A careful study of the rates published by the Baltimore & Ohio Railroad, which serves us, discloses so many gross inequalities and is so convincing of the utter injustice of the advance proposed that we beg to respectfully ask your honorable commission to issue an order suspending the application of the new tariffs on lumber incorporating the 5 per cent advance until data of a more exhaustive and definite nature can be submitted.

Yours, truly,

UNITED LUMBER CO.,
J. D. COPLAN,
Traffic Manager.

SECURITY WAREHOUSE & ELEVATOR CO.,
St. Louis, Mo., December 27, 1913.

LOUIS D. BRANDEIS,
161 Devonshire Street, Boston, Mass.

DEAR SIR: I am inclosing herewith an article by the writer, which appeared in the St. Louis Times, December 23, 1913, which I believe will interest you, if you will take time to read it. Yours, truly,

F. L. WALLACE.

SINGLE-STANDARD RATE BEST WAY OUT OF TANGLE—F. L. WALLACE SAYS IT WOULD DEPRIVE SOME OF SPECIAL PRIVILEGES, BUT WOULD RESULT IN GENERAL GOOD.

One of the great questions agitating the public mind to-day is that of railroad rates. The sufficiency of existing rates to furnish funds with which properly to maintain and operate the railroads of the country is very important, but should not be the only consideration, as their equity between commodities, individuals, and communities is, in fact, of equal, if not greater, importance.

Recent developments, showing gross mismanagement on the part of the railroad officials, have strengthened the public mind in a well-defined opinion that the managements, not the rates, need supervision. Undoubtedly the earnings from some of the rates and divisions now in use are insufficient, many others too high, and all are discriminative in some regard, being unfair either to the railroads, because they are too low, or to some of the public who are adversely affected. At the same time there is no definite relationship existing between the various rates now in use, because the railroads have been for years, and still are, laboring under the false delusion that they must make low rates and extend special privileges to some individual, class, corporation, or community, and to do so they tax some other business or community with an excess of cost to make good their losses on shipments handled on these low rates.

Consider the earnings of any line between certain junction points and compare the revenue as shown on shipments originating in some preferred territory passing over this intermediate line and delivered to some other preferred territory beyond its line with the earnings on like shipments from various other less-favored points of origin and destination when passing over the same intermediate line, as well as with the earnings contemplated on like shipments for local traffic and the divisions of through rates which the many transit and milling in transit privileges authorize when legitimately used and the weakness of the present system will be clearly shown.

Analyzing the evidence given by the railroad officials in the coal-rate case being heard by Commissioner Harlan will clearly indicate the conditions which surround every other set of rates in use by the railroads of the United States. The evidence given by the assistant general freight agent of the Southern Railway, as published in the St. Louis Times, to the effect that their tariffs in some cases show an earning of 3.9 mills per ton-mile and ranging up to 10.92 mills per ton-mile in other cases, brings out strongly the need of a single standard by which to measure the rates to be charged for a specific kind of service. The evidence in this case by the general freight agent of the Mobile & Ohio Railroad indicates that their rates are made not on a basis of the service performed, but for accommodation purposes, showing favoritism as a prime factor used by this company in determining their rates.

The act to regulate commerce is predicated upon a condition which regards neither individuals, localities, nor corporations with special favor, and presumes that the rates now established or to be established have been or will be made with a view of profit to the corporation on each individual shipment and one that is extended to all persons, corporations, and communities in an equal manner. Furthermore, the law contemplates rates based on the long and short haul clause, and this feature of the law should be enforced in every instance, suffering no exception to the rule, for it is manifest that an error in the premise would mean an error in the conclusion, and as there are many exceptions at the present time, the errors have been multiplied and diversified until the whole fabric of rates as now existing is erroneous; and when we contemplate the clerical forces at work compiling and revising these tariffs and the cost of printing and distributing them, together with the labor now necessary in auditing the accounts, we are amazed at the railroads' efforts to maintain the present system.

That justice may be done to the railroads and also to the public, whom they should serve impartially, a single standard or set of rates should be adopted which will supply proper revenue for the railroads, allowing only one set of rates to be operative between any two points and made to comply with the long and short haul clause of the act, this set of rates to be used in connection with a standardized classification and in conjunction with rates of connecting lines to form through rates. Through commercial lines should be formed, consisting of lines operating in the same general direction, in order that a simple system of through rates and routes might be established to cover the whole country.

A single standard does not mean that a specified rate per ton mile would apply in every case, but that each railroad should establish a single set of rates to apply between the extreme points of their line, and framing all the intermediate rates to conform to the long and short haul clause of the law. The rates should furnish sufficient earnings to cover legitimate operating and maintenance expenses and pay fair dividends on the real valuation of the property, and when once established would remain in force indefinitely—probably never would be changed. The only changes that would be made would be in a classification, which in a short time would become so fixed that neither classification nor tariffs need ever be tampered with. The result would be largely reduced cost to the railroads for clerical work, printing and distributing the tariffs, and auditing work, to say nothing of causing many other economies, which would in a short time create a fund sufficient for dividend purposes.

Contemplating these matters, it is evident that a flat raise of 5 or 10 or more per cent in the existing rates would not correct the discriminations now prevailing, and which result in so much justifiable dissatisfaction to the public generally. In fact, a raise of this character would only stimulate the aggrieved interests to renewed opposition.

The adoption of a single standard would deprive some favored interests of their special privileges, but it is manifestly evident that its adoption would result in the greatest good to the greatest number. Traffic moving under this system would follow the course of least resistance, and this simple system would eventually settle the deep-waterway question and in many other ways advance the interests and welfare of the country at large beyond the fondest expectations of our most enthusiastic citizens.

This does not mean the passage of new laws, but simply the enforcement of the law as it now stands.

F. L. WALLACE.

—

9 WEST ELEVENTH STREET,
ATLANTA GA., *January 10, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: I desire respectfully to suggest and urge that any increase of freight rates allowed by railroads be conditioned on the absolute compliance by the railroads with the terms of the long and short haul clause of the railroad rate law. Great injustice is now being done many localities by disregard of this clause. With higher freight rates the discrimination will become more pronounced and burdensome.

Yours, truly,

CHARLES H. HENRY.

—

CAMDEN, N. J., *January 26, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTS: I hardly think it is justice for the railroads to take advantage of the depressing condition of business on account of the changes made in the tariff and ask for an advance in rates at this time. They should be willing to share the misfortunes of the business interest. A graduated increase of rates should be made, if an increase is intended, until such times as the results of the new business condition are known. If an increase is made, are the increases to be used as a basis for issuing a great amount of new obligations or spent for betterments that the railroads claim are essential? The dealer in railroad supplies should be willing to stand the greatest increase in rates.

Yours, truly,

W. J. MCCAUSLAND.

—

BIRMINGHAM, ALA., *January 27, 1914.*

Hon. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: If all the water was squeezed out of the stock holdings of railroads, there would be no necessity for a 5 per cent increase in freight rates.

The railroads could employ the time they are consuming in their persistence to secure this increase by catching and clothing in stripes the railroad wreckers and soft-water dealers such as wrecked the New York, New Haven & Hartford and the Frisco system of railroads and no doubt many others if the light was turned on.

Respectfully,

GEO. C. KELLEY.

—

2424 SEVENTH AVENUE,
New York, January 27, 1914.

Mr. JAMES S. HARLAN,
Interstate Commerce Commissioner, Washington, D. C.

DEAR SIR: Mr. Edgar W. Dennison has handed me copies of your correspondence, with the request that I write to you regarding the proposed increase in railroad rates. We are opposed to an increase in the rates, for the following reasons:

It will be added to the selling price of food and merchandise transported, thereby putting the burden upon the consumer, the general public.

It is unnecessary, as the railroads can increase their net earnings by increasing the tonnage along their lines without increasing the expense proportionately. You can confirm this if you will secure the reports of Mr. Welsh, of the agricultural department of the New York Central & Hudson River Railroad, to the president of that road, showing where they have done this.

Secretary of Agriculture Houston in a recent speech stated that many of our farms were only producing 12 per cent of what they could produce.

It is therefore obvious that the relief asked for should be obtained by the railroads securing additional tonnage from the soil instead of shifting the burden onto the people.

If I can be of any service to you I will be pleased to render it.

Very truly, yours,

CHAS. WATSON.

—

OMAHA, NEBR., *January 28, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The evening papers state that Commerce Commission says "railways must charge for all service and stop rebates to lines at plants." Then rates may be raised. It seems to me that railroad rates have reached the limit of excessiveness, unjustness, and even unlawfulness. Based on actual cost, every railroad can be duplicated on a cash building basis, same as all railroads demand for all kinds of transportation. Since the life of your commission and the interstate commerce laws railroads have advanced lumber rates on the average 100 per cent from points of production to points of consumption. For years I had a flat rate of 12 cents per 100 pounds from Louisiana and Texas to many points; the rate reached 26½ cents to same points, and lasted until your commission reduced it to 25 cents, which is the present rate. I requested the commission to reduce to 20 cents, and stated this rate would be excessive and unjust, but the commission thought 25 cents was right. When I was given the 12 cent rate, and during many years, the minimum was 20,000 pounds and the maximum was 24,000 pounds per car, and a train for a single engine was 25 cars, with one engineer, one fireman, one conductor, and usually three brakemen, but now the minimum is 30,000 pounds and the maximum 120,000 pounds or over per car, and a single engine can now haul 50 cars or more of an average of 80,000 pounds per car, with the same train crew. For several years I had a rate from Portland, Oreg., on shingles to all points on the Missouri River from Sioux City to Kansas City, and including these cities, of 40 cents. The limit of capacity was 150,000 6/2 shingles per car, and a loaded train 25 cars; now cars contain from 250,000 to 500,000 6/2 and a loaded train for a single engine is 50 cars or more; so the average tonnage per car is almost four times former tonnage and almost eight times more per train, and the rate for years has been 60 cents to same Missouri River points. The general freight agents told me the 12 cent and the 40 cent rate was profitable to their roads, as lumber and shingles was a clean commodity and did little damage to cars and the only expense was in hauling. If these low rates were profitable for much less tonnage at even greater expense, kindly figure out present profit, based on present rates, tonnage, and expense, compared with former low rates that were profitable. I know of a certain railroad of large mileage whose stock about 15 years ago went begging at 5 cents and 10 cents on the dollar, and for years the same stock has been selling around $1.90 and $2, so figure this profit created by advanced rates while the commission was powerless to act. But now the commission has some authority to reduce excessive and unjust rates, and this they should do without anyone making any complaint. If a policeman sees a person stealing, he does not wait for some one to complain, but acts on the spot, and the commission should do the same. To my knowledge for 50 years railroads have murdered, killed, and injured thousands yearly, because some part of the railroad, including track, bridges, culverts, signals,

switches, crossings, cars, engines, etc., were out of safe repair and known to be unsafe, and also because trains were run beyond a safe speed limit and too close together on a single track. The greatest criminals of the world are our railroads. Railroads for the past 50 years have retained hundreds of millions yearly in unlawful charges of many kinds; and, as the cost of carrying a suit would be more than the claims, shippers permitted railroads to rob them. When the interstate commerce law was passed the Members of Congress thought it would do away with unjust and excessive rates and unlawful charges, but these have been increased since the interstate-commerce law has been in force. It seems to me that the duty of your commission under the law is to regulate excessive and unjust rates and unlawful charges made by lines of rail and water transportation, and to regulate them from your own knowledge. I have about $2,000 of just and lawful claims refused by railroads, but as I thought the railroads would pay, I let the two-year limit pass, and now must prosecute the railroads in our State courts. There should be no time limit of bringing unlawful charges before the commission, as there is no time limit for our Government in arresting criminals; and when a railroad makes an unlawful charge or kills or injures humanity, such railroads are criminals and the offense should never outlaw.

The rates on hundreds of other commodities besides lumber are now excessive and unjust and should be reduced.

The commission should hold a meeting every day for the most good and betterment of all our people.

This is a short letter, but I hope you will read and digest and see the point of intent.

Yours, truly,

H. N. JEWETT.

—

RICHWOOD, W. VA., *November 15, 1913.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: I notice the railroads are asking for an increased freight rate. If everyone is charged as I am, they certainly do not need an increase. On one shipment of toys from Baltimore, amounting to $200, the freight was $12—6 per cent of the cost of the goods; on another shipment from Baltimore of $600 worth of toys, $19—over 3 per cent. Now, we can not get any more for our goods, as I run a 5-cent and 10-cent and 25-cent store.

Very truly, yours,

C. B. CROPP, *Treasurer.*

—

BOSTON, MASS., *May 16, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: It is recorded in the newspapers that the eastern railroads are to apply for permission to increase freight rates 5 per cent.

As one of the 90,000,000 bread winners of this Republic who will be affected by any action you may take, may I be permitted to file my objections to the proposed increase?

We are now in the midst of economic changes, and as these changes become effective it will be clearly evident that present rates are too high. If our railroad officials claim that equipment and maintenance cost more than formerly, they will probably be unable to substantiate the claim, and commodity prices are falling. When normal competitive conditions are restored in the steel and allied trades, lower prices for these items will make it feasible to reduce rates rather than increase them.

I am among those who believe that the United States Steel Corporation will be dissolved and the steel-rail pool forced out of existence. There should then be a saving of one-fourth to one-third in the price of steel rails, and in other articles proportionately. Our railroads will no longer assist in paying dividends on billions of water stock—reported in one case alone to be $800,000,000. Our future prosperity depends on the thoroughness of our readjustment to a cash basis. If you increase rates now, in my opinion, you simply stand in the way of reform, for as long as the burdens of overcapitalization and high finance can be forced on the public reforms are unnecessary. Increased wages may be urged by the railroads as an excuse for higher rates, but it should not be forgotten that recent scales of wages have been established by boards of arbitration, who have considered the question well from the standpoint of the railroads. In a general way wages on our railroads, as in other lines, are unlikely to go higher. Such increases as we have had have simply cut down surplus, and I submit that it is far more to the public interest to distribute these surpluses in this manner and in extra dividends. The railroads may declare their inability to make improvements without increased rates, and the public will be the sufferers. I have never noticed that the railroads were particularly desirous of making improvements. It seems to me that most improvements in service—facilites and safety—have been made under the whip and spur of the law; but if our railroad managers have had a change of heart, and really wish to benefit the public, the remedy is at hand without any increase in rates. When issues of stock are made, let the railroads sell them at the market price, instead of to stockholders under the market. Let them abolish "rights," extra dividends, and "bonuses," and cease trying to compel the public to pay dividends on excessive capitalization, and there will be plenty of money available for improvements.

The present process of readjustment, if allowed to work itself out, will carry us to a cash basis all along the line. Every dollar's worth of security issued will have a real dollar back of it, and it will be as easy to do justice to all concerned then as it is difficult now.

Here in Massachusetts we are unwilling victims of Mellen and his methods. Some sympathy has been expressed for the Boston & Maine. Mellen and his associates have won every battle so far and have been able to carry their measures in the legislature, even though these measures would be beaten 10 to 1 if put to a popular vote.

To advance Boston & Maine freight rates would be simply to play Mellen's game. No advances should be allowed as long as the New York, New Haven & Hartford Railroad controls the Boston & Maine, and then none will be necessary. It would be like putting a plaster over a sore—the sore would still be there and the patient worse off in the end.

I inclose you an editorial clipping from the Boston Transcript. As you are probably aware, this papes is the organ of ultra-conservative and wealthy Bostonians. It is extremely partisan Republican in politics. This is only one of a series of articles recently published in this newspaper.

The story of monopoly in the United States is almost unbelievable. The country is staggering under the enormous load of overcapitalization; our earnings are taken to pay dividends on stock that represents nothing except the unlawful cupidity of the brigands of our railroad, industrial, and financial world. I wish to enter my earnest protest against any action being taken which will help sustain the rotten pyramid created by monopoly, high finance, evasion of the law, and corruption. We must compel the masters of our railroads and our captains of industry to abandon monopoly—reorganize their business on a basis of cash actually invested; and until this readjustment is completed no advance should be allowed, but reductions should be made as fast as possible. I believe that some immediate reductions should be made, such as freight rates on coal.

Your commission has won the everlasting gratitude and esteem of our people for all time; the silent multitude who have no advocate at court, but who nevertheless bear the burdens of our common life. Your just and patriotic action on many occasions has inspired us with hope and confidence in the future of our country.

You have the country solidly behind you in your refusal to allow advances, suspension of proposed increases, and reductions ordered.

With highest regards, I remain,

FREDK. H. JACKSON.

—

[Boston Transcript, Wednesday, May 14, 1913.]

WHO CONTROLS ON BEACON HILL?

Prohibited by the bank commissioner from using his name in support of the railroad rider to the Washburn bill, its champions will attempt to railroad both rider and bill through the house as rapidly as possible, rush it to the senate, and railroad it through that body to the governor with as many Republican and Democratic votes as they can muster. This accomplished, the railroads will have won their fight, for if the governor signs the bill he must approve the rider, which the railroads have declared is the price of their permission to the people of Massachusetts to create a public service commission with mandatory powers. If the governor vetoes the bill because of the rider, as many believe he will, the railroads will be equally content, for they are opposed to a public service commission and are determined to defeat the legislation if they can, or, failing in that, to make it an omnibus for as many concessions as they can pile on in the form of riders.

It is the Republicans on Beacon Hill who must shoulder the full responsibility for the introduction of the railroad rider into the Washburn bill and for its retention. They hold a majority of the two committees which have reported this legislation, and in the house and senate. They pledged to the people of Massachusetts a straight mandatory measure. In the face of this pledge the railroads served notice upon the Republicans that such a measure would be defeated unless it contained sections 15 and 16, commonly known as the "railroad rider." Those sections radically amend the banking laws of the State. They should be considered in a separate bill. That rider was drafted by the railroad officials and tacked on to the Washburn bill in committee. Only one public hearing was held, and the full effect of the rider was not then known. Furthermore, the printed Washburn bill was in the hands of the railroad officials for nearly a month before it was vouchsafed to the public or to the legislature. It is this method of procedure that gave rise in the last presidential campaign to the phrase, "the invisible government."

—

LOUISVILLE, KY., *September 10, 1913.*

Mr. G. B. MCGINTY,
Washington, D. C.

DEAR SIR: We are informed from a recent ruling of the commission that the railroad companies operating in the official classification territory will be permitted to file an application for a general advance of 5 per cent in freight rates, without the formality of filing tariffs. We would suppose that this would interfere with the usual protest privilege, and we would respectfully advise you that the majority of the importers and roasters of coffee would be strongly opposed to any advance in freight rates on coffee. There has been a reasonable advance within the past few years on the rates on coffees. But from the volume of tonnage, loading capacity, etc., the present rates are too high as compared with other articles on the basis of valuation, liability, volume of tonnage, etc.

We trust this matter will have the due consideration of the commission before allowing the railroads to increase their rate of freight on coffee.

Respectfully, yours,

NORTON & CURD CO.

—

NASHVILLE, TENN., *September 11, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Riggs Building, Washington, D. C.

DEAR SIR: We have learned from a recent ruling of the commission that railroad companies in the official classification territory will be allowed to file an application for a general advance of 5 per cent in freight rates without the usual formality of filing tariffs. We do not think they should be allowed to do this, for the present rate on coffee, as compared with other commodities, is higher than it should be, and it really should be reduced. This can be easily shown by comparison with analogous articles on basis of valuation, liability, volume of tonnage, loading capacity, etc. We hope very much that the commission will bear these matters in mind when making up their decision.

Yours, very truly,

CHEEK-NEAL COFFEE CO.,
J. O. CHEEK, *President.*

—

PADUCAH BOARD OF TRADE,
Paducah, Ky., September 12, 1913.

Mr. GEO. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We notice in the recent ruling of the commission that the rail lines operating in official territory will be permitted to file application for general advance of 5 per cent in freight rates without the formality of filing tariffs, as this would interfere with the usual protest privileges, and we will respectfully inform you that the interests represented by this organization are opposed to advance rate on coffee for several reasons, some of which are as follows:

Coffee has borne a reasonable advance for the past eight years; that regardless of tonnage and the nature of the commodity, coffee while carried in the commodity tariff is rated still on fifth-class basis, and that by comparison with analogous articles on the basis of valuation, liability, and volume of tonnage, loading capacity, etc., coffee in our opinion is entitled to an even reduction and is rated on a high basis.

Trusting this will have due consideration of the commission, I remain,

Yours, very truly,

C. W. CRAIG, *Secretary.*

NEW ORLEANS, *September 16, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Riggs Building, Washington, D. C.

DEAR SIR: It has come to our attention that a 5 per cent increase in freight rates in the official classification territory will probably be allowed the railroad companies without the formality of filing tariffs and the usual opportunity for the making of any protest regarding any particular commodity.

We are particularly interested in roasted-coffee rates LCL, and we believe that an increase of 5 per cent over the rates now carried would be a hardship upon the shipping public.

Coffee prices to the consumer have already been forced upward, due to advances in the raw commodity, and we know it would be a hardship for the roasters to absorb a universal increase in freight rates.

We trust, therefore, that an exception will be made in the coffee rates, and we believe also that as tea is now taking first-class rate, and in most instances a very high rate at that, a similar exception should be made for said commodity.

The losses to the railroad companies in the matter of roasted coffee packed in cases, as far as our experience shows, are not very large, and we do not believe that, in view of said fact, the proposed rates would be applicable along said lines.

Hoping that due consideration will be given to our protest, we are,

Yours, very truly,

AMERICAN COFFEE CO. OF NEW ORLEANS (LTD.),
W. H. KER, *President.*

—

BOSTON, *September 20, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Riggs Building, Washington, D. C.

DEAR SIR: We are informed that the railroad companies operating in the official classification territory will be allowed to file an application for a general advance of 5 per cent for freight rates without the formality of filing tariffs, which action would interfere to some extent with the usual protest privilege, and we wish to submit for your consideration the fact that we are very strongly opposed to an advance in freight rates on coffee.

Investigation of this matter will show that coffee has borne a reasonable advance within the past several years, and that regardless of tonnage or nature of the commondity the coffee while carried on a commodity tariff is rated on fifth class basis. In fact, we consider that in comparison with other articles on a basis of valuation, liability, volume of tonnage, loading capacity, etc., coffee bears too high a rate at the present time, and, in our opinion, this commodity is entitled to a reduction from present rates rather than an advance.

Asking your due consideration of our attitude in the matter, which we consider entirely justified, we are,

Very respectfully, yours,

MARTIN L. HALL CO.

—

CITY CLERK'S OFFICE,
Lowell, Mass., September 26, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I am directed by the municipal council of the city of Lowell to bring to your attention the action of that body relative to the proposed raise in freight rates by the Boston & Maine Railroad.

TRANSCRIPT FROM THE JOURNAL RECORDS OF THE MUNICIPAL COUNCIL SEPTEMBER 22, 1913.

"Voted unanimously that the city clerk be instructed to communicate with the Interstate Commerce Commission and indicate to that honorable body that the municipal council of the city of Lowell is opposed to any increase in freight rates by the Boston & Maine Railroad, as such increase would be an injustice to the Lowell merchants and an imposition on Lowell citizens."

Very respectfully, STEPHEN FLYNN, *City Clerk.*

—

WILLIMANTIC, CONN., *October 23, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Re coal freight rates. The New York, New Haven & Hartford Railroad has just issued a tariff, effective November 15, 1913, which raises rates on coal from tidewater points to inland stations, of 5 cents per ton in many cases.

We wish to urge you to put this off or suspend it until the general matter of rate raising in New England, which is now in progress, can be settled.

Yours, truly, GEO. S. ELLIOTT, *Coal Dealer.*

—

JEANNETTE, PA., *October 23, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington D. C.

GENTLEMEN: It has come to our notice that all the eastern lines have a lot of new tariffs ready to advance the freight on bottles on November 15, 1913, and we wish to protest against this advance. There has been no advance in the selling price of bottles, and this change in the tariff will probably work to refute the prices on bottles to some extent, and any increase in freight charges on materials that are used in the manufacture of bottles, or in the bottles themselves, will result disastrously, we are afraid, to the manufacturers. Aside from this, nearly all the contracts for bottles are made in the summer, during the months of July, August, and September, covering the period for the glass year, which ends in July, and as these contracts are all made on the existing freight rates it would not give the manufacturers any chance to protect themselves as regards the selling of their ware, and we know in a great many cases would bring about a condition where the manufacturer would be compelled to operate at a loss.

We trust you will take these reasons into consideration and try to have the rates remain as they are at the present, for it seems we have always paid a very high rate for shipping glassware.

Very respectfully, yours,

JEANNETTE GLASS CO.

—

ROYERSFORD, PA., *October 23, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand that the railroad companies are going to advance the freight rates on empty glass bottles.

We shall certainly enter a protest against this, as the freight rates on bottles at the present time in comparison with the selling prices of the bottles is excessive. On shipments in carloads and less, within a radius of 2 to 300 miles, will equal 7 per cent of the price of the bottles. For a greater distance the freight rates will equal 10 per cent of the price of the bottles.

Bottles are heavy and occupy but little space in comparison to weight, while minimum cars on ordinary merchandise would be 28,000 to 30,000 pounds, bottles can be shipped in cars that will run 40,000 to 50,000 pounds.

We hope you will at least retain the old rates and not advance them.

Yours, truly,

DIAMOND GLASS CO.

—

COLUMBUS, OHIO, *October 24, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the recently filed tariffs carrying increases in freight charges, on behalf of the above association I beg to direct your attention to one phase of this question of the carriers which I believe is entitled to your consideration.

Coal for steam purposes for use by public authorities, such as municipalities, schools, State institutions, courthouses, and public buildings of all characters, etc., is purchased under competitive bids and for a fixed price, which price is a delivered one, including the freight charges. The delivered price being so specified, there is no provision made for an increase in the freight charges. Such contracts being made on a competitive basis, necessarily make the margin of profit very small, the same oftentimes being but 5 or 10 cents per ton.

As I understand it, the new tariffs now on file with you provide for an increase of 5 per cent per ton, with a minimum of 5 cents per ton on all commodities, including coal. Much of the coal sold under these public contracts is West Virginia coal, the freight rate on which to association points will probably be $2 per ton, which would make the increased freight charge under the new tariffs 10 cents per ton.

If these new rates go into effect during the life of these contracts, the effect of such increased carrying charges upon the contractors will in many cases be disastrous, since the increased freight charge will wipe out the profit, if not in some instances more than cancel this margin.

I understand that there is a stipulation upon the part of the railroads that, though the tariffs on their face become effective November 15 next, they are not to attempt to collect them under your suspension until the question now before you, as to their needs for such increase, has been determined. I assume that the commission will determine this question as speedily as possible, and that some time during the coming winter we may expect these charges to become effective should the commission find in favor of the carriers.

Practically all the public contracts, to which I have referred, expire in the spring time, usually about the 1st of June. It hardly seems fair that the carriers should be permitted, even though it may be shown that they require increased revenues, to put into effect increased rates that would interfere with contracts made upon the faith of existing rates, especially when those existing rates have long been maintained.

I have thus brought to your attention this fact in this informal manner that it may have your consideration. If it is proper this letter may be inserted in the record; otherwise, if you deem it too informal to base any consideration upon this letter, I will, upon suggestion from you, take such other steps as may be necessary to bring this protest formally upon the record.

Respectfully,

MICHIGAN-OHIO-INDIANA COAL ASSOCIATION.
Per B. F. NIGH, *President.*

—

WILCOX, PA., *October 27, 1913.*

Increased tariff.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Kindly pardon our unsolicited remarks on the subject of a general increase in railroad freight rates, not only on shipments out but on materials in, by all eastern lines.

The above subject is so vital to our very existence that we can't resist presenting our side of the case, asking that you consider very carefully the conditions of the glass manufacturers generally. There is not a single item in the whole list of raw materials used by the glass manufacturers but what has advanced in price within the last six months. The margin of profit for the finished product is ridiculous when you come to consider the enormous investment necessary to manufacture bottles; the liability to loss, because of the numerous small consumers with whom we are obliged to deal through the mail entirely; the large amount of capital necessary to operate and to store finished ware, in addition to the hazardous operation of manufacturing resulting from the temperatures handled and the number of inflammable materials on hand necessary to the manufacturing of glass.

All of the above statments can be proven to your satisfaction by referring to the reports on capital stock of various glass manufacturers. The writer would venture the assertion that, considering the sum total in the United States, a fine average does not clear a reasonable profit in comparison with the average manufacturer's operation and that of the railroad companies.

Yours, truly, WILCOX GLASS BOTTLE CO.

—

SHEFFIELD, PA., *October 27, 1913.*

Increased tariff.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GLASSBORO, N. J., *October 27, 1913.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have been advised that the eastern lines have prepared tariffs advancing freight rates an average of about 5 per cent, taking effect November 15.

And we are, of course, informed of the proposition to make a general advance in freight rates of 5 per cent, which is to be considered by you.

We respectfully protest against any such advances, as the same would be injurious to the manufacturers of bottles.

For many years bottles shipped in carloads from eastern points to points between a line from Pittsburgh and Buffalo to the Mississippi River were carried at commodity rates.

In May, 1913, the railroads withdrew this commodity rate and applied class rates which caused an advance of 8 per cent, which we have been paying ever since.

The proposed horizontal advance of 5 per cent applies doubly with bottle manufacturers, covering 5 per cent on their supplies and 5 per cent on their product. The commodity is one of low value per cubic foot or ton, and the 5 per cent advance means an increase of 1 per cent in the cost of the manufactured product, which we can not afford, as the goods are sold on very close margin owing to the severe competition.

But, further, we shall be harmed by any advance at this time, for glass-bottle contracts are closed in August and September covering a period of a year, and we think that fully 80 per cent of the product of all manufacturers have had the price for the year's production up to next September already fixed. There is, therefore, no opportunity to ask the purchaser to pay any portion of this advance in freight.

We therefore sincerely trust that you will consider the position of the glass-bottle manufacturers and refuse to grant the increase.

Yours, truly,

WHITNEY GLASS WORKS,
C. J. YOST, *Secretary.*

MONROE, MICH., *October 27, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We have received notice from the Michigan railroads of an advance in freight rates to take effect November 15, I. C. C. W. S. 4436, 4437. Kindly advise if you have allowed this advance.

This, as we understand, takes away our lumber or commodity rates and puts us in sixth class, raising our rate in one instance—Bay City to Detroit, Mich.—from 6 cents a hundredweight to 8 cents a hundredweight.

Cedar poles and ties and posts we have always contended should not come under class rate and should be in a lower rate than lumber.

Cedar poles are simply unmanufactured logs with the bark taken off, as are posts. We can not get the number of feet on car as you can lumber, and we should be in a lower class than lumber. Trusting to hear from you at an early date and advising us if this same raise in rate affects dealers in the Upper Peninsula of Michigan, also Wisconsin and Minnesota. If their rates remain the same as has their minimums, we can not compete with them on account of freight rates, and it's liable to put us out of business.

Yours, truly,

W. C. STERLING & SON CO.,
A. C. MAURER.

UNION FOUNDRY CO.,
Anniston, Ala., January 2, 1914.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Why should the railroad yell and beg for increased rates? Just to-day I got a rate on a car pipe (sixth class) to Omaha, $6 per ton; to Grand Island, Nebr., about 100 to 150 miles farther west, $11.90 a ton, or $6 to haul over 800 miles or so and $5.90 to haul 100 to 150 miles.

Every railroad is earning good money on its actual investment, and that is enough. Why should they earn on their water?

The Chicago, Milwaukee & St. Paul and Chicago & North Western have raised their rates from Aberdeen, S. Dak., points to Wisconsin points over 50 per cent the last eight years—always quietly. Darn them, they have been hogs so long that, like bankers, hate to get under control.

Yours,

HENRY A. FOLGER.

OVERLAND, MO., *January 3, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the resolution of the Illinois Manufacturers' Association, in which, according to this morning's newspapers, it recommends to your honorable body that the roads be permitted to increase their freights by 5 per cent:

I hope, gentlemen, you will not allow this resolution and similar ones to influence you in the least. While the members of the above association are also consumers—the same as the writer—any increase in freight rates will be added by them to the price of goods.

It will not be absorbed by them. I am sure of this. There is, moreover, a probability that instead of increasing the price of goods to the consumer merely to the extent of 5 per cent, the manufacturers, wholesalers, and retail dealers will feel it is an opportune time for each to add a little to the price.

Who is being hit hardest by this continual advance in the prices of necessities of life? Not the manufacturer, not the wholesaler, not the jobber, not the retail dealer, not those members of well-organized labor unions, but the millions of laboring men earning from $1.75 to $2.50 and $3 per day and their families.

It is a difficult problem you have to solve, gentlemen. May God help you to do it.

Yours, very respectfully,

H. H. KLAUS,
Route 28, Box 28 A, Overland, Mo.

ST. LOUIS, *January 3, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We understand the railroads of the trunk line and C. F. A. territories have petitioned you for permission to increase both commodity and class freight rates 5 per cent. We learn that hearings have been held, but a recess has been taken, and hearings will be resumed on January 10.

We import, in a large way, tea waste or sweepings, which is a crude material used in the manufacture of caffeine. This material is packed in bags of about 100 pounds each and has a value of from 2½ to 4 cents per pound. At the present time there is a commodity rate of 22½ cents from New York or Boston, 20½ cents from Philadelphia, and 19½ cents from Newport News. The rate from Boston was increased from 20½ cents to 22½ cents, effective January 1, in compliance with your order.

We receive about 80 cars per year, a carload minimum being 30,000 pounds. The cars are loaded at steamship's side and come through to St. Louis without breaking bulk or being rehandled. Any increase in the rate in this commodity would be a great hardship on us, in view of the fact that we are the only inland importers and users of these goods, the other manufacturers being located in New Jersey, practically on the seaboard, and any increase in rate would put us to further disadvantage in competing with these other manufacturers. Further, the character of the goods, the low value, and the fact that they are a crude material used only in manufacture, should, we think, receive special consideration.

We trust that you will give this protest due consideration in your final conclusion on the petition of the railroads.

Yours, respectfully,

MONSANTO CHEMICAL WORKS.
W. R. PHUNISTER.

WARNER MOORE & CO.,
Richmond, Va., January 14, 1914.

Mr. LOUIS D. BRANDEIS,
Special Counsel Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Appropos of the proposed advance of freight rates by the railroad companies.

It is a matter of small mathematics to advance freight rates on a horizontal scale as proposed by the railroad people, and if this method is allowed by the Interstate Commerce Commission, it would doubtless add very largely to the much-needed revenues of the railroad companies, but in doing so, under the present arrangement of classifications in freight rates, it would be harmful to the public. There is no question but that a great many freight rates are too low and also there are a great many freight rates too high. However, it must be remembered that the present rates came into existence by a slow process, and to disturb them without having some fixed method for revision, but merely arbitrarily advancing the rates, would tend to cause confusion and demoralize business. The "rule of thumb" has been applied to such an extent by the railroad people that present methods of rate construction has loaded up tariffs with all sorts of inconsistencies and incongruities, and it is therefore a question whether the public should ask a 5 per cent reduction or the carriers for a 5 per cent advance.

In making a freight tariff, the first thing to be considered is classification, and rates should be made to fit the classification and not the classification to fit the rates. The latter is in violation of all principles of rate construction. When the proposed uniform classification has become an assured fact, the rate adjustment will follow as a natural sequence. Classification is intended as a discrimination in the character and quality of the goods carried. The quality of merchandise is to be considered by the carrier as much so as by the manufacturer and the merchant. If a classification is properly constructed, the following are the leading factors: Weight, bulk, and value, expressed or understood, because railroads are insurers as well as carriers, and the value is to determine adjustment in the case of loss and damage. When a classification is constructed on this basis there is no reason why rice can not be transported in Pennsylvania at the same freight rates as in South Carolina or cotton in Illinois as in Georgia; in short, the same method to be applied in classification and rate construction over the entire country. It will not be very long before the railroads will find out that they will have to adopt the zone basis, such as is now used by the Post Office Department on parcel-post business. However, the zone basis has its limitations for constructing freight rates on account of deep-water points and other competitive conditions. When this whole matter is considered as a unit and thoroughly thrashed out, it will be found impracticable to advance rates so long as the present classifications are in force without doing serious injury to the general business of the country.

I am merely giving you an outline now of the situation and leave the matter in your hands to work out the detail. With respect, I am,

Yours, very truly,

J. S. POTTS.

HARTLETON, PA., *January 19, 1914.*

Hon. LOUIS D. BRANDEIS.

DEAR SIR: In regard to the matter of the application of the railroads for permission to add 5 per cent to their freight rates, I will say that I paid the Pennsylvania Railroad Co. $73.92 on August 9, 1913, for freight on a carload of slate from Slatington, Pa., to Mifflinburg, Pa., a distance of about 100 miles. If you wish it, I will send the freight bill, check, etc.

Instead of getting an advance on their rates, the same should be reduced. A few trips made by that freight car at that rate would pay the first cost of the car.

Hoping you will be successful in defeating this increase of freight rates, I am,

Very truly, yours,

CALVIN M. HAYES.

THE ONTARIO PAPER CO. (LTD.),
Chicago Office, January 6, 1914.

Mr. JAMES S. HARLAN,
The Interstate Commerce Commission, Washington, D. C.

DEAR MR. HARLAN: I inclose a short letter of protest against our present railroad rate and against any raise upon the same. This little letter appears to me to be conclusive, but of course, I am prepared to amplify it as much as desired.

Very truly, yours,

ROBERT R. MCCORNISH.

[Inclosure.]

THE ONTARIO PAPER CO. (LTD.),
Chicago Office, January 5, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: The Ontario Paper Co. (Ltd.), hereby enters its protest, first, against any increase of the present rate on news print paper of 15 cents per 100 pounds from Thorold, Ontario, to Chicago, Ill.; second, against said existing rate of 15 cents per 100 pounds between said points on the grounds that the existing rate itself is unreasonable and discriminatory and any increase would impose an additional burden on this company.

The facts are as follows:

The Ontario Paper Co. (Ltd.) is a corporation organized under the laws of the Province of Ontario. Its mills, manufacturing news print paper, are located at Thorold, Ontario, on the Welland division of the Grand Trunk Railway system, about 7 miles west of Niagara Falls, N. Y. The average output of the mills will be between 100 and 120 tons of paper per day. Practically the entire output is and will be shipped to the Chicago Tribune, of Chicago, Ill. The present rate on news print paper from Thorold, Ontario, to Chicago, Ill., via the Grand Trunk Railway system, is 15 cents per 100 pounds on a carload minimum of 36,000 pounds. The distance between said points is about 515 miles.

In entering our protest we wish to emphasize the following facts:

First. The rate on news print paper via Grand Trunk Railway from Portland, Me., and mills in its vicinity to Chicago, Ill., is 18 cents per 100 pounds. The distance between these points is about 1,137 miles, or over 600 miles more than our mill to Chicago. Notwithstanding that the distance is more than twice as great, the difference between our rate and the Portland rate is only 3 cents per 100 pounds. This rate of 18 cents also applies to Chicago from mills in the Province of Quebec, where the distance is approximately the same as from Portland.

Second. Aside from our mills, the quantity of paper shipped to Chicago from other mills in this territory is insignificant. Most of the paper shipped to Chicago from the East comes from the mills in eastern New England and Quebec under the 18-cent rate. The reason seems to be clear. The present 15-cent rate from this territory, which embraces Niagara Falls, Buffalo, and central and western New York, operates as a discrimination in favor of the mills further east.

It is our belief that this situation may be attributed to the International Paper Co., owning mills in eastern New England, from which they find it more profitable to ship their paper to Chicago while they use their mill at Niagara Falls to supply orders in Indianapolis, a more expensive haul for the railroads than the haul to Chicago, where their rate is 13 cents, or Cleveland, where their rate is 8 cents, or Buffalo, where their rate is 5 cents.

Third. Cars of paper are switched from our mill to Merritton, Ontario, a distance of 3 or 4 miles, where they are put into trains for Chicago. Thus Thorold and Merritton are practically the same. The rate from Merritton to Chicago, via Grand Trunk, on other kinds of paper, such as roofing and building paper, is 12½ cents per 100 pounds. These papers load the same or lighter than news print paper, still they receive a rate 2½ cents lower than the rate on news print paper.

The figures and data relative to paper rates are too voluminous for the purposes of a letter, but we believe the above outline of the salient features of our rate situation at Thorold will convince you that we are subject to an unjust rate which should itself be reduced, and that the proposed 5 per cent increase asked by the Grand Trunk Railway would be adding to an existing hardship.

Very truly, yours,

ROBERT R. MCCORMICK.

HOLYOKE BOARD OF TRADE,
Holyoke, Mass., January 8, 1914.

Honorable INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the petition of the railroads for a 5 per cent increase in freight rates in official classification territory, please be advised that at a meeting of the board of directors of the Holyoke Board of Trade on December 31 it was voted unanimously to enter a protest against this petition, as conditions in New England did not seem to warrant the proposed increase.

Respectfully, yours,

ELWYN L. TABER,
Secretary.

NATIONAL LEAGUE OF COMMISSION MERCHANTS
OF THE UNITED STATES,
PHILADELPHIA BRANCH,
Philadelphia, January 10, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: On December 10, 1913, the Chicago Branch League of Produce Commission Merchants filed with you a letter of protest against advanced rates, of which inclosed please find copy. We, the Philadelphia Branch League, heartily indorse their action, as we are laboring under the same conditions to a certain extent and hope the advance will not prevail until we have an opportunity of presenting our case before your honorable body.

Yours, very truly,

ROBERT MCCAULLEY, *Chairman.*
ROBERT MCCAULLEY,
B. A. HEADLEY,
S. A. TOWNSEND,
J. E. HENDRICKSON,
Transportation Committee.

NATIONAL LEAGUE OF COMMISSION MERCHANTS
OF THE UNITED STATES,
Chicago, January 10, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In the matter of the advance of rates by the railroads, now under investigation by your commission, we desire to submit the following for your consideration.

Following the formal denial of an application by the railways for an advance in rates, the railroads leading out of the city lengthened their schedule of time to the north, northwest, and western tributary markets from this city. For instance, the schedule of time from Chicago to Omaha and St. Paul had been for many years a second morning delivery. This was lengthened to such an extent as to make it a third morning delivery.

As this was practically prohibitive for the interchange of business on perishable commodities, the members of this trade entered a protest, assuming that the action was a retaliatory measure. It was claimed by the railroads, however, that it was a forced action by reason of the necessity of economy, and our protest was overruled and the slower schedule maintained.

The result has been that it has practically destroyed this branch of commerce on perishable commodities, such as fruit and vegetables.

The old schedule of time with the present standard equipment of refrigerator-car service was eminently satisfactory to the trade, and allowed a distribution from an oversupplied market and a relief of scarcity and higher values in the other markets and territory tributary to it. This valuable assistance to commerce and aid to both the producer and consumer has been practically destroyed in the territory affected by this lengthened schedule.

Regardless of the cause of this action by the railroads, whether retaliatory or for economy, we submit the contention that it is entirely out of harmony with progress of the times, it is progressing backward. It creates a precedent, the serious effects of which would be enormous if followed in sequence. We claim it is un-American, out of sympathy with the progress of this Nation and detrimental to the interests of the public at large, and even to the best interests of the railroads themselves.

Irrespective of whether, in the wisdom of your honorable body, the advance in rates should be denied or granted, we ask that this particular schedule and service above referred to be changed to conform to the old and satisfactory one used, becoming mandatory in the event of the advanced rates being granted.

May we ask your earnest consideration of the above?

Respectfully, yours,

THE CHICAGO BRANCH OF THE NATIONAL LEAGUE OF COMMISSION MERCHANTS OF THE UNITED STATES.
By R. J. COYNE, *President.*
P. D. KONOLD, *Secretary.*
F. E. WAGNER,
J. W. SHAFTON,
J. L. OWEN,
Committee on Transportation.

MOUNT UNION, PA., *January 10, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We want to place ourselves on record as being opposed to a grant of higher freight rates to the eastern railroads. An increase of freight rates does not add anything to the wealth of the country. It is merely "robbing Peter to pay Paul."

American manufacturers are keenly fighting for an extension in the world's markets and every slight advance of freight rates means relatively harder fight to widen this area.

Compared with a lot of small manufacturers, the railroads have not yet learned many principles of economy. A lot of us could soon get rich off what they indifferently waste.

Yours, truly,

MOUNT UNION TANNING & EXTRACT CO.,
EDWARD M. GREENE, *President.*

PENNSYLVANIA GLASS SAND CO.,
Lewistown, Pa., February 19, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Believing that your action in the suspension of the advance of rates until next September, 1914, was entirely correct.

We further think that any general advance of rates, irrespective of conditions, would be an injury to us, as well as a "boomerang" to the railroad company itself. We wish to congratulate you on your actions, and believe you are entirely justifiable.

Yours, very truly,

S. S. WOODS.

ELGIN, ILL., *February 26, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I have read your communication of February 19, 1914, "the rate-advance case," very carefully, and give you my humble opinion: (*a*) The present revenues are adequate if (*b*) supplemented by charging the proper amount for all services rendered. No special privileges of any kind, viz, passes, free baggage, free transportation for large children, spotting cars, free lighterage, switching, and placing cars for loading or unloading in private yards, free storage, etc.. Why in the name of common sense, justice, and equity should railways render this service for nothing?

Five per cent freight raise would simply mean those that do the paying now would pay more. The labor unions would get it anyhow.

If railroad service would be more efficient, the big salaries of fellows that do not earn it eliminated, the watered stocks wiped out, a reasonable dividend and a surplus would be honestly earned. If they do not mend their ways, they will go broke; they can not borrow all the time.

Yours, very respectfully,

FRED SAUER.

HARDWICK, VT., *February 26, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In connection with the hearing to be held before your commission on February 28 relative to the general subject of the 5 per cent increase proposed by the line carriers in the present commodity and class rates affecting shipments of granite, we wish to voice our objections to the proposed increases.

First, our heaviest shipments consist of building granite, which takes sixth-class rate in official-classification territory. Raising the sixth-class rate arbitrarily 5 per cent will disturb the relation of the sixth-class rates to the other classes and destroy the present rate adjustment that applies in official-classification territory. If any increase is allowed the roads, it seems to us, it should be based on a fixed percentage added to the first-class rate and then the other classes re-

adjusted, so as not to disturb their present relations as fixed percentages of first-class rate.

Second, we believe the building granite industry of New England can not prosper under a 5 per cent increase in freight rate. Building granite fights for its market under severe competitive conditions, and in view of the low risk of damage to the material in transit and the large volume of business that can result to the carriers through reasonable rates, we do not believe the carriers are justified in an arbitrary 5 per cent advance in the cost of reaching our markets.

The granite and marble industries are the largest industries in Vermont, and any increase in the cost of reaching their markets is a direct burden on the prosperity of Vermont. The granite deposits in Vermont are practically inexhaustible and should furnish an increasing and permanent volume of business to the line carriers. Granite weighs approximately 175 pounds per cubic foot, loads closely to the full capacity of the car, is of low value, from 30 cents to $3 per cubic foot when intended for exterior building purposes, and is a desirable commodity for the carriers to transport.

Vermont granite is especially limited as to territory in which it can find a market for building purposes. On the north is Canada, from which we are practically excluded by the tariff law. To the east, New Hampshire and Maine have their own granite resources, while the remainder of New England is easily accessible by boat from the coast quarries of Maine and Massachusetts. The same is true of the entire Atlantic coast line south. So that Vermont produce must seek its market in official-classification territory to the west Central Freight Association territory and the States beyond the Mississippi.

Owing to the weight of granite, the freight rate already plays a very important part in its market value, and a 5 per cent freight increase would mean a heavy increase in the selling price of granite for building purposes, and we fear a still further restriction in the markets open to Vermont.

Third, there is no guarantee that the 5 per cent increase, if allowed, will result in better railroad management and real benefit to the shipping or consuming public by elimnating the wastes in their methods of handling freight and the reckless methods of financing many of the carriers have adopted, and the necessity for an increase could be largely, if not wholly, done away with.

Yours, truly,

WOODBURY GRANITE CO.

—

PITTSBURGH, PA., *February 26, 1914.*

To the HONORABLE MEMBERS OF THE
INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to the question of a general advance of 5 per cent in freight rates, would say that while we do not absolutely protest against this advance we do protest against the advance being made without giving the manufacturers a reasonable notice, say, six months at least, as most manufacturers are compelled to sell their products delivered at buyer's mills, and invariably the order books of manufacturers run from four to six months for future delivery. Should a freight advance at any time be declared on sight, or even 30 days, you can naturally see it places a hardship on manufacturers who have booked orders, and we hereby protest against any sight advance in freight rates, and claim that all freight rates advances should be preceded by at least three months' notice.

Yours, very truly,

THE MARSHALL FOUNDRY CO.,
GEORGE L. BROWN, *Secretary.*

—

INDIANAPOLIS, IND., *February 25, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We are in receipt of your printed notice, dated February 19, 1914, in the matter of the rate advance case, also as to hearings on the commission's inquiry regarding the practices of carriers in rendering certain services as listed by Nos. 1 to 7, inclusive in your notice.

Referring first to the questions:

(a) Are the present revenues of the carriers adequate?

(b) If not, how may they be supplemented?

And replying we respectfully beg to state:

(a) We believe that the present level of rates in official classification territory yield to the railroads sufficient and adequate revenues if properly conserved. This seems to be amply demonstrated by the highly prosperous financial showings made by a number of representative and typical railroads operating in the territory embraced in the inquiry that were prudently constructed and have been efficiently managed. Other carriers operating in the same territory, participating in the same traffic, at the same rates, can not rightfully attribute their unfavorable circumstances and financial conditions to the alleged insufficiency of rates.

On intrastate traffic in Indiana the class rates now charged range from 150 to 200 per cent and over of the rates charged by the same roads in Ohio for similar services on hauls under 80 miles, and surely these carriers should be required to equalize their rates as between the two localities before seeking to further aggravate the injustice of the existing disproportionate relation of rates in Indiana and Ohio. The inclosures will throw some light on our local rate situation in Indiana.

(b) By greater efficiency and economies in the management of their affairs, there being a widespread belief that excessive prices are being paid for rails, rolling stock, and other instrumentalities, also that unnecessary and unprofitable passenger train service prevents a more profitable operation of freight transportation. The remedy for the present distress of carriers, in our opinion, is not to be found in this proposed increase in rates.

As to the subjects:

1. Trap or ferry-car service.
2. Placing cars for loading or unloading on sidings serving industries.
3. Free lighterage.
4. Tunnel deliveries in Chicago.
5. Storage free and at unremunerative rates.
6. Reconsignments and diversions in transit.
7. Free holding of equipment under load at New York terminals beyond the customary free time allowed at other terminals.

We will have a representative present at the hearings in Washington February 27 and 28, to give information concerning these matters at Indianapolis.

Very respectfully,

INDIANAPOLIS CHAMBER OF COMMERCE.

CAMDEN, N. J., *March 20, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: The trying experience to arrive at what is just to both the people and the railroad interest in deciding the rate question is fully realized by the people of this country. On account of the tariff changes the reduction in the price of iron and steel material is estimated at $7.50 per ton less than last year. It is essential to make reduction of this kind to avoid competition with foreign countries. The United States Steel Trust produces over a million tons a month of manufactured iron and steel products. This would mean $90,000,000 less for their goods than a year ago. This is only one concern. The concerns like the American Locomotive, Baldwin Locomotive, Car Foundry Steel Spring Co., and numerous other concerns that furnish railroad equipments all reduce the cost of operations of the railroads. The tariff was enacted for that purpose. The benefits of these reductions should be considered in the interests of the people. If the railroads are going to have the benefits of increased rates and reductions in the cost of material used, which will amount to more than double the increase in freight rates, it will be an unjust punishment inflicted upon the people. The record of the earnings of these various corporations and the enormous surplus of earnings has done more to injure the financial conditions of the railroads than most any other cause. A great amount of the securities issued represent no value to these corporations.

Yours, truly,

WM. J. MCCAUSLAND.

—

HANKINSON, N. DAK., *March 21, 1914.*

Hon. C. B. MCGINTY,
Secretary of Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Our attention has been called to the proposed advance in freight rate by the railroads. We understand that this question is now before you and we wish to enter a protest against any general advance in this section.

From our own experience we find that the railroads are receiving far more in this section than in any other, volume of business and expense of operation considered. We find that the freight rates in nearly every case are more from Minneapolis to Hankinson, a distance of 216 miles, than on the same article from Chicago to Minneapolis, a distance of over 400 miles. If there is any further information that we can furnish you, please call on us.

Yours, truly,

S. P. IRELAND & SONS CO.,
By R. L. IRELAND, *Secretary.*

—

HANNAH, N. DAK., *March 21, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission, Washington, D. C.

DEAR SIR: In the matter of raising rates on all kinds of products, and also for the charging of a fee for switching or spotting cars on a special or private track, as you are well aware of, the railroad tariffs are far in excess of what they should be at the present time on lots of articles. Take cement from Duluth or Superior here; the rate is 26 cents per hundred. The coal rate is $2.65 on soft coal and $2.75 on hard coal, and yet the wheat rate is plenty high enough, which is 13 cents per hundred. Last fall the Great Northern Railway Co. lowered the rate on coal into Grand Forks to equal the rate into East Grand Forks—30 cents per ton—but they did not lower the rate any further than there. Now, in my opinion, if they had a right to and could afford to lower the rate there 30 cents per ton, why could they not make the same reduction all the way through the State? My opinion is that if coal could be hauled into Grand Forks at a reduction of 30 cents per ton, we are entitled to the same reduction and a right to a refund of 30 cents per ton on all coal hauled since the Grand Forks rate took effect, which was November 1, 1913. I would also state that the classification of freight is not right, and I base my claim on the following. Take for instance: If we wanted to get part of a car of millwork and the balance building and roofing paper, now we can not get a car rate on this, but are obliged to pay both the local rates, no matter if there was weight enough to make a car. This is only two of the many articles that come under this so-called classification of the tariffs. Now, take the lumber rate into consideration. The coast rate here is 40 cents per hundred, or about $9 per thousand feet of lumber. The shingle or cedar rate is 50 cents per hundred. These rates are both far in excess of what they should be. Take, for instance, a car of lumber weighing 60,000 pounds; the freight is $240, while the actual expense is less than $100 for hauling, and figuring good interest on the car and its share of stock or investment. Now, again, if they can haul one kind of lumber at a 40-cent rate, why can not the mixed car of lumber and shingles, weighing the same, be hauled for the same money, instead of the shipper having to make an affidavit to the amount of shingles or cedar siding in the car? I think that the railroads have gone about far enough in classifying and making high rates, and it is due time that the Interstate Commerce Commission put a stop to and equalize some of the excess rates. I thank you.

Yours, very truly,

ALFRED E. PRIOR.

—

LAKE PARK, MINN., *March 21, 1914.*

Hon. G. B. MCGINTY,
Secretary, Washington, D. C.

DEAR SIR: We hereby protest against any increase in railroad tariffs on grain and coal, as we believe from tariffs published that the railroads of the Northwest are receiving adequate remuneration, according to their published gross and net earnings and dividends declared. We believe increasing those tariffs would be working an injury to the producer and consumer only, at the same time inviting more foreign capital into railroad investments. We are of the opinion there is enough of such capital already invested in this country at present.

Yours, truly,

LAKE PARK FARMERS' ELEVATOR CO.,
By A. L. DOEG, *Manager.*

One hundred and fifty producers strong.

—

LAKE CHARLES, LA., *March 23, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: This association, incorporated under the laws of Louisiana, and having as members the greater majority of the retail furniture

dealers of this State, ask your honorable body to refuse to grant the eastern railroads the increase asked for on shipments moving into territory covered by the western classification. We contend that they are amply paid for the service rendered, especially as far as applies to our particular line of commodities, both in carloads and less than carloads, to the common points on the west side of the Mississippi River, which you can readily see by glancing at said classification.

On carload shipments the minimum weight is materially increased after passing the river points, so that this greatly affects the rates, not only from such river points, but applies from point of shipment, wherever that may be. For instance, on a car of common furniture from an eastern point takes 12,000-pound minimum on a 36-foot car to river point, and to a western point this same car takes a 20,000-pound minimum, while the weight may not go over the first mentioned.

We sincerely hope that your careful investigation on the claims made by the railroads in question will justify you in refusing to grant the advances prayed for.

Thanking you for your consideration of this petition, and trusting we may receive a favorable reply, we are,

Yours, very truly,

RETAIL FURNITURE DEALERS' ASSOCIATION,
W. H. BOOTH, *President.*
A. A. STILLMAN, *Secretary.*

—

REDDING, IOWA, *March 23, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I understand that there is a question before your honorable body looking toward a raise in all freight rates with an extra charge for spotting all cars. Now, gentlemen, it seems to me that our freights are painfully high as they now stand, and I wish to register a protest against anything being added to our already heavy burden.

We buy our Illinois coal for $1.50 and $2 per ton at the mines and railroads charge us $2.50 per ton to deliver it to us here at Redding, while they will carry it on to Omaha for the same rate. Please investigate this matter carefully before allowing any advance in freight rates.

Yours, very truly,

W. F. BERNARD.

—

PARKER BOILER CO.,
Philadelphia, November 25, 1913.

Hon. C. A. PROUTY,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I was an interested listener at the freight-rate hearing yesterday for a short time, and it occurred to me as a boiler manufacturer and small shipper that freight rates are of far less importance to the small business man than to have business go along steadily so that he can secure orders.

I noted the following plea of Mr. Willard:

"There is at this time no more important question for the people, nor one a correct solution of which will do more to stimulate healthy commercial activity and promote industrial growth."

The Philadelphia Ledger in the morning made the same plea in an editorial and also printed a statement by Mr. Alba B. Johnson, president of the Baldwin Locomotive Works, to the effect that they would probably have to lay off 3,000 or 4,000 employees at the beginning of the new year unless the increase is granted.

It seems to me that if in order to keep business going the Government must give way to the big business men, who control the railroads, regulation in the interest of the small shipper is substantially a failure. If the financiers who control the railroads fail to advance the financial assistance necessary to purchase needed equipment, and if large firms are thereby compelled to lay off large numbers of workmen, there is little hope for the small business man. The "big fellows" can take care of themselves by keeping their capital idle until more favorable conditions arise, when they can recoup any loss in interest or dividends by judicious investments when the flow of business has ebbed to the limit and the tide begins to turn.

Has it not been the expressed policy of the financiers in control to increase the stock issues sufficiently to keep down dividends?

It has been intimated that Government ownership of the railroads will ensue if the increase is not granted, and that it would be a fearsome thing. Would not the Government be in a better position to place orders for equipment during dull business periods and curtail their expenditures during boom periods, and would not this "steady" business more effectively than is now being done by those in control of the railroads? Would it not be better for the Baldwin Locomotive Works to employ 15,000 men steadily than to vary from five to thirty thousand?

It is generally conceded that giving to the poor, without requiring some corresponding service, increases their dependence.

Suppose the increase enables the railroads to pay dividends on the present volume of business, what assurance is there against a further decrease in the volume of business?

If the increase is granted, will the financiers who have control of the purse strings advance the funds to provide for betterments and purchase sufficient equipment to start business moving?

Yours, very truly,

J. C. PARKER.

—

UTICA, N. Y., *May 25, 1914.*

To the INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In regard to the advance in class and commodity freight rates, applying in the official-classification territory covering all points east of the Indiana-Illinois State line, north of the Ohio and Potomac Rivers, and, as I understand it, there is also proposed an advance in rates to Quincy, Ill., on the same basis as the upper Mississippi River crossing rates, instead of the St. Louis, Mo., basis, I wish to say that I think the advance is unwarranted.

I respectfully ask that the Interstate Commerce Commission delay the proposed advances from becoming effective at least a sufficient length of time that shippers into this territory may be heard on the matter.

I am sure you will see the fairness of giving the shippers a hearing before granting the advance.

Thanking you for your consideration of this matter, I am,

Very truly, yours,

W. H. FITCHARD.

CANTON, OHIO, *April 25, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: We wish to protest against any further advance in freight rates. Illustrating the advance that has already taken place in the shipment of our product, please note the present rates as compared with those in existence January, 1899, which indicates the very healthy advance that has already taken place during this period.

Comparative statement of freight rates on axles Feb. 25, 1914.

Canton to—		January, 1899.	February, 1914.	Increase.
		Cents.	*Cents.*	*Per cent.*
South Bend	carload	11½	14½	$0.26
Chicago	less carload	15	18	.20
South Bend	do	14½	17	.173
Baltimore	do	18	20½	.14
Moline	do	25½	30½	.19
Cleveland	do	5	6½	.30

Within the same period the railroads have been relieved of the great burden of free transportation, have secured many changes in classification, which is another way of advancing freight rates, and, in addition to this, the railroads have back of them Uncle Sam, to prevent secret rate cutting, a condition which formerly contributed more to reduced earnings than any other one cause. If the railroads are not able to show satisfactory earnings on the present rates of freight, the redress should be through economy in operation rather than an advance in their freight terms, this is the plan adopted by other business men in hard times. Why not with the railroads?

To well-established roads the continuation of present freight rates, under present conditions, might temporarily affect stock values, or, for the time being, reduce dividends, but it hardly seems likely that the result would go any further than this, such as forcing them into the hands of a receiver, etc.

Respectfully submitted.

Yours, very truly,

CLEVELAND AXLE MFG. COMPANY,
GEO. A. LAUGHLIN, *President.*

—

BATTERY PARK HOTEL,
Asheville, N. C., December 1, 1913.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: As one of the general public I should like to ask why should not the railroads help themselves before calling on the shippers and the public to aid them in the matter of freight rates? Why should not the railroads first be compelled to cut off all parasitical growths, beginning with the Pullman Co.? Why not be compelled to do as the St. Paul is doing voluntarily, viz, to build their own sleeping coaches and keep extortionate profits in their own treasury? Why should the railroads be robbed and the public called upon to make good the deficiency?

Yours, very respectfully, HENRY STEWART.

—

ELGIN, ILL., *December 15, 1913.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Going to Chicago last week, I noticed at the station three women taking the same train and the same car. One woman, apparently the mother, and a girl almost as big as the mother traveled on one ticket. The girl, almost as heavy, occupied one seat to Chicago. The other woman had a boy with her big enough to shave, occupying one seat same as the mother, the two traveling on one ticket. The third woman, living in this town, traveled alone, having two large trunks; this means the railroad company has to handle 150 pounds for nothing—at an actual loss—made more trouble than a passenger paying his fare. If this is not mismanagement I should like to know what is. The loss and actual expense connected with it amounts to millions.

Common sense and justice demand that the railroads should have compensation of at least one-half fare for children occupying a seat, and should charge for every pound of package.

The German state railways do it and nobody seems to kick. Why should a passenger carrying a little satchel help to pay for the other fellow's big trunks.

Pardon my writing to you.

Very respectfully, yours, FRED SAUER.

—

SECURITY WAREHOUSE & ELEVATOR CO.,
St. Louis, Mo., December 13, 1913.

JAMES S. HARLAN,
Commissioner Interstate Commerce Commission,
Jefferson Hotel, St. Louis, Mo.

DEAR SIR: The great question before your commission at this time is the application of the eastern railroads for a 5 per cent increase in the present rates.

That the cost of operating and maintaining the various systems has increased is supported by a mass of evidence on the part of the railroads, which generally speaking, may be admitted as a fact, and that the railroads are entitled to sufficient revenue to maintain and operate their several systems in a first-class manner, and to pay reasonable dividends to the stockholders on the real value of the properties is also conceded, but a deficit is not an evidence that increased earnings are necessary, or that they should be obtained by a flat raise of 5 or more per cent in the present rates.

Recent exposures of mismanagement by railroad officials have strengthened the public in a well-defined opinion that it is the managements more than the rates that need supervision and revision, furthermore, the daily experiences of the shipping public furnish many evidences of discrimination which strengthen their determination to oppose legislation or permission to continue a system which is unjust. It is evident that while the law contemplates sufficient earnings as stated above, it does not authorize the collection of funds for such high financing operations as have recently developed, or to maintain waste-

ful or inefficient managements. The law also guarantees to each individual, class, corporation, and community the services of the railroad in an equal manner, allowing neither prejudice nor favoritism to find a place in their application.

Within the past few years the writer has shown the traffic officials of the Wabash Railroad where they were paying out thousands of dollars unnecessarily. The fault has not been corrected, and yet this same management is appealing to the commission for more money for operating purposes. The public does not know all the details of railroad management, but may reasonably conclude that the net results may be fairly calculated by the manner in which the less important details are handled. It has been clear to the writer for many years that the rate-making system in vogue is unfair and discriminative and the outgrowth of selfish interests. The original rates were no doubt made with a thought of fairness to both the railroads and the public, yet the system and its operation has been, and still is, full of inconsistencies which enable the railroads to confer favors upon various shippers and communities at the cost, however, of some other interests or communities. Here it is evident that a flat raise in the present rates will not correct the discrimination, but would rather produce an aggravated condition, which would arouse those adversely affected to greater opposition.

Looking back over the past we find a growing demand on the part of the public for impersonal rates and uniform service, and many attempts on the part of the aggrieved public to have this condition enforced have been made, and have been recognized by our law makers, whose efforts to frame laws which would stop the discriminations finally resulted in passing the existing "act to regulate commerce," the fundamental principles of which are ideal, and the absolute enforcement of which will bring about the millennium in transportation, both for the railroads and the public, whom they should serve impersonally. The rates as now constructed are absolutely opposed to this principle, being honeycombed by the many errors resulting from a misguided attempt on the part of the early managements to get the business away from their competitors, and which efforts have continued to a greater or less extent up to the present time.

The time is now ripe for abolishing the present system and adopting a single standard or set of rates. It is not necessary to frame new laws to bring this about, for the present law is adequate and confers the authority on your commission to see that the plan is carried into execution. The law itself is clear, and involves only the absolute enforcement of the long and short haul clause and the promulgation of the same set of rates for the use of all persons, corporations, and communities. This may be done by the establishment of a single set of rates by each railroad, starting with a set of rates to apply between the extreme points of the system and framing all the intermediate rates in conformity therewith, absolutely applying the long and short haul clause in every instance. This plan is simple and will grow to include every other system, each one using the single standard of the connecting lines in connection with their own single standard to form through rates, the use of which will result in no discrimination whatever.

Under this system traffic would move through lines of least resistance, which would soon be the means of establishing the highest-grade service at the least possible cost, both to the public and to the corporations, and furthermore would be the means of reestablishing traffic upon our navigable waterways which would in time exceed anything that has heretofore existed, and probably greater than contemplated by our most enthusiastic deep-waterway adherents.

The law invests your commission with power to determine this question, and the benefits to be derived by the future generations will be in proportion to your proper interpretation and application of the principles involved. The need of a single standard or set of rates is more vital than the question of managements; therefore, the writer hopes that the present system of rate making will be abolished and a single standard adopted, for it is manifest that in this manner only will accurate results and impersonal service be obtained.

Yours, truly,

F. L. WALLACE.

—

GRAFTON CENTER, N. H., *December 12, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I as a little mite of these United States want to raise my voice against the railroads from raising their freight rates. Example, rate from here to Enfield, 14 miles, $11 per car of 30,000 pounds; that makes it cost about $2 per thousand on bobbin stock; that surely knocks me "flat," at any rate, and that is a fair sample of how they put the screws to us.

When I was a boy B. & M. stock was worth 160 and was considered as good as Government bonds, but they had a man for superintendent, one that came up from the ranks and knew how to get results. Railroad men say that New York bankers are milking this road and hammering the stock down so they can gobble the whole thing. Don't do it.

Respectfully,

C. J. HALL.

—

FOXCROFT, ME., *November 17, 1913.*

Mr. C. W. WENTWORTH,
Boston, Mass.

DEAR SIR: Your circular letter of November 15 received and noted. We wish to put in our protest against any advance in lumber rates from Maine Central points.

A large proportion of our lumber goes over three roads, and if each road is allowed an advance of from 5 to 15 per cent it would practically put us out of business, or it would be a serious question whether we could do business while the matter was being adjusted. The public is not to blame for the trouble the railroads are in and ought not to be punished for their extravagances and bad management.

Respectfully, yours,

DANFORTH & MARSH.
Per D. H. DANFORTH.

—

WILMINGTON, DEL., *December 6, 1913.*

Mr. LOUIS D. BRANDEIS.

DEAR SIR: The report of the Maryland Public Service Commission for the eight months ending December 31, 1910, states on page 325 that the Delaware Railroad (which railroad is leased and operated by the Pennsylvania Railroad) had $500,000 in general mortgage 4½ per cent bonds outstanding and $4,987,280 common stock on which was paid a dividend of 31.67 per cent, and on page 320 the report states the Delaware Railroad had a surplus of $397,745.48. It seems to me that when the Delaware Railroad can pay such dividends it is not entitled to a 5 per cent increase in freight rates, as the United States Supreme Court has held that 6 per cent is a reasonable rate of interest on a fair valuation of the property of a public utility.

Yours, truly,

C. FRED BACHER,
1121 West Fifth Street.

—

LYNCHBURG, VA., *November 25, 1913.*

GENTLEMEN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

In regard to the railroads asking to be allowed to increase their freight rates I beg to enter a poor man's protest against the increase. The moment you grant it, up will go the price of coal $1 per ton or more. We now pay $6 for bituminous coal, more than twice as much as when coal was first brought here.

The half-dozen coal dealers here have agreed among themselves all to sell at same price.

The rich man buys by the carload at $4 or $4.50. The poor man at $6 to $12 per ton or bucket.

I beg you not to consent.

Yours, truly,

WILLIAM ALFRED.

—

AMERICAN WIRE FABRICS CO.,
Chicago, Ill., December 2, 1913.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: There has been a good deal of discussion recently with reference to allowing the railroads to increase their freight rates 5 per cent, and the writer would not offer any complaint against this increase if the railroads would conduct their business as manufacturers and merchants have to do and should do.

So far I have seen no discussion or question raised with reference to what I am about to say, but I travel in many States and over many roads and I frequently see people riding on passes. In the State of Illinois I know of many politicians who have been able to get passes to go where they want to within the State. This, in business, would be considered robbing the firm, and I believe now is the time to point out to railroads that they should discontinue giving these passes and charge every person riding on their roads a rate, except those who are actually traveling to transact business for the company. Most merchants charge their employees about 10 per cent above the cost of goods, and the railroads should do likewise. Those who are traveling for pleasure and those who have no connection with the railroads should pay their fare. I think this would amount to about as much as the freight increase asked, although I have no figures or information with reference to same.

I am merely writing this as a shipper who pays freight and one who travels practically all over the United States and pays his fare.

Yours, very truly,

C. K. ANDERSON, *Secretary.*

—

MOUNT UNION, PA., *November 22, 1913.*

Mr. LOUIS BRANDEIS,
Care of Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We do not think railroad rates, which application comes before your commission November 24, should be raised. We are familiar with the railroad arguments, and we are in sympathy with their unfavorable financial situation.

However, a raise in rates does not create additional wealth, but "robs Peter to pay Paul." The railroads profit at the expense of the general shipper.

It is time to halt. Let the railroad stop spending unnecessary money a while. They have and are still managing their properties on too extravagant and altruistic lines. We are on the main line of the Pennsylvania Railroad, which company is most wasteful in its labor efficiency and use of materials. The general shippers already suffer from the same troubles now affecting the railroads, while they are all compelled to pare down their costs any way they can. If the rates go up it is likely they will never go down. The American shipper is now on an export basis, and he can not afford to have his transportation increased. We can prove the statement that during the past 25 years the freight rates on hides, leather, coal, and such other commodities as go into our cost have been revised upward—never downward.

Let the railroads practice economy a while like the rest of us, and there will be little occasion to ask for higher rates.

Yours, truly,

MOUNT UNION TANNING & EXTRACT CO.,
EDWARD M. GREENE, *President.*

—

NEW YORK, *March 17, 1914.*

LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Every class of vessel owned or exploited by a railroad or corporation in the United States, also docks and piers, can never be anything but an agent of evil and against the prosperity of the country. The two propositions combined are a detriment to a country, as it is impossible and beyond human achievements to unite them without dark business methods prevailing, also swindling and increasing badness.

After our railroad companies and corporations got started to monopolize the transportation in the country and acquire boats, they did not stop at anything, no matter how corrupt, and the result was usurpation and fraudulent business methods that are unbelievable. It takes long years of experience to handle a proposition successfully. New business must be approached carefully with experience to handle same. This they did not do. The moneyed man was installed in charge, with or without experience, with the result that the moment the overflow of easy money ceased and business did not come to them in avalanches, bringing that enormous amount of money to squander, they were used to getting. They are practically beggars. My impression is that every eastern railroad is in as bad a condition as the New York and New Haven Railroad, financially, if the whole truth was known. If you take any eastern railroad subsidiary (water carriers preferred), their gross tonnage carried in 1912, and place it against the amount of money used to operate these water carriers in the year of 1912, every detail, large and small (this information is known only to few people), and the result would be both amazing and educational.

The New York Central Railroad has a grain elevator at Sixtieth Street, North River, that, in my estimation, has not handled grain enough in the last six years to pay the taxes on the site.

Yours, very truly,

W. E. STREETER.

—

NEW YORK, *March 10, 1914.*

LEWIS D. BRANDEIS, Esq..
Washington, D. C.

DEAR SIR: If the inside and secret workings, the endless chain of finance, insurance, rebating, and presents of every kind, favoritism to steamship companies and shippers of importance, tricks employed to shut out the legitimate companies, that are employed by the lighterage companies owned and manipulated by the eastern railroads centering in New York, it would be the largest hippodrome of unheard-of business methods yet uncovered.

It will be the greatest move for the integrity of the United States if the 5 per cent advance is denied. The railroads will be compelled to disgorge every losing proposition.

Yours, very truly,

W. E. STREETER.

—

BALTIMORE, MD., *March 11, 1914.*

MR. LOUIS D. BRANDEIS, *Washington, D. C.*

DEAR SIR: I clip the inclosed from to-day's Sun, to show how the carriers are pleading their case before the public.

The Interstate Commerce Commission has already shown that, eliminating favoritism, more than the sum declared a "decrease in net earning" can be saved. By a readjustment of rates, so that big shippers of trust-made commodities be made to pay a higher rate and food-supply men a lower, very large increases can be made. Also cutting off official perquisites, as to special cars and maintenance of same, extravagant salaries, etc., will help out.

Yours, truly,

A. W. LYMAN.

EXHIBIT G.

CHAIN LETTERS HAVE BEEN MADE USE OF TO BRING PRESSURE TO BEAR ON THE INTERSTATE COMMERCE COMMISSION FOR RATE ADVANCE.

Following is a sample chain letter made use of in the campaign to secure the rate advance:

STANDARD STAINED SHINGLE CO.,
April 10, 1914.

The WESTMORELAND CHEMICAL & COLOR CO.,
925 Chestnut Street, Philadelphia, Pa.

DEAR SIRS: If you favor the railroads having an increase of 5 per cent in freight rates and such other privileges as they are entitled to, write a letter to Hon. James S. Harlan, chairman Interstate Commerce Commission, Washington, D. C.

Also write or inclose a letter to 10 persons or firms with whom you are corresponding, asking them to write Mr. Harlan and also 10 firms, and so on, thus forming an endless chain.

If this can be accomplished, Mr. Harlan will soon realize what public sentiment is. This is a very important matter as bearing on the present depression in business, and we hope you will do your part to help out the very serious situation.

Thanking you, we remain,

Yours, very truly,

STANDARD STAINED SHINGLE CO.,
H. P. KENDALL, Jr., *Secretary.*

—

STANDARD STAINED SHINGLE CO.,
North Tonawanda, N. Y., April 10, 1914.

Hon. JAMES S. HARLAN,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We are in favor of the railroads having an immediate increase of 5 per cent in freight rates, and believe that if your commission will so decide, and at the earliest possible time, the depression in business now prevailing throughout the country will disappear and that a revival in trade will take place immediately.

Yours, very truly,

STANDARD STAINED SHINGLE CO.,
———— ————, *Secretary.*

—

APRIL 13, 1914.

STANDARD STAINED SHINGLE CO.,
North Tonawanda, N. Y.

GENTLEMEN: Your valued favor of the 10th instant, inclosing copy of your letter to the Hon. James S. Harlan, chairman the Interstate Commerce Commission, Washington, D. C., is at hand and noted.

We regret to be obliged to say that we are on the other side on this question.

In the production of oxide of iron we are compelled to bring from Newcastle, Pa., to Philadelphia, Pa., 5,000 tons of sulphate of iron per annum. A moment's calculation will serve to show you what a heavy tax 5 per cent on this tonnage would be. To add to our troubles sulphate of iron has been put on the free list, and oxide of iron carries a protection of but 10 per cent under the provisions of the Underwood tariff bill.

We are obliged to readjust our business to meet these conditions, and our labor and expenses are just as high comparatively as those of the railroad companies. We fail therefore to see any reason why the transportatiton companies should be put in a preferred class at this particular time

Yours, very truly,

THE WESTMORELAND CHEMICAL & COLOR CO.,
HENRY STEWART, *President.*

—

SUGGESTED 5 PER CENT INCREASE IN RATES OF FREIGHT.

MARCH 26, 1914.

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Kindly permit us to address you the following in relation to the suggested 5 per cent increase in railroad freight rates, you to enter our objection to the proposition.

We are the largest independent producers of copperas in the United States, with a factory located at New Castle, Lawrence County, Pa. Our production of the chemical amounts to between 5,000 and 6,000 tons per annum, and we are obliged to transport it from New Castle to this city because our plant, which is necessary to convert the copperas into oxide of iron, is located in Philadelphia.

We pay a special rate of 12½ cents per 100 pounds; and a carload, containing 60,000 pounds, net in bulk, yields the companies $75 for a 400-mile haul. There is no expense entailed on the railroads, as we load and unload the cars.

The proposed increase of 5 per cent means $3.75 per car or $625 per annum on a minimum quantity, taken from our pockets and presented to the railroads for absolutely nothing.

The Underwood tariff places copperas on the free list and presents also for nothing, to the foreigners, a large portion of the American market for this chemical. The inclosed letter from Messrs. W. T. Scales & Co., of Birkenhead, England, will show you that they are now in position to take advantage of the opportunity afforded. The pamphlet on copperas, which we also inclose, will serve to show what the material is and the necessity for its production.

We believe there are many other chemicals placed in this unfortunate position, and other manufacturers besides ourselves are compelled to work out their problems without governmental aid. We believe it will strike you as manifestly unfair to add the suggested additional burden of 5 per cent on the freight rate we now have to pay.

It occurs to us that if the manufacturers of the country are obliged to find methods to finance their operations at this time, the railroads should be obliged to do the same thing. In our case the railroads are well and amply paid for the service rendered.

Yours, very truly,

THE WESTMORELAND CHEMICAL & COLOR CO.

—

GREEN COPPERAS.

CLEVELAND, *March 14.*

The WESTMORELAND CHEMICAL & COLOR CO.,
92 William Street, New York, U. S. A.

DEAR SIRS: We are in a position of offering you this packed for export to advantage, and if same is of interest to you we shall be pleased to hear from you, stating size of package and quantity required, when we shall be pleased to submit samples and prices.

Thanking you in anticipation of a reply, we are,

Yours, faithfully,

W. T. SCALES & CO.

EXHIBIT H.

A LARGE NUMBER OF COMMUNICATIONS TO THE INTERSTATE COMMERCE COMMISSION POINT OUT SPECIFIC INSTANCES OF INEFFICIENCY AND WASTEFULNESS BY THE RAILROADS.

Numerous instances of inefficiency are pointed out. Some letters speak favorably of the fearless attitude of the Interstate Commerce Commission. Certain letters subtly suggest that an increase should be allowed, while others ask only that full consideration be given in the pending cases and that the decision of the commission will be cheerfully accepted, whether for or against the proposed increase:

NEW YORK, *March 20, 1914.*

Commissioner JAMES HARLAN,
Washington, D. C.

DEAR SIR: The people of this country are becoming alarmed at the interference by the President of the United States with the legislative and judicial departments of the Government. He has assumed the power of a dictator, and his encroachment on the function of your office is an outrage. Any attempt at coercion, direct or indirect, in influencing the decision of the Interstate Commerce Commission in the rate case should be resisted to the last. If the newspapers are correct in quoting the President, to the effect that he has interviewed each commissioner and advocated an advance in freight rates, then there might as well be an end to the judiciary. I am sure, however, that there is one man who will resent any such interference, and that is yourself. Your splendid record, your high character, your courage on behalf of the people, and determination that justice shall be done prove this to be true. And the people have faith in you.

Yours, sincerely,

GEORGE WINDOM.

—

NEW YORK, *March 14, 1914.*

JAMES HARLAN, Esq., *Washington, D. C.*

HONORED SIR: Your splendid arraignment of the St. Paul road has won you the gratitude of every true American. You are a worthy son of an illustrious father, who, in his day, was the noblest Roman of them all. The Interstate Commerce Commission should continue to expose rotten railroads like New Haven, New York Central, Frisco, Rock Island, and St. Paul. It is ridiculous to think, even for a moment, that any increase in rates should be given the rascals who have looted these railroads in order to enable them to cover up their robbery and escape justice. If it is given, it will come out of the pockets of the people, and one might as well say good-by to popular government.

Yours, most sincerely,

ANDREW KNIGHT.

—

NEW YORK, *November 22, 1913.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have forwarded to the secretary of the commission a paper of which I inclose a copy. It contains general, but I think obviously valid, objections the application of which you will at once see. I wish to assure you that I am not merely acting the part of a trouble maker or venting an unfriendly feeling against the commissioners or anyone else. I never was more in earnest in my life. I have not done this without seeking and obtaining good advice, though I would have done it on my own account. When you come to view it in a proper light you will see the incongruity and impropriety of placing above and in front of the people I represent, or of me as an individual freight payer, a quasi official representative of us all. I am not willing to be estopped or forestalled or compromised by the legal assumptions of Mr. Brandeis, who, though possibly much better qualified than I am for some branches of professional work, has, to my knowledge, fallacious views on questions affecting railroad rates and railroad business. If the commission cares to employ him to represent it, that is another matter. The commission could in that case prevent error and mis-

representation, or see that none were committed or made, or assume full responsibility for any mischievous outcome.

I think, however, that you and the other commisisoners will see at once that my legal objections are unanswerable. There is not enough power in the whole Government to confer representative authority otherwise than in the form of official authority.

I find I can not attend the initial proceedings in these cases, but, if the commission permits it, I hope to participate later, and at all important stages. I respectfully request that my objection be given due consideration in due and proper time.

Yours, respectfully, T. C. SPELLING.

TRUNK-LINE RATE-ADVANCE CASES BEFORE THE INTERSTATE COMMISSION.

Now comes the Freight Payers' League of the United States, by T. C. Spelling, its attorney, whose appearance has been entered, also the said T. C. Spelling, in his own proper person, and file herein its and his objection to the appearance or participation herein of any person assuming to represent the people, or any part or number of them, except such as shall see fit to employ him in some proper and legal way, or for himself alone. This objection does not, of course, lie against anyone regularly employed by the commission to represent it, nor any sworn officer of the Government or his assistant. Said objection is based on the ground that neither Constitution, nor any law enacted pursuant thereto, gives or can give any person any authority to so appear, nor is there any law authorizing or which gives even the semblance of authority to the Interstate Commerce Commission to employ anyone to represent the public, otherwise than as an attorney or other employee of the commission; that such a practice, if adopted, pursued, or tolerated, would open the way to the grossest frauds and oppressions, and would open the door to perversions of official power and authority which might be thereby prostituted to base purposes; that responsibility for consequences might be thus shirked and concealed, the rights of the public sacrificed and betrayed without recourse or remedy against any responsible person, officer, or official body. No objection is hereby made or offered against anyone whom the commission may see fit to employ to represent the commission in the interests of justice, that being the only way in which it has power or jurisdiction to give employment to anyone.

And we reserve the right to present and urge special objections to suit any particular occasion that may hereafter arise herein additional to the foregoing.

FREIGHT PAYERS' LEAGUE OF THE UNITED STATES,
By ——— ———, *Attorney.*

MABTON, WASH., *November 20, 1914.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission.

DEAR SIR: I have been reading in the newspapers that the railroads are insisting on higher railroad rates.

We beg of you to stand for the people and municipal ownership of all transportation.

The Yakima Valley settlers are at the mercy of the railroads.

Lumber that can be purchased on the coast at $6 per thousand is $22 and up, never down, here.

The railroads fleece us in shipping our products to markets, which is 200 miles to nearest market, east or west. A neighbor sent produce to market which sold for $1,400; the transportation and commission on this was $900. Another man shipped a car of celery; the car was sidetracked and celery frozen. The shipper sued the railroad and had to pay freight and costs.

The parcel post is a godsend to us, and we want municipal ownership of all transportation.

Not another country in the world has an express company except the United States.

Not since Lincoln was President have we had so great a man as Mr. Wilson for President.

We are grateful to the heads of the various departments of this administration for what they have done for the people. Not in many years have we had men so capable. We would like to have the United States currency deposited in the postal savings banks, nearer to the people.

We are grateful for what the Interstate Commerce Commission has done for us.

Respectfully, MRS. JEAN EVEREST.

THE COLORADO ENGINEERING & CONSTRUCTION CO.,
Greeley, Colo., December 25, 1913.

LOUIS BRANDEIS,
Boston, Mass.

DEAR SIR: The writer, in his capacity as a citizen of these United States, wishes to express to you his appreciation of the work you are doing for the people of this country

There can be no doubt but that you should have the cooperation of those citizens who are patriotic and whose avocations have qualified them to get the knowledge which is necessary to have in order to intelligently draft measures for relief from the evils the country is now suffering from.

The writer believes his observations and experiences qualify him somewhat to assist along certain lines, and takes the liberty to put on paper for your information some of the observations and experiences above referred to.

First, perhaps, I should say that although a member of the company on whose paper I am using, I am also a shipper of produce and am a land owner and farmer. It is in the shipping end of my business that I wish to refer to principally.

There is a movement being made by the railroads to be permitted to increase their rates, they claiming they are not getting revenue enough to pay expenses. We know that you have studied this matter quite exhaustively, and, perhaps, by your efforts more than any other one man, their demands have not been acceded to.

There is no doubt but that since your crusade against them for greater economy that many economies have been inaugurated. But recent developments show—as in the case of the New Haven and the Frisco—that these economies have been all absorbed, and then some, by the directors and management for their personal gain in their manipulation of the roads. Of course, before rates can be gotten to where they ought to be, the water must be squeezed out of the stocks, but there are a world of other reforms for economy that could be put in force that will help out; among which, some that have come to our notice that must amount to prodigious amounts are the advertising campaigns of the railroads in the papers and magazines of the country. The cost of a full page in such magazines as Harper's, Everybody's, Collier's, and such, as well as large space in the prominent dailies and weekly papers, must be something enormous. The question comes to one who believes the railroads of the country are the people's roads and the people are assessed the expense—I say assessed advisedly, for a freight rate, at least, is as much of a tax as those levied by our county and State assessors—of what right the managers of these lines have to spend the people's money to advertise their particular lines? People usually travel, and they should, on the most direct lines. These naturally should make the lowest rate, and travelers will not usually deviate without they are obliged to visit points en route. Why should the people's lines be allowed to go to the great expense of such advertising when the cost must all eventually be added to the cost of the public's transportation charges?

Railroads must eventually fix their charges on the cost of the service, when the operation is done with the greatest possible economy. Therefore there should be no competition allowed that would make the cost of service below the cost of operation. Most of us agree that stockholders are entitled to the same protection as is the public.

When that protection is given by law, then a low rate of interest should suffice. All earnings over that should go to the public that guarantees the investment. Scientific railroading now seems to be to impress on their employees what small savings mean, as gauged by how many miles such savings mean in hauling—or in the distance a ton will have to be hauled to be an equivalent—of a ton of freight. Putting the cost of the advertisements to this test—how many miles would the cost of a full page in Harper's Weekly haul a ton of freight?

In my business with the railroads I am visited constantly by traveling freight solicitors. I naturally select the shortest route to ship my cars, and I feel that all shippers should do the same. As a question of economics, that should be the deciding factor. Unless a railroad is woefully mismanaged, the direct lines are the ones that should have the business.

Why should we, the people, be assessed for a world of traveling freight solicitors, whose only business is usually to try and divert shipments over lines other than those the most direct?

Perhaps it is presumptuous for the writer to criticize a policy of railroad management, but nevertheless I am constrained to take the risk of doing so. It was our experience a few years ago to take several loads of fat lambs to the Chicago market from this section. We unloaded at Fremont, Nebr., to rest and feed. When we loaded up and the train was completed there were in the train some 65 cars of live stock and about 10 cars of dead freight next to the engines. There were two of the largest engines attached. We left Fremont about 4 p. m. and should have been in Omaha, 28 miles away, in one and a half hours. The facts were that there were five drawheads pulled out at five different times before reaching Omaha, which was reached after midnight.

In the craze to make tonnage they overreached. There was also the factor of trying to save the cost of an extra crew involved. There was an effort made for economy, but it proved to be not economy. The craze for hauling the maximum tonnage was evidently principally responsible. What happened? There were five cars put out of commission for weeks before repairs could be made. There was delay of at least seven and a half hours with live stock—which meant more than as if the freight was dead—in 28 miles. At that time all the railroads were extremely short of equipment, and shippers were handicapped almost to the point of being put out of business because of the inability to get cars. There can scarcely be any argument about the cost of building solid roadbeds, provided there is no graft in the expenditure. That is a legitimate expenditure. But there is a limit to its sustaining qualities.

A roadbed is like a chain, no stronger than its weakest link, and the writer is firmly convinced by his own observation that there is a grave economic error made by railroad management in operating such enormously heavy equipment. The risk of wrecks is very great with its accompanying claims for freight and passenger accidents. The great factor to be considered is the unreliability of most of the railroad labor. A little careless work by one of the ignorant track workers may mean so much in dollars and cents when it comes to adjusting claims.

It was the writer's fortune—or misfortune as the case may be called—to be delayed by a freight wreck in the Colorado mountains this fall. As there was several hours to wait, my rather inquisitive mind put me to find out the cause of that wreck. I found an imperfect rail and an imperfect joint in combination. The approaching rail was rusty for 10 feet from the joint, with the exception of about one-half inch in width, which was bright on the outside of the rail. This happened at a rather sharp curve, and the rail showed the car wheels had been grinding against the edge of the rail in an endeavor to ride it for a long, long time.

The inside of the rail, where the bearing ought to have been to fit the round in the car wheel, which was designed to keep the wheel from riding, did not have a chance—by the imperfect rail—to do its work. The result was a disastrous wreck. Competent trackmen who were conscientious and knew their business would have observed that defect and have remedied it.

I quote this to illustrate that a roadbed should not be required to be put anywhere near its limit. My firm judgment is that greater efficiency, and therefore greater economy, would be gotten by lighter engines and lighter trains. It may take the Nation some years longer to find this out, but we believe it will come. Such trains will be quicker stopped and liability of leaving the rails would be practically eliminated, and therefore the expense of wrecks, which is now no small item, we are called upon to pay.

Another great source of expense which could be easily remedied is losses of perishable stuff, like produce, from freezing throughout almost the whole country, for such losses occur as far south as northern Texas. The equipment furnished by the railroads for that class of shipments during the winter months are usually traps for losses for the shippers. Scarcely a refrigerator car built will long stand a zero temperature. It is now a struggle for a shipper to get a frost-loss claim allowed. There can scarcely be any question of equity involved in that transportation companies should deliver in good condition the shipments they receive in good condition. We are not sure but there are rulings now in force requiring them to do it, but it not known by the general shippers, and the railroad men themselves will not commit themselves on that question. The losses every winter run into enormous figures, and the railroads pay them when pressed hard enough. The economic situation, however, is bad; the public in some manner is the loser, even if the railroads do not always pay the losses. The claims against them for such losses are so just that it can not remain much longer a question of doubt, and they will surely be assessed for them.

The point we wish to emphasize is that with the present manner of handling freight in the winter months the railroads are put to an enormous expense to pay the losses, and that they are entirely unnecessary, and the result of neglect of having proper equipment, which could be arranged at slight expense. It is now known that refrigerator cars can be equipped at a very slight cost—probably not to exceed $50 per car—with steam pipes through which the steam from the locomotive could circulate when conditions made it necessary, and by so equipping cars all frost losses could be avoided and consequently an immense saving to the roads be made—without saying anything about the economic saving to the public—and it is apparent that before the roads are allowed to charge higher rates all these economic savings should be enforced.

The writer has talked many times with railroad men with whom he has come in contact about the heating proposition, and all agree that it is perfectly practical and is no experiment, as the system is already in use, but all these men have said frankly this measure has got to be forced on the management before it can be secured.

This latter aspect is the strange part of this proposition, as it shows the road managements will not do anything in this line of their own initiative. This is all the more astonishing because we are led to believe it takes great ability in a man to run a railroad, and they are paid salaries that often make the President's salary look small.

One would naturally think men of the mental caliber they are supposed to be would be quick to see the economic advantage of safely transporting perishable produce of our northern sections of the country during the winter months, thereby giving a steady business to their roads constantly instead of at times when the weather, as now, permits, thereby often making congestion of traffic as well as steadying prices to consumers.

This latter proposition is one not of the least importance, as a moment's thought must convince one who will take the time to think it out.

These propositions are all vital, as you will admit, and are factors that should be remedied before higher rates should be allowed. They are much more important than the saving of a few spikes or a little oil; they are big things.

These matters we submit hoping they may be of benefit in the solution of this great economic question of the people's transportation.

Very truly, yours,

F. H. BADGER.

GREELEY, COLO., *December 27, 1913.*

INTERSTATE COMMERCE COMMISSION:

What a travesty is Elliott's statement that Interstate Commerce Commission is responsible for the sick condition of New Haven. Piffle. How many hundreds of millions of dollars have Morgan, Baker, and the rest of them gotten from poor New Haven? Let them put back what they have stolen from the road and there will be no necessity for an increase in rates. Of course, the poor shippers and the consumers must make up the money stolen by paying higher freight rates. Wall Street millionaires rob the railroads to death, gut them, etc., and then say that because the Interstate Commerce Commission will not grant increased rates the latter are responsible. Raise freight rates and you will give the billionaire monopoly a new basis for robbing the roads. Let them practice a little economy, which they will not do if rates are advanced. Say, for example, a board of directors robs a bank and the Government is asked to replace the loss. It does not do it, and is accused of being responsible for wrecking it. Why should consumers and producers be forced to pay for what the billionaire monopoly has stolen? Present freight rates will not bankrupt the roads. Seventy-five per cent of the statements of earnings of the railroads are made to order to influence the Interstate Commerce Commission.

Can not the Morgan-Rockefeller-Baker clique of plutocrats be made to disgorge a slight share of their ill-gotten gains? Is nobody to be held responsible for the dissipation of scores of millions of dollars saved by trusting men and women and placed in the custody of these brilliant financiers?

A CONSUMER.

BREMEN, *December 16, 1913.*

To the Interstate Commission of the Railroads in the United States, Washington:

Hereby I ask you, when you will regulate or put up the rates for the railroads? It was cabled to-day that you would postpone this matter eight months again. This seems to me and many people not true, as this delay would do a great deal of damage to the stock exchange and to your country, which is laboring under the uncertainty of your laws since a long time. Will you, please, in answering this question?

Most respectfully, yours.

AD. V. HEYMAN.

NEW YORK, *February 24, 1914.*

Hon. THETUS W. SIMS,
House of Representatives, Washington, D. C.

DEAR MR. SIMS: You will no doubt recall that early in December last I called your attention to what I considered was the situation in reference to the various tariffs that had been filed by the trunk-line railroads asking for permission to make a general increase in freight rates to the extent of 5 per cent advance. I stated at that time it was my firm conviction that the campaign which they had inaugurated along with the publishing of the tariffs, was particularly for the purpose of establishing a precedent and rule for the future, and also to place the commission in a position where it would be criticized by uninformed people and shippers who are interested in selling to railroads, as the theory of the proposition seems to be that general prosperity is dependent on the railroads' ability to buy whether they need to or not.

I find an editorial in the New York Sun, under date of February 21—copy of which I am inclosing you. I want to quote two or three items that confirm the statement which I made to you early in December:

"The factor involved was not represented so much by the amount of the increased earnings which would accrue from the actual advance in rates proposed, as by the desire of the common carriers to have the fact demonstrated that general rate increases * * * were possible under a régime of Government regulation * * *. As the railroad case stands to-day, expectation has lost its enthusiasm of a month ago, and is even turning toward apprehension that the railroads will fail ultimately to gain recognition of the principle."

The situation to-day is that the Interstate Commerce Commission seems to be alive to the situation that the railroads have been performing an enormous amount of free service and free privileges in the form of terminal switching, renting of railroad property at ridiculously low sums to favored shippers, discriminating rates on imports, discriminations in elevator allowances, special services to private car-line owners, and the commission has set out to bring about the abolishment of these privileges, which will, in turn, turn into the railroads' treasuries larger sums than were anticipated from the 5 per cent increases. And we find that the railroads are not satisfied, for the reason that they have not been allowed to fasten on the country and the commission a general advance in rates.

I am not so sure that the speech you delivered some time ago is not in a way responsible for some of the recent actions of the commission, and I think they should be backed up and encouraged in every effort to see that everyone pays for what he gets—no more and no less than what is fair.

I think this is a matter that should interest you, as the commission is being criticized very severely by the 25,000 or 30,000 big shippers who have enjoyed these free privileges in the past.

I beg to remain, yours, very truly,

J. R. SCHURZ.

[Editorial from the New York Sun, Feb. 21, 1914.]

THE CASE OF THE RAILROADS.

A month ago there was more or less enthusiastic expectation that the Interstate Commerce Commission would see its duty early in the matter of strengthening railroad credit, and rule promptly and favorably on the application of the eastern lines for permission to make a horizontal increase of 5 per cent in their freight rates. Public opinion, so far as it could be tested, was not opposed to the railroad application. At the headquarters of prevailing political sentiment a disposition was manifested which is clearly appreciative of the exigencies of the railroad situation.

The factor involved was not represented so much by the amount of increased earnings which would accrue from the actual advance in rates proposed as by the desire of the common carriers to have the fact demonstrated that general rate increases of demonstrable necessity were possible under a régime of Government regulation which had evinced little more than a large capacity for decreeing sweeping rate reductions on occasion by way of relieving a continual process of ordering reductions in particular instances. Such an establishment of fact could hardly fail to provide a vast encouragement to railroad finance, with a beneficial sequel through the acceleration which railroad enterprise always gives to the expansion of general business.

As the railroad case stands to-day expectation has lost its enthusiasm of a month ago, and is even turning toward apprehension that the railroads will fail ultimately to gain recognition of the principle they had hoped to incorporate in the undertaking of making rates by Government rule. The action of the Interstate Commerce Commission in postponing from March to September the date of effectiveness of the higher-rate schedules submitted by the railroads is a formality which does not preclude earlier action; nor does it signify any official view of the merits of the question under consideration, but it is a way of evincing reluctance on the commission's part to face the issue squarely.

The postponement is itself a disappointment in all business and financial circles where it is realized what good could follow an early and favorable determination of the matter. It is even more of a disappointment, because it is to some extent corroborative of other indications that the commission does not propose, if it can help it, to institute a departure from past practice and sanction the idea that the railroads can resort to general elevation of the rate structure in order to deal with the problem of steadily rising costs of operation and steady additions to the weight of freight.

COLUMBIA CITY, IND., *January 1, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: There has been for a long time tremendous pressure brought to bear upon your honorable body to grant permission to the railroads to raise their freight rates, and of late, for some reason, the opposition seems to have weakened. I find the press especially admitting that at least there may be much of justice in the claims of the roads. The men of the commission must be possessed of a splendid backbone to have resisted so long, and, perhaps, I may as well end here, for one if not the principle object of this letter is to afford the slight encouragement of an approval from one in the ranks of common people.

However, I wish to protest against a raise of wages being considered a legitimate reason for a raise in rates. The only logical reason for a raise in wages is to distribute more justly the fruits of industry, and if prices for output or service be raised that object is thereby annulled. If employers may raise wages and for that reason increase the cost to the public of their service or output, they cheapen the dollar more effectually than it can be done by determining how much gold the standard dollar must contain; and the result is that the workman receives no benefit, big debtors may more easily pay off bonds and mortgages, cost of living goes up, and the salaried man gets it in the neck.

Respectfully, yours,

R. W. WIGENT.

SAN FRANCISCO, CAL., *June 20, 1913.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Regarding increased freight rates asked by the railroads, beg to inclose the inclosed clipping, showing that 29 railroads for the fourth week of May increased over 10 per cent.

Of course, you are wise enough to know that the railroads will ask for anything, hoping to get something, but because they ask it is no sign that they are entitled to it. It is to be hoped that you will handle the situation as well as it was handled by Franklin K. Lane.

Yours, very truly,

W. O. MANSON.

Thus far 29 railroads, operating in the United States only have reported weekly gross earnings to Wall Street Journal for the fourth week of May, as follows: Gross, $13,274,553. Increase, $1,245,464, or 10.35 per cent.

SPRING LAKE, N. J., *February 7, 1914.*

Hon. EDGAR E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

SIR: I wish earnestly to protest against granting to the railroad companies the privilege of increasing rates of freight.

A review of the annual reports for the last fiscal year, mainly to June 30, 1913, of 23 of the leading railroad companies of this country, show that they operated at an average ratio of 69.1 per cent, or converted 30.9 per cent into net earnings or profit on operation, accepting at par the railroad's figures at that.

Thirty-one per cent profit is a most liberal one, and if in determining the final surplus an abnormal proportion of this profit has to be deducted to meet fixed charges mainly interest on obligations, it is not an argument for further profit or a reason that the public who pays is interested in, for it is generally understood what a portion of these interest obligations stand for.

The public did not need the recent findings of the United States Government experts in the case of the St. Louis & San Francisco Railroad Co. to enlighten them, but they simply served to confirm, although disclosing as it did that this company pays annually $1,600,000 interest charges on obligations from which the road has received no benefit. An amount based on the Frisco's freight business would require more than 18 per cent advance in rates to annually provide for.

Were it simply a question of economics, involving no moral consideration, the passenger rates of the railroads alone should prove an effectual barrier to any increase of rates of freight, for these rates are excessively high, and compared to electrical traction, and to a great extent they are justly comparable, they are simply extortionate and assuredly offset any deficiency in freight revenues if such deficiency exists at all.

The failure of profit in excess of 30 per cent, to provide amply for all charges after net, does not indicate the insufficiency of the former but the unnatural burden of interest it is called upon to meet, and a burden in no small degree unrepresented by value.

It is absolutely wrong and unbearable to inflict this burden of the old iniquities upon the third and fourth generations, and adding this weight to the present excessive consumption cost it is a question that the public would accept it pacifically.

If the conditions revealed by the Frisco investigation will determine the Government to probe into the finances of all the railroads from 1896 to date it will prove one of the most valuable investigations the Government ever made, even if the cost runs into millions, and will make of freight and passenger rate increases exiles forever.

Very respectfully, yours,

F. S. HEDDEN.

—

SAN FRANCISCO, *January 31, 1914.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission, Washington, D. C.

DEAR SIR: The confidential talk here amongst the clubmen, brokers, and railroad officials is that the railroads are going to get the increase of 5 per cent in freight rates asked for. Of course, if such reports as the Reading has sent out are true, there surely can be no reason for that increase other than to help Wall Street juggle the stocks. The clipping says that Reading has earned 27 per cent for 1913.

It is possible that Chief King, of your commission, is playing the stock-market game, as the inclosed clipping sounds like it.

Yours, very truly,

W. O. MANSON.

"A private-wire message from New York yesterday stated that the Reading is now earning at the rate of 27 per cent per annum, counting its equities in the earnings of the Jersey Central and the returns from its coal companies.

REGARDING RAIL FREIGHT RATES.

CHICAGO, *January 29.*

Chief Statistician King, of the Interstate Commerce Commission, is quoted as saying that a feeling exists among the commissioners that freight rates should be raised. The commission merely wants railroads and private-car concerns to tell what arrangements really exist, so the commission may know just where the money goes and what rate should bring a suitable profit to railroad stockholders.

—

SHAPLEIGH, ME., *January 28, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Your very courteous answer to my letter received; also statement of date of the different hearings.

It is a pleasure to note that the individual is to be given consideration and fair treatment in these matters. There were days when any appeal from the public met with curt rebuff. Be assured that your courtesy to a very humble individual is appreciated.

Am inclosing a clipping from Collier's Weekly of January 24. Perhaps these few lines have been noted; in either case they seem to me to sum up to a nicety the case of the rural communities.

Very respectfully,

F. W. WARNERY.

THE RATE INCREASE—A MIDDLE WAY.

The railways ask permision to increase their freight rates by 5 per cent. That would add $100,000,000 to the country's freight bill, and this bill already exceeds two billions. The increase is defended on the ground that while the general level of prices had risen 30 to 50 per cent, and wages some 20 or 30 per cent, railway rates have stood still. Of course, the latter is not wholly true. In a great many ways railway rates have been considerably raised within the last 10 years. The fact that the average rate per ton-mile has stood still is due to other causes. One kind of transportation has in the United States been developed to a very high degree of efficiency. That is the transportation of commodities like coal, grain, iron ore, and so on, over long distances. These commodities are carried cheaply, because if they were not carried cheaply they could not be drawn these long distances; but because they are drawn a long way the profit is large. Rates for the short haul in this country are not low, compared with Europe. In many instances as much is charged for a short haul as for a much longer haul. The effect of this scheme of cheap long haul and dear short haul has been to build up the big cities at the expense of the country. It has produced enormous congestion of population in the great centers and sent land values in these centers to fantastic heights. It is a striking fact that the congestion of municipal centers in the United States now exceeds that in many parts of Europe. This same vicious scheme has ruined industry in many portions of the country. It has nearly ruined farming in New England and the Atlantic States. It has ruined the woolen factories in the West and often suppressed coal and iron mining where it would otherwise still yield profits.

THE RAILWAYS GET THE RECOIL.

Now, this evil scheme is beginning to recoil on the railways themselves. To increase their business they must have larger and larger terminals. These terminals cost huge sums for the land alone. To pay interest and dividends on the money for the land purchased at these fantastic values the railways now ask permission to raise their rates. Where is it going to end? The greater the congestion of population they produce the higher the land values, the greater the cost of more terminals. Land on Manhattan Island or at the mouth of the Chicago River is worth millions per acre; land on Staten Island or in New Jersey, 10 miles away, is worth hundreds of dollars per acre. At Fall River they are building bigger cotton mills, at Brocton bigger shoe factories, at Lowell bigger cotton mills; but the shoe factories in Texas, the cotton mills in Mississippi, the woolen mills in Ohio or Colorado do not flourish. And why? Because the power to fix railway rates represents the greatest power of taxation in this country, and the whole scheme of railway rates in the United States has been to enable industries which are established where they do not belong to compete with and suppress industries at the natural bases of supplies and power. And this is one big reason why food and living in America is one-third dearer than in England and one-half dearer than on the Continent of Europe generally. It ought not to be cheaper to ship hides from Texas and have them made up in Massachusetts and shipped back and sold in Texas more cheaply than they could have been manufactured there. Texas has the raw materials and the fuel close by. New England has neither. Millions of cheap horsepower is going to waste in the Far West; but industries will not move there in considerable part because railway tariffs are adverse to such a development. We believe that the time has come at last to make a beginning of the end of this purblind policy.

THE WAY TO A BEGINNING.

The railways ask for a nearly horizontal increase in all existing tariffs. They do not propose to disturb the advantage of New England or of Pittsburgh or Chicago over the rest of the country. They do not propose to touch the rates which have created the fortunes of many of their directors and which have often been dictated by the directors themselves. They purpose to keep on running the railways in the interest of the very few and the interest of a small part of the country against the interests of the many and the interests of the whole country. This is unreasonable. If it is to the interest of the whole country that railway revenues should be increased, it is not to the public interest that this increase should come from rates which build up the cities against the country. If rates must be increased, it should be the long-haul rates, and especially those between the great centers. These are the rates which, from a social and economic point of view, are too low. In general, the longer haul is with commodity freight and the shorter haul with classified freight. We believe classified rates are to be raised much more than commodity rates. This may be good railway policy from the point of view of quick dividends—it is not good public policy. With the suppression of the railways' suppression of water competition, we believe it would be entirely safe to permit the railways to raise their long-haul rates as much as they liked. They could not raise them much, because such a raise would promptly check the volume of business. We believe there is here a work for the Interstate Commerce Commission of the highest economic importance. It transcends in importance the work of the new banking system, because it reaches far more deeply into the social and industrial life of the Nation.

—

LITTLE ROCK, *December 30, 1913.*

Mr. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Your letter in regard to disposition made, my letter in regard to rail rates received; am very thankful to you for consideration given it. I must say it is very gratifying to know we have a President and men at Washington at the head of our national affairs that show the desire is being shown to help the condition of our country, and by so doing bettering the condition of our people therein. Everyone should put their shoulder to the wheel and give all the assistance they can.

It is only to be hoped our State governments will take pattern after our National Government, and follow in their footsteps.

Very respectfully, yours,

B. M. DEVITT.

—

ELGIN, ILL., *January 29, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: A Chicago paper reports you saying yesterday to the railroads, "Stop privileges to increase revenues."

I congratulate you on your impartial and good judgment. Three years ago I traveled in Colorado on the D. & R. G. R. R. I was surprised at the many passes used. The conductor told me 26 rode on passes on the car I was on. In what financial condition is the D. & R. G. to-day? Still the deadheads seem to think that those who pay ought to pay 5 per cent more to keep the thing going.

We have a sample right here, the Aurora, Elgin & Chicago Railroad Co. Apparently they do a good business, still they have a hard time to make both ends meet and pay 3 per cent dividend. When the new law about passes went into effect January 1, 1914, it leaked out that about 600 passes had been distributed here and in Aurora, Ill., in 1913 among politicians, mayor, commissioners, police, special police, lawyers, judges, ministers, friends, and their families. Anyone wearing good clothes and talking at meetings and street corners rode on a pass. When the court at Geneva is in session the cars are crowded. The deadheads take the seats, those who pay hang on the straps; the same condition exists in town at noon, and at 5 and 6 o'clock the boys and girls working in a factory, office, stores, etc., pay and hang on the straps, work for $8 to $12 a week at least eight hours a day. The officials working for the city about six hours a day, drawing salaries from $1,000 to $2,500 a year, get free transportation. Is this right? Is this just?

It seems to me if the railway officials that give the graft, and the other fellows that accept the passes would go to jail, it would be the best thing that happened for a long time. Reform should begin right there; these fellows that shout loudest are the worst offenders.

Pardon my bad writing and my intruding on your time.

Look out for the reformers that get their light, transportation, and telephones free.

Yours, very respectfully, FRED SAUER.

SCRANTON, PA., *March 7, 1914.*

LOUIS D. BRANDEIS,
Care Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Allow me to congratulate you for the splendid work you are doing. Having had some experience I can appreciate what it means to secure evidence against the railroads and have them admit it is true.

Cordially, W. P. BOLAND.

—

NEW YORK, *March 29, 1914.*

Hon. JAMES HARLAN,
Washington, D. C.

DEAR SIR: The papers announce that the New York Central has laid off 25,000 men. This is an outrage. It is done in order that dividends can be paid on a huge amount of watered stock. This overcapitalized system has exhausted its credit, can raise no more money through short-term notes, and is now sacrificing labor and efficiency in order to continue paying unearned dividends. And it is all done for stock-market purposes. If ever a rotten system deserved an exposure like you, in all justice, gave the St. Paul, it is the New York Central.

Yours, very truly, JAMES WRIGHT.

—

CARLISLE, PA., *March 29, 1914.*

THE INTERSTATE COMMERCE COMMISSION.

DEAR SIR: The following was written to the editor of the Philadelphia Record in reply to editorial of this date, "Holding prosperity in check.'

"Suppose a business man had actually (if it were possible for him) capitalized his business on a 4, 5, or 6 per cent basis at a time when it was at its zenith of prosperity, when by every artificial device he had led the holders or advancers of his capital to believe it represented exact, real value, would it appear proper for him when the business ceased to earn the said 4, 5, or 6 per cent on the inflated unreal stuff to ask 65 to 75 per cent of his customers to pay 5 per cent more for their goods? Would it not rather be adding insult to injury, moreover, when the said 65 to 75 per cent of the customers were not holders or advancers of his capital, especially when the holders of his capital had obtained his capital certificates at great discount and by special favor?

"Would you not consider that the only just way for him out of his difficulties was bankruptcy and reorganization on an equitable earning basis for his customers based on his real investment?

"Would it not be better than to allow him to go on and continue his pernicious method of capitalization only to the greater but no less certain eventual calamity to all concerned?"

Very, respectfully, W. F. HORN.

—

LANCASTER, PA., *April 4, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The entire business interests of this whole country are intensely interested with the proceedings before your honorable body in reference to granting permission to the various railroad corporations for an increase of 5 per cent freight.

Allow me to say that the intelligent classes, not swayed by political bias, believe that your commission can not be bought by the railroad corporations to sanction an act that would permit us to be further robbed by a set of greedy railroad officials.

Take as an illustration the Pennsylvania Railroad Co., which is paying President Rea the sum of $50,000 to perform the arduous duties of signing his name to the minor reports of the subordinate officers who maintain and repair the tracks. You are also aware that in all matters requiring anything but ordinary judgment this President Rea places such matters in the hands of the corporation solicitor. In amounts for salaries we have following President Rea's the following sums: $35,000, $40,000, $45,000, $30,000, $25,000 paid to the minor executive officers of the company for performing the most superficial functions requiring not over 30 minutes for each one of them per diem.

In addition to the outrageous salaries paid to the officials ranking from the president down is to be considered the assistants waiting upon all these minor officials, to say nothing of the bookkeepers, stenographers, etc. Upon inquiry you will find that this corporation is paying as much as $150 per month to freight conductors whose arduous duties consist of riding in the caboose as custodians of tags containing directions where to shift their freight cars. As a rule not 1 in 25 of these men can read or write two lines grammatically, but fortunately for these men they are members of labor unions which compel the spineless railroad corporations to yield to their demands for any salaries desired.

Doubtless you read President Taft's address in Boston within a month, in which he attributes the deplorable conditions of the entire railway system as well as that of manufacturers in general to the cutthroat principles of labor unions.

The present business depression that has affected the entire country naturally affects the quantities of freight tonnage, and we business men naturally ask why a railroad company should be allowed to rob us in order to maintain highway salaries and outrageous labor union wages.

We depend upon you to thwart this scheme and protect us from any further advances which will never be yielded up when once granted.

The testimony adduced before your honorable committee last Friday, to the effect that a 5 per cent increase would not materially benefit the various railroads now threatened with bankruptcy because of extravagant salaries, well-watered capitalization, and general robbery of their legitimate stockholders by the pet schemes of railway officials in rebates, etc.

In your careful consideration of all these conditions I trust your commission will not forget to investigate why that the Anchor Line, Empire Line, Union Line, Merchants Line, Adams Express Co., Pullman cars are permitted to exist upon trunk lines that are capable of performing all such services, and turning the profits made by these robbing side lines into the legitimate hands of their bona fide stockholders. Allow me to further state that I do not think it possible for your commission to discover one stock or bond holder of the Pennsylvania Central or New York Central, or any of the trunk lines, who is familiar with the actual financial conditions of these corporations. It is a well-known fact that many of the railway corporations of this country are yearly selling additional stock certificates, thereby increasing their capital frequently requiring increased revenue to pay interest upon inflated issues. Until your commission will stop this wholesale robbery these railroads will continue to call for more fuel for their furnaces.

A general perusal of the leading New York journals reveals the consensus of opinion by their Wall Street editors that you gentlemen should allow these dear railroads to further tax us.

You will readily understand the motives of newspaper publishers in advocating matters beneficial to said railroads just as they do oppose an increase of postal rates on carrying newspapers at a rate entailing a heavy loss upon the Post Office Department.

I sincerely trust I have not encroached upon your valuable time, and if I have uttered anything that is interesting to you kindly read it to your fellow members.

Yours, truly, D. H. POTTS.

—

THE "RAILWAY" CRISIS.

The "railway crisis" of the financial columns is something remote, impersonal, almost a theoretical affair, without practical importance outside of limited circles. It assumes a near, broad, and human aspect as interpreted by President Willard. As he sees it a crisis for the railways is a crisis for workers who lose their jobs, for investors who are disappointed in their dividends or interest, and for the shippers whose trade is interrupted by deterioration in the service which the railways are able to render. These are heavy prices to pay for escaping a rate which the payer transfers to the buyer of the merchandise, to whom the burden is so slight that he is not aware of it and can not calculate it. It will be much easier for him to calculate his losses through not paying the rate. It will be reflected in increased costs of manufacture and through reduction of profits in sales lost through the general decrease in the purchasing power throughout the community, whether that purchasing power is derived from wages or dividends.

President Willard's interpretation of the crisis for the railways puts another face upon the means by which the advantages of the advance are to be obtained. When a burden which can hardly be traced is escaped at the cost of impediments to trade, shippers perceive that their interests lie rather in excellence of railway facilities at any reasonable cost. Many shippers have formally so resolved, and the commission has been made aware of it. Why might it not be a good idea to advance rates when shippers and carriers are agreed about it?

—

APRIL 2, 1914.

EDITOR NEW YORK TIMES,
Times Square, New York City.

DEAR SIR: In your editorial in this morning's Times entitled the "Railway Crisis" I am rather surprised to find you taking "the-public-be-damned" attitude. After asserting that the railways have everything to gain and the shippers nothing to lose, you suggest that these two interests be allowed to settle the question of an increase of rates. There is another large body of citizens to be considered, and fortunately for them they have the Interstate Commerce Commission to look after their interests. It was for their interest the commission was created.

CONSUMER.

—

LANSDALE, PA., *April 1, 1914.*

The INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: It would be a calamity if you were influenced by the pressure brought upon you by the railways and their thousand and one emissaries that are at work to frighten you into a decision which is not absolutely just to them and the public. Don't let them worry or hurry you in the deep and general sentiment of the people. We know their game, and do hope that while the President and others may become frightened you will not. A wrong decision would almost forever destroy your usefulness to us the people. We greatly appreciate your great work, and thank you.

Yours, truly, TRAVELINGMAN.

—

RAILWAY MAIL ASSOCIATION OF PORTSMOUTH, N. H.,
Ogden, Utah, March 25, 1914.

Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

HONORED SIR: I submit respectfully a clipping from the Weekly Inter-Mountain, a union-labor publication of Salt Lake City, and hope that the statements in said article as to your position on said questions are false. We progressive Democrats of the West who worked so hard for your election, and who have suffered from the exorbitant freight charges as well as unjust passenger rates in the Rocky Mountain States, are decidedly opposed to any concession whatsoever to these plunderers. The history of railroading in the West is written in graft and mismanagement (see history of the Union Pacific and Southern Pacific Railway Cos.), and if they economize in a proper manner they will not find it necessary to raise their rates. Admitting the fact that wages have increased 25 per cent, they seem to forget that the hauling capacity of their engines has doubled and trebled. Their rates are unjust, and I will quote one instance: The excursion round-trip rate to Chicago, Ill., 1,500 miles, is $55, and to San Francisco, 745 miles, it is $40 from Ogden, Utah.

Be not deceived by their lamentations. They have sowed the wind; let them reap a little what they have sown. They are, so to speak, very crude and unworked. As well as untempered iron, a little of the fire of self-sacrifice and self-denial will do them good; a little economy and less graft will do them good. There are entirely too many deals like the Frisco and Milwaukee, where the high and mighty organize construction companies to build the railroads and sell them to themselves at fat figures.

The party has done nobly so far. We are converting many of the rank and file of the Bull Moose and Republican Parties in this State, as well as many other States, and let us continue in this manner and we will be ever respected and successful.

With kindest regards and best wishes for your health and a successful administration, I am,

Very sincerely, yours, FRANK W. JOESTEN.

—

[By Lucien Saint.]

WASHINGTON, *D. C., March 16.*

In the great fight which the railroads are making for a 5 per cent advance in freight rates, as well as in their struggle to control freight rates through Panama Canal tolls, President Wilson has definitely sided with the railroads and against the public. His recent action in respect to these two propositions leaves no doubt that he stands with the roads.

Thus ends once and for all the illusion that Wilson is a "radical" and an advocate of the rights of the people as against the vested interest.

Wilson wants the railroads to have their 5 per cent freight increase because the railroads say that they need it. In cautiously worded emanations from the White House "it is learned," "it is authoritatively stated," "it is rumored," that Wilson shares with the railroads their solicitude for their pocketbooks, and believes with the magnates who have succeeded in nothing except in demonstrating the inefficiency of private capital to operate a public utility, that "business confidence" will be restored if the Interstate Commerce Commission grants the requested increase. Wilson has not made any definite public statement to this effect, but he has authorized the publication of dope which has indicated plainly that he desires the raise. Everyone in Washington knows that this is the fact of the case, though the impression is given out that the President is not interfering.

Wilson shows that his heart is with the railroads in the matter of the Panama Canal tolls. Two years ago, contrary to the wishes of the railroads, Congress decided that the canal should be free to American ships. This was a blow at American railroads, who own most of the ships and who do not want to see independent shipping firms spring up in competition with the railroad-owned shipping. The effect of tolls on transcontinental freight rates would also be helpful to the railroads, and the railroads for this reason do not want the canal free to all. After Congress defied the railroads the Democratic Party at Baltimore clinched the matter by putting a plank in its platform declaring for a free canal.

But a few days ago the railroads grew restive, and Wilson came out in favor of repealing the free canal proposition, thus reversing not only his party in Congress, but his party platform. International treaty obligations and "other circumstances" were his excuse for this astonishing action.

The fact of the railroad situation to-day is that the roads of this country are trembling on the verge of receiverships. It is known in Washington that if the 5 per cent freight rate increase is not granted at least two railroad systems will be declared bankrupt. High finance, wasteful methods of operation, graft to allied private industries, and general incompetence are to blame for this condition. Louis D. Brandeis, special counsel for the commission in the rate case, is trying to make the railroads save money by adopting a little of the efficiency and economy which they talk about so much in public. Brandeis is fighting the railroad press agents and the railroad grafters at every turn, and the big papers of the country, neither understanding the case nor wishing to understand it, are poisoning the public mind in such a way as to make the people think that the railroads need the increase. The truth, of course, is that in the long run the railroad systems will be better off if they are not given the increase, but are forced to add to their revenue by cutting out the graft.

Before Wilson became President it is reported that he spent a week at the palatial Hudson River home of a New York big business man. At the end of the week the big business man came to the conclusion that Wilson was "all right" from his point of view. In the presidential campaign Wilson received the support of many big business men. Wilson is now supporting the railroads.

—

356 PINE STREET,
San Francisco, April 9, 1914.

Hon. OSCAR UNDERWOOD,
Washington, D. C.

MY DEAR SIR: The subsidized press is determined to have the Interstate Commerce Commission grant the eastern railroads the 5 per cent increase in freight rates. Of course you and I know that if there was no Wall Street there would have been no such demand; consequently, the incentive for the demand is Wall Street.

Wall Street has never produced a new dollar nor added a new idea to the world, she simply lives out of the other fellow's pocket; her production is mostly watered stocks and degenerates.

The yearly dividends on watered stocks alone amounts to 25 per cent of the average yearly income of every workingman. The dividends on the Steel Trust stock alone (all water) adds 10 per cent yearly rental to every occupant of Class A buildings for the structural steel alone.

The Reading Co. (a holding company) earned 30 per cent last year on its stock (originally all water), and yet is asking for increased freight rates for the railroad company which it owns.

Wall Street will die a natural death if nothing is done to stimulate it, as the new currency bill will keep most of the surplus funds away from Wall Street, where it is now used to float their watered stocks or loaned on such stocks within 10 per cent of their so-called market value.

If the heads of the different railroads asking this increase would devote their time and energy to running the railroads on their merits instead of hovering over the stock ticker there would have been no necessity for the increased freight rates. They are hardly sincere in their pessimistic reports to the Interstate Commerce Commission, when at the same time they are giving out tips to their personal friends to buy stocks.

It is to be hoped that you will use your efforts to continue the investigation until the truth is arrived at, even if it takes another year, as it would be very unjust to the public to increase the cost of living 50 or 100 million dollars per year because the railroads are not economically and efficiently managed.

Yours, very truly,
WILLIAM O. MANSON.

—

CRANFORD, N. J., *April 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: Increasing freight rates will bring no money into the country. On the contrary, it will take it out. To export goods we have to meet foreign prices, otherwise no exports. Increasing rates will increase cost of exports and such may shut out or stop exports. Increasing rates will be adding to the prices that foreign shippers can get in this country on imports, say, from Argentina on cereals, cattle, etc. It seems to me the railroads are between the devil and the deep sea and have no way out of the dilemma except to economize.

Respectfully,
HENRY F. KNAPP.

—

356 PINE STREET,
San Francisco, March 4, 1914.

President WOODROW WILSON,
Washington, D. C.

MY DEAR PROFESSOR: It is to be hoped that the Owens bill for the control of the stock exchanges will pass as, in connection with the currency bill, it will stop a great deal of the bunco schemes for getting the people's money by the Wall Street "wolves."

Have just seen a telegram from Palm Beach, Fla., signed by one of the wealthiest men in New York, stating that the "administration would grant the larger part of the increased freight rates asked for by the railroads before the 1st of July, as the administration did not want to hurt commercial business. Of course, Wall Street is not commercial business, and, so far as I can see, legitimate business has not been hurt; in fact, it is better than it ever has been; but the moment you say or do anything to stimulate or encourage Wall Street you will find a letting-up in legitimate business.

Do not be scared by any threats or bluffs of the "kept press" that you are "hurting business." It is possible that some of your advisers are interested in the Wall Street game; otherwise I can't understand a telegram so positive as the one I just saw.

Yours, very truly,
W. O. MANSON.

—

RESOLUTIONS ADOPTED BY SCRANTON CENTRAL LABOR UNION.

To Woodrow Wilson, President of the United States, and members of the Interstate Commerce Commission:

Whereas a group of railroads known as the Eastern Railroads, through their officers, managers, legal advisers, and other factotums, have made a request for the privilege of increasing the freight rates 5 per cent on the pretense that it is necesary to charge more for the transportation of freight if the railroads continue in business and are saved from the quagmire of bankruptcy; and

Whereas it has been charged, open and aboveboard, contradiction of the allegations being challenged, that this movement for an increase in rates has been and is urged by all the special-privilege-serving crew, including subsidized periodicals, trade organizations, flunkies controlled by railroad influence, for the purpose of coercing, intimidating, and terrorizing the members of the Interstate Commerce Commission to compel them to grant the unreasonable demands, despite the fact that evidence is at hand to prove that an increase in freight rates at this time can not be sustained either by fact or persuasive argument; and

Whereas Congressmen are enlisted in the campaign of misrepresentation, some of them boldly writing to the commissioners in behalf of the railroads' plea, while trade publications, commercial associations, banks, and other organizations and associations of influence and affluence have joined in the clamor for the granting of unreasonable requests of the railroads, without first permitting the members of the Commerce Commission to make a thorough and unbiased investigation of the facts for the purpose of ascertaining if the demands are just and reasonable and supportable by the conditions that exist: Therefore be it

Resolved, That we, the delegates of the Scranton Central Labor Union, in convention assembled Sunday, April 5, 1914, representing 75,000 wage earners, protest, with all the power at our command, against the unfair methods resorted to by the railroads and their "Friday men" in the interest of special privilege, and denounce the campaign as unfair, un-American, and maliciously misrepresenting the conditions: Be it further

Resolved, That the President, Woodrow Wilson, be requested, in the name of 90,000,000 of Americans, to keep his hands off the Interstate Commerce Commission, and not to urge, as has been reported, a decision before the commission has had ample time to dig out the facts, which appear to have been submerged under an ocean of verbal brash and asinine drivel, so that justice may be meted out to the wealth producers of the Nation, who have been robbed, exploited, and persecuted by the criminal machinations of the plunderbund in this country, which seems to have gripped the Government by the throat and is striving desperately to shake tribute from an already overburdened people. Be it further

Resolved, That in view of the evidence at hand of double-dealing, alleged prostitution of the legislative halls, and some of those who have been clothed with the toga of authority, that we call upon the 90,000,000 of Americans, regardless of creed, color, or nationality, to arise and cooperate in this protest against the onward march of the plunderbund, and that we request the President of these United States to maintain his usual composure and not to become unnecessarily excited over the reports which have been sent out by the minions of greed who have sucked the very blood of the Nation in order that the goal that they are striving to reach may be attained through misrepresentation. Be it further

Resolved, That in view of the fact that the sick man of the railroads in this country, the Erie, which has been hobbling on crutches for the past quarter of a century, issued orders some time ago that a reduction of 5 per cent in freight rates had been decided upon, but was forced to countermand the order and recall the announcement slips when the plunderbund got after it, we are of the opinion that this company joining in the request for the privilege of advancing the rates now is but one of the many instances that can be cited to prove that the clamor raised in behalf of the water-soaked railroads is not sincere, and that to grant the privilege craved for would be to impose hardships upon the people of the country, who have groaned under the weight of imposition too long. Be it further

Resolved, That a copy of these resolutions be sent to the President of the United States and the members of the Interstate Commerce Commission, and that we call upon all the people of the United States who are affected by the freight rates to protest against an increase until such time as it has been shown that the conditions justify an increase. Where greed is king and special privilege the ringmaster it is necessary for the people to speak out in such tones that their plea for justice shall be heard.

OTTO E. MUSSELMAN,
Secretary Scranton Central Labor Union,
911 Ridge Avenue, Scranton, Pa.

—

EASTON, PA., *December 1, 1913.*

LOUIS D. BRANDEIS, Esq.,
Care the Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: In relation to the request of the railroads of the eastern section of our country for authority to increase their freight rates 5 per cent, I beg to submit a few thoughts to yourself as the only medium through which I can reach the Interstate Commerce Commission, before whom the question is now pending.

In the discussion of so important a subject it should be assumed that the great majority of the American people are willing to pay "a fair return for a service rendered"; that is, such rates of freight as, under

proper management, will yield a net average return of 6 per cent upon the money actually invested. But they are not willing to pay stockholders for mismanagement, nor should they be forced to do so by the approval of the Interstate Commerce Commission. For example, they are properly unwilling to pay 6 per cent for the huge sums which the New York, New Haven & Hartford Railroad Co. wasted in a vain attempt to establish a hard and fast monopoly in the transportation business of New England, by means of which it meant to take from its patrons, through increased rates, the money required to recoup itself, and more. The balance sheet of this company showed June 30, 1903, about seventy millions of capital stock outstanding and fourteen millions of funded debt; while 10 years later there was one hundred and fifty-seven millions of capital stock outstanding and two hundred and forty-two millions of funded debt, besides $34,000,000 of floating debt.

Of course a part of this fivefold increase in capitalization is accounted for by mergers with companies formerly controlled, but after making proper allowance for this factor there is still at least $250,000,000 of increase.

The inner history of the New York, Westchester & Boston Railroad purchase, coupled with its trolley deals, helps to explain this vast increase.

This is merely touching upon the kind of railway management which railway patrons should not be forced, by increase of rates, to provide for. The facts in this case are accessible to all and are characteristic of all railroads that have become attached to the "stock ticker." Another instance of railway financing which, though older and more brazen in regard to the public, well illustrates the principle of placing burdens which the commission should not uphold by permitting freight rates which will provide for them. When the late Commodore Vanderbilt consolidated the New York Central and Hudson River Railways his first important act was to secure the issue of $44,000,000 of "consolidated certificates"; to be precise, $44,428,330. If the united corporation ever received a dollar for this issue the public were never advised of it. Before the Interstate Commerce Commission authorizes the increased rates asked for it should know all the facts in the case of every petitioning railroad's capitalization.

Another branch of this subject which ought to be gone into thoroughly is whether the simultaneous appearance of so great a number of railroads before the commission with the same identical request does not indicate such concert of action in the step taken to increase freight rates as does itself violate the act of July 2, 1890, and whether the commission may lawfully hear such a request thus made in concert. However this may be, it seems certain that the commission ought, in fairness to the general public, to act upon each individual road's petition separately and not for the whole as a body. That there may be isolated cases of railroads whose condition and the public's need of their service justify an increase is quite likely, but whether the trunk lines now active in demanding an increase are entitled to it is another question, which they should prove affirmatively before obtaining the commission's consent.

Another matter that should be carefully considered before action is taken is this: To grant a 5 per cent increase in freight rates upon interstate transportation in the territory covered by the petition is, in fact, to lay upon the public (those who first pay the bill merely pass it along to the public) a tax of probably $50,000,000 annually, not for the public treasury, but for the sole benefit of those who own railroad stocks. Only absolute necessity can justify such action.

Much is said of late of the necessity of keeping the credit of the railroads at such a point as will enable them to borrow money readily with which to make needed extensions, even implying a duty on the part of the public to pay such rates of freight as will largely provide for extensions from current revenue. If this principle is sanctioned by the commission, there is nothing to prevent the railroads ultimately owning all property because every extension so made would become the basis of fresh demands for increased returns. I submit that too good credit in the hands of unwise managers, as illustrated in the case of the New Haven road, is dangerous to the railroads themselves. An assurance of wise, prudent, and careful management within the pale of law, and always acting within its restraints, is all that is required by railroad managers to obtain adequate money for profitable extensions. Judging the present from the past, I submit that if the statements, unverified, of railway managers, together with the railway bookkeeping in which betterments and expense are hopelessly muddled and sometimes purposely made to support the contentions of the railways, regardless of actualities, are in the pending hearing accepted as facts without the closest scrutiny, the just interests of the public will suffer.

To recur again to the subject of united action on the part of the railways in seeking increase of rates, the question arises, in view of repeated decisions of the Supreme Court of the United States, in substance, that an agreement to fix a uniform selling price upon the part of competing interests was a violation of the Sherman Act, how can the railways lawfully combine to obtain a uniform advance from the Interstate Commerce Commission? the truth being, that first-grade trunk lines now maintain a uniform rate of freight for competitive movements with differentials for roads below the standard. In my view, any road believing existing rates too low may properly ask that it be allowed to increase them, but that all the roads in a given section unite in such action, thus bringing the full influence of the most highly organized industry in the country into action to accomplish their purpose, is itself a violation of the spirit and letter of the law.

In order that I may know that my letter reaches you, may I not ask for an acknowledgment of it?

Yours, very truly,

ALBERT D. COOKE.

—

SYRACUSE, N. Y., *March 23, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We inclose you an editorial taken from one of our daily papers of March 21. If there is any truth in what they are hinting at, there is no use of any firm trying to conduct an honest upright business in this country any more. We would like to hear from you on this subject.

Yours, truly,

T. H. APPLEBY & CO.

EXECUTIVE INTERFERENCE WITH THE INTERSTATE COMMERCE COMMISSION WOULD LEAD TO GRAVE PERILS.

One of the most astounding inferences yet drawn by Washington correspondents relative to the railroad situation before the Interstate Commerce Commission is that President Wilson is conferring with the members of that body with a view of influencing their decision in the application that has been made by the eastern roads for a 5 per cent increase in freight rates.

The Interstate Commerce Commission isn't an executive body. It got its authority for existence from Congress. Its powers are semi-legislative and were conferred by Congress. It can have its powers enlarged or restricted by Congress alone, and can be removed from existence by the legislative branch of the Government. Yet it has quasi-judicial powers. It has much of the sanctity of a court of justice.

The question of an advance in freight rates should be settled without delay. The determination is due the roads, the shippers, and the general public. A grave injustice is being inflicted if the Interstate Commerce Commission is unnecessarily postponing its decision, but a far graver injury will be done if it is disclosed that the President has used the mighty power of his position to affect the decision. Such action would be equivalent to the President conferring with the Chief Justice and associate justices of the Supreme Court relative to a forthcoming opinion in an important case. The decision as to the desirability of the proposed rate increase should be governed wholly by the evidence submitted. Public sentiment is of value only in so far as it may properly reflect the respective advantages or disadvantages, if such there be, to the general public. But no further. Neither should the opinion of the President be permitted to influence the decision any further than that the President can publicly make known his attitude and his preferences in so far as he has studied the situation and is advised. But it must be recognized that the President can not be expected to know and have analyzed the voluminous records and the weighty testimony presented by the railroads in behalf of their position. Therefore the Interstate Commerce Commission should be left free to decide the case as the evidence warrants, whether what is done proves a wise political act or not. Courts should have nothing to do with political sentiment. To judges, possible popularity or unpopularity of their opinions should cut no figure in influencing their determination. Decisions thus warped by public sentiment are what create the discontent that is all too apparent with some of the judiciary.

Any Member of Congress has as much right to confer with members of the Interstate Commerce Commission and attempt to influence their decision in the railroad rate case or any other case before that body as the President would have to do that grievous act.

Executive interference with the commission would mean the eventual overthrow of the commission. The American people's sense of fair play is too much developed to permit one man—the titular head of any political party—to fix its railroad rates. That is what Executive interference in the Interstate Commerce Commission work would mean, stated bluntly, but fairly and justly.

—

NEW YORK, *March 20, 1914.*

DEAR MR. HARLAN: I am a shipper and interested in the forthcoming decision of the Interstate Commerce Commission in regard to an advance in freight rates. I have always understood that, according to law, your decision would be based on the evidence submitted in the case. But the inclosed clipping from the New York Evening Mail says that President Wilson will dictate decision. If this is so, then the Interstate Commerce Commissioners might as well resign office. What on earth is this country coming to? I am beginning to lose all faith in a republican form of government.

Very truly, yours,

GEORGE L. BABBITT.

BUSINESS DROP FORCES WILSON TO NEW POLICY—FEARING RETALIATION AT POLLS NEXT NOVEMBER, PRESIDENT CHANGES TOWARD INDUSTRIES.

[By telegraph to the Evening Mail.]

WASHINGTON, *March 20.*

President Wilson has at last begun fully to realize the extent of the recession in business and the urgent necessity for some policy other than "watchful waiting" for the return of industrial prosperity.

He is done with "niggardly nagging," it is said, and will now endeavor to help matters along so that a Democratic majority may be returned to Congress at the November elections.

Not until recently have Democratic Congressmen dared to tell the President their dread of the fall election, and to urge him to give business a chance to revive. Moreover, those from whom he has been willing to accept suggestions are from the South—a section of the country that does not represent the manufacturing and financial interests. It does not, therefore, reflect the acute situation that actually exists.

REPORTS MAKE IMPRESSION.

Latterly, however, the President has been hearing from the industrial centers of the North, and the reports he has heard have made an impression on him.

He is now anxious to do something to turn the tide—to restore confidence.

The freight-rate decision will be one evidence of his changed attitude.

Frankly, the President will dictate the decision of the Interstate Commerce Commission in this matter.

That is to say, he will see to it that the railroads get at least a fairly satisfactory advance—the commission can make it as much better as they see fit. The minimum, however, will be fixed by Mr. Wilson.

DRAWS ITS TEETH.

The "teeth" have been drawn from much of the proposed antitrust legislation, too. The "debatable ground" around the Sherman law is to be left as debatable as ever, and interlocking directorates are to continue to interlock without much change.

In brief, President Wilson is beginning to feel that it is good politics to have prosperity prevailing throughout the country, and he is ready to abandon many of his plans in order to create good times.

—

NEW YORK, *March 20, 1914.*

Commissioner PROUTY,
Washington, D. C.

MY DEAR SIR: I wish to call your attention to the inclosed clipping, the same news appearing in every paper, to the effect that President Wilson will dictate your decision in the rate matter. He must have an utter contempt of the Interstate Commerce Commission to usurp their functions and decide the case himself without having heard any of the evidence.

The commissioners might as well resign. Are they puppets and Wilson a dictator? Anyhow, I do not believe that the fair, just, and estimable men that compose the commission should allow this usurpation of their functions to go without a protest.

Yours, very truly,

DONALD E. MARTIN.

BUSINESS DROP FORCES WILSON TO NEW POLICY—FEARING RETALIATION AT POLLS NEXT NOVEMBER. PRESIDENT CHANGES TOWARD INDUSTRIES.

[By telegraph to the Evening Mail.]

WASHINGTON, *March 29.*

President Wilson has at last begun fully to realize the extent of the recession in business and the urgent necessity for some policy other than "watchful waiting" for the return of industrial prosperity.

He is done with "niggardly nagging," it is said, and will now endeavor to help matters along so that a Democratic majority may be returned to Congress at the November elections.

Not until recently have Democratic Congressmen dared to tell the President their dread of the fall election and to urge him to give business a chance to revive. Moreover, those from whom he has been willing to accept suggestions are from the South, a section of the country that does not represent the manufacturing and financial interests. It does not, therefore, reflect the acute situation that actually exists.

REPORTS MAKE IMPRESSION.

Latterly, however, the President has been hearing from the industrial centers of the North, and the reports he has heard have made an impression on him.

He is now anxious to do something to turn the tide—to restore confidence.

The freight-rate decision will be one evidence of his changed attitude.

Frankly, the President will dictate the decision of the Interstate Commerce Commission in this matter.

That is to say, he will see to it that the railroads get at least a fairly satisfactory advance; the commission can make it as much better as they see fit. The minimum, however, will be fixed by Mr. Wilson.

DRAWS ITS TEETH.

The "teeth" have been drawn from much of the proposed antitrust legislation, too. The "debatable ground" around the Sherman law is to be left as debatable as ever, and interlocking directorates are to continue to interlock without much change.

In brief, President Wilson is beginning to feel that it is good politics to have prosperity prevailing throughout the country, and he is ready to abandon many of his plans in order to create good times.

—

FRED R. KLEIBACKER,
803 Publication Building, Pittsburgh, December 20, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: The Union Storage Co., of this city, are one of the oldest—possibly the oldest—of the corporations doing general merchandise storing here. They have buildings at Second and Liberty Avenues, also at Twenty-fifth and Pike Streets. They formerly were lessees of and occupied a third building, at Thirteenth and Pike Streets. This latter location was abandoned by the Union Storage Co. possibly five years ago. The site is now occupied by the Consolidated Storage Co., also a public warehouse.

The Pennsylvania Lines always store uncalled-for freight with the Union Storage Co. Even after I, for one, have written and also spoken to them protesting against the unfair practices of this storage concern, they have persisted in ignoring all other warehouses. Once, answering a protest relative to goods sent from their platform at Eleventh Street and Pike, they gave as reason for their selection of the Union Storage Co. at Twenty-fifth and Pike Streets, 12 blocks beyond the Consolidated Storage Co.'s warehouse, that the Twenty-fifth Street warehouse is more nearly in the (geographical?) center of the town. Possibly so, but that location would generally be regarded as beyond the outskirts of the business section. And, further, this "advantage" did not seem to appeal to them when the Union occupied the Thirteenth Street site, for my impression is that then "everything" went to Thirteenth Street store, only 2 blocks from the railroad terminal, at Eleventh Street, instead of 14, to the Twenty-fifth Street location. Naturally the real expense of carting goods from Eleventh Street to Twenty-fifth Street is greater than the cost of hauling from Eleventh Street to Thirteenth Street.

In addition to this, the Union Storage Co. raise their tariff where goods are stored by the railroad company, and have in the past ignored personal appeals for fair treatment, which, in my opinion, would consist of assessment at their own published rates.

These facts have been put before the railroad company, but they were not moved. So set upon storing only with the Union Storage Co., in fact, have they been, as to cause one to wonder if any of the railroad officials are pecuniarly interested in increasing this storage company's revenues.

On November 28, so I was informed by the men on the Eleventh Street platform, Pennsylvania Co., there were sent to storage in the Union Storage Co.'s Twenty-fifth Street warehouse 150 cases 2½-pound California peaches, weighing, according to the warehouse receipt, 61 pounds gross, average. The railroad company usually notifies me that goods must be removed or they will be stored, and while the customary notice was not given in this instance I do not make complaint because of that, for I knew that unless they were being lenient to counterbalance, in a way, their own helplessness and miserable service, at about that time (they being so congested with freight as to render the very worst service I have ever known in the matter of time in transit, and also inability of consignee to get access to goods after arrival) the goods, according to their rules, were due to be stored.

When I discovered they were stored I called up the Union Storage Co. and asked what rate would apply (their rate on No. 3, average weight about 67 pounds to the case, is 1½ cents for the first month, 1 cent per month thereafter); I was told 1¼ cents. Inquiring why, I was told that they always charge 5 per cent additional on goods stored by the railroad. You will please note the vagaries of their arithmetic—their 5 per cent is somewhat larger than other people's 20 per cent—in fact, just 25 per cent—and I was informed further that $4.57 cartage would be assessed, at the rate of $1 per ton. I called upon minor officials of the Pittsburgh, Fort Wayne & Chicago Railway in an endeavor to have the storage charge adjusted to agree with storage company's published tariffs, and also asked for a fair charge for hauling. These minor officials referred me to the division freight agent, the station agent assuring me vehemently that he was utterly without any concern or interest as to the conduct of the warehouse people with respect to any charges levied.

I then went to the chief clerk of the division freight agent, P. F. W. & C. Ry., Mr. Robb, who, in the spring, after having dismissed a somewhat similar matter, which I thereupon reported to the general freight agent, suggesting in my letter to the general freight agent that it seemed too trivial to bring before your body, adjusted the then trouble fairly and satisfactorily.

Mr. Robb immediately called on the storage people, who agreed to assess the storage at their published rate, but who would not alter the hauling bill. I had told Mr. Robb that I consider 60 cents per ton a fair price for the service performed. The storage company then sent bill at 1¼ cents (Exhibit No. 1). Back I had to go to Mr. Robb for adjustment. I had already emphasized to him the fact that these goods, part of an order shipment, had been released by me through surrender of the indorsed bill of lading and that I had paid freight charges in full. Notwithstanding which the goods were stored in name and for account of Pennsylvania Co., which action appears to me as being confiscatory, and I only finally secured a receipt in my name and title to my property by another call on Mr. Robb, after having received the receipted bill marked Exhibit No. 2, though in remitting I asked for warehouse receipt—Exhibit No. 3.

While this matter was underway I had occasion to store (again due to removal) 100 bags lima beans, weighing approximately 8,000 pounds—a trifle heavier. I merely sent Consolidated Storage Co., a perfectly responsible concern, an order to haul, and they charged $1.50 for drayage (Exhibit No. 4)—about 37½ cents a ton—to their warehouse at Thirteenth Street.

Now, as noted above, I considered the cartage charge to Twenty-fifth Street excessive, and having received an offer for the lot of goods for shipment to an out-of-town place, which would have necessitated hauling back to the station whence they were taken, I asked the teamster I usually employ his price for shipping. The letter of the White Transfer & Storage Co. (Exhibit No. 5) will show their rate for hauling and, in addition, marking and shipping. All Pittsburgh warehouses, so far as I know, charge one-half cent per package for marking and shipping, which allowed, makes a charge for hauling $2.25 as against $4.57 I was compelled to pay before getting title to my own property. Further, before I got the proper warehouse receipt, the party to whom I had sold the goods asked to be permitted to cancel his order, which request being granted, the goods are still unsold—on my hands—all because of the assumption of the transportation company of title to my own property.

Now, you will have observed the tremendous outlay of time and effort necessary to secure such consideration even as was accorded me. Many people are being daily likewise treated, but none of us can really afford to spend the time necessary to an effort to secure consideration. Few care to undergo the humiliation of an appeal to the storage company.

I therefore ask that the railroads entering here be instructed to store uncalled for freight with the nearest responsible warehouse company; that they be compelled to secure for account of consignee the usual hauling and storage charges; and that the warehouse companies be restrained from extorting unfair charges from people whose goods are sent them by railroad companies.

I ask further that the railroad companies be compelled to store goods in name and for account of the legal owner.

The practices complained of above are another factor in the increased cost of living, multiplying unnecessarily as they do the handling charges.

Yours, very truly,

———

NEW YORK, *November 28, 1913.*

Hon. LOUIS D. BRANDEIS,
Counsel to Interstate Commerce Commission.

DEAR SIR: All the evidence of the commission regarding the justification of the proposed increase of rates of 5 per cent on the interstate roads, is, we are informed, to be submitted to you for analysis and other things. In viewing evidence, it is essential that the reviewer should be fully alive to the laws bearing on the matter, and we know that this is no easy matter, as sometimes judges and arbitrators have to study the history of the common law and the statute law for hundreds of years, and also study it in the light of the most enlightened and equitable of commentators. We are not going to give you any evidence under the due form of law, which you would be compelled to reject, because it was not presented in due form before the commission, but we ask you as a favor to read our letter through, as we believe that it will throw a light on this question which will be useful, and which you ought to know before you make your report. And it will be in the line, not of facts, but of the law, bearing upon the subject. Who are the parties interested in this controversy? Why, in the first instance, the railroads and the shippers, and the decision must be perfectly equitable between them. If the railroads, honestly managed, can not carry the freight of shippers at the present rates and get their average prosperity out of industrial conditions, the rates should be raised; but if the necessities of the railroads are caused by corruption and fraud, it would be a shame to make the honest shipper pay for their swindles. This publication has maintained that the railroads are now and have been for years under an organized conspiracy to rob and swindle them. And this conspiracy is the natural result of natural conditions—just the same as if a man is a habitue of a barroom, he is sure to become a drunkard. To-day and for years past, we find that the rich multimillionaires have perfected an institution which is local, but which is able to buy or sell the entire capital stock of any railroad in a single day—and years ago, all the lynx-eyed venal wealth of the world has been focused on this place as being mighty in its power for swindles and corruption. If, by any methods, they could get the inside information of what the conditions of the railroads were, and still more if they could get the financial power of the acts of these railroads, with the aid of this machinery, there would be no limit to their schemes of aggrandizement. So for years back we have had their dummies put in as railroad officials, and to-day the multimillionaires of corrupt wealth, and the railroad officer and the stock syndicates are practically one and the same thing, either in reality or by affiliation. Have you not read the recent disclosures about the St. Louis & San Francisco matter to show you that this charge we make is well within the facts. This outrage is also in open defiance of the Sherman law, against unreasonable monopolies in restraint of trade. And you must also remember that the New York Stock Exchange has no charter, and is nothing, as far as its organization is concerned, but a lot of private parties, making a monkey out of the railroads of the people of the United States. The money that they rob from the railroads is placed in their concerns to make them still more arrogant and unlawful. But there is a deeper question involved here than the one between the railroads and the shipper—that is the unceasing warfare between virtue and vice. As insiders who have been in personal contact with this place for years, we are willing to take oaths, that the railroads, nor man, nor anything else,

could come under its influence without being ruined. The men who make rotten fortunes there, deserve our sympathy. They were good men once, but the baleful influence of this place, which has secret and powerful agencies all over this country and Europe, is enough to destroy any good thing. It wrecks the railroads and depraves the community, and lures innocent victims into its toils—such as clerks, mechanics, laborers, and farmers—and robs them the same as it does the railroads.

For an illustration of its methods of using the earnings of the roads as a basis for stock deals, take the following:

A road is commencing to pick up in earnings, and the cliques at once get wise; they send out false reports of earnings, and with their control of the road they depress the price and load up with stock, and the country prospers, and huge dividends are paid out and not a cent is laid up for lean years, and the new issues are sold to the predatory bands, for less than they are worth, and the president takes from the road a hundred and fifty million of stolen money, which must leave the road so much the poorer. And then the lean years come and the road is sinking under the effects of the robbery—then these Christian gentlemen put on solemn faces and say we can not run our roads under the present rates, and the shipper is asked to put back the embezzled money, and then the road is ready for some more Wall Street. Mr. Brandeis, you owe it to yourself and to the United States Government to make a protest against these private parties, with their place merely a local institution, allowed to run in this State without a charter, under the mistaken idea that this State will profit by partnership with vice and the fruits of vice. The mere fact that this organized band of plunderers should be able to defy the Government and the people of this country with their rotten money is preposterous.

THE PROGRESSIVE BANNER,
New York City.

—

In the adjustment of freight rates incident to the advance thereof sought by railroads you may and doubtless will find upon investigation that a general advance may not become necessary if the roads are compelled to discontinue discrimination in every particular and confine the rate regulation to a mileage basis and the classification to a kind. To illustrate, stone, sand, cinders, coal, slag, etc., and that character of material are of a kind in respect of the railroad service required—the shipper loads and consignee discharges, weather or temperature fails to affect this material, and loss can occur only by accident, and the wear and tear on car and track equipment is about equal, relative to each of such articles. They enter into interstate relations to some extent, especially in respect of States bordering upon those in which the material is found, and the comparative rates charged is about 25 per cent more for stone than for the others. This does not signify that the stone rate is high, but does signify that a proper reconciliation of such rates would produce a corresponding increased revenue to the railroads and at the same time administer justice to the interests involved.

If such discrimination appears in this class of material, a similar situation may be found in many other like classifications, and the general reformation of such a system ascertained to be more required than a general indiscriminate advance in all rates.

Omit coal from the consideration, and it will be found that not only does a 25 per cent discrimination occur in the rate itself exist in many cases, but, in addition thereto, the railroads give quite an additional service to the favored material. To illustrate, crushed stone and crushed slag are alike in preparation and use; slag may be 20 per cent lighter than stone; hence to carry a given weight of slag, that percentage additional of carroom is required—to wit, 250 tons of crushed stone may be carried in five 100,000 capacity cars, while 250 tons slag may, because of its bulk, require six like cars to carry it, and a like condition may exist in many other commodities. Stone dust is of like characteristics of sand; for stone 20 to 25 per cent more rate is exacted in many instances. Let the sand bear the stone rate. An investigation along such lines may assist to a proper understanding of the entire freight situation.

—

CHICAGO HEIGHTS, ILL., *December 5, 1913.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: The railroads of the United States are clamoring for an advance in freight rates on interstate business, their basis being that present rates are inadequate.

It goes without saying that earnings are expected on water, but in view of the fact that they are asking material increase, it appears to the writer that it would be very pertinent, before this matter is given serious consideration, that the principal railroads be called upon to submit to your organization, and through you to the public, a statement of salaries of $5,000 or higher per year paid officials, and the positions occupied; such a statement would be more interesting reading if it would state the relationship of the understrappers with high salaries to the men higher up.

You will remember Mr. Brandeis statement that the roads are wasting a million dollars daily, and Mr. Mellin's that no man is worth more than $25,000 per year. You will also remember Mr. Yoakum drew $75,000 salary and wrecked the Frisco, with a terrible scandal following.

We respectfully submit the above for your consideration.

Yours, truly,

WOOD, SMITH & CO.,
G. S. SMITH, *President.*

—

BURNETT'S HIDE & FUR HOUSE,
Henry, Nebr., December 18, 1913.

INTERSTATE COMMERCE COMMISSION.
Washington, D. C.

GENTLEMEN: I have read Gov. Cox's views on railroad rates—a plea for permission for increase, etc.

First. I suggest that you grant 2½ per cent increase, but see that every cent goes into betterments and not one cent for exploitation or dividends.

Second. That so soon as physical valuation has reached the stage when you can safely say just what is "water" and just what is "value" that you order a "sinking fund," made out of net earnings, that in life of present generation, say 25 years, will restore this water value to the holder of stock.

If you find it to be one-fourth, or 25 per cent, assess 1 per cent per annum, so that 25 years hence every dollar of railroad stock will represent one dollar of real value, and at once and forever after not permit one dollar of bonded debt created, only upon vouchers showing beyond peradventure that it represents betterments. In short, prepare the way for real, and not false, Government ownership ultimately.

Again, I suggest that salaries be "cut" so that no employee may receive more than $10,000 per annum, not even the president.

The wrong of paying a president $100,000 per annum when the operator, who risks life and limb, gets possibly $200 per month, and years of preparation, does not need discussion.

Again, hit upon a uniform classification, so simple, so plain, that even children can understand, and enforce strict obedience.

Cut off all "free transportation"; cut off all discrimination; lower maximum weights to favor small shippers; fix rates of wages to employees, so that strikes shall become things of the past on railroads, on grounds that the public is the most vitally interested party and a strike means a direct attack upon the authority of the United States Government, and so a dangerous venture; establish rates of increase of wages for years of service, and retirement on part pay at certain ages, say 60 to 65 years.

These suggestions may all be in your mind, but even men charged with great responsibilities like to hear from the common people, of whom the writer is one.

With respect,

J. A. BENT.

—

THE NATIONAL PETROLEUM ASSOCIATION,
Cleveland, Ohio, December 13, 1913.

Hon. LOUIS BRANDEIS,
Attorney Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have not been able to be in attendance upon the hearings in the advance-rate case, except part of one day, although our Mr. Boltz has, and has secured most of the exhibits filed by the carriers.

Mr. Boltz has just received a letter from the Waverly Oil Works Co. which is so pertinent in its suggestions that I am sending you a copy of it herewith. Under the fourth and sixth items of this letter it occurs to me that it is quite important to understand how much the fast-freight lines are subtracting from the revenues of the carriers and to what extent such fast-freight lines are of any value to the shippers. Mr. Boltz will make up a statement showing these fast-freight lines and by what roads operated, if you desire.

On the commercial phase of the question it seems to me that the commission should not be without information as to the cost to the carriers of maintaining commercial agencies in the various cities, which commercial agencies are generally duplicated by similar fast-freight line agencies. As Commissioner Prouty said in the former advance-rate case: "There is no longer any competition in the matter of a railroad rate."

It seems entirely superfluous that a large force of high-salaried officers, with unlimited expense accounts, should be employed by the carriers to secure freight which must inevitably go by some of the stronger routes, and that such stronger routes will attract the freight in spite of commercial agencies.

To be perfectly plain, they do not need anyone to buy a drink or a theater ticket for the traffic manager or traffic agent of a large shipping concern, whereas the ordinary shipper simply tenders his freight and takes out his bill of lading without any of these accessories. I speak of this that you may suggest that carriers furnish a statement of the cost of operating their so-called commercial agencies and a statement of the amount that is subtracted by the fast-freight lines.

Yours, very truly,

C. D. CHAMBERLIN,
Secretary and General Counsel.

[Inclosure.]

DECEMBER 5, 1913.

Mr. F. W. BOLTZ,
Traffic Manager National Petroleum Association,
Rose Building, Cleveland, Ohio.

DEAR SIR: Yours 3d instant regarding general advance in freight rates. We are certainly sorry to note that Mr. Chamberlin is ill and hope that he will have a prompt recovery.

We believe that the shippers should take the position that there should be no advance whatever in freight rates until the railroads come before the commission with absolutely clean hands.

First. No individual, employee or otherwise, should ride on a pass except when on company business, and then only over the road that employs him.

Second: The private-car grab should be eliminated entirely, and no employee should be granted the use of the private car, except he pays for it just as any other individual.

Third. There should not be any payments whatever made to industrial lines for the furnishing of terminal facilities, such as the Monongahela connecting railroad at Pittsburgh.

Fourth. There should be absolutely no traffic arrangements with bridge companies, tap lines, and other highly profitable subsidiary companies owned and controlled by railroad officials and large stockholders.

Fifth. All construction companies should be absolutely divorced from any connection with the management of the road.

Sixth. Purchase of tap lines, bridges, and other subsidiaries now owned by the inside ring should be forced at a valuation basis on appraisal made by representatives of the Interstate Commerce Commission, and allow nothing for franchise value and valuing all real estate at original cost.

I, of course, understand that there are no adequate laws to force the railroads to the above program, but the Interstate Commerce Commission could readily take the position that until the railroads voluntarily adopt the above program that their hands were not clean and that they had no standing in their demand for a general advance in freight rates.

Yours, very truly,

WAVERLY OIL WORKS CO.,
HARRY H. WILLOCK.

—

LAW OFFICE OF DONNELLY & GLAVIS,
San Francisco, Cal., December 4, 1913.

Hon. LOUIS D. BRANDEIS,
161 Devonshire Street, Boston, Mass.

DEAR MR. BRANDEIS: I notice that you are representing the Interstate Commerce Commission in the matter of the 5 per cent horizontal increase requested by railway carriers, and I inclose a brief memorandum, which I prepared after discussing the matter with Mr. Donnelly, and which sets forth a number of points which might be used as an argument why the present rates should not be increased. I

thought perhaps that one or two of the points mentioned may not have suggested itself to you.

Mr. Donnelly, with whom I am associated in handling interstate-commerce matters, is a lawyer and has had 27 years' experience with various railroads as their interstate-commerce expert and has had a vast amount of information concerning rate questions. It was my intention to have him prepare an exhaustive statement on this subject, but he was unexpectedly called to Arizona and will not return until the latter part of the month.

I intend to be in the East the latter part of this month and nearly all of January and trust I shall have the pleasure of meeting you then.

With kind personal regards, I am,

Sincerely, yours, LOUIS R. GLAVIS.

[Memorandum.]

The following matter is adduced for record in connection with 5 per cent horizontal increase requested by railway carriers, covered by Suspension Docket No. 333, November 4, 1913:

Railroads in the past have benefited by the following:

1. Passes formerly issued to the public to secure business, also to politicians, now absolutely prohibited; hence, handsome increase from passenger earnings from this source. (Estimated 40 per cent.)

2. Rebates prohibited by statutes, thus enabling carriers to refuse to make these concessions from commercial pressure. This, I estimate, was worth one hundred million a year to the carriers.

3. Commission ruling that combination of locals need not be applied where tariffs publish specific through rates, equivalent to allowing roads a 10 per cent increase in rates, based on conservative estimate, as majority of shippers do not get the benefit of combination of locals by informal pleadings.

4. Decision as to railway carriers not being obliged to allow divisions of their earnings to "tap lines." This increases the earnings of railroads in the Middle West particularly.

5. Decision as to terminal allowances for elevator charges and other switching and terminal allowances so tied up by the commission that leaks in revenue from that source stopped.

6. Milling in transit has now been so regulated by the commission that shippers can not take advantage as in the past by being allowed through rates on business which they should not enjoy and by substitution of tonnage in transit.

7. The commerce act, as amended, and rulings of the commission resulted in carrier being able to abrogate contracts which provided free and reduced rates to favored firms, resulting in considerable increase in revenue from that source on most lines.

8. Rulings by the commission made so that properties that were rented at nominal values now bring incomes commensurate with their real values, such as warehouses, etc., located on their rights of way.

9. Tremendous saving by railway carriers, it being unnecessary for the railroads to maintain subsidies for political bureaus and lobbying as in the past.

10. Roads which acquired land grants from Congress have sold them from time to time and put the earnings into dividends instead of physical improvement of properties, which was not intended by the acts of Congress. In other words, the land grants were given with the moral intention that the moneys would be used for building and improving their properties and not to use such earnings for dividends as was done. The public should not be expected to repay such losses. Nor should the railroads be allowed to increase their capitalization to double-track their lines through such territories where the earnings from their land grants have been squandered.

11. A great majority of railroads in the past have received bonus from counties and cities to build and secure their rights of way. They have used such bond aid, or free grants, and in turn recapitalized the same lines and sometimes doubled or trebled the capitalization on lines which were originally bonused by the people. The last four issues of the Hearst's Magazine gives a detailed synopsis of the financing of a great many roads. The December issue notably gives a historical write up of the New Haven matter, which was recently heard before Commissioner Prouty.

12. To offset the above it might be added that the railroads are operating at a greater expense by being obliged to continually defend rates under the statutes before the commission and by the "full-crew" law and other matters in the safety of transportation, which they did not adhere to in the past. However, these additional expenses about offset the amount formerly expended for lobbying and political bureaus.

—

PORT CLINTON, OHIO, *November 26, 1913.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Will you please let me know if a railroad company doing an interstate business has a right to squander their earnings under the interstate-commerce law? I know of a case where the Lake Shore & Michigan Southern Railroad Co. has contracted to pay all the expense of elevating their tracks that will cost something like $1,000,000. The town in question passed an ordinance requiring the Lake Shore & Michigan Southern Railroad Co. to elevate their tracks through the corporation. The law of Ohio says under these conditions the town must pay 35 per cent of the cost of elevating, the railroad company 65 per cent. Notwithstanding this, the railroad company has agreed to pay all of the expense. If you wish, I will send you a copy of the ordinance.

Respectfully, yours, C. K. FREER.

—

LAW OFFICES KANE & RUNK,
Philadelphia, November 25, 1913.

LOUIS B. BRANDEIS, Esq.,
Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have had pleasure and profit from time to time in reading your articles, particularly those that have appeared recently in Harper's Weekly, and I also listened with interest to your address on the Concentration of Credit at the November meeting of the American Academy of Political and Social Science, which was followed by the futile, cuttle-fish tactics of Vanderlip.

It has occurred to me in connection with the application for 5 per cent increase of freight rates that a point might be called to the attention of the commission which would have a good deal of effect in causing the dismissal of this petition.

Little attention is ordinarily given to the steady and enormous increase in the market value of terminal sites, rights of way, and land held out for use by the various large transportation companies. All of this land has an annual unearned increment, the effect of which is to cause an annual increase in the value of the franchises and to afford opportunity for increases in capital stock.

In comparing gross earnings with operating expenses, the effect of this unearned increment does not fully or clearly appear, large tracts of land providing no present source of income.

There is also, so far as certain of these roads are concerned, the holding out of use of enormous deposits of coal and iron with a steady increasing yearly value.

Of course all this may be a part of your defense, but I thought I would take the liberty of calling the matter to your attention.

I believe that I am only one of a large number of citizens who heartily appreciate the invaluable services which you have rendered to the community, particularly in connection with the New Haven Railroad, over whose tracks and upon whose boats I have had to travel for over 20 years going to and from Maine.

Yours, very truly,

HENRY JOHNS GIBBONS.

—

CHICAGO, *December 12, 1913.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

MY DEAR SIR: The inclosed has been sent to a number of publications in various parts of the country and has already appeared in the Chicago Tribune. I trust it may prove of interest if not of suggestive value to you and the members of the commission.

Always more strength and power to you.

Very respectfully,

HARRY F. PORTER.

[Inclosure.]

SHALL THE RAILROADS BE ALLOWED TO RAISE RATES?

In regard to the question of raising the railroad rates, there seems to be a widespread and correlated effort to force the Interstate Commerce Commission into acceding to the demands of the railroads. I hope they stand firm and instead force the railroads to adopt a program of economizing along efficiency lines. So far they have shown little disposition to move in this direction, and they won't while there is hope in their minds of being able to bully the Government into approving a horizontal rate raise. First, let them show that they earnestly are seeking to apply the well-known principles of economic management developed by Taylor, Emerson, Gantt, Franklin, and others, and then we will be willing to grant them the right they now would compel—if, indeed, then it is necessary to ask it. I do not think it will be. On the other hand, I think it will eventuate that a decrease then will be in order.

Louis Brandeis, in the famous hearing of the shippers versus the railroads before the Commerce Commission in 1911, produced the testimony through Harrington Emerson that, conservatively speaking, the railroads are losing a million dollars a day through inefficiencies in operation that easily are remediable. This statement was pooh-poohed by the railroad men very generally, and it is still very generally pooh-poohed by them, though no one has come forth with figures to prove the impracticability of Mr. Emerson's statement.

One million dollars a day is indeed conservative. Twice that would still be a moderate estimation of the possible saving. For let us look at these figures. The total expenses of the railroads annually are approximately $2,800,000,000. The genesis of this is as follows:

(1) For all materials and supplies for operation	$600, 000, 000
(2) For total pay roll, about	1, 200, 000, 000
(3) For interest, taxes, and insurance on a valuation of $16,000,000,000	1, 000, 000, 000
Total	2, 800, 000, 000

These are actual. If reasonable standards of efficiency were enforced, the following would be the figures:

Item (1). Efficiency in purchase and use of materials and supplies whenever checked up accurately always has been less than 50 per cent; but assume 70 per cent	$420, 000, 000
Item (2). Efficiency of labor whenever checked up on a large scale as to a whole class has not exceeded 60 per cent; but assume 80 per cent	960, 000, 000
Item (3). By underwriting railroad indebtedness, the interest burden could easily be lowered 1 per cent and the present capital extinguished in 40 years. This the Government could do if it realized its responsibility as well as its power	920, 000, 000
Possible total expense	2, 300, 000, 000
Actual total expense	2, 800, 000, 000
Present annual loss	500, 000, 000
Present daily loss	1, 370, 000

For these figures I am indebted to Harrington Emerson.

When we are able to get at such facts as these, it seems to me that we can afford to stand firm in our refusal to approve an arbitrary increase in rates in spite of the clamors of the railroads and the great, powerful, bulldozing, and blundering financial interests that goad them on. To yield to them under present circumstances would be to delay the crystallization of the efficiency movement in this country a generation or more and to place our stamp of approval on the continuation of a policy which, succinctly stated, amounts to "robbing Peter to pay Paul."

Yours, very truly,

HARRY FRANKLIN PORTER,
5 North Wabash Avenue, Chicago, Ill., Efficiency Engineer.

—

1124 LA CLAIR AVENUE, PITTSBURGH,
Swissvale Station, December 13, 1913.

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Aside from the efforts before your body, railroad men are making a great advertisement to influence public opinion, and through this, manifestly, to exert pressure upon the commission in order to get a favorable decision on the proposed freight increase. In the stations hereabouts the Pennsylvania Railroad has posted printed manifestoes, setting forth what the company is doing for the public and the difficulties under which it labors.

The commission will, of course, decide the case upon its merits, and I would not presume to insult it by offering advice. But when the railroads thus seek to prejudice the case by appealing to the public may not I, as one of that public, be pardoned in making known to you what I believe to be about the average of what the ordinary man thinks on this question? I am not in business of any kind, and have no personal interest whatever in the matter.

Railroad men dwell upon the increase in wages. This is true of train service, but how about clerks, ticket agents, common labor, etc.? Maintenance of way is a huge item, and if I am correctly informed track laborers get about the same as 10 years ago and still have the same hours—11 in summer and 9 in winter.

Further, rates are no higher than those of years ago. But those rates are not a fair criterion. After the era of competition had passed, railroads fixed rates to suit themselves. "We make these rates," was the lofty answer I once got from an official to a civil question about some inequality. Economy also went out of date, there was no need of it. Great sums could be spared for outside enterprises or to buy stocks in other roads. Had the Pennsylvania Railroad kept the money put into New Haven stock there would be better use now for it at home.

Until recently I was for a long period in wholesale business in this city, and I feel safe in saying that in this line net profits on sales during the last six years have been from 20 to 40 per cent less than for any similar period in the past. But I have yet to hear of the jobber who told his sad tale to his customers and for remedy asked them to let him charge higher prices.

Customers! Why, the retail trade is in worse shape now than it has been for 20 years. And the consumer, is he not suffering?

Mr. Chairman, these and many other facts are better known and understood by the commission than by myself. My purpose in citing them is merely, as already intimated, to make known to you the opinion of one of that public to which the railroads are appealing.

Very respectfully,

LEO REED.

—

WASHINGTON, D. C., *December 12, 1913.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: I should like to make an observation in the matter of advances in freight rates in eastern territory that perhaps has not occurred to you. It is that if the roads have any justification for advancing their rates, it applies rather to passenger rates than to freight. The general principle is that every service should bear its own cost, and that extends to fixed charges as well as to operating costs. And yet the railroads, together with the State commissions, keep passenger fares down to such an extent that the passenger operating ratio is almost always greater than the corresponding freight operating ratio; i. e., per cent of expenses to revenues.

A prominent railroad official (L. C. Fritch, chief engineer Chicago Great Western) has estimated that the new Grand Central Station in New York will cost $200,000,000, on which fixed charges, taxes, and depreciation will amount to nearly $20,000,000, with perhaps $3,000,000 operating and maintenance expenses per annum, and assumes that 50 per cent of the entire passenger traffic of the lines using the station accrues on New York city traffic (obviously an overestimate if the station is to be credited with only outbound traffic, or better yet, with one-half of the outbound and inbound traffic combined), amounting to $27,500,000, of which the expenses and charges amount to 80 per cent. The question I raise is, Why should the freight shipper be called on to foot the bill?

Another illustration that he uses is found in the new passenger terminals of the Pennsylvania Railroad in the same city, estimated to have cost $113,000,000 to December 31, 1910, on which the fixed charges, etc., are perhaps $11,300,000, with running expenses of $2,000,000, as against earnings accruing in New York city of about $14,000,000 (30 per cent of Pennsylvania Railroad earnings and 75 per cent of Long Island Railroad earnings), nearly all of which is accordingly dissipated before it reaches the stockholders. This official cites other similar cases, such as the Chicago & North Western passenger terminals in Chicago, whose charges he estimates at 65 per cent of the passenger revenue involved, and the new passenger terminal in Kansas City, some of whose tenants he estimates will pay out more for the terminal charges than they will receive from the resulting traffic.

What about the road expenses attaching to such traffic? Necessarily other passengers not using the terminals mentioned must pay for them or else the freight shipper has to do it. What right has a railroad company to ask that passenger terminal charges be saddled on the freight shipper? Let each man pay as he goes.

Another thing: It is hardly likely that any railroad manager would deny that it costs more in general to earn a dollar of passenger revenue than it does to earn a dollar of freight revenue. And yet they propose to conceal the truth, if possible, by favoring passenger traffic still further at the expense of freight. Rather they should seek to place the burden where it belongs by assigning a fair cost-of-service proportion of all operating and maintenance expenses to passenger traffic by adjustment of fares. It would appear that our railroad managers are afraid to face the music or, rather, the passenger, and tell him what is what. Everybody—call him the ultimate consumer, if you like—is taxed directly or indirectly for freight charges on practically everything in his house or yard, and this applies to most of the food he eats, while but few, comparatively speaking, become passengers. Much could also be said along this line touching on discrimination between the passenger who has no trunk and the one who has, the passenger who rides in a Pullman or on a fast train and the one who rides in a day coach or on a slow train but nevertheless contributes to the luxury of the other, and the passenger who eats in a dining car (and every dining car shows a commissary deficit without taking into account the transportation and maintenance expenses of the car itself, to say nothing of the fixed charges on the investment) and the passenger who carries his own lunch or goes without, who nevertheless contributes a proportion of the cost of the other fellow's meal, the balance, of course, being made up by the freight shipper.

Very truly, yours,

E. S. HOBBS.

—

AVONDALE MILLS,
Birmingham, Ala., December 12, 1913.

Hon. JOHN H. MARBLE,
Interstate Commerce Commission,
Washington, D. C.

MY DEAR SIR: I am mailing you herewith clippings from Birmingham papers being used by the railroads as frame-up evidence before your body, falsely evidencing the demand of the people for freight concessions made by your body.

Am also inclosing you my published reply to same and can assure you that the people who pay the freight have never consented to this increase.

Very truly, yours,

B. B. COMER.

[From the Age-Herald, Friday, Dec. 12, 1913.]

COMER CRITICIZES DIRECTORS' ACTION—SAYS THEY HAD NO RIGHT TO INDORSE RATE INCREASE—TAX ON THE CONSUMER—DECLARES 5 PER CENT INCREASE IN FREIGHT RATES WILL MEAN INCREASED TAX OF $100,000,000 ON PRODUCER AND CONSUMER.

Ex.-Gov. B. B. Comer does not approve of the action of the board of directors of the chamber of commerce in indorsing the petition of the eastern railroads that they be granted an increase of 5 per cent in freight rates. Mr. Comer takes the position that the directors had not the right to indorse this petition.

Following are the governor's remarks:

"For many years I have been a member of the Birmingham Commercial Club, which club was recently merged into the chamber of commerce. Yesterday the directors of the chamber of commerce passed a resolution indorsing the request of the eastern railroads made to the Interstate Commerce Commission to increase their freight rates 5 per cent. The real intent of this whole proposition is that all the railroads are to have a horizontal increased freight rate of 5 per cent.

"The directors of the chamber of commerce in their resolution state that this increased freight charge will enable the railroads to buy more equipment—rails, lumber, crossties, etc.—greatly helping business. Of course! Statisticians estimate that the increase of 5 per cent on freight charges would be an increased tax upon the country of $100,000,000. This $100,000,000 would be levied on the producer and consumer of the country. The directors of the Birmingham Chamber of Commerce would possibly not pay a cent of it.

"EXCEEDED AUTHORITY.

"The directors had no authority whatever to associate the chamber of commerce with this resolution. The people of Birmingham, of Jefferson County, and of Alabama, are absolutely opposed to it. The directors have as much right to telegraph, in the name of the chamber of commerce and the people of Alabama, to President Wilson to withdraw the currency bill—that it disturbs business; to restore the Aldrich-Smoot tariff bill; that the Underwood-Simmons bill is hurting manufacturing business of every description and disturbing every other business; to repeal the income-tax law—that it's hurting business.

"They have as much right to telegraph President Wilson to declare for the people of the United States that the only legitimate tax that can be levied that will not hurt business is on production and consumption—the one that the farmer pays; that he must stop every agitation; restore the tariff taxes; repeal the income-tax law, because the reduced tariff taxes—all the benefits go to the common people—the producer and consumer, and that the income tax is levied on the prosperity of the country—on the people who are able to pay—and that this crowd must be left alone with their moneys and business, because they help business; that the unrestricted taxes upon the people are all right because they enable the taxer to buy more goods and create more prosperity. To whom?

"TAXES ON SHIPPER.

"The Alabama cotton crop this year was 1,500,000 bales, and will bring $90,000,000. The railroad taxes against the shippers this year will be $40,000,000, or nearly half the cotton crop.

"Is it thoughtful in the directors of our commercial bodies, without even notice or discussion before the members, to petition as the directors the Interstate Commerce Commission to increase the railroad taxes against the farmers 5 per cent? That is just what it means—nothing more."

—

[From the Age-Herald, Thursday, December 11, 1913.]

PETITION OF ROADS OF EAST FOR HIGHER RATES IS INDORSED—RESOLUTION ADOPTED AT MEETING OF DIRECTORS OF THE CHAMBER OF COMMERCE—TO MAKE EFFORT TO GET REGIONAL BANK—IF THERE ARE MORE THAN FOUR, BIRMINGHAM WILL BECOME ACTIVE—TO ASK COMMISSION TO RESCIND RECENT ACTION.

The directors of the chamber of commerce met at 3.30 o'clock yesterday afternoon in the director's room, and among other important things done passed a resolution asking the Interstate Commerce Commission to grant the pending petition of the eastern railroads for an increase in freight rates.

Chairman H. U. Sims, of the finance committee of the chamber, opposed this resolution, offering as a substitute that a special committee be appointed to investigate the matter and make a report on it. Mr. Sims said that he was in sympathy with the railroads, but that he believed the chamber should inquire further into the matter of rates before acting. The resolution was passed by an overwhelming majority, however. The directors also took up the matter of the traveling men's dinner and discussed the pending currency bill, with special attention to the regional banks.

The resolution offered in regard to the railroad rates was submitted by W. W. Crawford. Quite a lively discussion followed. Mr. Sims was practically the only opponent of the resolution.

SIMS EXPLAINS POSITION.

Mr. Sims made the following statement about the matter to an Age-Herald representative last night:

"I thought that the time had come, from the size of Birmingham and the importance of the chamber of commerce, for the chamber to be careful about passing resolutions which we were not in a position to act intelligently upon offhand; that none more than I believed that the railroads have been pressed to extremes and need relief, but that the Interstate Commerce Commission is a court as capable of discerning right and wrong as any court in this country; that for us to assume the position of our impressing of telling them how they ought to decide on a matter which we were not in a position to know definitely ourselves would be a mistake on the part of the chamber. Numerous periodicals have said that the low tariff under the Underwood bill might enable the railroads to buy their raw materials and construction materials and rails so much cheaper that they need not require any increase in rates as yet. I thought that the Interstate Commerce Commission could be relied upon, like any other court, to reach the right decision."

It seemed to be the sense of the directors that if the railroads were allowed to increase rates it would mean that the people who furnish money to the railroads would become more confident and release larger sums, which would enable the roads to close contracts for new rolling

stock and other materials. This would mean much to Birmingham and the Birmingham district, and this, it is thought, was a prime factor in the decision of the directors.

It was suggested at the meeting yesterday afternoon that the chamber of commerce could not go on record as favoring an increase in freight rates for the reason that, through its railroad and transportation committee, it had been attempting to have the rates reduced. M. P. Northington pointed out, however, that this committee had not attempted to have the rates reduced, but had been working to the end of securing rates on an equitable basis with other Southern cities. The resolution, therefore, it was said, is not contrary to the work of the railroad committee, for that committee has not tried to reduce freight rates.

RESOLUTION ADOPTED.

The resolution is as follows:

"Whereas the railroads are the largest employers of labor and the largest purchasers of material in this county; and

"Whereas the price of labor and material has been steadily advancing, and in all apparent probability will continue to advance; and

"Whereas the demands of the public and the necessities of commerce are constantly calling for additional facilities and extensions, as well as the construction of new lines into undeveloped territory; and

"Whereas the margin of profit has been steadily decreasing owing to the causes above enumerated; and

"Whereas the eastern railroads have united in a request for increase in freight rates of 5 per cent; and

"Whereas we believe that this request is reasonable and warranted, and that the granting of the request will greatly revive and stimulate trade and commerce and will at the same time give additional credit to the railroad interests so that they will be able to adequately finance contemplated betterments and extensions: Now, therefore, be it

"*Resolved by the board of directors of the Chamber of Commerce of the city of Birmingham, Ala.*, That we do respectfully petition and recommend to the Interstate Commerce Commission that the pending petition for an increase in railroad freight rates be granted."

The directors decided that in the event the pending currency bill provided for more than four regional banks, Birmingham would make an active effort to secure one of them. If only four are provided for, however, it is very probable that the Birmingham chamber will let the matter rest.

DISCUSS CURRENCY BILL.

President Harding brought up the matter of the currency bill before the directors, giving a résumé of the progress of the bill in Congress, with special reference to the regional bank part of the measure. The members requested that he do this, and after he had done so, a general discussion followed. Col. Tom O. Smith, vice president of the Birmingham Trust & Savings Co., said that his principal reason for desiring the establishment of the regional banks was that it would unlock for general and freer use the reserves now in the Treasury.

After J. D. Moore, W. W. Crawford, Sidney Bowie, Oscar Turner, and others had talked on the matter a motion was made that if more than four regional banks were decided upon, Birmingham should make an active effort to secure one of the banks. Mr. Crawford suggested that a special committee be appointed to take up this matter, and his suggestion was made a part of the motion, and the following committee named: W. H. Kettig, chairman; W. W. Crawford, Col. Tom O. Smith, J. D. Moore, Oscar C. Turner, and W. A. Malone. This committee will immediately begin work on the matter, and if necessary will make a trip to Washington. They will present Birmingham's claim to Congress through the Members of the Alabama delegation, and will also take up the matter with the proper authorities in Washington. Mr. Kettig, who is out of town at present, will return within the next two or three days and his committee will then get busy.

WANT ACTION RESCINDED.

In regard to the recent repeal of the ordinance granting 10 years' exemption from taxes of new industries by the city commission, J. L. Yancey, chairman of the industrial committee of the chamber of commerce, moved that a committee be named to call upon the city commissioners in the near future to ask that the ordinance be restored. It was pointed out by Mr. Yancey that it would not be fair to those industries already here, who had come in under this provision, to remove the exemption ordinance, and also that it would take away a great "talking point" from the chamber of commerce in securing new industries. Sydney J. Bowie was chairman of the committee which was instrumental in the passage of this ordinance, and he will be chairman of the committee to call on the commissioners to ask that it be replaced on the statutes of the city.

A letter was read from the United States Chamber of Commerce asking for a referendum vote of the membership of the local body on the matter of establishing a bureau of foreign and domestic commerce. The directors took action, allowing the matter to be referred to the committee on foreign trade, which is to be named by Mr. Harding within the next few days. If that committee considers it wise, a referendum vote of the entire membership will be taken.

Four new members were added to the chamber of commerce yesterday when the directors elected the following: W. T. Lathm, Victor H. Smith, C. L. Stapleton, and Abe Kaufman. The directors have had several meetings this year, and at each one of them have elected several new members.

EX-GOV. COMER AT CULLMAN—SUMMARY OF HIS LATEST AND STRONGEST SPEECH—FACTS AND FIGURES ABOUT HIS ADMINISTRATION—DEMANDS THAT WE GO FORWARD IN WAR FOR PEOPLE'S CONTROL OF THEIR GOVERNMENT.

The following is a summary of an address delivered by ex-Gov. B. B. Comer at Cullman on Monday, November 10, 1913. It is a restatement of the issues of the campaign and a reannouncement of the policies which he has advocated and the platform on which he has stood and a strong recommendation that everybody should carefully study:

"Let the people—not the railroads—rule. The control of State government by the people rather than control by the Louisville & Nashville Railroad Co.

"Equalize the taxes of the people—also equalize the freight and passenger taxes; that is, railroad rates.

"An administration based upon education and progressive principles. Alabama should not be a laggard in the sisterhood of States. Full and equal protection of all property, individual and corporate, coupled with fair and firm State regulation.

TRUE THEORY OF TAXATION.

"The sole revenue of government is taxation. A Government that protects and educates must be supported. Every good citizen is willing to pay his part, levied on a fair basis. Therefore fairness requires the equalization of taxes and the wise expenditure of money, to the end that all citizens share in the benefits and burdens of government.

"In our business we require that a dollar spent shall secure a dollar in service or in value. The State should be run on this principle.

IF USELESS ABOLISH THEM.

"If during the Comer administration any useless office—whether administrative or judicial—was created, it should be abolished. The same should be done with every office in the State, regardless of when or how created. Not only this, but every officer whether clerk or head of a department, in the State's pay, should do the State's work. No head of a department has the right to use his department or any other department for his private gain—either politically or otherwise. Offices are primarily created to develop and protect the State. When not responsive to this policy they should be abolished.

GO FORWARD WITH EDUCATION.

"No backward step in the encouragement of education and school facilities. Progress means greater State responsibility to schools. The State's best asset is its boys and girls. An adequate State school system is vital.

"Efficient citizenship depends on the equipment which education gives the rising generation.

"Without good roads, the prosperity era on which our farmers have just began to enter will find a limit at no distant day. Every encouragement that the State can give must be freely and persistently offered to all the agencies that are now awake and striving to forward this development.

"Liberality, justice, and gratitude should be continued in the pensions and care of our old soldiers.

"The legislature of 1907–1910 utilized the moneys of the State to develop every facility along the above lines.

APPROPRIATIONS THAT WERE WISE INVESTMENTS.

"There was approximately $7,500,000 more expended during my administration than during any previous administration. Approximately $1,500,000 of this expenditure went as fixed investment, which investments are now the properties of the State, and will show usufruct for all time.

To the Speigner dam and power equipment	$50,000.00
To enlarging and reequipping the cotton mill at Speigners	75,000.00
Balance payment on new wing at Capitol and refitting and furnishing Capitol	100,000.00
Attorneys' fees and expenses of railroad litigation	100,000.00
To aid the rebuilding of agricultural school at Athens, Ala., damaged by storm	6,000.00
To aid the rebuilding of agricultural school at Wetumpka, burned	10,000.00
To the Boys' Industrial School, East Lake	50,000.00
To aid the rebuilding of medical college at Mobile, injured by storm	50,000.00
To aid in building and repairing rural schoolhouses, approximately	195,000.00
Building girls' school dormitories at Montevallo	200,000.00
To waterworks, engineering hall, and agricultural building at Auburn	260,000.00
To repairs and new buildings at the university	400,000.00
	1,496,000.00

The above is permanent investment and well made.

INCREASE IN MAINTENANCE FUNDS.

The legislature also increased the appropriations over any previous administration.

To the insane asylum over any previous administration	$429,509.60
Increased expense to industrial school for white boys at East Lake	50,000.00
Increased amount for keep of old soldiers at Mount Creek	25,000.00
Increased amount paid old soldiers	1,763,621.95
Increased appropriation to medical college at Mobile	20,000.00
Increased appropriation to the university	100,000.00
Increased appropriation to Auburn	56,000.00
Increased appropriation to Montevallo	51,000.00
Increased appropriation to normal schools	95,000.00
Increased appropriation to agricultural schools	72,000.00
Appropriations to county high schools	198,500.00
Appropriations to public schools	2,893,893.52
	5,754,525.07
To this add fixed investment of $1,496,000	1,496,000.00
	7,251,525.07

"The difference between these amounts and the $7,500,000 increased expenditures went in the attempt to secure greater efficiency in the departments, the largest part of which went to the judiciary, medical, and agricultural departments and to the railroad commission.

FALSE REPORTS CORRECTED.

"The report is not correct that the legislature of 1907–1910 exempted cotton mills from taxation; created a horde of offices and made useless expenditures. Neither did it entail heavy debts on the succeeding legislature or administration; neither did it leave unpaid warrants. A report from the joint House and Senate committee of the succeeding legislature, made March 14, 1911, showed a large sum of money on hand, and the records show that it was not necessary to borrow any money until after the end of the fiscal year succeeding my administration.

"If the laws enacted in 1907–1910 were wrong—if the appropriations were useless or excessive, the succeeding legislature had abundant opportunity to correct both and it is not becoming in anyone, posing as the friend of the present administration, to condemn the laws and appropriations made by the legislature of 1907-1910.

"The legislature of 1907–1910 used $7,500,000 in excess of the previous administration, used it in the upbuilding of every department of the State and the lion's share, as it should have done, went to the schools and old soldiers.

"The above outline shows where, either in fixed or continued appropriations, the amounts were invested, and I challenge anyone to show that the State and citizens were not greatly benefited and respectfully ask which office and which appropriation will be repealed?

THE GREAT CORPORATION FUND.

"In 1904 the Louisville & Nashville Railroad used in Alabama elections $142,385.25 to debauch the voters in the endeavor to elect its candidate president of the railroad commission. What did the Louisville & Nashville Railroad want with the Alabama railroad commission?

"In the year 1913, the same railroad company is endeavoring to elect its candidate governor. What does the Louisville & Nashville Railroad Co. want with the governor of Alabama?

"The Louisville & Nashville Railroad is now seeking control of the Alabama Legislature, house and senate. What does it want with the Alabama Legislature?

"The Louisville & Nashville in the past has sought to control every function of our State government, whether administrative, legislative, or judicial; has sought through these sources the trusteeship of the State to develop its properties, uncontrolled or unregulated, free from competition, according to its own methods and with own charges.

AN ERA THAT IS PAST.

"President Wilson, in his New York speech, said that this kind of trusteeship and property development no longer appeals to the people, and Mr. Underwood, in his Birmingham speech, said that this kind of business created a monopoly, and that in our government monopolies of whatever nature must be controlled or regulated.

TREAT ALL ALIKE.

"If the charges of the Louisville & Nashville, the Central and the Western, both as to passenger and freight rates, are not regulated, then the restrictions on the rates of the seven railroads of the State which have been observing the law for six years should be removed and all their original high charges restored. This is common justice, as our laws should carry alike for every property and every interest of the State.

"In plain terms, if the State is to be bossed and controlled by the railroads, it should be by all of them and not by one of them.

WHAT STATUTE RATES SAVED THE PEOPLE.

"The Louisville & Nashville Railroad had the State rates, passenger and freight, in effect for three years. Their own testimony shows that the difference between their rates, passenger and freight, and the State rates, passenger and freight, was about $700,000 per year, or $2,100,000 for three years.

"Their own statement made in the Wall Street Journal, published July 14, 1912, shows that in 1910, the first year the Louisville & Nashville had in the Alabama freight and passenger rates, they earned 17.35 per cent; in 1911, 14.26 per cent; in 1912, 16.04 per cent, and this on par value of stock, which had been watered double, and this in addition to the immense sums spent with the press, with the courts, and lawyers and in other debauchings of the people which had been charged to its expense.

"This $2,100,000 was saved to the Alabama patrons of the Louisville & Nashville Railroad on passenger and freight rates.

"I estimate that this railroad system is one-third of the railroads of the State. All of the roads observed the rates for three years, and for these three years the patrons—that is, passenger and freight—were saved $6,300,000.

NINE MILLIONS SAVED IN ALL.

"More than half the roads have had the rates in for six years—saving to the people an additional $3,000,000, or approximately $9,000,000 in all.

"From this record of saving to the shippers of the State, and which saving the Georgia farmer has had for 32 years, the people will understand why this railroad system seeks through every debauchment of Government to obtain control. They throw every environing influence around our politicians, whether bank president or the citizen, whose vote and influence are for hire, for the purpose of obtaining control. They plead that if they are not allowed to make their own charges against the people of the State they will not continue development, a development which every understanding man knows is made by supertaxing the people of the State to build property with the money of the State, not for the people of the State, but for the owners of the railroad, and in the end this secures to them an additional tax on the people.

"Every influence in Alabama which could be approached has been approached, and we have many instances of press and individuals essaying to be leaders, both in State and national democracy, and yet who are in every act the agents of this company and their allies to do that against the people of Alabama which every attitude of good governments demands should not be done.

TRUE STATESMANSHIP.

"To justly equalize tax assessments and wisely distribute the moneys of the State constitutes statesmanship.

"The $100,000 invested in attorneys' fees and court costs in the railroad litigation has already saved the shippers of the State in passenger and freight charges $9,000,000.

COMPARE FOR YOURSELF.

"Let any shipper compare his freight receipts under the rates on the 110 commodities of common consumption, production, and use—called the Comer rates—for the three years in which they were enforced on the North Carolina & St. Louis, Louisville & Nashville, Western, and Central with the charges to-day on the same commodities as made by the same railroads. Also let any shipper on the seven other railroads, including the Alabama Great Southern, which have been observing the statute rates on the 110 commodities for six years, compare their rates with the rates which were paid before the law went into effect; you will then fully understand the difference the Alabama shipper—and remember always that the farmer pays the freight—has been paying, and is on some of the roads now paying, more than the Georgia farmer has paid for 32 years. Remember again that the seven roads have had the rates in effect for six years and the other systems had the rates in for three years and there was no confiscation or destruction.

TOTAL RAILROAD LEVIES ON THE PEOPLE.

"The total railroad charges against the shippers of the State for the four years of 1907–1910 were $132,294,720.42. The State taxes for the same years were $18,712,745. The railroad taxes against the people of the State were $113,577,972 more than the State taxed its people for their own use and benefit. The State taxes have exact constitutional limitation of 6½ mills, and the law limits the assessment to 60 per cent of value, and this is right, because the people should be protected even against their own assessor and against excessive taxes for their own use.

IS OUR COMMISSION DOING ITS DUTY?

"The State has a railroad commission law, drawn by Mr. Selheimer and passed in 1907–10, made from the laws of the most progressive States for the protection of the shippers and to more fully protect the people the commission was made elective.

"This is the only protection, outside of the legislature, that the people have against this immense sum taxed for freight and passenger carriage. Is the commission discharging its duty? The freight charges against the State last year were $39,900,000, practically half as much as the value of Alabama's cotton crop, and more than double the State taxes for four years.

IS THE COMMISSION HELD CAPTIVE?

"The only defense that Alabama can possibly have against these charges is the execution of the law in the establishment of reasonable freight and passenger rates. Is the commission doing it? Have the railroads captured the commission? If the commission will not act, if Gov. O'Neal will not act, then the only relief is a new administration and a new legislature which will act.

OUR TARIFF VICTORY.

"The National Democratic Party, after a 50-year struggle, has just accomplished a tariff victory; that is, reduced the tariff tax on all ordinary articles of common consumption, production, and use—those things which save most to the common people.

"They reduced the tariff 2 cents per pound on sugar, notwithstanding the people of Louisiana claimed that it would destroy a great property interest engaged in producing sugar.

"They reduced the tariff 8 cents per pound on wool, notwithstanding the sheep growers' protest that it would ruin the industry.

"They largely decreased the tariff on all cotton and woolen goods against the protest of every manufacturer.

"They decreased the tariff on all hardware and on every meat product. They even came to the Birmingham district, at Corey, now Fairfield, and reduced the tariff, even to the free list, on nails and wire goods.

"These things were accomplished in the face of the strongest adverse lobby, a lobby in which it was shown that immense sums of money were used in the debauchery of not only the voter but of the legislators also. The Democratic argument used was that no interest should be allowed to write its own tariff, and to-day the strongest Democratic argument for indorsement by the people is the immense sum saved from these protected industries in their charges against the people.

TAXING WEALTH, NOT POVERTY.

"The Democratic Party went further than that and in the income-tax law declared that taxes or money to run the Government should be levied on incomes and not on consumption—that is, should be levied on the wealth and not the poverty of the country.

"In the reduction of the tariff it has been said a thousand times that on the goods reduced in price by the removing of tariff charges the profit would go to the middle man and not to the consumer—a statement as rotten as ever a demagogue or paid hirely got off.

"The Alabama Congressmen and Senators, all elected as Democrats, are now preening themselves on this great tariff reduction victory, and it is well. The fight was long, hard, and costly, but the value of the victory will be immense.

"All the evidence in this contest showed that no individual or corporation could be trusted to fix their own charges for any service or product; that in the end it would be an excessive tax on the people.

ASKS GOV. O'NEAL TO APPEAL THE STATE'S FREIGHT AND PASSENGER RATES ENJOINED BY JUDGE JONES.

"I call the attention of our National Representatives, just returning home in the full flush of their tariff reduction victory and ready to accomplish the further success of currency reform, to the fact that here at home we have also won a partial victory in our railroad tariff regulation laws. The Federal law requiring three Federal judges instead of one to sit on an injunction case against the State law or against the railroad commission law, has had a most important bearing, as has the impeachment of Judge Archbold, of the Interstate Commerce Court, for liason committed with the Louisville & Nashville Road. The abolition of the Federal Interstate Commerce Court, evidently because of their interference with the Interstate Commerce Commission, and the decision of the Federal Supreme Court in the Minnesota, Missouri, and Arkansas rate cases sustaining the State's control of intrastate rates, has had a most beneficial effect. While the agitation is now on, we trust for a speedy, successful adjustment of our freight and passenger contention, and particularly that all of our roads will speedily recognize the right of the State to control and adjust rates. I will suggest to Gov. O'Neal that since this Supreme Court decision the rate cases in Alabama enjoined by the inferior Federal judge take on a new aspect and a new importance; that while it is true the appeal to the Supreme Court would cost quite a sum of money, yet the suit is so vital, of so much interest—even money—to the people involved that the importance of the appeal would justify and greatly outweigh the expenditure; that every citizen should ask the governor to carry these cases to the Supreme Court.

LOUISVILLE & NASHVILLE CLAIMS.

"The Louisville & Nashville road still insist on the vested right to make their own tariff or taxes against the people—freight and passenger fares—their own way.

"This claim of the Louisville & Nashville road is obsolete, and no longer has place in the Government of a progressive people.

COMPARISONS WITH GEORGIA.

"The Georgia farmer who ships a ton of fertilizer pays an average rate of $1.10 per ton. In Alabama the same service is $1.50 per ton, or 40 cents per ton difference.

"In Georgia a builder pays an average rate of $10 per car on lumber; in Alabama, $50 per car.

"In Georgia the merchant can ship 10 barrels of flour for $1.75; the Alabama merchant pays $2.40.

"A farmer or truck gardener ships 100 pounds of potatoes in Georgia at 9 cents; in Alabama the rate is 21 cents.

"In Georgia a carload of watermelons average distance is $10; in Alabama, $50.

"In Georgia a carload of cottonseed hulls costs $10; in Alabama, $17.50.

"The average difference in the Georgia and Alabama freight rates on the 110 commodities is $1 as compared to $1.40. In other words, the Alabama farmer has to pay $1.40 where the Georgia farmer pays $1.

A GREAT BANKER'S HERESY.

"An eminent banker, who possibly rides on a pass, advises the people to stop agitation for lower passenger and freight charges and allow the railroads to name their own rates; that we will get more railroad buildings, which would increase our population, increase our trade, increase development, and thus greatly benefit the State, and if generally practiced, would not cost very much to any one citizen. He specially names the Louisville & Nashville Railroad, after the judge of the inferior Federal court at Montgomery enjoined the State passenger and freight rate last year, as using $12,000,000 in double-tracking, and also states that they would have built a short line to Mobile if it had not been for the railroad agitation.

GROSS DISCRIMINATIONS.

"The Louisville & Nashville charges out of Birmingham, going toward Nashville, 3 cents per mile, and is contesting a 2½ cent rate. The Louisville & Nashville charges out of Atlanta, going toward Chattanooga and Montgomery, 2 cents per mile, and the Louisville & Nashville charges on the 110 commodities out of Birmingham, toward Montgomery and Nashville, $1.40, where they charge for the same carriage out of Atlanta, going toward Chattanooga and Montgomery, $1. In other words, there is a difference against Alabama of $50 on the $100 in the passenger rate and $40 on the $100 in freight rate.

"It is a strange argument that Georgia is hurt and Alabama benefited by such a discrimination in charges.

"Alabama could take the overcharge and soon build, own, and operate its own railroads. Such arguments as this belong to the out-of-date class, and there is not a banker, business man, or paper in Georgia who would advocate permitting the Louisville & Nashville or any other road to change the Georgia freight and passenger rates to the higher Alabama rates, claiming that it would aid and develop railroads in Georgia or any other property. Mr. Wilson has well said that this species of trusteeship over the people for the development of personal property no longer appeals to the people.

"All authority agrees that a power to tax is a power to destroy.

THE BANKER'S CLAIM REPUDIATED.

"The people, in two successive elections in the State and one in the Nation, repudiated the destructiveness and untenableness of the claim put forward by the railroads, and I am astonished that it is so gravely set forth by so intelligent an authority as the banker whom I have quoted. This claim is a direct repudiation of every principle of democracy; a direct repudiation of our tariff bills, so hardly won by the Democratic Party at Washington, and properly belongs to the environments of an Aldrich or a Smoot, and I don't know of any State other than Vermont or Utah which would indorse it as a State policy.

STATE AND RAILROAD TAXES COMPARED.

"The State taxes in Alabama are $6,000,000 per year for its own use and benefit, and the railroad taxes $39,000,000 per year for their own use and benefit. Would the same authority allow the State assessor a free hand in naming the taxes, on the general plea that it would greatly increase the State's power to accomplish good for all the citizens—even though it should be applied to the development of schools, increase of pensions, and building of public highways?

OUR WATERWAYS.

"Alabama is rich in waterways. A few days since a great demonstration was made at Tuscaloosa on the arrival of the first steel barge. Many speeches of congratulation were made and future successful river carriage prophesied. I will caution the barge projectors that the Age-Herald, unchallenged, published that the railroads would not allow freight carriage on Alabama waters; that the Louisville & Nashville Railroad in the last few years used $60,000, spent through Capt. Staples, in a single effort to destroy water competition running into the port at Mobile.

RELEASE OUR RIVER HIGHWAYS.

"While, in every sense of the word, this is a reflection on our State and National Government, as no railroad should be allowed to obstruct by any tactics whatever a waterways channel or carriage, I appreciate that with Mobile awakened to its possibilities, and the Panama Canal opened, that these great resources of the State will be of much more use than any new railroad in the State, no matter where built. So I say, as one of the prime platform articles of the future: Release the railroad embargo from our rivers and untie these greatest assets of the State.

A BANKING ILLUSTRATION.

"Recently the banks of Birmingham were in controversy with the banks of Montgomery over a question of exchange. Montgomery had advanced the rate from one-eighth of a cent to one-fourth of a cent, and against this increase the Birmingham banks protested and fought. The Montgomery banks could easily claim that with this additional charge they could better do the business, and while on the subject would it be a very tenable proposition for the First National Bank of Birmingham to ask the right of charging 10 per cent for money instead of 6 per cent on a general proposition that with this increase of interest it could do more business, develop more land, and help in the general upbuilding of the State? Would it be a tenable proposition for the Avondale mills to demand the right to charge one-half cent per yard more for goods on the general claim that it would be able to build more mills, give more people work, etc.? Or still again, how would it appeal to the First National Bank that its State and county taxes should be doubled in order to establish more schools, build more roads, etc., all of which would increase our population, increase our trade development, and greatly benefit the State, and if generally practiced would not cost very much to any one citizen?

"Congress, under the leadership of Wilson, has just demonstrated the absurdity of all such propositions, and for the full protection of the people has written the laws of the land.

ALABAMA AND WASHINGTON.

"Is the Democratic Party at Washington of any different material from the Democratic Party in Alabama? Is the Democratic policy at Washington any different from the Democratic policy in Alabama?

"Over the great Democratic tariff reduction victory at Washington we should shout our vivas.

A REFEREE AND HIS PAPER.

"What sort of a proposition is it to have the would-be Washington sponsor and Alabama referee in national Democracy, with the jingle of the corporation loot in his pockets, fighting the accomplishment of all these things in Alabama?

"What sort of a proposition is it to have a paper that sold its columns to this great corporation to commit libel, whose columns are on the mercenary and not the patriotic side, to be the leader to carry Alabama back into the plunderings of the invisible government?

"Esau sold his birthright for a mess of pottage. The dearest right that Alabama can have is the right to govern our State our own way by our own people and not from the offices of the Louisville & Nashville Railroad at Louisville, Ky.

THE SENATE TO INVESTIGATE.

"Under the resolution of Senator LUKE LEA, the Federal Senate by a viva voce vote instructed the Interstate Commerce Commission to investigate the methods and practices of the Louisville & Nashville Railroad and all of its subsidiary lines and companies. I suppose some Louisville & Nashville improvised decoy duck will say that this will hurt business and stop them from building roads, buying rails, and crossties, etc.

THE REAL RAILROAD WRECKERS.

"Senator LEA said: 'It is fashionable nowadays to accuse those who insist upon railroads obeying the law of impoverishing the widows and orphans whose investments are in railroad securities. The railroad wreckers are those officials of railroads who, blinded by egotism and brief authority, are determined to ruin their railroads in defiance of law and without respect or regard for public opinion.'

THE NEW ENGLAND EXAMPLE.

"He says also that the president of the New York, New Haven & Hartford Railroad, Mellen's management, was directed more toward monopolizing the territory his road served, buying out and ruining competition, and directing legislatures and coercing public officials than in running trains safely, carrying passengers, and transporting freight.

ITS SOUTHERN COUNTERPART.

"He says that 'the Louisville & Nashville Railroad is the New York, New Haven & Hartford Railroad of the South. It's a defiance of public opinion, and an attempt to control government by directing legislatures and coercing public officials; that they continue to oppose giving their patrons the benefit of a 2½-cent fare when other railroads in Tennessee and adjoining States are making money in charging 2 cent and 2½ cent fares; in fighting and defeating just legislation like the employers' liability laws; in crushing out competition, and spending its stockholders' money in campaigns to punish public officials who have done their duty; to employ counsel to invoke the aid of courts.'

VANITY AND EGOTISM.

"He says further: 'Tennessee has always and always will be, not only friendly but cordial to investment in its boundaries when that capital comes to obey and not make its laws. Tennessee needs and will welcome more railroads, provided they will not try to create monopoly, will not tax their patrons sums beyond profitable rates for the purpose of enabling them to maintain a lobby and legislative agents that harm the railroad, and by their work only please the vanity and egotism of those who happen to be their temporary officials. Let every corporation in Tennessee and every corporation that will come to Tennessee remember that they are created by law and are not creators of the law, with powers to coerce the lawmakers and direct the desires of the lawgivers, and there will be no anticorporation fight in Tennessee.'

THE GOVERNMENT CAN STOP IT.

"I recently appealed to the National Government for help to stop this great interstate road from taxing the people of the State, to debauch the voters of Alabama, and to see to it that they quit coercion in the politics of Alabama. There is power in Washington to see that the government of Alabama is left to the people of Alabama, and that the railroads shall be restricted to the running of their railroad. All railroads or any other interests should be run under the protection and control of the Government. If I succeed in accomplishing this I have discharged the greatest service that could fall to the lot of a citizen of any State.

FROM FEDERAL COURT TO FEDERAL COURT.

"The tragedy being committed by the Louisville & Nashville Railroad in going around from Federal court to Federal court seeking an injunction against statute rates—passenger and freight—of Alabama can be equaled only by the red-headed peckerwood as he flies from tree to tree sounding for some rottenness in which to get a worm.

"The late decisions of the Federal judges and our Federal Supreme Court indicate that the people's rights—State's rights—are again above the horizon, and we trust that the future will always insure this foundation to safe, good government.

AVOID DELILAH'S LAP.

"In thanking Senator LEA and the Federal Senate for this reply to my appeal to the Federal authorities, God grant the Interstate Commerce Commission success in putting a stop to the most unrighteous interference with our State government. To the people of Alabama I declare again and again that my position in politics is to hurt nothing, but to build up everything; but again and again I caution them to remember the story of Samson and not go to sleep in Delilah's lap. You will be delivered to the Philistines, your eyes put out, and you be made to grind and grind and grind."

CHICAGO, *December 19, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In the matter of the advance of rates by the railroads, now under investigation by your commission, we desire to submit the following for your consideration:

Following the formal denial of an application by the railways for an advance in rates, the railroads leading out of this city lengthened their schedule of time to the north, northwest, and western tributary markets from this city. For instance, the schedule of time from Chicago to Omaha and St. Paul had been for many years a second-morning delivery. This was lengthened to such an extent as to make it a third-morning delivery.

As this was practically prohibitive for the interchange of business on perishable commodities, the members of this trade entered a protest, assuming that the action was a retaliatory measure. It was claimed by the railroads, however, that it was a forced action by reason of the necessity of economy, and our protest was overruled and the slower schedule maintained.

The result has been that it has practically destroyed this branch of commerce on perishable commodities, such as fruits and vegetables.

The old schedule of time with the present standard equipment of refrigerator-car service was eminently satisfactory to the trade and

allowed a distribution from an oversupplied market and a relief of scarcity and higher values in the other markets and territory tributary to it. This valuable assistance to commerce and aid to both the producer and consumer has been practically destroyed in the territory affected by this lengthened schedule.

Regardless of the cause of this action by the railroads, whether retaliatory or for economy, we submit the contention that it is entirely out of harmony with progress of the times. It is progressing backward. It creates a precedent, the serious effects of which would be enormous if followed in sequence. We claim it is un-American, out of sympathy with the progress of this Nation, and detrimental to the interests of the public at large and even to the best interests of the railroads themselves.

Irrespective of whether, in the wisdom of your honorable body, the advance in rates should be denied or granted, we ask that this particular schedule and service above referred to be changed to conform to the old and satisfactory one used, becoming mandatory in the event of the advanced rates being granted.

May we ask your earnest consideration of the above?

Respectfully, yours,

THE CHICAGO BRANCH OF THE NATIONAL LEAGUE OF COMMISSION MERCHANTS OF THE UNITED STATES,
By RICHARD J. COYNE, *President.*
P. D. KONOLD, *Secretary.*
F. E. WAGNER,
J. W. SHAFTON,
J. L. OWEN,
Committee on Transportation.

—

J. G. WHITE & CO.,
New York, N. Y., April 24, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: To-day in looking over the annual report of the Deutsche Bank, the largest commercial bank in Germany, with assets exceeding $534,000,000, I noticed two paragraphs which, it seems to me, might be of interest to the members of your honorable body. They are as follows:

"Nearly the whole of the German railways being state property, it is necessary to raise every year, by means of Government loans, sums exceeding $119,000,000 for extensions and improvements. It would be a matter for regret if the development which gives rise to this demand for capital should diminish.

"In the United States of America we find fundamental conditions pointing to a recovery after several years' stagnation in that country's economic development. The political and financial embarrassments in Mexico, however, are checking the upward swing. Besides, American railroads need higher freight rates; their present rates are the lowest in the world—representing, for instance, but a fraction of the English railway rates—and this in face of the fact that wages in the United States on the average are fully twice as high as in Europe. This latter question is one of paramount importance for the economic welfare of the whole country, because the earning power of the gigantic net of American railroads is an essential condition for the possibility of their securing the urgently needed additional capital, whereon in turn depends the prosperity of important industries and the opportunities for the employment of labor."

Very respectfully,

J. G. WHITE.

—

TRENTON, N. J., *January 14, 1914.*

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: In your 5 per cent rate-increase work you doubtless will uncover some very interesting data in the line of influence, or rather control, of interlocking directorates. Let me give you a few suggestions for a line of inquiry: The interests first bought or organized the American Locomotive Co., closing some five plants and operating five, driving from their native cities and towns thousands of workmen to seek work elsewhere, and impoverishing these towns and cities through the loss of these consumers.

The Baldwin Co. were unwilling to sell, so, as a result, competition by Baldwin prevented American Locomotive Co. from earning dividends on their stock, inflated as it was some eight times above its value; so it was necessary to "sandbag" Baldwin financially, and they did it, forcing them to incorporate and divide stock, giving them control.

Please observe gradual but sure advance in cost of locomotives—steam and electric—in the next year or so. The interests now own every plant which manufactures parts for locomotives, and the roads, whether locomotives are needed or not, will buy them by directions of owners—the interests—just as they have been buying rails and cars to keep plants and mills going to earn dividends for themselves. Any railway manager, if he dared to do so, would tell you thousands of tons of rails have been forced on him—rotten ones at that—half worn rails taken up and scrapped to make room for new ones, that mills may be kept running to enhance stock values for speculative purposes. Oil, coal, rails, locomotives, cars, steel castings, with their innumerable parts controlled by them all pay tribute, and the public pays the price necessary to earn dividends on mud and water. In heaven's name how long must this thing go on before the ax falls? Wonder if you are aware that the heads of all these corporations named, also "The Railway Business Men's Association," with its 200 members, are "yapping" for this increase by instructions from their masters, the interests. The above association is composed almost entirely by Wall Street, yet as a rule the average citizen accepts these expressions as pure public sentiment. When everyone is tainted by pure selfishness you must be wise beyond your generation if you can get on all these underground workings. An investigation of the Railway Business Men's Association would develop some interesting information as to ownership and source of funds to carry on their work. Manufacturers' Association would be shaded somewhat by these developments.

Yours, truly,

CHAS. N. JACKSON.

—

SHAPLEIGH, ME., *January 10, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Don't know whether you are tired of public opinion or not, but it is sometimes interesting to get the views of every class of people when dealing with such questions as are before you. A great many in every walk of life are decidedly in favor of higher freight rates. But the writer is inclined to believe that when one comes to thin down this class of persons one finds that many such are holders of railroad stocks or bonds and can not but think of the palmy days when dividends were high, when stock dividends poured out like water, and extra dividends were common Xmas presents. They are told that an increase in freight rates means an increase in the cost of living, but they have decided that any increase in the cost of living will be more than offset by larger dividend returns. What of another class that own neither stocks nor bonds?

The railroads have sowed their wild oats; let them reap them. Better for the common carriers, better for the masses, that they economize for a few years till it becomes a habit. At present the railroad presidents and bank presidents cry, "What is to become of the railroads of this country? Ruin is in the air." They tell how the cost of maintenance eats into dividends, and heartrending reports come from great systems every month. But once an increase in freight rates is granted the net income will leap into new figures as if by magic, and the stock dividends will pour forth once again, and a great stock speculation in railroads will gladden the hearts of Wall Street (the most hounded place in the world, yet perhaps there are some, the hounded ones, there yet who can tell where New Haven's millions vanished).

One notices that the railroads are spending more for maintenance in these days than in the days of 1909–10, when the bull move in railroad was at its height. Then it was to show large net incomes; to-day it is to show poor net incomes to influence public opinion. Wall Street is still the place where many railroad systems begin and end, much as we should like to believe to the contrary. An illustration but recently of this fact: Union Pacific directors declare a stock dividend to the holders of common stock of such a date. Very pleasant for the common-stock holders, but what of the preferred? It is said that the common-stock holders should get something for having their dividend cut. True; but what of the preferred holders who have known for some time that the 10 per cent on the common was of a speculative nature; and chose to take the more sane course and hold the stock on which there was not as great a return as on the other. It would seem that they should have some share in this distribution.

Union Pacific may some day need that surplus that they so gladly give away to-day to keep up 8 per cent on their common stock, as many of the great systems of this country have learned from bitter experience. In times of plenty the writer can not see why a railroad system should give away stock dividends that can some day be needed to pay necessary dividends. Why not treat them like a private corporation? They put their surplus into stock of goods; why not railroads buy equipment or retire some of the high-interest bonds?

The New Haven system is continually crying that the Department of Justice and the public are somewhat too severe on this helpless corporation. The writer does not favor force as a remedy for such ills, but it would be the happiest moment in my life, should I see some of the ones higher up in this system pleading for mercy at the bar of justice, when having disobeyed every law of the State and Nation. True, some of their properties may some day bring more than was paid for them, but most of them never. But this fact stands out above all facts, that a body of men trusted by a community can take the earning of the farmer—the saving of the great middle class—from every section of New England, spend this sacred trust like drunken sailors, and then not even tell the owners of the property what they did with the millions. If the monthly and yearly reports coming from the New Haven for the past 10 years can not put their originators behind steel bars, then open the prison doors that the forger and swindler may go forth. Thus we may treat all alike.

It is said by those advocating freight advance that the laboring man has added very materially to the maintenance cost of the railroads through advanced wages. True. In the years past would it not have been wise to have seen the inevitable coming and granted a slight increase to the men behind the guns or a little Xmas present now and then, instead of showering the gold always on the stockholders? A railroad must be run for the brakeman as well as the millionaire, and one deserves a little of the profits now and then, if they have been faithful, as well as the man with the certificate of stock.

It is said that the mail and the parcel post does not pay enough at present to get a fair profit to the railroads. If such is the case your commission must know from the figures before you whether this contention is true or no.

It is said of the New Haven that they wish to raise freight rates so that their revenue will show a fair return on the outstanding stock. Now the question is, How much bonds and stock ought there to be? not, How much there is; how much is good will? Are the people of New England to pay a dividend of a hundred millions of good will, or the interest charges on bonds issued at outrageous interest? Rather let the New Haven begin at the beginning and pay off some of this "good will" indebtedness, as a private corporation should do under similar circumstances. Why must New England pay freight charges for the next 10 years because New Haven has good will on its books. They (of the New Haven) want the people to buy them a new horse after the old one has been stolen through the trickery of some clever politicians and gamblers and the always-willing consent of the very wise directors.

Very respectfully,

F. W. WARNER, Jr.

—

ELLIOTTSON, PA., *January 7, 1914.*

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: Attached hereto is a clipping from the daily paper. Would you allow me to offer a suggestion for your consideration?

Could your queries of railroad wages not be enlarged to cover the rental of grain elevators, other than terminal elevators, to private parties?

I. Number and location of such warehouses or elevators.

II. The construction cost of the same.

III. The rental for same and per cent on cost, and conditions of lessee's continuance in use thereof.

IV. Number and location of private elevators on ground leased from the railroad and conditions for termination of lease, and rental paid to the railroad for same.

V. State whether the land so leased was included in the chartered right of way obtainable by condemnation proceedings or ground subsequently purchased by the railroad and not strictly in the eye of the law necessary for the transportation business.

VI. State whether any banking facilities were procured for such lessees and their character.

VII. State whether any grounds on original right of way or on land subsequently bought is leased to any manufacturing plant, and the terms of said lease, and conditions for the termination of the same.

I believe that a few inquiries along this line will show wherein the railroads are potent in destroying individual trade and individual initiation in mercantile and manufacturing lines.

Yours, truly,

JAMES ELLIOTT,
Carlisle, Pa.

[Inclosure.]

RAILROAD HEARING TO-DAY—IN REGARD TO COMMERCE COMMISSION'S RATE-INCREASE QUESTIONS.

WASHINGTON, D. C., *January 6.*

Daniel Willard, president of the Baltimore & Ohio Railroad; Frederick A. Delano, president of the Wabash; and other railroad officials will appear before the Interstate Commerce Commission to-morrow in response to the commission's recent order submitting a number of questions to all railroads of the East which have applied for a 5 per cent increase in freight rates. The interests of the Pennsylvania Railroad will be taken care of by George Stuart Patterson, general solicitor for the road.

The series of questions propounded by the commission to the roads include such matters as allowances to terminal railroads owned by industries, free switching, lighterage, loading and unloading freight, free warehousing, reconsignment, especially favorable rates and special train service, milling-in-transit privileges, and questions relating to free passes and free hauling of private cars.

While these questions were directed to the carriers, with a request for responses as soon as possible, the commission set for to-morrow a hearing, at which the railroads will be given an opportunity to make any inquiries of the commission about the information which they have been called upon to furnish. There seems to be confusion in the minds of some of the carriers as to the exact nature of the data which they have been asked to give the commission.

—

BUFFALO, *January 23, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We understand that there will be a hearing in Washington on January 28 with the tile, brick, and clay products items in the list of commodities on which the railroads of the country desire permission to raise their rates approximately 5 per cent. The writer regrets that he will be unable to be present at this hearing and, therefore, trusts he will be allowed to express his views regarding this matter by letter.

The writer has, during the past seven years, been the sales manager of one of the largest face-brick manufacturing companies in the eastern part of the country, and during that time gained considerable knowledge as to the freight rates in effect on brick and clay products as compared with other commodities. Up to the decision rendered in the Stowe-Fuller case, the railroads maintained different rates on common brick, face brick, fire brick, and paving brick. They made the lowest rate on paving blocks because that commodity moved in heavy shipments and sometimes in trainload quantities. After the Stowe-Fuller decision all brick, whether common, face, fire, or paving, were given the same rate and this means that the railroad companies secured a considerable advance in the freight rates because the rate, as a whole, was advanced owing to the fact that the shipments of paving blocks was much heavier than on fire brick; in other words, while the new rate was lower than the rate on fire brick, it was higher than the rate on paving blocks, and, as the paving brick shipments were greatly in excess of fire-brick shipments, the railroads secured a considerable advance in their income.

We can not accept as correct the statement that the railroads are making to the effect that while the prices of labor, etc., are advancing the freight rates have remained stationary. The rates on building brick and clay products are constantly being advanced, the railroads having apparently adopted the policy of advancing a rate on one or two points at a time rather than making a general advance, but the general trend of rates on brick and clay products have been upward for the last four years. It is our belief that the brick manufacturers of the country do not desire the railroads to carry their commodity at rates that are not profitable, but a comparison between the rates charged on brick and other commodities convinces the writer that many other commodities should be brought up to a higher rate before considering any further advance in the tariffs on brick and clay products. In other words, we consider a straight advance of 5 per cent on all commodities as not only unjust but illogical. It is our opinion at the present time that some commodities are being carried by the railroads at a lower freight rate than necessary, while on the other hand, other commodities are paying their full proportion and more.

Brick shipments generally move in carload quantities, in which a minimum carload is large and the product is not easily damaged; it is often subject to delay without any particular damage to the shipper, and there are many other reasons why the present freight rate on brick is not only profitable to the railroads but a class of business that is very desirable for them.

We trust that the commission will scrutinize this request of the railroads very carefully before granting permission to make the advance requested.

Yours, very truly,

BUFFALO BUILDERS SUPPLY CO. (INC.),
EDWIN F. KNIGHT,
Manager Clay Products Department.

—

MANSFIELD CENTER, CONN., *January 22, 1914.*

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: Thanks for classification notice of freight commodities of many kinds, and many different date hearings.

How it must most craze the railroad managers, so to itemize their freight rates and charges. So different from past time—more easy business way. When they could not only make "flat rates" and all the same, for a large variety, but could charge a living profit to meet necessary demands and pay stockholders their dividends. I fear for mine.

Very, truly yours,

CHAS. H. LEARNED.

—

BROOKLYN, N. Y., *January 22, 1914.*

The INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Your notification of January 20 of the hearings which are to be given to protestants against increases in railway freight rates on January 26–March 5, inclusive, is received and duly appreciated.

Presumably this notification results from my communication, with inclosures, of December 15, 1913.

While I am not in a position to represent any of the scheduled industries, I should be very glad to be heard on behalf of the people who eventually buy the product of and support such industries.

As I stated in my letter of December 15, I do not desire to make any charge for the time spent in testifying, but, as the commission represents the people in whose interest I am actuated, I feel that I may properly ask it to defray my necessary expenses in going to Washington for this purpose.

It is probably true that the railroads are operating upon a narrow margin, but it is probably not the less true that the prices which they have been and now are paying for commodities contain large amounts of "velvet" and, also, that equally large inflations exist in the prices which they pay for labor, such, however, being generally injected by the merchandizers who sell to the employees of the railroad, directly or indirectly, rather than by the employees themselves.

If the railroads are permitted to raise their rates it will be the signal for another series of inflations by these and other merchandizers which will more or less affect the entire population and tend to increase the already large amount of ill-gotten gains.

Hence the question has an importance which is not restricted to the railroads themselves. This is one of the few chances which our economic methods afford for the application of governmental control to the current vicious cycle of inflation of the cost of living.

The eyes of thinking men are watching you very closely. If permission to raise these rates be not granted, the merchandizers, after due growling, will accept the prices which the railroads can afford to pay and the mass of the people will be protected against the increase in prices which, otherwise, will be inevitable.

Do not imagine for one moment that commodity prices are merely the sums of the actual costs of production and distribution plus a margin or margins of 10 or 15 per cent per sequential enterprise.

I do not desire that any one should work for nothing. But I insist that the life of the Nation is dependent upon our coming to realize the fact that value is a concrete element, which can and should be accurately measured, rather than guessed at, to put it mildly, by the parties most directly interested in its distortion.

Scientific valuation must come sooner or later.

If the commission will set a date for my testimony in our mutual interest, and will defray the expense of my going to Washington for that purpose (as I have no expectation of any business that will call me there in the near future), I shall be glad to place myself at its command.

Yours, very respectfully,

H. F. STIMPSON.

[Inclosure.]

SCIENTIFIC VALUATION.

[By H. F. Stimpson.]

The sum total of a statement of valuation is important only in so far as it represents the accurate summation of the items involved. Each item is only important in so far as it represents the correct multiplication of numbers of units by unit values. These are purely arithmetical processes and may be performed by any competent clerk. The number of units per item is important only in so far as it represents correct observation and notation. This, also, is an operation which is within the powers of a competent clerk to perform.

The most important factors, however, in such a statement are the unit values. Scrutiny of these is not a matter of mere arithmetical routine, but a matter of determination which requires scientific ability of the highest order. Any error in such determination basically affects all of the subsequent computations and invalidates the total, together with all of the conclusions drawn therefrom.

Yet it is an actual, though amazing, fact which reflects no credit upon our civilization that, up to the present time, the determination of unit values has consisted and now consists of the arbitrary assignment, by "all sorts and conditions of men," of artificial qualities to service and the commodities which it produces, rather than the accurate measurement, by properly qualified scientists, of an essential property which is naturally resident within all service and commodities. As a result we have a constantly increasing turmoil in our commercial and industrial enterprises and a corresponding instability in the "securities" supposed to be based thereupon.

In the days of small communities, when all but a very few of the commodities which were consumed therein were of domestic production, an inflation of values was, obviously, extremely difficult. But in these days, when the production of such commodities is either retired behind factory walls or conducted at a great distance from where most of them are consumed, the opportunities for such inflation by the merchant, be he the salesman of the manufacturer, one of the middlemen, or the retailer, have enormously increased and are being correspondingly utilized.

The writer feels justified in stating, from many years' connection with large industries and several years' careful, dispassionate study of economics, that the prime causes of wage disputes are not to be found in the ranks of the workers themselves but in the merchants who sell to the workers. The margin of the workers is, already, so small that the disturbance reaches the employer almost immediately and the speed with which it reaches him will continually increase instead of decrease, under our present system.

It is a fact, moreover, and one not generally realized, that this constant inflation of values by the merchants not only injures the far outnumbering consumers by constantly decreasing their list of available commodities, but it is beginning to react upon the merchants themselves by narrowing the market for all sorts of merchandise in a cumulative manner that is far worse than any ordinary panic. It must not be forgotten that, according to our present system, the foundation of all business is the supplying of the necessities of life to the lowest stratum of society. Every other business is absolutely dependent thereupon.

There is reason to believe, however, that a substitute for our present arbitrary methods of valuation is available if we will but shake ourselves free from the false precedents which we have suffered to grow up about us and take enough interest in our own welfare to reach out and grasp it. This is the accurate measurement of a common, essential property, naturally resident in all service and commodities above mentioned.

That such a property exists is known to every real engineer. Its name is energy.

Technical authorities on the subject all agree that all of the types of energy of which we now have any knowledge come to us from the sun. Those latent in fuel, moving wind, and falling water are liberated and applied by means of machinery. That latent in food is liberated by means of the stomachs of animals and men and applied by means of their muscular and nervous systems.

Material, broadly speaking, is any portion of the substance of the earth, including vegetation, and may be considered, in this connection, as being inert.

By the application of one or more types of energy, which may be termed service, to material, the latter is grasped, transported, and transformed in such a manner as to fit it for the use of man, when it becomes a commodity.

While service is the vital element of a commodity, all service does not become a part of any commodity. This is seen in the case of the service of a singer, physician, or teacher.

If, however, we consider energy as the common property above referred to, it simplifies the comparison of the value of the direct service of the teacher with the commodity produced by the service of the weaver or the service of the merchant in handling such a commodity.

Exchanges of this or of similar character being necessarily parts of our *daily lives*, the urgent necessity of correct standards for their equitable accomplishment can not be much longer ignored.

Proceeding upon the lines above suggested we shall find our problem comparatively simplified by being reduced to the comparison of different types of energy and, if they originate in a common center, the sun, it may not be unreasonable to infer that these differences are those of volume and intensity, such as we already recognize in those forms of energy known as electric currents.

It would seem essential to the common interest, however, that the efforts toward the discovery of such a common denominator as has been suggested, and the units and method of using it, together with the subsequent duty of certifying to the resultant measurements, should be intrusted to a properly constituted branch of the Federal Government for exactly the same reasons that the duty of coining money is so intrusted.

The determination and certification of values would appear to be the logical complement to the coinage of money.

We condemn any attempt at counterfeiting our coinage and pursue the perpetrators thereof with the direst vengeance. But we merrily countenance a universal counterfeiting of values, or the prices supposedly representing such, and then bewail the results of our ignorance, because we fail to recognize the cause of our troubles.

Every manufacturer, harassed by demands for more wages, and every consumer, harassed by high prices of commodities, should at once urge upon his National Representative the urgent necessity for immediate legislation authorzing the analytical and constructive action which is essential to the discovery and use of scientific methods of valuation.

—

WASHINGTON, PA., *January 21, 1914.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission.

MY DEAR SIR: A little food for thought. I have been a commuter along the lines of the railroads for 24 years. I have purchased my home and raised a family. There is at this time four commuters from my family on the railroads. Now, as to the increase in freight rates asked for by the railroads I would like to make a suggestion. I don't possess ability to operate a railroad, but increase in freight rates while comparatively small mean much to the consumer in the suburbs on the commodities used by them, such as coal, flour, meat, and all necessities of life, not luxuries, and another increase in this line will cause many homes to be vacated and families to return to the cities.

I think a suggestion from the commission of whom you are the head will have great effect with the railroad chiefs. For instance, abolish the ticket offices maintained through the cities at such enormous cost, as 99 $\frac{95}{100}$ per cent of the patrons of the railroads transact their business at the terminal. The rents for above offices mentioned range from $2,000 to $5,000 per year; keep about four clerks in each office, and may sell one ticket a day.

The railroad traffic managers every now and then will show a revised list of offices, and you will see another office opened, creating additional expense; and after doing so the heads of the railroads get together and ask you to increase my freight rate, to drive me from my home after years struggling to get it on the part of myself and family. The day has gone for these offices. Why can't an office be opened at the terminal? The telephones will get you any service you ask for, and the railroad should not be a producer; so why couldn't they do their advertising through the press?

The offices are kept open to satisfy the "whims" of certain officials; not from the amount of revenue they take in, but to keep up with the other fellow. It isn't a business proposition but a get-ahead spirit. The offices in question don't pay for it, but they are now asking you to make me do it, which is beyond any bonds of fairness to make me do it.

I trust your body will make this suggestion to the railroad heads and save thousands of dollars each year for them and let me feel I can remain in the home I have made for myself and family.

Respectfully, JAMES WATSON.

—

PORTLAND, OREG., *January 19, 1914.*

LOUIS BRANDEIS, Esq.,
Care Interstate Commerce Commission, Washington, D. C.

DEAR MR. BRANDEIS: For your information I herewith inclose you an analysis of what might be termed the relation of lumber rates to other commodities, as well as an application of the arguments advanced by the railroads where they measure the cost of carriage against the value of some article in which the rate does not cut anything like so great a figure as it does in other commodities. You will also note that in this analysis of the figures given in the pamphlet referred to, "Are the wages we pay the railroads high enough?" generally speaking l. c. l. rates are used, which necessarily make an entirely different showing than if carload rates were used, whereas Mr. Donaldson in preparing his tables and his comparisons on lumber and shingles was compelled to use carload rates. In other words, if he had used l. c. l. rates on shingles and lumber, the rates are so high, relatively, that the comparison would have been almost absurd in its discriminations against lumber and shingles. Furthermore, Mr. Donaldson used the carload rates on lumber and shingles in his comparisons with the arguments used on other commodities, because he desired to avoid the possible criticism of his rates which would be made if he had used l. c. l. rates, due to the fact that everyone knows that lumber and shingles generally can not move any considerable distance in less than carload lots on account of the excessive freight rates applying on less than carload shipments of these commodities.

It may be that this tabulation by Mr. Donaldson may give you a new viewpoint of this situation, hence I send it to you.

Yours, very truly,

JOSEPH N. TEAL.

[Inclosure.]

ARE THE FREIGHT RATES ON LUMBER AND SHINGLES HIGH ENOUGH?

To members:

While the proposed advance of 5 per cent in all freight rates is limited to eastern territory it will to some extent affect rates from the coast, and it is not improbable, if allowed in the present case, will be followed by application for like advances west of Chicago. Without in any way attempting to prejudge the question, I do feel those interested in the lumber industry should understand the situation as applicable to it. Publicity bureaus have distributed many articles and pamphlets in support of the proposed horizontal 5 per cent advance. You have doubtless seen a copy of the pamphlet entitled "Are the Wages We Pay the Railroads High Enough.' If not, you will find it quoted in A Study in Cypress Rates, issued in the Cypress Association Bulletin of December 17, 1913. This pamphlet is unsigned, but was issued by a publicity bureau in Chicago.

While the burden of defending the lumber and shingle industry against unnecessary advances in rates under the 5 per cent advances so far proposed falls at this time largely upon the eastern manufacturers the Pacific coast shippers of forest products, I think, should interest themselves individually in this matter and prepare themselves to fully understand just what these advances mean. It is important that you give some thought to this freight-rate situation at this time, so that in justice to the railroads as well as yourselves you may form some opinion as to whether the freight rates lumber and forest products are paying are high enough.

Without expressing any opinion as to whether or not the earnings of carriers as a whole are sufficient, I call your attention to several things you should consider in connection with the proposed horizontal advance of 5 per cent in all freight rates.

First. Is a horizontal advance of 5 per cent in all freight rates over all lines of railroads a necessary or proper remedy for the ills of the railroads?

Second. Is it not possible that a part of the railroads deficiencies in earnings may be chargeable to insufficient passenger earnings or very great and undue expense in passenger-train operation?

Third. May not unnecessary duplication of service be responsible for some of carriers' troubles?

Fourth. If some commodities are being transported at unremunerative rates and other commodities are already paying more than a remunerative rate, is it fair to advance all of the rates?

In considering the first question it should be borne in mind that some railroads, even in times of depression, shown earnings that indicate no necessity for increased freight rates, while other railroads operate under such conditions that an advance in all their freight rates would not, on a 5 per cent basis at least, place them in a prosperous condition.

In considering the last question let us refer back to the pamphlet Are the Wages We Pay the Railroads High Enough? The rates used in the pamphlet are apparently mostly less than carload rates. The first illustration shows that the railroads carry one hammer valued at 65 cents 1,000 miles for 1½ cents, or 54 hammers for the price of 1 hammer. Of course, every shingle shipper knows that shingles could not be shipped a thousand miles or any other considerable distance in less than carload lots, because the freight rate is prohibitive. For instance the l. c. l. rate on shingles Portland to Salt Lake City, a distance of about 940 miles, is $1.01 per 100 pounds. One thousand "A" shingles valued at the mill at $1.70 would weigh about 145 pounds and would cost $1.46 to ship to Salt Lake. On this basis the railroads would haul about one and one-eighth thousand for the price of 1,000 shingles. Measured by the mental process applied to the hammers, the railroads charge fifty times as much for hauling shingles as they do for hauling hammers. However, shingles move almost exclusively in carload lots, and while it is unfair to shingles to compare the carload rates with less than carload rates on other commodities the result of such a comparison may prove interesting.

Shingles from a point in Washington or Oregon 1,000 miles from Salt Lake would take a rate of 50 cents, but to make a more than fair comparison we will take the rate from Portland, Oreg., to Salt Lake, which is 47½ cents per 100 pounds (distance, about 940 miles). On this basis the freight charges on 1,000 "A" shingles, weighing 145 pounds, would be 69 cents, and on a valuation of $1.70 at the mill the railroad transports less than 3,000 shingles for the price of 1,000 for a distance of 1,000 miles. Compared with the freight charges and valuations quoted in the pamphlet referred to above on hammers and other articles cited, the charges on 1,000 shingles would appear to be relatively higher than the charges on hammers, etc., as follows:

TABLE NO. 1.

18 times as much as for hammers.
53 times as much as for shoes.
141 times as much as for socks.
73 times as much as for clothes.
37 times as much as for shirts.
33 times as much as for underwear.
10 times as much as for motor cycles.
27 times as much as for harness.
35 times as much as for winter undershirts.
33 times as much as for derby hats.
25 times as much as for hammocks.
222 times as much as for shotguns.
100 times as much as for overcoats.
13 times as much as for coffee pots.
41 times as much as for suspenders.
30 times as much as for umbrellas.
111 times as much as for typewriters.
45 times as much as for hand saws.

21 times as much as for ice skates.
10 times as much as for axes.
18 times as much as for hams.
9 times as much as for garden rakes.
15 times as much as for clothes wringers.
70 times as much as for cigars.
14 times as much as for pianos.
75 times as much as for collars.

Following this same process of rate analysis on fir lumber, we find the situation to be as follows: One thousand feet of fir lumber (common boards), estimated weight, 2,500 pounds; value at mill, $8 per thousand; freight rate to Salt Lake, 37½ cents; figures $9.38 per thousand. If value is a proper measure of a freight rate, the fir-lumber rate to Salt Lake is about 4 times the shingle rate and about 888 times the shotgun rate. It would seem absurd to use such a method in determining the merits of a freight rate, but that is the method used in the publication referred to, which apparently was distributed to educate the public to the necessity for an increase in freight rates.

When one considers the great volume of lumber and shingle tonnage from the Pacific coast, the low value of the commodity, the nonperishable nature of same, that it is not time freight, but is handled at the convenience of the carriers, and the importance to the general public of placing this necessity in the hands of the consumer at the very lowest possible cost, one might reasonably expect the freight rate on forest products to be in all instances one of the lowest rates charged. Following tables indicate that this is not the fact.

TABLE NO. 2.—*Rate for rate comparison of red-cedar shingles with a few of the principal commodities moving from Pacific coast to eastern points.*

Commodity.	From Pacific coast to—	Rate.	Shingle rate excess.
Canned salmon	New York City.	70	
Shingles	do	85	15
Wheat flour	do	70	
Shingles	do	85	15
Rice in packages	do	75	
Shingles	do	85	10

Shingles	do	65	15
Tin scrap	do	50	
Shingles	do	65	15

TABLE NO. 3.—*Comparative statement of carload earnings on various commodities from Pacific coast to various points, Spokane and east.*

Commodity.	From—	To—	Rate.	Minimum weight.	Probable average load.	Earnings per car.	Excess paid on fir lumber.
Fir lumber	Pacific coast.	N.Y.City	$0.75	[1] 45,500	50,000	$375.00	
Rice in packages	do	do	.75	30,000	33,000	247.50	$128.50
Paper, news and wrapping	do	do	.75	40,000	44,000	330.00	45.00
Green coffee	do	do	.80	30,000	33,000	264.00	111.00
Ginger ale	do	do	.85	30,000	33,000	280.50	94.50
Hair, deer, hog, and cattle.	do	do	.85	30,000	33,000	280.50	94.50
Matches	do	do	1.10	24,000	26,400	290.40	84.60
Neatsfoot oil	do	do	.90	24,000	26,400	237.60	137.40
Tea and tea dust	do	do	1.00	30,000	33,000	330.00	45.00
Apples, green	do	do	1.00	30,000	33,000	330.00	45.00
Hops	do	do	1.75	15,000	16,500	288.75	86.25
Fir lumber	do	Chicago, Ill.	55	45,500	50,000	275.00	
Potatoes	do	do	75	30,000	33,000	247.50	27.50
Onions	do	do	75	30,000	33,000	247.50	27.50
Rice in packages	do	do	60	30,000	33,000	198.00	77.00
Sirup	do	do	75	30,000	33,000	247.50	27.50
Crude coconut oil	do	do	50	30,000	33,000	165.00	110.00
Fir lumber	do	Denver, Colo.	40	45,500	50,000	200.00	
Bottles, secondhand	do	do	65	24,000	26,400	171.60	28.40
Excelsior	do	do	65	20,000	22,000	143.00	57.00
Fir lumber	Portland, Oreg.	Spokane, Wash.	20	45,500	50,000	100.00	
Hay	do	do	19½	20,000	22,000	42.35	57.65
Straw	do	do	19½	20,000	22,000	42.35	57.65
Grain, flour, and mill feed.	do	do	17	44,000	40,000	85.00	15.00
Potatoes	do	do	17	30,000	33,000	56.10	43.90
Onions	do	do	17	30,000	33,000	56.10	43.90

[1] Fir lumber takes graduated minimums on different-sized cars. The average minimums on all closed cars is about 45,500. The average load is a little over 50,000 pounds. Minimum shown above on other commodities are actual, and the average load is based on 10 per cent above the minimum. There are no statistics to show the actual average load on these commodities, but a fair assumption is that the actual load will exceed the minimum weight about the same percentage as in the case of lumber, and above figures are based accordingly.

TABLE NO. 3.—*Comparative statement of carload earnings on various commodities from Pacific coast, etc.*—Continued.

Commodity.	From—	To—	Rate.	Minimum weight.	Probable average load.	Earnings per car.	Excess paid on fir lumber.
Brewers' rice grits	do	do	20	30,000	33,000	66.00	34.00
Berry boxes	do	do	30	30,000	33,000	99.00	1.00
Hollow building tile	do	do	20	40,000	44,000	88.00	12.00
Cereals in packages	do	do	25	30,000	33,000	82.50	17.50
Coke	do	do	18	40,000	44,000	79.20	20.80
Cattle, per car	do	do				81.00	19.00
Horses and mules, per car.	do	do				93.00	7.00

The foregoing tables do not pretend to set forth all of the instances where the lumber and shingle rates appear to be, to say the least, high enough. Nor do we undertake to say that the rates on the other commodities are too low. The figures are submitted for what they are worth as indicating that if the carriers must have more revenue they should get it in some other way than by a horizontal increase in all freight rates.

Respectfully submitted.

F. G. DONALDSON,
Traffic Manager West Coast Lumber Manufacturers' Association.

A STUDY IN CYPRESS FREIGHT RATES.

[Chapter 3.]

[From Southern Cypress Bulletin of January 7, 1914.]

In our preceding statements on this subject we have made a point of specifically mentioning the value of the commodity transported compared with cypress lumber, our idea being that value of commodity, preferred equipment, rapidity of movement, and salvage in case of wreck should all be considered in the making of a freight rate. In this present statement, however, we will compare rates alone and leave the other items to your imagination or knowledge, as the case may be.

The statement here given is a comparison of freight rates on competitive building material. It is impossible to give rates on movements in the same direction, and the figures quoted are, therefore, from points of origin of the other building materials to New Orleans and the rates on cypress lumber back to these points, the figures being per hundred pounds.

We find that the rate on brick from St. Louis, Mo., to New Orleans is 15 cents and the rate on cypress lumber from New Orleans to St. Louis is 18 cents.

The rate on building stone, whether in blocks or slabs, from Bedford, Ind., to New Orleans is 20 cents and the rate on cypress lumber from New Orleans to Bedford, Ind., is 24 cents. On building stone from Amherst, Ohio, to New Orleans the rate is 26 cents and on cypress lumber back to Amherst from New Orleans is 29 cents.

The rate on Portland cement from Sandusky, Ohio, to New Orleans, whether in barrels or sacks, is 20½ cents and the rate on cypress lumber from New Orleans to Sandusky is 28 cents. Portland cement from Gary, Ind., to New Orleans takes a rate of 17½ cents, whereas the cypress lumber rate from New Orleans to Gary, Ind., is 24 cents

The rate on structural steel from Pittsburgh to New Orleans is 30 cents and the rate on cypress lumber from New Orleans to Pittsburgh is 31 cents.

The rate on roofing slate from Bangor, Pa., to New Orleans is 32 cents and the rate on cypress lumber (or shingles) from New Orleans to Bangor, Pa., is 35 cents.

Again, we merely quote the bare facts and refrain from comment of our own.

In order to enable our members to discuss intelligently the present great transportation problem of whether or not the railroads shall be permitted to make a blanket advance in freight rates of 5 per cent, our traffic department has prepared the two tables which are shown herewith, the first being a comparison of freight rates and minimum weights of cypress lumber and the other leading commodities shipped in carload lots from New Orleans to various junction and basing points throughout the country. Tariff authority is given for the figures quoted.

In the discussion of the figures here shown we will not go into the question of whether or not the railroads need more money. Neither will we go into a lengthy discussion in an effort to prove that cypress lumber is already paying a proportionately higher transportation tax than other commodities. We merely wish to give a basis of figures for future debate and analysis.

The second table shows two things, the first being the actual freight paid on a car of each commodity to the destination named, and the second being the freight paid on each $100 in value of the commodity shipped. Minimum weights were as hereinafter described and the highest minimums were invariably used. By this we mean that in those cases where the minimum varied from 30,000 pounds to 40,000 pounds, the minimum of 40,000 pounds was used throughout on the commodity named.

Cypress lumber.

The values used for cypress lumber in the second statement were obtained by a comparison of the values of several thousand carloads of cypress. This investigation showed that taking all items which are shipped by rail from the lowest grades, including peck and railroad ties, to the highest grades, some months showed an average value per car of $365 and these values range up to a maximum of $385 per car. Therefore an average value of $375 per car was taken for the basis of these figures and the statement shows in dollars and cents the amount of money per $100 in value (f. o. b. New Orleans) paid for transportation charges to the points named.

In considering this question other things must be taken into account. It is a well-known fact that probably no commodity moving in interstate commerce is handled with as much delay as lumber. Furthermore, no commodity can take such a variety of equipment in such bad order as lumber. After other commodities have had the pick of the equipment, what is left usually goes to lumber, this being especially the case when there is a heavy movement of other freight, lumber being a commodity which moves all the year round. In the case of a wreck there is less loss with lumber than with other commodities, it being possible, in most cases, to transfer the entire contents of a wrecked car into another car with no loss whatever.

Sugar.

In this column of the second table an arbitrary minimum weight of 33,000 pounds was used and a market price f. o. b. New Orleans of $4.35 per 100 pounds was taken as the basis for this calculation. As a great many sales of sugar depend upon the market price at the date delivery is made a rather rapid movement is given to this commodity and the same can be stated with reference to clean rice and coffee, the average movement being several times faster than that of lumber. In the matter of equipment only the best of closed cars can be used and the matter of salvage in the case of wreck is infinitely more serious than where lumber is the commodity transported.

Molasses.

A market price of 12 cents a gallon on heavy molasses, averaging 12 pounds to the gallon f. o. b. New Orleans, and a minimum weight of 40,000 pounds, was assumed in this statement and the same things mentioned with reference to sugar, so far as the rate of transportation and salvage prevail.

Clean rice.

A market price of 6 cents per pound f. o. b. New Orleans and a minimum weight of 40,000 pounds were used in this calculation. Here also the matter of salvage, pick of equipment, and speed of movement must be considered.

Bananas.

An average value of $560 a car f. o. b. New Orleans, and a minimum weight of 20,000 pounds were used in the banana column of the second statement. Bananas are moved in the highest class of special equipment, the shipment being in refrigerator cars. In addition to this a movement equal to express shipments is given this commodity, there probably being no other class of freight which moves more rapidly. A banana train is shoved to destination with the utmost speed, it having right of way over all other freight. Loss and damage must also be taken into account in this comparison.

Coffee.

A market price f. o. b. New Orleans of 9½ cents a pound was used in figuring the coffee column and a minimum weight of 30,000 pounds was the basis. All that has been said with reference to rice and sugar prevails in coffee shipments, so far as rapidity of movement, salvage, and preferred equipment are concerned.

In conclusion.

We admit ignorance as to how freight rates are made, as no one has been able to give any hard and fast rule on this subject except that of charging as much as the commodity will bear. It does seem to us, however, that the question of value should enter into the problem as well as the equipment used, the rate of movement and the liability assumed by the carrier in safely delivering, without loss or damage, a high-priced commodity versus one of low value. These figures are, therefore, given for your study, and we refrain from comment thereon.

A. Total freight paid for minimum carload.
B. Freight paid for each $100 in value of commodity.

ACME CEMENT PLASTER CO.,
St. Louis, January 19, 1914.

Mr. GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As I can not be present to make an oral statement to your commission regarding the increased freight rates in territory east of the Mississippi River, I take this opportunity of making a suggestion to you which I hope will meet with your approval and that is if, after a thorough investigation, it is finally concluded to grant the request of the railroads to increase their rates 5 per cent, if it is possible I would be glad to have you incorporate in that decision the usual form in allowing an increase of rates which is, having the rates maintained for at least a period of two years. The way it is now, before we know anything about it they have had a meeting in Virginia, or in Ohio, or in Chicago, or somewhere else, and changed the classification from a lower to a higher class, or changed the rates on some classification, and the first we know of it is when an E/B comes in to our office with a higher rate charged, and when we commence to look into the matter we find that a tariff has been issued and our name was on the list, but through some "oversight" we are not furnished with a copy. So, if it is finally decided that the commission is going to allow the railroads to increase their rates, there should be two distinct understandings, in my judgment. One is that the rate should not be changed again without your consent for two years, and another is that you make the general claim agents pull their arms out of the pockets of the shipper.

While the railroad president and chairman of the board of directors are making these elaborate "spiels" to your commission their faithful subordinates are systematically withholding from the shippers the money that absolutely belongs to them.

If one of your representatives will call at my office I will give him positive information showing where we have been held out of money for years that belongs to us, and finally after they had thrashed it around from year to year they have taken advantage of the statute of limitation.

Yours, truly,

S. A. WALKER, *Vice President.*

—

JANUARY 16, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: A magazine I take suggests that its readers address you asking that some relief be granted the railroads in this their day of adversity. Well and good, give it to them, but keep a strong string on what you give, for it should not be forgotten that the railroads are just as much on the hog now as they ever were. From the day they built a mile of road for $5,000, and stocked it for $50,000 and bonded it for $50,000, down to the present time, when they quarreled, with four or five thousand cars of lemons annually, over 15 cents per 100 pounds; and after years of litigation defeated at every point, and at a time when Congress took away from the lemon grower two-thirds of his tariff protection and an act of God destroyed two-thirds of his crop—just then the railroads insisted on a further trial in the court of last resort. Yes; the railroads are just as much on the hog as they ever were.

Yours, truly,

B. K. BRANT, *Lemon Grower.*

—

JACKSONVILLE, FLA., *January 15, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.:

At the annual meeting of the National League of Commission Merchants of the United States held at Jacksonville, Fla., January 15, 1914, the following resolution was unanimously adopted:

Resolved, That this national league respectfully desires to submit the following for your consideration: Following the formal denial of an application by the railways for an advance in rates, the railroads leading out of the city of Chicago lengthened their schedule of time to the North, Northwest, and western tributary markets from this city. For instance, the schedule of time from Chicago to Omaha and St. Paul had been for many years a second-morning delivery. This was lengthened to such an extent as to make it a third-morning delivery. As this was practically prohibitive for the interchange of business on perishable commodities, the members of this trade entered a protest, assuming that the action was a retaliatory measure. It was claimed by the railroads, however, that it was a forced action by reason of the necessity of economy, and our protest was overruled and the slower schedule maintained. The result has been that it has practically destroyed this branch of commerce on perishable commodities, such as fruit and vegetables. The old schedule of time, with the present standard equipment of refrigerator-car service, was eminently satisfactory to the trade and allowed a distribution from an oversupplied market and a relief of scarcity and higher values in the other markets and territory tributary to it. This valuable assistance to commerce and aid to both the producer and consumer has been practically destroyed in the territory affected by this lengthened schedule. Regardless of the cause of this action by the railroads, whether retaliatory or for economy, we submit the contention that it is entirely out of harmony with progress of the times; it is progressing backward; it creates a precedent the serious effects of which would be enormous if followed in sequence. We claim it is un-American, out of sympathy with the progress of this Nation, and detrimental to the interests of the public at large and even to the best interests of the railroads themselves. Irrespective of whether in the wisdom of your honorable body the advance in rates should be denied or granted, we ask that this particular schedule and service above referred to be changed to conform to the old and satisfactory one used. May we ask your earnest consideration of the above?

NATIONAL LEAGUE OF COMMISSION MERCHANTS
OF THE UNITED STATES,
J. J. CASTELLINI, *President.*

—

NEW YORK, *January 3, 1914.*

Mr. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington D. C.

DEAR MR. CHAIRMAN: In reference to pending demand for an increase in the freight rate by the railroads I take the liberty as a disinterested citizen to call your attention to the following case:

I received lately through the New York Central two bags of potatoes shipped from New Amsterdam, N. Y., to the nearest depot from me—about 165 miles apart—and for which the freight bill was 29 cents. As they weighed 300 pounds, the express charges were $1.50 for a 3-mile route.

The difference in price of shipping is so great that it appeals to me as the railroads are rather justified or the others are overcharging by the hundredfold.

Respectfully, yours,

C. SAUER.

—

JAMES W. HOUSTON CO.,
Pittsburgh, December 18, 1913.

LOUIS D. BRANDEIS, Esq.,
Boston, Mass.

DEAR SIR: In connection with the endeavor of the railroad companies to obtain an advance in freight rates, I have always been struck with this fact: That in spite of the complaint about the high cost of labor, taxes, etc., there has been no mention of the monopoly price of steel rails or of the cost of lubrication. No doubt this is accounted for by the representation the steel and oil people have on railroad directorates.

Further it might be interesting to the public to learn just what is paid in the way of salaries to the higher officials of the various roads and what actual return the money brings.

Your presentation of the shipper's side of the case in the former controversy was a master stroke, and I trust you will be able to serve the public equally well and successfully in the present instance.

Very respectfully,

JOHN D. HOUSTON.

—

DECEMBER 15, 1913.

Mr. MCGINTY:

This sort of retrenchment will pay for the special cars for Pennsylvania Railroad's president and vice president. They—the cars—are richly, exquisitely furnished, you know.

ANON.

—

RAILROAD REDUCES FORCES.

SHARON, PA., *December 14.*

Many of the Pennsylvania Railroad's small telegraph offices between Erie and Pittsburgh have been closed. Clerks and dispatchers have been given leave of absence. Others have been reduced in salary and even the section hands have been put on half time. Many crews have been dispensed with, and it is said agents and other officials have been given instructions to curtail expenses wherever possible.

—

Mr. GEORGE B. MCGINTY,
Secretary of Interstate Commerce Commission,
Washington:

Mr. Willard and his friends seem to be trying their case in the newspapers.

The cry of inability to do business on the margin of profits made, and the doubt raised as to the willingness of investors to buy railroad notes and securities required for betterments can be met by the statement that economies be instituted which can save "a million a day," according to Mr. Louis D. Brandies, an expert, and an offer of the Government to loan the railroad from time to time such amounts as may be required to keep up actually necessary improvements in equipment and active operations.

Such requirements being subject to the close investigation of a board to consist of one member of your commission, one expert engineer, and a Treasury official, which board will pass upon the requisitions to be made before cash is advanced, at 2 per cent interest.

Meanwhile let the railroads submit present rates that are charged for: Carriage of all food supplies in great volume, coal, oil, etc. A condition may be imposed upon the railroad companies that before such funds are loaned to them an equalization of tariffs shall be made by reducing overcharges and increasing low rates to a fair and equal sum, based partly upon values of goods transported.

For instance, let us suppose coal rates from mines to New England points be (per ton) $2 per ton, say $100 a car (of 50 tons), value $350. Fish, which sells at about $5 per barrel or $50 per ton, on which the freight express charge from Maryland and Virginia to the northern markets averages $20 per ton or $340 a car. Selling value about $600. In one case 30 per cent is exacted, in the other case 60 per cent is exacted. There is no equality shown here.

If fish only cost 30 per cent of value, as carrier's charge, I can show that the average market value in New York City (this year and 1912) was $3.50 a barrel. This would yield the railroad companies and express company participating $1.05 a barrel. A fair rate.

In cost of carriage of potatoes, about 2,000,000 barrels over same route as fish from Maryland and Virginia peninsula, an average of 24 cents per barrel is charged.

Selling value is about $2.50 a barrel; say 10 per cent value for freight. White fish calls for about 60 per cent.

Raising coal rate 33⅓ per cent; raising potato rate 33⅓ per cent; reducing fish rate 60 per cent, would fairly adjust these.

The railroads would get $133.33 per car of 50 tons.

The rate on potatoes would yield the railroads 33⅓ cents a barrel more—8 per cent.

The reduced rate on fish would oblige the railroads to accept 66⅔ cents less a barrel.

This would leave the men who produce, value that much more than now, a total of about $100,000 that goes into the carriers' hands unfairly, and due fishermen, applied to improved methods, increased plant, therefore largely increased output. This surplus would add 300 per cent, one-eighth catch, or 450,000 barrels to carry, where 150,000 barrels now hold.

—

ROCHESTER, MINN., *December 11, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: By press reports the railroads are trying to get increased freight rates which they are entitled to, providing they can show you that they have not received sufficient pay in the past, and you are most likely looking for evidence that if they have done any crooked work you want to know it, and this is what I want to tell you about.

A few years ago, when the old Chicago & Great Western was in the hands of a receiver, they had new railroad ties hauled along the road from Rochester south, as the roadbed and ties were in a rotten condition, and a few days before the road was sold to the Morgan interests some bondholders made a trip over the road inspecting the same, and the day before this trip was made word was passed along

to the section boss that he had to get these ties out of the way, and some farmers got same and what were not hauled away were burned up. Now, if this is of any benefit to you in your battle let me know and I will see the man that told me at the time, and if he repeats the same story I would pave the way for a detective to come here and get the whole facts. But before you would send a man I would want to talk with this farmer, who is an honorable man, but a little of this evidence would go a great way. So if this is of any value to you let me know and I will have another talk with this farmer, and I would report to you just what he said, and then you could act by sending one of your men here and get to the bottom of it.

Yours, respectfully,

JULIUS J. REITER.

—

NEW YORK, *December 17, 1913.*

MR. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Being deeply interested in your work in connection with the railroads of this country, and as an exrailroader of 12 years' practical and theoretical experience, I desire to offer one fact which will put you on the trail of thousands of inefficiently spent or thrown-away dollars of the Pennsylvania Railroad Co. For unsophisticated graft, corruption, and stolen moneys the Pennsylvania Railroad is one of the leaders. Now the experience I wish to explain was during the year 1906. I prepared plans for electrifying a transfer table at Camden shops, Camden, N. J., and desired a 50-horsepower motor, and got permission from our master mechanic, Mr. W. B. Page, to get a price on the electrical requirements, which I did, from the General Electric Co. I desired a 50-horsepower motor, but took a General Electric 52-horsepower motor, 2 circuit-breakers, 1 controller, 1 rheostat, and outboard bearing, and the figure was $527, providing I purchased same for the railroad; but was told by the General Electric engineer, Mr. Kellog, if same were purchased through the railroad purchasing agent it would cost considerably more, as he would have to give him a few dollars. After a vicious argument our master mechanic got permission to purchase, which was against the railroad law to purchase anything but Westinghouse motors, etc. I kept the tool record of the shops, and just a few weeks previous the railroad paid $840 for one 50-horsepower Westinghouse motor. Now you can see the vast amount of stockholders' money that went through another avenue, as the shops are peppered with Westinghouse motors, etc. Useless machines and machinery were bought and kept idle. All kinds of things were made at shops, such as Christmas houses, corner closets, quartered-oak doors, boat furnishings, desks, tinware, picture frames, letterings, good lumber taken away, hardware, paints, small tools, and thousands of other things. This was done by officials as well as the subordinates. The piecework system steals thousands of dollars from the stockholders, as work not done was charged to an unlimited extent. This also shortened the lives of the equipment and placed the public in danger on account of the rolling stock being run in a supposedly repaired condition. Do not forget to investigate the shops and the methods, and don't take the superintendents' statements, as they very seldom see the shops; in fact, hardly know where they are located. Telling the truth while I was with the railroad was equivalent to a discharge. My exposure of the above caused an investigation, and I was not allowed to offer testimony, and the matter was closed with the usual power.

Hoping the above may be of value to you, and wishing you success in filtering the railroads; hoping you won't let up until the guilty ones are where they belong.

Respectfully,

DAVID L. KIRK,
Seventh Avenue and Thirty-sixth Street, New York, N. Y.

—

WASHINGTON, D. C., *December 20, 1913.*

Hon. LOUIS BRANDEIS.

DEAR MR. BRANDEIS: I very much hope that you will not forget to engage the services of Mr. Harrington Emerson, of New York, and of the efficiency engineer, Mr S. B. Fowler, of Boston, to appear at the coming railway hearing and to testify as to the possibility of so improving our transport business as to make any increased tax unnecessary, and, indeed, to make it certain that a reduction of transport taxation is the practical method for increasing transportation revenues. It must be perfectly clear to you that the suffering of the tens of thousands of unemployed in our great cities at this hour is the direct result of the system of railway speculation under which we have so long suffered. You must realize that our present condition is the result of leaving to our railroad corporations the power to at once determine the cost of living and to limit our opportunities for getting a living. We need not, we can not, and I think I am safe in saying we will not, endure any increase of railway taxation at their hands. Your must realize that the distance form of transport taxation that is now being fastened upon us will quickly destroy every manufacturing industry of any account on all our seaboard. It will also destroy the farming interests of the West. I have been astounded to read the Postmaster General's report, with its proposed increase of taxation on second-class matter, and also to discover in his report his evident intent to restore, in its entirety, the old distance form of taxation, which, as to general mail matter, was abolished by Abraham Lincoln and the Congress of 1863. Think for a moment of such a simple system of transport taxation as that which I have suggested, with all transport taxes prepaid at uniform rates, regardless of distance, and as to freight determined only by the size and weight of the parcels handled—this, with passengers and freight, transported from starting point to destination over the lines of lowest grades, least obstructed curves and shortest distance, with a local business handled by automobiles, with the whole machinery run by electricity, with coal transformed into electricity at the mine and carried by cable to its destination. My friend, I must have you with me in this great work. We must save this land of ours from the revolution which is impending and which will certainly come unless you and I and our other friends have the skill and ability and the farsightedness to apply the only practical remedy—the immediate ownership of our business of public transportation and transmission under the Post Office.

What a stupid thing to pay to the managers of two little railways in New England a combined salary of $50,000 a year, when a Goethals is at hand capable of running all of the New England Railways with a salary of $15,000 a year. The running of a railway is an engineering business, and we have Army engineers at hand ready to undertake it.

Competition in railways or competition between railways, steamboats, and steamship lines—one might as well think of competition between the arteries and the veins of the human body. It's cooperation, not competition, that we must have in the different parts which make up the circulating system of the body politic.

Wishing you a merry Christmas.

Sincerely, yours,

JAMES W. COWLES.

—

[Postal Progress, New York, October, 1912.]

THE BOURNE-ZONE PARCEL-POST LAW COSTLY, COMPLICATED, UNINTELLIGIBLE—A DEADLY BLOW AT THE FUNDAMENTAL PRINCIPLE OF THE POST OFFICE—THE QUICK AMENDMENT OF THIS LAW AN ABSOLUTE NECESSITY.

The Bourne law, unless previously amended, will, on January 1, 1913, divide up our Nation wide common market, first into 3,500 basis squares—measured by minutes of latitude and longitude—squares of 30 minutes each side, or, since the minutes of longitude diminish in length from the Equator toward the Poles—averaging according to Senator Bourne 34 7/12 miles long by about 27 miles wide.

Seven concentric "square" zones are to be ranged around these curious primal zones and in addition to these we are to have scores of thousands of local delivery zones giving us a parcel service up to 11 pounds in weight and 72 inches combined length and girth, with rates:

Up to 4 ounces, flat rates everywhere, 1 cent an ounce.

Local free delivery: Within city and free rural-delivery routes, rates up to 24 miles: Over 4 ounces to 1 pound, 5 cents; each additional pound, 1 cent; 1 pound, 5 cents; 2 pounds, 6 cents; 11 pounds, 15 cents.

First zone: The crossing of the 24-mile local limit into the first zone raises the tax on parcels over 1 pound 2 cents a pound, and up to 50 miles, leaves rates: 1 pound, 5 cents; 2 pounds, 8 cents; 11 pounds, 35 cents; 1,333⅓ per cent increased tax for crossing the 24-mile line.

Second zone: The crossing of the 50-mile limit into the second zone raises the tax on all parcels by 1 cent a pound, with rates up to 150 miles: 1 pound, 6 cents; 2 pounds, 10 cents; 11 pounds, 46 cents. An increase of over 30 per cent for crossing the 50-mile line.

Third zone: The crossing of the 150-mile limit, into the third zone adds 1 cent a pound to all parcels, with rates up to 300 miles: 1 pound, 7 cents; 2 pounds, 12 cents; 11 pounds, 57 cents. An increase of over 25 per cent in the tax for crossing the 150-mile line.

Fourth zone: The crossing of the 300-mile limit into the fourth zone adds 1 cent a pound on all parcels, leaving the rates up to 600 miles: 1 pound, 8 cents; 2 pounds, 14 cents; 11 pounds, 68 cents. Over 20 per cent increase for crossing the 300-mile line.

Fifth zone: The crossing of the 600-mile limit into the fifth zone adds yet another cent a pound on all parcels, leaving rates on parcels from 600 to 1,000 miles: 1 pound, 9 cents; 2 pounds, 16 cents; 11 pounds, 79 cents. An increased tax of about 16 per cent for crossing the 600-mile line.

Sixth zone: The crossing of the 1,000-mile line adds 1 cent to pound parcels, and to larger parcels 2 cents a pound, leaving rates for distances of 1,000 to 1,400 miles: 1 pound, 10 cents; 2 pounds, 19 cents; 11 pounds, $1. An addition of 21 cents for transporting an 11-pound packet across a line.

Seventh zone: The crossing of the 1,400-mile line into the seventh zone increases the tax on all parcels by 1 cent a pound, and leaves a system of rates for distances of 1,400 to 1,800 miles: 1 pound, 11 cents; 2 pounds, 21 cents; 11 pounds, $1.11. Only 11 cents added for carrying an 11-pound parcel across the 1,400-mile line.

Eighth zone: The crossing of the 1,800-mile border into the eighth zone adds only 1 cent to the tax on pound parcels, but on larger parcels increases the tax by 2 cents a pound, and the rates of this eighth zone, distances of 1,800 to 3,300 miles within our continental area and including our various possessions up to 4,000 or 5,000 miles, remain uniform as follows: 1 pound, 12 cents; 2 pounds, 24 cents; 11 pounds, $1.32. The increased tax for posting an 11-pound parcel across the 1,800-mile line into the eighth zone is 21 cents.

Under this law domestic parcels posted on our Atlantic border, distances beyond 600 miles, are taxed from 9 to 12 cents a pound, or from 12 to 50 per cent more than the flat rates from Europe throughout the same area under our existing parcel-post conventions.

PROFIT AND LOSS.

All the benefits that may accrue to the public from the increased weight limit and the reduced rates of the Bourne law and a thousand more would have followed the Postal Progress League plan for the consolidation of third and fourth class mail matter with common flat rates: 4 ounces, 1 cent; 8 ounces, 2 cents; 12 ounces, 3 cents; 1 pound, 5 cents; each additional pound, 1 cent; 11 pounds, 15 cents; with insurance up to the full value of the parcel, and this free of the countless evils and the awful wastes of this unhappy measure.

The revival of the old zone system of postal rates 50 years after its abolition by Abraham Lincoln and the Congress of 1863, is to cause, at the outset, a waste of $750,000 appropriated in the Bourne law for the directories, maps, charts, distinctive stamps, etc., required by the Post Office Department for its installment and its use will unquestionably cause an annual waste of many times $750,000 by our 90,000,000 people for every considerable business firm, as well as every post office, will require maps and big side walls for their display (the map illustrating the Bourne scheme at the National Capitol, was full 5 feet wide by 12 feet long), and will also require copies of the directories, explanatory keys, etc., that go with the maps, and to this needless waste will be added the wages of the thousands of extra clerks required for the service.

Twenty seconds, according to Senator Bourne, should be the extreme amount of time consumed in the ascertainment of any rate. We think it will take the country postmaster, and the ordinary citizen, many times 20 seconds to determine the average parcel rate of this scheme.

Under a flat-rate service, all of these wastes of time, money, and labor would be avoided.

That this Bourne scheme was unsatisfactory to Congress, although, perhaps, the best that could be secured against the opposition of the railroads and the express companies, is clearly shown by the provisions in the law itself: First, for the appropriation of $25,000, to cover the expenses of a special congressional committee, who are to report as to the amendment of the law as early as possible, and, second, authorizing the Postmaster General, by and with the advice of the Interstate Commerce Commission, to modify its weights, rates, and zones at their will, and to arrange for a system of insurance and collection on delivery.

TESTIMONY OF INTERSTATE COMMERCE COMMISSION AS TO FLAT EXPRESS RATES, PAGE 480, OF REPORT NO. 4198, 1912.

Speaking with reference to their proposed zone system of express rates, Commissioner Lane says:

"But there is a broader view to take of this matter, one of public policy, and of a wise, far-sighted railroad and express policy. It would

doubtless greatly stimulate express traffic if rates were made on a flat basis per package for a broad sweep of territory, and a low rate for the longer hauls would find its compensating and complementary advantages to the carriers in the greater volume of the business, and the ease and saving in many directions with which it could be conducted. This, however, is a matter as to which we are not free to substitute our own judgment as to policy for that of the carriers themselves. We may not order such an experiment to be made, even if we thought it would in time prove a profitable one to the carriers and gratifying to the public."

POSTMASTER GENERAL HITCHCOCK'S TESTIMONY AS TO A ZONE LAW.

Testifying before the Senate Post Offices and Post Roads Committee in November, 1911, as to an improved parcel service, Postmaster General Hitchcock said that he would have the same rate for a rural Parcel Post as for a general Parcel Post; that if the Government monopolized the business, it would be quite feasible to have a flat rate applicable to the whole country, as in the case of ordinary mail, and, he added, "I believe it would be better for the Government to take over the entire business," and as to Senator BOURNE'S zone proposition he said:

"No matter what zones we might establish, they (the express companies) would be able to fix rates that would give them the short haul in any zone and throw the long haul on the Government. If the (zone) rates were established with that very great nicety that you suggest, it would, of course, render the system extremely complicated and also the accounting extremely complicated. We could never carry out a system so intricate as that, in my judgment, except at a very high rate of cost. We should have 60,000 post offices within the range of that system. When you consider the extent of the country and the vast number of offices, you will find it very complicated. You would have to locate every office, you would have to have a key to assist.

"In many of the cases referred to, they (the postmasters) would have to use a key or map to determine what the rates should be. That would add materially to the expense of conducting the business, and, I think, would necessitate a higher rate than the one you could afford to make under the other (flat rate) system."

These statements apply with yet greater force to the more complicated and far more costly service of the Bourne law, which, in addition to its increased number of zones, fails to provide for the consolidation of the third and fourth classes of all mail matter originally proposed by Mr. Bourne, and seems to provide for a yet more complicated system of classification than that which now exists.

HUGHES'S POSTAL COMMISSION OF 1911 ON ZONE RATES.

"The policy of zone rates was pursued in the earlier history of our post office, and has been given up in favor of a uniform rate in view of the larger interest of the Nation as a whole. It would seem to the commission to be entirely impracticable to establish a system of zone rates for second-class matter." Will it prove any less impracticable for general merchandise?

DISTANCE TARIFFS CHARACTERISTIC OF A DESPOTISM, OUT OF PLACE IN A REPUBLIC.

From the days when the old-time despot first conceded the use of the post office to his subjects, until the days of Rowland Hill, its primary object was taxation, and its rates were always determined by distance, not because distance represented the cost of the service rendered, but because representing the value of the service, the distance system of rates enabled the monarch to tax his subjects all the traffic would bear. As late as 1837, the postal rates of Great Britain varied from 8 cents on a single sheet of writing paper (one-fourth of an ounce), distances up to 15 miles, to 24 cents for 300 miles. The average postage was nearly 18 cents a sheet, and to make the tax as burdensome as possible, long and circuitous mail routes were often preferred to short direct routes—a not very uncommon custom with American railroads seeking large mail pay.

Suddenly, in the year 1837, an English schoolmaster, one Rowland Hill, appeared in the midst of this postal chaos with the astounding announcement that the old zone system of public transport rates was unreasonable, unscientific, and unjust—that in the great majority of cases, the light, short-distance traffic was far more costly than the heavy, long-distance, through traffic—in the case of the short-distance service, London to Louth, some 20 miles, the cost of the conveyance of a letter to the Government, was, indeed, fifty times that of a similar letter in the heavy through traffic London to Edinburgh, 400 miles. This being the common rule it, therefore, followed, said the reformer, that a system of uniform rates, with the lowest existing local rate as the uniform standard rate would be at once practical and the nearest possible approach to justice and right reason, and thus it happened that Mr. Hill suggested to the English people the adoption of a 2-cent, half-ounce, letter post. The question was debated throughout England for two years, and on the 17th of August, 1839, Mr. Hill's project became law, and on the 10th of January, 1840, the penny letter post of England went into operation.

The business soon doubled, trebled, and quadrupled, while the cost of the new, simple service to the Government quickly fell to one-fourth that of the old, complicated, zone system.

At the time of the establishment of the English penny-letter post, we had a five-zone system in this country, with rates on a single sheet of paper—one-fourth of an ounce, up to 30 miles, 6 cents; over 30 to 80 miles, 10 cents; over 80 to 150 miles, 12½ cents; over 150 to 400 miles, 18¾ cents; over 400 miles, 25 cents; on two pieces of paper, double these rates; three pieces, triple these rates; and for every packet of four pieces, or for 1 ounce of other articles, quadruple these rates; or for distances over 400 miles, $1 an ounce.

The publication of Mr. Hill's pamphlet of 1837, advocating the abolition of the English zone system for a uniform penny half-ounce letter post, aroused great interest in favor of the abolition of our zone system, and almost immediately after the inauguration of the English penny-letter post, strong associations were formed in New York and Boston to establish a similar service here. In 1845 the five-zone system was cut down to two, with rates 5 cents one-half ounce up to 300 miles; over 300 miles, 10 cents. In 1851 these rates were reduced to 3 cents one-half ounce up to 3,000 miles; and 6 cents for greater distances. President Lincoln and the Congress of 1863 abolished the zone system altogether.

THE ENGLISH PARCEL POST.

Sir Rowland Hill would have had a flat-rate parcel post accompany his flat-rate penny-letter post, but the opposition of the English railroads postponed its establishment until 1883.

On the 14th of February, 1890, George Findlay, general manager of the London & Northwestern Railway, speaking before the Society of Arts, said of this wonderful service:

"The parcel post, compared with its elder brother, the letter post, is as yet in its infancy, but it has almost at a bound become one of the great institutions of the country, and has clearly justified its inception."

The English colonial parcel post now covers the entire Dominion of Canada, and the greater part of the British Empire with flat rates: 3 pounds, 24 cents; 7 pounds, 48 cents; and 11 pounds, 72 cents.

OUR FLAT-RATE MODERN POST OFFICE.

The creation of Abraham Lincoln and the Congress of 1863, in the extension and development of our modern flat-rate post office, lies the hope of the Republic.

Confined first practically to sealed parcels (letters), at 3 cents per one-half ounce, limited to 3 pounds, this flat-rate postal service has been gradually extended until it covers sealed parcels—either of correspondence, merchandise, or both—at 2 cents an ounce in weights unlimited. For unsealed parcels, magazines, and newspapers (second-class matter) at 1 cent a pound, limited only by the capacity of a railroad car.

Single books, unlimited in weight and parcels of books in weights up to 4 pounds, at 1 cent each 2 ounces, with seeds and bulbs for planting at the same rate.

General merchandise, including seeds, bulbs, etc., for food, in 4-pound parcels, at 1 cent an ounce.

And every advance of this flat-rate postal service has been attended with wonderful benefits to our whole country. If at any time the service has failed to meet its expenses the deficit has been due not to the system of flat rates or even to the low flat rate of the second-class service, but to the waste arising from the complicated system of classification, to the continued use of out-of-date machinery, Noah's arks drawn by half-dead horses, walking postmen burdened like pack mules, to the failure to adopt up-to-date methods of postal management, and to the free use of the mails by the Government.

Twenty-five years ago Postmaster General Vilas stated that the Government ownership of postal cars would save to the post office the value of the cars every year.

Our express companies carry registered magazines and newspapers distances up to a thousand miles or more at a flat rate, 10 pounds for 10 cents; larger parcels at 1 cent a pound; fruits, nuts, and vegetables from California over the greater part of the United States and Canada, 10 pounds for 40 cents. The great part of the through traffic of our railroads is done on a postage-stamp basis.

LONG-DISTANCE TRAFFIC CHEAP; SHORT DISTANCE COSTLY.

The Sixty-second Congress was altogether mistaken in its condemnation of the system of flat rates on the ground that any flat rate that might be adopted would be necessarily so high as to prohibit the short-distance traffic of goods of low value. It is the light local short-distance traffic of the country that is costly; it's heavy, long-distance through traffic that is cheap.

I have said that it is the long-haul heavy traffic that is cheap, the short-distance light traffic that is costly, and in further proof of this, I ask attention to the following figures as to our own Railway Mail Service:

Heavy through traffic.

	Distance (miles).	Cost per 100 pounds (about).	Cost per pound (about).
New York to Philadelphia	90	$0.24	$0.0025
New York to Boston	231	.69	.007
New York to Buffalo	438	1.30	1.3

Light local traffic.

Railway mail route No.—	Average weight.	Distance.	Cost per pound.
	Pounds.	*Miles.*	*Cents.*
116046	40	6.9	1.7
123068	20	5.57	3
127051	40	31.83	9
127038	60	11.97	2
131048	50	17.06	4
139107	14	22.14	18+

THE COST OF PUBLIC TRANSPORTATION.

A postman goes out with a special-delivery letter 1 mile; his 10-cent fee measures fairly well both the cost and the value of his special service. To-morrow he delivers 50 different letters at 50 different houses within his 1-mile course. He does not go one step farther than before. Divided among the 50 letters the distance cost now falls to one-fifth of a cent per letter, add another one-fifth of a cent to pay the cost of the average stop and you have a common cost of the service rate of two-fifths of a cent per letter, 20 cents for the 50 letters. Make the rates according to distance, according to what it would cost to send out a special carrier with each letter, and you will have a what-the-traffic-will-bear tax of 10 cents per letter, or $5 for a service fairly paid at 20 cents. Distance rates deprives the citizen of nearly all the commercial benefits of public transportation. When to a distance system of rates the public transport manager adds a tax according to the value of the contents of the package transported, his power over the citizen comes very near that of complete confiscation. It is through their value of the service system of transport taxation, rates according to distance and according to the contents of the parcel transported, that our private transport managers have gradually taken to themselves the greater part of the earnings of the American people, and to this "what-the-traffic-will-bear" system of transport rates, more than to anything else, is due the high cost of our living.

THE COST OF LIVING.

Customs tariffs undoubtedly affect the cost of living to a considerable extent, but if there were no more legal barriers to international intercourse than there are to-day between the States of our Union, the cost of living within the United States would still be practically a question of public transportation, and the only method by which we can secure the lowest possible cost of living and the widest possible

opportunities for getting a living is through the extension and improvement of the flat-rate post office.

THE EFFECT OF UNIFORM RATES ON THE PUBLIC WELFARE.

As to the effect of a system of uniform rates on the public welfare, Judge Cooley, the first chairman of the Interstate Commerce Commission, speaking with regard to the uniform rate on milk transported by rail to New York in 1888, when the uniform rate covered distances up to 220 miles, said of the system: "It has served the people well. It tends to promote consumption and to stimulate production. It is not apparent that any other system could be devised that would present results equally useful or more just. It is, upon the whole, the best system that could be devised for the general good of all engaged in the traffic."

RAILROADS DEMAND UNIFORM CONTINENTAL RATES.

In December, 1895, Commissioner George R. Blanchard, of the Joint Traffic Association, testifying in behalf of the uniform rate on milk to New York before the Interstate Commerce Commission, declared that there was no reason why it should not be extended to a thousand miles, and Messrs. Rogers, Locke & Milburn, counsel for the Delaware, Lackawanna & Western Railroad, said:

"The distance within which the rate on milk should be uniform need only be limited by the time required to make it with the train and meet the wants of the New York market with milk not affected by its transportation.

"The cost of train operation is not appreciably more whether there be 200 cans in a car or 160 cans in a car or 10 cans in a car. The same crew, the same messengers and organization, and the same terminal service have to be maintained whether the car be carried from Binghamton or not, or from Sussex County or not, and the cost of the delivery of the can at the Hoboken terminal is in no real sense dependent upon the length of its haul."

In his great work, "The Economic Theory of Railway Location," Arthur M. Wellington says: "As a matter of purely public policy—that is to say, if the interests of the railways were identical with the interests of the community as a whole—railway rates should be the same for all distances."

Note also this testimony as to the uniform rates of the railways in their through traffic, set forth before the railway-rate committee of the United States Senate of 1905, at Washington:

IOWA'S PROSPERITY DUE TO APPLICATION OF THE POSTAL PRINCIPLE IN THROUGH RAILWAY TRAFFIC.

Hon. L. S. Coffin, late railroad commissioner of Iowa:

"Some 40 years ago the agricultural papers announced the fact that a shipment of butter from Davenport, Iowa, and a shipment of butter from central New York, and a similar shipment from St. Albans, Vt., were brought to Boston in the same car and the freight rate on the butter from St. Albans and from central New York was the same as that from Davenport." And Mr. Coffin went on to say, "that the position of Iowa as the foremost of the States in agriculture was due to the fact that this system of uniform rates on dairy products had put her on a level as to the cost of transportation with localities 500 to 1,000 miles nearer the great marts of trade. To this custom was due the fact that his farm, which is 1,000 miles farther from the great markets of New York and Boston, was worth as much for dairy purposes as farms in New York or Vermont. It was this application of the postal principle to railway traffic that had brought to him his prosperity and had enabled him to so educate his children that they could be as intelligent as the children of farmers living near those great markets. We want this same thing to go on. There should be no wholesale rates as against retail rates; no more so than in buying postage stamps."

The railroad expert, Prof. Hugo R. Meyer, stated that the one thing that had done more than all others for the development of this country was the common custom of the railways (in their through traffic) to group large districts of territory with a uniform rate regardless of distance. It was this that had made possible the wonderful growth of agriculture in the West and of manufactures in the East.

President Tuttle, of the Boston & Maine Railroad, said: "The boot and shoe industry of New England flourishes because of the common rate—1½ cents a pair on shoes carried 20 to 1,400 miles. The barbed-wire industry, of Worcester, Mass., continues to employ 8,000 hands because of Worcester's common rate with Pittsburgh to all the West. The textile industries of Massachusetts flourish because of their grouped rates over a good part of the United States." And then Mr. Tuttle went on to illustrate how a postal system of rates not only preserves but creates industries and brings into being new towns, and told the story of the creation and growth of the little town of Millinocket in Maine that had come into being as the result of the uniform rates upon paper 1 mile to 1,500 miles that he had given to a Maine paper mill to induce them to settle there. "As a result," he said, "we have this place Millinocket with its schools churches streets, electric lights, and its population of three or four thousand (requiring unquestionably numerous small stores and small dealers) who live as comfortably as they do anywhere in the world, a place where 10 years ago it was primeval forest."

WHY NOT HAVE UNIFORM RATES IN ALL PUBLIC TRANSPORTATION.

Manifestly a system of transport rates so useful in through traffic could hardly fail to be of equal benefit in local business. Strange as it may appear, however, though our railways ignore distance over continental areas, they carefully mark up the miles in local traffic, and investigation will prove that in many cases the very lowest less-than-carload rate for the very shortest distance is higher than the through rate for very long distances. In the course of the legislative hearings at Boston in 1900, relative to the issue "The State management of the Boston & Albany Railroad *v.* The New York Central management of this great State highway." President Tuttle, of the Boston & Maine Railroad, gave these as the figures charged for the transportation of flour in carloads from Ogdensburg, 429 miles via the Rutland Railroad and his own road, to Boston:

	Cents per barrel.
For transportation, 429 miles	7.2
Terminal charges at Boston for handling and delivering the barrel, guaranteeing its safety, collecting charges, and paying back to the lines from the West their share of the transportation tax	3.0
Total	10.2

The less-than-carload rate on a single barrel of flour over the New York, New Hoven & Hartford Railroad, Hartford to Wethersfield, 4 miles, is 25 cents; in quantities of several barrels, 12 cents. Taking the average haul of general produce at 429 miles, it would seem clear that a common 10-cent rate for the railway transport of 200-pound parcels of all kinds of commodities would provide all the revenues needed from all railway freight traffic.

Mr. Childs, general manager of the Erie Railroad, testifying before the Interstate Commerce Commission in the milk case of 1895, already referred to, said that as railway business increases the cost of the services decreases in the ratio of 25 per cent for every 100 per cent increase of traffic. In other words, "if the business be doubled, the cost is diminished 25 per cent per unit of persons or produce transported. There is no extra cost in extra speed, because any possible extra expense involved in making fast time is offset by the increased service thus secured from the engine."

"It is a principle of transportation," declared the general freight agent of the Erie, H. B. Chamberlain, "that the constant movement of cars is what makes profit for the road. It's the constantly moving wheel which makes the profit. In the traffic of the roads running into New York these milk cars, which are constantly on the move, although not heavily loaded, carry over four times as much traffic in the course of a year as the ordinary box car."

PARCEL-POST PLAN OF POSTAL PROGRESS LEAGUE.

That the eighth section of the act, making appropriations for the Post Office Department for the year ending June 30, 1913, approved August 24, 1912, be and is hereby amended by striking out all after the word "That" in said section 8, and substituting therefor the following:

"The third and fourth classes of mail matter be, and are hereby, consolidated under the title of merchandise, with a weight limit of 11 pounds, and with rates as follows:

* * * * * * *

"On all unregistered prepaid mail matter without declared value, an indemnity up to $10 shall be paid by the Post Office Department for such actual loss or damage as may occur through the fault of the Postal Service, and this without extra charge. Certificates of posting shall be provided on demand.

"On registered parcels of declared value and on which the fees for registration, insurance, and postage have been duly prepared, the Post Office Department shall pay the full value of any direct loss or damage that may occur through the fault of the Postal Service. The fees for insurance and registration shall be as follows: For registration and insurance up to $50, 10 cents; for each additional $50, 2 cents. No claim for compensation will be admitted if made more than a year after the parcel was posted.

"A collection on delivery service shall be established with rates covering transportation, insurance fees, and delivery to the consignee as hereinbefore provided, together with the usual fee for the money order given in payment for the goods and an additional 2 cents for the return of the money order to the consignor.

"That this service shall go into effect January 1, 1913.

"That all laws and parts of laws in conflict with the provisions of this section are hereby repealed."

(The proposed 2-cent charge for the collection and return of the money paid in the C. O. D. service of this plan is the same as that of the German post office.)

The proposed consolidation of mail matter providing for the posting of many different articles in one packet at one rate would greatly reduce the cost of packing and handling to the public and of handling to the post office.

The needless waste of time, labor, and money involved in the countless maps, directories, distinctive stamps, etc., required under the Bourne law ($750,000 for its inauguration) would be avoided. The extension of the old flat-rate service up to 11 pounds would immensely widen business opportunities by opening up the whole country for the use of the new service in the satisfying of our wants and the disposing of our wares, and would thus tend to reduce the cost of living. Every person and every place within our national territory would be on a plane of perfect commercial equality, whereas under the Bourne zone law the inhabitants of the center of the country will have an immense advantage over those of the border lands.

It is to be noted that on parcels below a pound our flat rates are much lower than those of the Bourne law, while our pound rates are the same as those of the Bourne local service.

If the congressional Parcel Post Committee, provided for under the Bourne law, could be persuaded to report in early December in favor of the substitution of our simple proposition for the costly, complicated Bourne zone law, Congress might yet save us from its fearful waste, and the fiftieth anniversary of the inauguration of our modern flat-rate post office by President Lincoln might see its wonderful service yet further extended in the public interest.

SCIENTIFIC POSTAL MANAGEMENT.

"Scientific management," says Louis Brandeis, "would reduce the expenses of our great post roads a million dollars a day." The mere substitution of a system of prepaid cost of the service rates (less-than-carload rates, station to station, 10 cents on a 200-pound parcel, 4 cubic feet space; carload rates, 50 cents a ton, 40 cubic feet space) for the tens of millions of the "what the traffic will bear" collect rates of to-day would reduce railway expenses by many thousands of dollars a day.

Railways are post roads; railway trains are post wagons; railway rates are post road taxes; they must be determined by the Representatives of the rate payers in Congress assembled and on the postal principle.

Under a scientifically managed post office, covering the general business of public transportation, post-road trains would run from starting point to destination over lines of the lowest grades, least obstructive curves, and shortest distance. Mechanical power, taking the place of man power in the loading and unloading of parcels less than carload freight, would cut down the cost of that branch of public transportation, says the efficiency engineer, S. B. Fowler, from 75 cents to 19 cents a ton, and on the basis of the over 600,000,000 tons of that character of freight handled by our railway post roads in 1909 would save over $300,000,000 a year. The mechanical handling of carload freight by the Government cutting the two days of the present private service down to one day would double the capacity of our transport equipment.

The railway expert, Harrington Emerson, estimates a possible reduction in the railway fuel bill of $60,000,000 a year and of half the time spent by locomotives in repair shops. The general substitution of electricity for steam will greatly reduce transport costs. The transformation of coal into electricity at the mines and its transmission by cable will leave our coal cars—about one-third of our whole freight-car equipment—open for other uses.

The Railway Age of February 10, 1911, states the present service of the average American freight car as follows:

	New England.	General average.
Average daily trip, miles	16.8	24.8
Earnings, per day	$2.53	$2.79

The average American freight car handles less than 3 tons of freight per day; its earnings hardly equal that of the old post coach.

In 1911 the Interstate Commerce Commission reported the average passenger load of the Pennsylvania Railroad at 16 per car, 62 per train; New York Central, 16 per car, 67 per train; Illinois Central, 14 per car, 53 per train; Atlantic Coast Line, 13 per car, 42 per train; Seaboard Air Line, 12 per car, 39 per train. These cars might have carried three times as many passengers at no increased cost, and the locomotives might have handled cars enough in a train to have transported 5 times their trainload with the additional cost of but a few pounds of coal.

POSSIBILITIES OF THE POST OFFICE.

With public transportation under the complete control of an extended Post Office Department, made up of the Postmaster General and members of the Interstate Commerce Commission, we believe that we might have a parcel post in this country limited only by the capacity of a freight car, and with rates as follows:

All tolls to be prepaid and the rate basis to be determined by the weight and bulk of the produce handled. Differences in value to be met by insurance.

	Cents.
Parcels freight per haul per barrel, 200 pounds, 4 cubic feet bulk	10
Bulk freight per haul per ton, 2,000 pounds, 40 cubic feet bulk	50

Door-to-door express service, using modern transport machinery

	Cents.
Pound parcels, $\frac{1}{4}$ cubic foot in dimensions	1
Larger parcels, up to 5 pounds, $\frac{1}{2}$ cubic foot in dimensions	2
Larger parcels, up to 11 pounds, $\frac{1}{2}$ cubic foot in dimensions	5
Larger parcels, up to 30 pounds, 1 cubic foot in dimensions	10
Larger parcels, up to 60 pounds, $1\frac{1}{2}$ cubic feet in dimensions	15
Larger parcels, up to 100 pounds, 2 cubic feet in dimensions	20
Larger parcels, up to 200 pounds, 4 cubic feet in dimensions	25
For each additional 30 pounds or each additional cubic foot bulk	5

The post office, our mutual express company.

From the foundation of our National Government, the people of the United States, through their Representatives in Congress, have always determined the scope of their postal service, the pay of their mail carriers, their own postal rates; and from the first they seem to have provided for the postal transport of merchandise in very small sealed parcels at very high rates—by the act of 1792, 24 cents an ounce for distances up to 30 miles; higher rates for greater distances. In 1810 they fixed the postal weight limit at 3 pounds, and it so remained for many years. In 1863 postal rates were made uniform regardless of distance, and since 1863 Congress has definitely provided for the transport of merchandise in unsealed parcels, but still with a weight limit so low and rates so high as to be practically prohibitive.

In the old era of household industries, when the peddler with his pack on his back or driving his own team was the chief agency of commercial intercourse, these postal limitations worked little harm, but their continuance in our day, when every industry needs a continent for its development, is no longer endurable. The common welfare demands the widest possible extension, the most efficient and economic administration of our great mutual express company—our modern flat-rate post office.

INTERESTING FACTS.

Our average freight train earns about $2.86218 per mile; in its 3,200-mile course, New York to San Francisco, $9,159. The average haul of an express parcel is 200 miles, its weight 34 pounds. Taking ten 30-ton cars as the average express continental freight train, its total capacity would be 17,644 34-pound parcels. Since the average haul of these parcels is 200 miles, this train would handle 16 times 17,644, or a total of 282,304 such parcels in its continental course, and the cost per parcel would be less than 3¼ cents. If the train handled but 200,000 parcels in its long journey, 5 cents per parcel would bring up its earnings to $10,000, over 30 cents per car mile.

The cost of delivering the average parcel of the Retail Dry Goods Association of New York—from a yard of lace to a cook stove—distances up to 35 miles is but 5 cents. Taking this as the cost of the terminal services, collection, and delivery between the homes of the people and the railway stations, 15 cents—5 cents for the railway service, 5 cents for each terminal service—would seem to be an ample payment for the transportation of the average 34-pound express parcel between any two homes in the United States located within 35 miles of a railway station.

COMPARISON OF PARCEL-POST RATES.

United States.

Bourne law: Local, city and rural service, 1 pound 5 cents; each additional 1 pound, 1 cent; 11 pounds, 15 cents. Radius 24 miles, 2 pounds, 6 cents; radius 24 miles, 11 pounds, 15 cents.

Through railway rate on flour in the year 1900, Ogdensburg, N. Y., to Boston, Mass., 429 miles: Transportation, 7.2 cents per barrel; terminal charges 3 cents per barrel; total, 10.2 cents.

Local express rates, Boston, radius 12 miles or more: 10 pounds, 5 cents; 100 pounds, 10 cents.

First zone, 50 miles: Rates, 1 pound 5 cents; each additional pound, 3 cents. Zone rates, Bourne law: 1 pound, 5 cents; 2 pounds, 8 cents; 7 pounds, 23 cents; 11 pounds 35 cents. No insurance.

The Long Island Express Co. carries 30 to 33 pound hampers of vegetables from Medford, L. I., 58 miles by rail, and delivers them to the address anywhere in New York and Brooklyn for 25 cents—the express company furnishing the hampers. Contrast this with the Bourne 35-cent tax on 11 pounds, 24 to 50 miles.

Second zone, over 50 to 150 miles, first pound, 6 cents; each additional pound, 4 cents; 11 pounds, 46 cents. Zone rates, Bourne law: 1 pound, 6 cents; 3 pounds, 14 cents; 6 pounds, 26 cents; 7 pounds, 30 cents; 9 pounds, 38 cents; 11 pounds, 46 cents.

Third zone, over 150 to 300 miles: First pound, 7 cents; each additional pound, 5 cents; 11 pounds, 57 cents. Zone rates, Bourne law: 6 pounds, 32 cents; 8 pounds, 42 cents; 11 pounds, 57 cents.

Fourth zone, over 300 to 600 miles: First pound, 8 cents; each additional pound, 6 cents. Zone rates, Bourne law: 7 pounds, 44 cents; 11 pounds, 68 cents.

Fifth zone, 600 to 1,000 miles: First pound, 9 cents; each additional pound, 7 cents. Zone rates, Bourne law: 2.2 pounds, 23 cents; 4.4 pounds, 37 cents; 7 pounds, 51 cents; 11 pounds, 79 cents.

Sixth zone, over 1,000 to 14,000 miles: First pound, 10 cents; each additional pound, 9 cents. Zone rates, Bourne, law: 3 pounds, 28 cents; 7 pounds, 64 cents; 11 pounds, $1.

Seventh zone, over 1,400 to 1,800 miles: First pound, 11 cents; each additional pound, 10 cents. Zone rates, Bourne law: 7 pounds, 71 cents; 11 pounds, $1.11.

Foreign countries.

Germany-Austria: Radius 46 miles, 11 pounds, 6 cents; over 46 miles, 11 pounds, 12 cents.

Throughout Switzerland, 11 pounds, 8 cents; throughout Switzerland, 22 pounds, 14 cents; throughout Denmark, 11 pounds, 8 cents.

Germany has a C. O. D. service with charge for collection 2 cents.

Flat rates, Great Britain, area, 121,391 square miles: 1 pound, 6 cents; 2 pounds, 8 cents; 7 pounds, 16 cents; 11 pounds, 22 cents. Insurance up to $10.

Flat rates, France, area, 207,054 square miles: 7 pounds, 17 cents, insurance $2.90; 11 pounds, 21 cents, insurance, $4.83; 22 pounds, 29 cents, insurance $7.72.

Flat rates, European Russia, area, 2,081,025 square miles: 7 pounds, 23 cents; 12 pounds, 34 cents.

Union of South Africa, area, 473,184 square miles: 1¼ pounds, 6 cents; 3 pounds, 12 cents; 6 pounds, 16 cents; 9 pounds, 20 cents; 11 pounds, 24 cents.

Flat rates, American Express Co., on European merchandise from New York City throughout the United States, 3 to 11 pounds, 24 cents. From California throughout the greater part of United States and Canada, nuts fruit, etc.: 8 pounds, 35 cents; 10 pounds, 40 cents.

Flat rates, Chile, area, 292,580 square miles: 7 pounds, 17 cents; 11 pounds, 22 cents.

Flat rates, Japan, area, 175,540 square miles: 6 pounds, 10 cents; 8 pounds, 12 cents; 11 pounds, 16 cents.

Flat rates, Italy, area, 110,646 square miles: 6 pounds, 12 cents; 8–11 pounds, 20 cents.

Flat rates, China, area, 4,277,170 square miles: 7 pounds, 40 cents; 11 pounds, 50 cents.

Flat rates to United States: From Norway, 1 kilo, 2.2 pounds, 16 cents; from Germany, 2 kilos, 4.4 pounds, 33 cents; from Italy, 3 kilos, 7 pounds, 39 cents; from Italy, 5 kilos, 11 pounds, 79 cents; from Great Britain, 11 pounds, 79 cents.

British colonial flat rates: 3 pounds, 24 cents; 7 pounds, 48 cents; 11 pounds, 72 cents. From Great Britain throughout Canada, India, British East Africa, British West Indies, British Agencies in China and Turkey, New Zeland.

British foreign flat rates: 7 pounds, 72 cents; 11 pounds, 96 cents. From Great Britain throughout the following South American countries: Uruguay, Chile, Colombia, Costa Rica; throughout Cuba, Danish West Indies, Dutch West Indies, Japan, Persia, Portuguese India.

The eighth zone: This zone covers distances over 1,800 to 3,300 miles within our continental area and including our island posessions, at least 5,000 miles, with a flat rate for the intervening area of 12 cents a pound. The reason given for not making it higher is that 12 cents is the foreign rate on postal imports to the United States, and that any higher rate would be manifestly unjust and most irritating to our citizens. The fact, however, that more than three-fourths of our parcel post imports come from Europe at less than 8 cents a pound, will, we think, seriously irritate the people on our Atlantic seaboard, when forced under the Bourne law to pay the same rate as their European competitors, on parcels posted 1,000 miles, and for greater distances from 30 to 60 per cent more. And their irritation will hardly diminish when they discover that while the American Express Co. carries 11 pounds European postal parcels from New York City throughout the whole country, at a flat rate of 24 cents, their taxes on similar parcels are increased by the mere crossing of a local limit from 15 cents to 35 cents: For the crossing of the first zone limit, from 35 cents to 46 cents; second zone limit, from 46 cents to 57 cents; third zone limit, from 57 cents to 68 cents; fourth zone limit 68 cents to 79 cents; fifth zone limit, from 79 cents to $1; sixth zone limit, from $1 to $1.11; seventh zone limit, from $1.11 to $1.32.

THE PUBLIC OWNERSHIP OF PUBLIC TRANSPORT MACHINERY.

[Count von Bismarck, April 26, 1876, the Public Ownership of the German Railways.]

Germany is divided into 63 railway provinces, endowed with all territorial and feudal rights and privileges, including the right of making war, and the railway boards avail themselves of these privileges and even make war against one another, which costs much money, for the sake of power and as a kind of sport.

After my opinion, the railways are intended rather to serve the requirements of trade than to earn a profit for the owners.

The profits which the individual States derive from the railways owned by them, or which are distributed to shareholders in the shape of dividends, are rightly considered a national taxation which the State would be entitled to impose, but which is paid not to the State, but to shareholders in private concerns. It should be our aim to see that the tax is not oppressive, but that it stands in due relation to the requirements and the means of the railway user; that it is financially just.

[January 1, 1877.]

Railways were meant to be and are instruments for conveying the national traffic, and they were given their far-reaching privileges and they were constructed in order to serve the public and for the general interest.

Therefore their character as profit-earning instruments may be taken into consideration only in so far as that character is compatible with the general welfare which has to be considered first and foremost. Hence the right of constructing and exploiting railways can be considered only as temporary, and their eventual purchase by the Government is a matter of course.

EVILS OF PRIVATE OWNERSHIP.

Count Bismarck states these evils as follows:

1. Unnecessarily high working expenses and correspondingly high charges in consequence of the multiplicity of railway boards, managers, officers, and the unnecessary duplication of lines, stations, material, rolling stock, etc.

2. Chaos of freight charges, there being 1,400 different tariffs which are constantly changing, which are unclear, and which make trade an uncertain and speculative venture.

3. Because direct travel of passengers and goods over the whole railway system of the country is often impeded with the object of harming competing railway systems and consequently much damage is done to trade and industry.

[January 3, 1879.]

At this time Count von Bismarck opened the campaign for Government ownership in a letter written to the Prussian ministers of trade, home affairs, and railways, Messrs. Hoffman, Friederthal, and Maybach, in which he said, "I intend to raise the question whether it be not necessary to regulate railway tariffs by imperial law. The fact that such far-reaching public interests as the transport business of the railways is left to individual railway boards, who are free from any supervision by the State and the fact that these companies are entitled to make their own interest their sole guide, finds no analogy in the economic history of modern times, except in the way in which formerly a country's finances were farmed out to certain individuals.

"In view of this fact, I intend, after due investigation, to bring forward the question whether it is not possible to introduce by means of imperial legislation a uniform tariff on all the railways of Germany."

And later he added, "The foregoing statement shows that an improvement can only be expected by insisting upon the principle that the railways are meant for the service of the nation; their further direction can be no longer safely left to the egotism and arbitrariness of irresponsible individuals and must be brought into harmony with the general interests of the country."

And addressing Parliament Count von Bismarck said, "Did anyone formerly trouble whether the introduction of railways ruined the coaching industry and the innkeepers?

"The railway monopoly is, to my mind, far more unjust than was that of the coaching industry, for the railway monopoly actually means the farming out of a province to a railway company. This monopoly arose naturally when all other means of transport had been killed by the railroads.

"Everyone who had goods to send or receive fell into the hands of the railways, and these acted in exactly the same manner as did the farmers' general, who impoverished France before the Revolution, for they also were given a large part of the country and were allowed to exploit it at their will. The object of the railways is to squeeze out of the country the largest possible dividend.

"This is an extraordinary abuse of the taxpaying and traffic-requiring community which favors those capitalists who were given the traffic monopoly that accrued to the railways."

And on the 8th of November, 1879, Herr Maybach, minister of the railways, addressed the Prussian Parliament as follows:

"As regards the tariff policies of the railway, I am of the opinion that railway charges should be fixed in accordance with the requirements of the country, and if it be necessary to give the second place either to the national interest or to the railway interests, I am inclined to give the second place to the railway interests.

"The system of private railways has been imported from England, but it does not suit Prussia. Prussia requires State railways.

"It is our aim to take the railways out of the hands of the speculators and to make them truly for the defense of the country and for the development of the country.

"A bill for taking over the railways of Prussia by the State was therefore presented to the Prussian Parliament on the 29th of October, 1879, with the following memorial: 'Among the various forms in which railways have been developed in civilized countries, the system of State railways pure and simple is the only way which is able to fulfill in the most satisfactory manner the tasks of a national railway policy.'

"Only in the case of State railways is it possible to utilize to the full and in the most thorough manner the enormous capital invested in railways. Only in the case of State railways is it possible to give direct and effective protection to the public interest which is the government's duty.

"Lastly, only in the case of State railways is it possible to establish a simple and cheap railway tariff to suppress harmful discrimination and to create a just and diligent and able administration solely guided by consideration of the public good.

"Therefore the State railway system must be considered as the final development in the evolution of the railway system.

"Railway tariffs were to be, first, clear, and to be drawn up in such a manner as to enable everybody to easily calculate the freight on the goods sent. Second, they were to secure to all citizens in all parts of the country equality of railway charges. Third, they were to eliminate the disadvantages which weighed down small producers. Fourth, they were to secure the abolition of unnecessary and therefore wasteful services and to insure the honesty of railway officials. These were the principles on which the Prussian railway system was established, and to which we believe the prosperity of Germany may be largely attributed."

What was good for Prussia in 1879 will be found to be good for the United States of America in 1913.

As long ago as 1903 Mr. C. J. Prouty, of the Interstate Commerce Commission, declared that our present system of making railway rates was taxation without representation in its most dangerous form. It remains to-day what it was then, and its continuance is the cause of the high cost of living and of the limitation of our opportunities for getting a living to-day. It is this system that is responsible for the tens of thousands of working people who are out of employment in our great cities to-day in the face of winter.

I am certainly safe in saying that failure on the part of those now intrusted with our public business to realize this fact and to act upon it will mean political suicide, and the only practical way to meet it is to forthwith extend the post office over the whole business of public transportation and transmission, with low, uniform cost-of-the-service flat rates everywhere, and with this to guarantee to those who have built up our transportation and transmission systems a low and certain return for the actual services which they have rendered to the general public.

G. AMES L. COWLES.

—

DECEMBER 29, 1913.

Mr. G. AMES L. COWLES,
Washington, D. C.

DEAR MR. COWLES: The holidays have delayed reply to your letter of the 20th with its valuable suggestions, for which I thank you.

Yours, very truly,

——— ———,

—

MARYLAND WOOD FIBER PLASTER & SUPPLY CO.,
Cumberland, Md., December 20, 1913.

Mr. L. D. BRANDEIS,
Care Interstate Commerce Commission, Washington, D. C.

DEAR SIR: I desire to apologize to you in advance for writing you on a subject which I see you are engaged in combatting, i. e., the advance in freight rates as demanded by the railroad companies in the eastern section of the country of 5 per cent, and beg to commend you on the stand you are taking in this matter; and desire to suggest, if you will permiit it, to compel the president of the Baltimore & Ohio Railroad, and with whose rates the writer is somewhat familiar, to give you the information as outlined in the following:

According to the evidence submitted before the commission at the hearing in this matter they stated that their gross earnings per ton per mile was less than 6 mills per ton per mile. It will be, I deem, quite an easy matter for them to give you the total percentage of their total traffic which earned the different rates per ton per mile, beginning at one-fourth of 1 cent per ton per mile, or $0.0025 a ton a mile, up to and including the highest rate per ton per mile charged by them in their total traffic handled in the fiscal year ending June 30, 1913. For instance, grain handled from Chicago to New York on a proportional rate out of Chicago would earn to New York approximately 17 cents per 100 pounds, or $3.40 per ton on an approximate distance of 1,000 miles, which would show gross earnings to be about $0.0034 per ton per mile, while the same car, instead of being shipped to New York, would be shipped to Baltimore; the rate to this point would be 13 1/10 cents per 100 pounds, or $2.74 per ton, with an approximate distance of 800 miles. This would show gross earnings of $0.0034 per ton per mile, approximately the same as New York, while the same car, if shipped to Cumberland instead of either New York or Baltimore, the rate would be 13 2/10 cents per 100 pounds, or $2.64 per ton, with an approximate distance of 600 miles, which would make the gross earnings $0.0044 per ton per mile; if the same car that was shipped from Chicago to Cumberland, upon which the gross earnings were $0.0044 per ton per mile, reshipped from Cumberland to Pattersons Creek, a distance of 8 miles, the rate on it would be only 80 cents per ton a distance of 8 miles, which would show 10 cents per ton per mile. All of the above illustrations represent interstate traffic.

That you may see the measure of discrimination practiced, I am stating for a quick comparison with the eye, as follows: $0.0034 from Chicago to New York; $0.0034 from Chicago to Baltimore; $0.0044 from Chicago to Cumberland; $0.1000 from Cumberland to Pattersons Creek.

What I mean for you to have the railroad companies do is to show what percentage of the traffic they hauled at the different rates, and then have them show what their average cost of transportation was, including all charges on their total traffic, which, in the writer's opinion would be near about 4 1/2 mills per ton per mile; perhaps 5 mills, or one-half cent, per ton per mile. You can readily see by the statement we are able to get at what percentage of their traffic they are hauling at less than cost and what percentage of traffic they are getting an enormous profit thereon; and if not presuming, would also ask that you have them submit the provisions of their charter, and so regulate their charges as to be within the proper charter requirements.

The writer does not desire to be put on record as desiring anyone, and especially our large transportation companies, to do business at a loss; on the other hand, they have an inalienable right to make a profit on their business; but I do object to them discriminating in the freight rates, as the statement outlined above will absolutely show.

I would appreciate very much if you will kindly acknowledge receipt of this letter, and after its perusal would be pleased to have any comments you care to make.

Appreciating and thanking you for the use of your valuable time in perusing this letter, I am,

Very truly, yours,

CHAS. D. WILLARD.

—

SCRANTON, PA., *September 29, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Regarding the matter of 5 per cent increase in freight rates asked for by the railroads of the country, permit me to call your attention to the fact that if the railroads and their various constituent concerns were honestly dealt with by their own officers and a stop put to the grafting done on them by their own officers, from the president down to the train dispatcher, there would be no need of any advance in rates, for then the companies could not only meet their fixed charges, but pay reasonable dividends, and give their men a living wage as well.

To a man that has seen as much of this thing as I have, it strikes me this is the real key to the situation. Everybody seems to have been sidestepping this proposition for years, and yet it is one that has a vital bearing, not only on the wage earner, but the stockholders as well.

Your commission, already having done so much good, seems to be the proper medium to put it up squarely to the railroads. The results measured by the bettered conditions that you have brought about in other directions can not fail in great good to everybody concerned. It will at least bring the matter out prominently, thereby throwing a scare, to use the vernacular, into the thieving fraternity.

Respectfully, yours,

T. ELLSWORTH DAVIES.

—

In re application for raising freight rates, etc., of the railroads.

Just tell them that you see no necessity for it as long as they maintain fancy salaries for the officeholders, from president down. Some very able men consent to serve as judges, Cabinet officers, etc., at a salary of $12,000 a year, and I personally have seen few men who are worth more.

Tell them to reduce official salaries first and then see whether they can make ends meet and regain the confidence of investors.

High salaries are the curse of our day.

Yours, W. OSCAR MILLER.

—

No. 153 WEST STREET,
South Norwalk, Conn., May 3, 1913.

GENERAL FREIGHT AGENT AT NEW HAVEN,
New York, New Haven & Hartford Railroad.

MY DEAR SIR: This letter is written by one who believes that the New Haven road has greatly degenerated, if such word can be used in connection with a corporation exploited only for the water that can be taken from it.

It has ceased to be honest, to deal fairly or justly by those that your president calls your patrons. It has ceased to do business in an equitable manner. How?

The Cutaway Harrow Co., of Higganum, Conn., sent me a disc harrow over your road. On Monday, April 28, 1913, I received from them the bill of lading, and on Wednesday, April 30, 1913, it was announced from your freight depot here in South Norwalk that the goods were here.

At once my man (who speaks little English) went to the station and was given three pieces, the first two containing several discs and the third piece being a board with a wrench or two upon it. His bill of lading called for four pieces, and upon his asking for the missing parts he was told his third piece contained two parts, his bill of lading was retained from him, he was given a freight bill which called for four parts without enumerating the same, he was charged the weight of full shipment, paid for full shipment, no mention being made to him that any part was yet undelivered, nor any written memorandum to that effect given him.

Therefore I state that your road is dishonest in its dealings, is unfair, and—we will take up the rest later.

That you are dishonest is shown by the above detail.

In the giving of part of the shipment only without noting failure to complete.

Charging full freight, though not delivering full goods.

Taking away the man's evidence (bill of lading) while not fulfilling its needs.

Delivering a new receipt which did not give proper detail.

To-day, Saturday, May 3, 1913, I had an interview with your local cashier and agent, but in no way could I make them see that I was entitled to anything but to wait the good or other pleasure of your company in its routine transaction of its business—in its monopolistic operations.

Yours is a road that has any quantity of money for lobbying purposes; for buying up rivals or parallel lines by land or water; for "publicity," to deceive the public; professes to care for the interests of its "patrons," yet robs them of time and money without compunction.

I believe your dealing with me in this matter is good evidence for the Interstate Commerce Commission and herewith am making a copy to place in proper hands where it will be used wisely.

Just suppose I had been a higher official of this road and had said to this local agent and cashier: "That has gone astray, now get it."

Do you suppose that they would have answered me that I must wait until the usual routine methods bring the thing to light, if ever? And my season of using it going day by day meanwhile.

You know the answer, and that but a day would have gone by before that part would have been discovered and sent through to proper destination.

In my case it is different.

That difference being that I am not a higher official, but simply one member of the late Mr. Vanderbilt's "Public be damned," while as Mr. Baer so neatly put it, "Providence has seen fit to place in your hands these large interests."

But coming back to the question of honesty.

I charge your road with inefficiency, with dishonesty (and can give you at least one other instance), with carelessness due to monopoly and absence of competition, and I trust that with this spirit of unrest you may be brought to take up your business seriously and effectively.

Meantime you are injuring me by keeping me from my goods.

Awaiting your answer, I beg to remain,

Yours, in the hope of using this incident to accomplish some good in some way,

JOHN A. HAMILTON.

LATER NOTE.—This letter brought the missing goods within a few days, also a personal call from a gentleman connected with the New Haven office asking that the letter be not used as threatened, which request was denied.

NOVEMBER 24, 1913.

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: On behalf of the people of South Norwalk and elsewhere on this railroad, I urgently ask that you refuse this New Haven Road any advance in freight rates, that you cause them to restore the old commutation rates under which many of us were induced to become commuters, and that you do not put upon the traveling public the burden of mismanagement and willful extravagance of this road and its officers.

In your hands lies the interests of a large body of the people who look to you for help in this matter and protection from this corporation.

Awaiting your courtesy of an answer,

Respectfully submitted, JOHN A. HAMILTON.

—

GREAT BARRINGTON, MASS., *June 5, 1913.*

MY DEAR MR. PROUTY: I see that all the eastern railroads have asked for 5 per cent increase in rates.

The Reading Co. will earn on its stock this year, at the present rate, about 15 per cent on its common stock and they have just raised the dividend from 6 per cent to 8 per cent.

The New Jersey Central will earn on its stock this year 30 per cent and pay 10 per cent. The Delaware & Lackawanna will earn on its stock this year 30 per cent, and it pays 10 per cent and 10 per cent extra. Now, why do these roads want increase in rates? The New Haven, Pennsylvania, and New York Central have done nothing but issue stock and notes for the past five years by the millions, and now they want you to advance the rates to pay on their watered stock. I am a large holder of bonds which I hold for investment and I hope you do not advance the rates, for if you do they will go on making new issues of stock and notes, which will be a very bad thing for the bondholder.

Yours, very truly, HARRY C. ELDRIDGE.

MAY 24, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Pardon me for taking the liberty in writing to you, but I just want to let you know the true conditions that exist and howl that is being made by Wall Street and a few millionaires that are paying the newspapers and a lot of good for nothings to be sent to Washington to protest against the tariff and also to get an increase in freight rates.

They are holding back business and crying for help, when really the money the railroads are making they put in improvements and have been making false statements to the public, so that they could get an increase in freight rates to manipulate the stock market.

Gentlemen, I hope you will all look into this matter very carefully, as you will find for the past 20 years they have been swindling the public, and the sooner they are brought to terms the better for all concerned.

Respectfully, yours, LIVINGSTON KEYES,
496 Fifth Avenue, New York City.

—

H. W. SMITH & CO.,
Wilmington, Ohio, February 28, 1914.

LOUIS D. BRANDEIS, Esq.

DEAR SIR: I note you are conducting an investigation into some phases of railroad operation. You likely know all about these things, but as a shipper of grain I have often wondered at some charges. For instance, if grain is shipped to Baltimore elevators there is 17 days' free storage; if shipped by some routes to New York lighterage is free. These must be in the nature of rebates. Also, the export rates are less than domestic. There are probably many other kinds that I do not know about.

Very truly, H. W. SMITH.

—

FEBRUARY 28, 1914.

DEAR SIR: Speaking as a citizen, and with a desire to see the pending "increased rate" problem settled satisfactorily to the citizens of the United States, permit me to invite your attention to the following points:

1. Would not the railroads derive an addition to their present revenues through leasing or selling their present holdings in contiguous canals?

2. Would not the railroads derive an addition to their present revenues through encouraging a wider use of their pier holdings throughout the United States?

3. What would a railroad answer to the proposal that the Government lease the railroad on a basis which would guarantee 8 per cent on the present capitalization? Surely a railroad would not object to an 8 per cent investment secured by bonds signed by the United States as a whole. If the United States can not make 8 per cent from operating the railroads, would it not be better that the increase in rates for freightage be permitted to help pay the 8 per cent and provide a sinking fund to amortize the 8 per cent annually, with the United States as operator of the railroads rather than the present owners?

4. If the railroads are in need of 5 per cent increase of charges, why do they spend so many millions in "expensive" terminals?

5. Since the railroads are more and more to be considered as an inseparable whole, with reference to a communicating and carriage system for the United States, why should not their equipment be considered a general equipment? In other words, why should the rolling stock of one road not be used on another road in another part of the country, when the first road is having a seasonal lull and the second road a period of carriage stress?

6. If two organizations are expensive when one should be less expensive, why not in cases like the Baltimore & Ohio, the Reading, and the Pennsylvania, running from Philadelphia to New York, require that one organization instead of three take care of running traffic facilities between such two or similar points? Why this waste of money?

7. If a railroad contends that a branch line does not pay, why should it not be ordered to lease it to the highest bidder? If the big railroad organization will not develop such roads, why should it object to their development by means of local capitalists?

8. Why should competing systems, with tracks parallel, be permitted an increase of 5 per cent in charges, when a single line between the points would gain more than that 5 per cent through saving in capital outlayed?

9. What became of all the information which was collected last year about terminals on waterways?

Respectfully,

JOHN MCCLURE.

Personal.

IRWIN'S BANK,
Columbus, Ind., March 27, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: There are some things in regard to the request of the railroads for increase in rates that I feel should be considered.

Rather than to make a uniform increase, it seems to me that additional revenues could be secured for the railroads by raising the rates of materials imported from foreign countries instead of them being carried, as now, lower than are articles manufactured or produced in this country.

I was told a few weeks ago by the president of one of the leading steel companies that his traffic manager had informed him that the rate on steel from Pittsburgh to Chicago is 18 cents, while it was possible to secure a rate to Chicago from Antwerp by way of Galveston, Tex., for 17½ cents.

If other import rates are on the same relative basis in comparison with rates on domestic products, it would seem to me to be an excellent opportunity to benefit not only the railroads but our own industries by letting whatever rates might be increased apply to those on imported articles.

In this way the roads could be benefited as they were by the abolition of rates and of free passes, and no one in this country would be harmed.

Very truly, WILLIAM G. IRWIN.

WELCH & MERRILL,
Delta, Colo., February 23, 1914.

Hon. WOODROW WILSON,
President, Washington, D. C.

MY DEAR SIR: I have been following with a great deal of interest the application of the eastern railroads for a 5 per cent increase in freight rates and to the investigation of the question by the Interstate Commerce Commission. I have faith this matter will be considered solely on its merits, and while I am not personally familiar with conditions in the East as in the West, I believe the investigation will disclose practices and extravagances on the part of the roads which will not justify the increase. It certainly would not be justified in the West, but if granted in the East it will naturally be made effective over the whole country.

It is conceded by all, the railroads as well as the traveling public and the investing public, that future stock and bond issues of interstate common carriers must be under some kind of Government supervision, and I trust this phase of the question will not be accepted by the Government as a concession from the roads in lieu of securing the increase in freight rates asked for. In other words, a log-rolling adjustment.

In picking up any daily paper and referring to stock quotations, you will notice a large number of railroad stocks quoted at very low figures, representing merely a speculative value, and due in nearly every instance to high railroad financing. For the good of the country I should like to see some of these stocks eliminated, and while you will say a great deal of such stock is now in the hands of innocent purchasers and nothing can be done, is it right that the Government should levy a tax on the producer and consumer in this country, in the way of a 5 per cent increase in freight rates, to take care of these innocent investors who inadvertently made a bad investment, giving a tangible value to stocks now possessing only a speculative value, and to help the railroads out of a dilemma which, I believe, will be found to be of their own making? I refer both to high financing in the past and to present extravagant management. Railroads to-day are granting concessions and allowing divisions in through rates to certain favored large shippers which cuts down their revenues materially. I am sure the present administration is not blamed in the least for the financial condition in which the Frisco System now finds itself.

I firmly believe a more permanent revival of business conditions can be secured by encouraging agriculture, particularly in establishing a comprehensive system of farm-land credits, which would gradually turn the unemployed in our large cities, who are now consumers, to producers in our rural communities.

Most sincerely,

C. A. MERRILL.

Cy. Mr. EDGAR E. CLARK.

Mr. MCGUIRE:

The inclosed item would indicate a portion of the "increased expenses" of Pennsylvania Railroad. If so inclined, file with memorandum. It should be interesting in view of hearings before Interstate Commerce Commission this week.

ANON.

ATTERBURY'S CAR HOME ON WHEELS.

ALTOONA, PA., *November 17.*

Ready for service, the private car built for Vice President W. W. Atterbury, of the Pennsylvania Railroad, has been turned out of the shops here. It contains almost every accessory of a first-class home and is practically a duplicate of President Rea's car, recently completed. Its chief features are drawing room, dining room, sleeping quarters, and kitchen, and the details of equipment include a complete cut glass and silver service, private heating plant, shower bath, and electric lights for the beds.

NEW YORK, *November 24, 1913.*

LOUIS D. BRANDEIS, Esq., *Boston, Mass.*

DEAR SIR: I beg to submit to you that in consideration of the increase of railroad freight rates by railroads, it should be remembered that of the $5,730,000,000 of outstanding capital stock probably more than two-thirds originally water, and yet in the year 1911 the railroads paid on the whole of the stock $460,195,000, or an average of 8.03 per cent, which prorated over all the stock gives an average of dividends of 5.43 per cent, as compared with 5 per cent in 1910 and 4.18 per cent in 1909; $16,000,000 of the stock divided 10 per cent, which in justice to the people should be considered excessive.

There were upon all the railroads a total of $2,634,000,000 of capital stock, or 31½ per cent of the whole, on which no dividend was paid. It is a wonder that the gross amount of capital stock not earning dividends is so small in view of the Harriman treatment of the Harriman roads, the Gould treatment of the Gould roads, and the Yoakum treatment of the St. Louis & Frisco road, and so many other examples of malfeasance, so vast, so numerous?

A noteworthy feature of the present oppression is the iniquitous monopoly which railroads possessing coal lands under fictitious names and competing, thus holding an oppressive monopoly, which is frequently prohibitive. All this ought to be changed.

Yours, most truly.

JAMES CLEGG.

ALTAMONT, ILL., *February 6, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: I notice in your tap-line decision that you intimate that if the railroads would not waste the money they already have they would not be in such desperate need of that 5 per cent increase. This shows a glimmering of common sense, and it is a wonder that some railroad managers had not discovered it sometime ago. I want to call your attention to where they are right now throwing away enough money to choke a sewer. Heretofore it has been the custom to issue homeseeker tariffs once a year and they were good for the entire year. Now they are issuing them twice a month and they are good for one day only. These books contain from 50 to 150 pages and are furnished to all stations east of the Missouri River, probably 25,000 stations. The book, together with the cost of compiling them, must cost a dollar each at least. I would bet a month's wages that all the tickets sold under these tariffs will not bring in enough money to pay for printing them. They are distributed about 24 hours before the fatal day that they are in effect, and no one knows that there is going to be an excursion, hence no sales. The railroads are far the largest of publishers in existence, and most of what they publish might as well be dumped overboard as soon as it is off the press. The art of scientific rate making is supposed to be so mysterious and unfathomable that it requires a stack of books like one of Carnegie's libraries to inform a ticket agent that on a certain date he can sell a round trip to Boulder, Colo., for so much money. All that is needed in a homeseeker tariff could be printed on one page and the list of concurring carriers printed on the other side. It should state briefly: First, date of sale, which ought to be every day or none; second, territory from which tickets may be sold, which is simply all territory east of the one hundredth meridian; third, routes, which should be same as for one-way tickets and without further trimmings or extensions; fourth, destinations, which should be all territory west of the one hundredth meridian; fifth, minimum, which should be, say, $9; sixth, fare, which should be stated in percentages of the regular one-way fare, say 160 per cent. This is all that is necessary, and could be printed on a good-sized postal card and issued once a year. If your honorable body could cut out the fool tariff issuing as now carried on by the railroads I believe that this one item would come close to the much-desired 5 per cent. It costs more to print one of these tariffs than it does to print a copy of the "Trail of the Lonesome Pine," since one man compiled that literary gem, but it requires a house full of clerks, working for sometimes a year, to get out one of these tariffs. I append a list of the homeseeker tariffs which are good for a day only. It is only a partial list; there are dozens of others:

Tariff 0-12, I. C. C. 361, issued by MacLeod.
Tariff M-25, I. C. C. 360, issued by MacLeod.
Tariff O-11, I. C. C. 354, issued by MacLeod.
Tariff O-14, I. C. C. 364, issued by MacLeod.
Tariff M-24, I. C. C. 356, issued by MacLeod.
Tariff C-11, I. C. C. 357, issued by Hannegan.
Tariff C-10, I. C. C. 356, issued by Hannegan.
Tariff C-13, I. C. C. 362, issued by Hannegan.

Yours, truly,

H. D. EARL.

---

120 SEIBERG STREET,
New York, January 29, 1914.

To the CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: In this fight by the railroads for an advance of 5 per cent will be the death of independent oil companies. This is a put-up job by the Standard Oil Co. I was with them 14 years. They control 95 per cent of all the roads in the United States in the use of lubricating oil, and the railroads dare not buy or do anything to reduce the use of oil. I have a lubricating oil pad that will save 50 per cent of oil and other savings. It has been tested and proved all I claim by one road and then they dare not put it on. It has been offered to all the big railroads here. And then they dare not put them on. They own that there is a big saving with a small expense. When I write them and offer to guarantee the saving they say we have a contract with the Standard Oil Co. The New Haven Railroad had at one time 6,000 pads, and they saved so much it scared the Standard and it had them put off.

I can save the railroads millions a year with a small expense and no change in construction and no delay. The railroads do not deserve any help until they get away from the Standard Oil Co. I can save them more than the 5 cent and they know it. I can tell a lot more if wanted.

Truly, yours,

J. H. SWIFT.

BERLIN HEIGHTS, OHIO, *January 28, 1914.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Referring to the investigation now going on at Washington relative to the proposed increase of 5 per cent in freight rates by the various railroads of the country.

When the railroads about two years ago asked for a 10 per cent increase and announced that the new rates were ready, we sent to our agent for a list on the towns we ship to regularly each year. When these rates were received and compared with the prevailing rates, the advance was noticed to be considerably more than 10 per cent.

We inclose a schedule of rates selected at random showing the rates as they existed at that time and still exist in force at present. Our arithmetic may be faulty, but we can not understand that a 10 per cent increase means anything else than 10 per cent. We were unable to get any satisfactory explanation from the railroads as to this at least apparent discrepancy.

We are now informed on what would seem to be reliable authority that if the requested 5 per cent is granted the railroads propose to make up what they call "a general average 5 per cent increase," whatever this may mean. But it looks to an ordinary business man as if the railroads were going to put something over on the shippers that will bear watching.

We realize that you are too busy a man to answer this letter, but would appreciate it if you could announce to the public something as to just what constitutes a 5 per cent freight rate advance and if the commission will see to it that the railroads will honestly comply with that meaning. If a rate is 20 cents and they are allowed to advance it 5 per cent, it would seem to the layman that the new rate would be 21 cents.

Thanking you in advance for any information you can give us through the newspapers, we remain,

Very truly, yours,

THE BERLIN FRUIT BOX CO.,
G. C. STURTEVANT, *President.*

[Inclosure.]

The following shows the prevailing rates of two years ago and the proposed rates on basis of 10 per cent advance:

From Berlin Heights, Ohio, to—	Present and prevailing rates of two years ago.	Proposed rates.
	Cents.	*Cents.*
Cleveland, Ohio, (first-class rate only)	12	17
Canton, Ohio (first-class rate only)	25	31
Clyde, Ohio (first-class rate only)	14½	19
Detroit, Mich. (first-class rate only)	26	32
Dover, Ohio (first-class rate only)	[1] 8½	[1] 19
Dayton, Ohio (first-class rate only)	32	39
Boston, Mass. (first-class rate only)	65½	77
Brownhelm, Ohio (first-class rate only)	7½	12
Fredonia, N. Y. (first-class rate only)	35	42
Northeast, Pa. (first-class rate only)	34	41
Norwalk, Ohio (first-class rate only)	10½	18
Oak Harbor, Ohio (first-class rate only)	9½	15
Peru, Ind (first-class rate only)	38½	47
Stillwater, Pa. (first-class rate only)	58½	70

[1] Note this.

Other rates on lower classifications increased proportionately. Not a single rate was increased by 10 per cent, all being raised by a considerably larger percentage.

—

GOSHEN COAL CO.,
Clearfield, Pa., January 27, 1914.

LOUIS D. BRANDEIS, Esq.,
Washington, D. C.

DEAR SIR: Relative to the matter of increase of railroad rates now pending before the Interstate Commerce Commission, I beg to submit the following suggestion. It seems to me that all of the eastern roads can not make out a claim for the raising of rates on all classes of freight an equal percentage of increase. Some of the eastern roads are hauling the same class of freight a much longer haul than other roads and are doing so on either the same freight rate or a greater rate not at all commensurate with the longer haul.

Take, for instance, the case of the Pennsylvania, the New York Central, and the Baltimore & Ohio. The first two roads transport bituminous coal from the "Clearfield region" to tidewater, South Amboy for the Pennsylvania and Port Reading for the New York Central, on a rate of $1.85 a gross ton, subject to an adjustment of 30 cents a gross ton on coal going over the piers, making a net rate of $1.55 a gross ton for pier shipments. The rate for Baltimore & Ohio shipments, I believe, is practically the same notwithstanding that road has a much longer haul.

It seems to me that if the rate now in use by the Pennsylvania Railroad and New York Central to tide points is just, that the Baltimore & Ohio does not need an increase in rates for the reason that it is now willing to haul coal a longer distance than the other roads mentioned for the same rate, and if that road needs, on case being shown, an increase in rates, it should be compelled to increase its rates on coal commensurate to its haul, instead of asking for a flat increase on all classes of freight. The Baltimore & Ohio would justly be entitled to a rate increase based on its longer haul, and the public could not complain.

The expense of hauling freight is so much per mile haul, and when the Baltimore & Ohio is willing to haul coal a much longer distance than the Pennsylvania Railroad and the New York Central on the same rate of freight, it does not seem right to ask for a general increase of rates.

This phase of the rate increase matter has probably had your attention, and I ask pardon for intruding the suggestion, but if you wish any further information on these rates I will be glad to submit it to you.

Very truly, FRED G. BETTS, *President.*

—

1911 WALNUT STREET,
Jacksonville, Fla., December 27, 1913.

Mr. LOUIS D. BRANDEIS,
Boston, Mass.

MY DEAR SIR: Pray pardon my butting in. So far as I know I have never been called a crank.

I have for some time had an idea that we were not going about the increase in rate proposition in the right way, and I have spent altogether too much time wondering why no one else caught on to the idea that came to me, which, of course, plainly raises the crank problem, and after much hesitation have concluded to ask you to pass on it.

You are against the raise in rates; so am I; so is practically everyone else save the railroads.

Apparently, as matters now stand, it is that, with more or less endless chain applications or Government ownership, which under any conditions is a leap in the dark.

So, as there is no other way out, it has apparently not been considered, and am I a crank for raising such a plan?

That is my apology for troubling you with a request for your opinion and judgment on this idea.

It is a question as to whether I have treated it as it should be done. The idea or plan is all I claim any "patent" on, and it is my maiden attempt at anything in this line, so if I can get a bit of consideration and possibly commendation I would greatly like to see it discussed.

So far the only obstacle presented has been "public opinion has not grown to a point that would favor incorporation by the General Government rather than the State."

Possibly, but has that question been raised and discussed and what possible legitimate objection can there be to the General Government creating General Government corporations as well as the individual State its own companies?

And now President Wilson is suggesting presidential primaries, which must necessarily be under the General Government where up to this time the States alone have been in full control?

Of course, I thoroughly understand we American people, if we don't want to do a thing, why we simply won't be able to make water run down hill for a time, but we generally get over it, and there is not the slightest doubt we are now in a hole. Isn't this a possible way to get out of it?

Since writing out my plan, and simply to show how much of a question it is, I added a page with four clippings from a single issue of a prominent periodical treating the general question from different angles and all tending to show we are in a bad fix and that we have not yet begun to estimate the trouble ahead if we try either of the two horns of the dilemma as now proposed. Why not try and avoid both?

That is my apology for troubling you with a request for your opinion as to whether some such plan as here outlined is not far and away a better solution than any now under consideration.

Very truly, your obedient servant,

W. S. TAYLOR.

—

IS GOVERNMENT OWNERSHIP INEVITABLE, OR EVEN NECESSARY?

[By W. S. Taylor.]

A brief outline of what it was expected the subcommittee that had been investigating matters connected with the St. Louis and San Francisco Railroad Co. fiasco would report to the Interstate Commerce Commission was published in the public prints soon after the middle of November and was substantially to the effect that for a number of years prior to the recent failure of the Frisco company Chairman Yocum, the virtual head of that company, as the head of a syndicate, composed of fellow directors and a few prominent stockholders, had been systematically engaged for years in promoting a number of schemes of more or less merit, and then unloading them onto the railroad company at prices highly remunerative to the syndicate and with the net result that the company had a fine lot of "cats and dogs" and approximately a debt of some forty million dollars, representing practically nothing, and the burden of this debt was one of, if not the principal, factors that forced the company into bankruptcy last spring.

As this subcommittee had been in action barely a week, it would appear that they had had opportunity to but scratch the surface, and that it was highly probable there was considerable more rottenness to be uncovered.

In what has been made public at the time of this writing it was plainly intimated that the schemes that had put the company into bankruptcy had put some millions into the pockets of these scheming officials.

There are some indications that the American Locomotive Co., the largest concern of its character in the country, is badly in need of a thorough house cleaning, and it appears to be a possibility that in due time they will get it.

It is charged that the president of that company, who, it appears, owns but 1,000 of its 500,000 shares, and one or two other directors with a somewhat similar small ownership of locomotive company shares have been compelling that concern to purchase its springs of a company in which they are largely interested; that the tool supervisor of the locomotive company is largely interested in a tool-making concern with the results detrimental to the locomotive company; that the locomotive company lately gave up the manufacture of steam shovels and sent that branch of the business to the Bucyrus Co., in which the president of the locomotive company is largely interested, and a few other similar trifles of this character, one net result of which, it is claimed, is that the Baldwin Locomotive Co., its nearest competitor, "although doing a smaller business and having less valuable plants, made relatively twice as large profits in 1912 as the locomotive company."

Some time ago, in answer to a strong protest made by the minority stockholders, a movement was made to investigate, but it was shifted into the hands of three of the directors who were strong partisans of the management, and so far nothing has come of it.

At the annual meeting of the company in October a proposition was offered to name as an investigating committee William R. Wilcox, former chairman of the Public Service Commission of New York, Herman Knox Smith, former commissioner of corporations, and William J. Wilgus, a distinguished consulting engineer, and the motion was promptly voted down.

Then we have New Haven and, particularly just now, Boston & Maine, regarding which President Elliot the other day said was in much worse shape than even New Haven and for which emergency calls have been made to have it authorized to raise its rates at once, both local and interstate, to try and avoid bankruptcy.

For years the Boston & Maine paid 9 and 10 per cent dividends, then 7 until about the time the New Haven got its hands on it, when The word "dividend" was promptly forgotten and now "bankrupt" is apparently to take its place.

This brief reference to some of the clouds on the financial horizon is prompted by the reading of an able article in a December magazine by President Eliot, under the caption "What I am trying to do."

The threat running through the story is: First, an appeal to forget what has been and everybody turn to and help get the craft out of the mire; and, second, the inevitable fact that if the railroads are not granted the privilege of raising rates it is only a matter of resorting to Government ownership.

Possibly he is right, but the writer doubts it.

But of one thing, I think, there can be no question, both horns of the dilemma are most decidedly objectionable and neither should be resorted to save as a last extremity, and the principal object of this writing is to attempt to demonstrate neither is necessary.

But before taking up what we may call the alternative let us run over some features of the situation as it now faces us.

If it was merely the addition of 5 per cent to existing freight rates and would not go farther than that there would hardly be any grounds for objecting.

The trouble is the increase, whatever it is, will come on what we know as the "ultimate consumer," the consuming public.

The present freight rate, New York to Chicago, first class, is 75 cents per 100 pounds; the additional 5 per cent to that is 3¾ cents, a mere trifle. Let us suppose that Marshall Field & Co. orders from the Claflin Co. a case of cloth, weighing 100 pounds and probably containing 1,000 yards of light dress goods. Divide that additional 3¾ cents among that thousand yards and see if you can tell how much of it is on the one yard? Yet, when a bolt of that same goods is passed along to a retailer and Bridget Flarity goes on a Saturday night with Pat's week's wages in her pocket to get a dress pattern of three yards for the girl, just see how much more she will have to pay for it "on account of the increase in the freight rate" than she did for a similar pattern she bought at the same place the Saturday before, which was before "the rates went up."

The increase on a single barrel of sugar of over 400 pounds from New York to Chicago would be barely 10 cents, but try and imagine

when that barrel has been retailed out what the amount of "the increase in the freight" will have figured up to.

A box of 6 dozen bars of soap—railroad increase between 1 and 2 cents. Last week that same soap sold 6 bars for a quarter. The advance in the rates results in a straight 5 cents per bar. To give the railroad its 2 cents the consumer gives up 72 cents. Unless our past experience is entirely at fault, every dollar that the railroads gain will cost somebody—everybody—you and me $10. Of course, the railroads will get a very handsome increase, but the "indirect" results of that increase, and which the consuming public will have paid, will put the trifle that the roads have realized to shame.

And that indirect bad effect is only one of the many objections to the plan.

Another view: Why should the railroads ask it? Look at the Lackawanna. Under the beneficent methods of good old Sam Sloan—may his tribe increase—that road is earning net every year fully a third of its entire capital stock. Practically nobody knows what its shares are worth, because none are ever on the market. None are bought, because the man owning knows when he has a good thing and won't sell.

Pass along to the Lake Shore, where more years ago than I care to remember the writer had his first lessons in railroading, and it was before the name "Lake Shore" was coined. I believe I am correct in saying it regularly pays 18 per cent each and every year, and practically an extra dividend of that same amount each year. A full one-third of the amount of its stock distributed every year, and, as one of the results of the magnificent work of President John Newell, 25 years ago, it is to-day in physical condition and equipment, one of the very best roads in the country and freight trains of 80 or more cars, led by a single engine, follow one after the other in long processions.

Half a dozen times in a year, maybe a sale of its stock is recorded. The last one I know of, a short time ago, was at $4.90.

If I had been lucky enough to have been the seller, which, interpreted, means had been lucky enough to have owned such stock, and had been fool enough to have sold it, I believe I would have stood out for an even $5, just to have saved the bother of having to make change, and I would have got it.

The North Western—All the business they can handle, and dividends as regular as clockwork.

The Union Pacific—While it is well and liberally capitalized, and in spite of the fact that its first 1,000 miles of road was built for them by the Government and didn't cost the company a penny, and that same mileage is capitalized just as heavy as the rest, the 10 per cent dividends are regular, an immense surplus piled up, which, a short time ago, provoked grave fears of a "melon cutting," and it didn't come off only by reason of the belief it could be made much larger in the near future.

The Southern Pacific—The same thing as to having a good part of their road being built for them by the Government as the Union Pacific, and the same thing as to liberal capitalization; plenty of water there, but 6 per cent dividends every dividend day, and dividend day is as fixed as the "17th of Ireland."

Atchison—Liberal subsidies and as liberal capitalization, with last year's results just about as usual, all debts paid, a good average amount of betterment work done, and, after paying all fixed charges, between 11 and 12 per cent remains for the stock, including that slightly moist, so 6 per cent was paid, and about as much passed on to surplus.

A pretty fair showing, wasn't it? And yet President Ripley, of the Atchison, is one of the most persistent calamity shouters in the country. An ordinary day of 25 hours is all too short to permit him to tell his tale of woe at the Government's hardheartedness in not permitting a raise of rates.

And there are plenty of others. L & N.; Atlantic Coast Line; all on easy street, and all they want and need is to be let alone.

Let us class them as No. 1.

Class 2. Frisco. Hold your nose. Wabash, utterly bankrupt for a score of years past. Rock Island, a fine granger a few years ago; now, with so many different issues of stock that it would take an expert accountant to keep track of them, and Rock Island quoted to-day at 14, and, of course, our old standbys, New Haven, Boston & Maine, etc.—all that class that are crying for help and for all hands to fall to and help pull them out of the mire.

There is not a road in the country to-day that has been decently and honestly managed during the past few years that needs or would hardly have the face to ask for help in the way of better rates.

Isn't it a pertinent question, "Why should the general public be called on to contribute for the relief of these cripples?"

President Elliott, in his call for cooperation, assumes everything in his official family is now lovely. So far as he is concerned, I think no one will for a moment question it; but when we come to look at the fact that his board of directors, with two or three exceptions, is the same personal that are responsible for a large part if not all of the trouble the road is now in, when it is to be noted that practically the last action they took prior to his taking hold was to declare a dividend of some three or four millions more than what had been earned during the time in question, and voluntarily agreed to pay ex-President Mellen $30,000 per annum for five years, it raises the question, Is not the old adage applicable—

The devil was sick
The devil a saint would be,
The devil got well
A devil of a saint was he.

Let me quote a little from President Elliott:

"If we are to continue to have privately-owned railroads, supervised and regulated by governmental authority, and, if we are to avoid ownership by the Government, the owners, that is, the stockholders of the railroads, and the users must all work together.

"Personally, I do not believe in governmental ownership in a country like the United States where political methods are still in need of improvement.

"The policy of the Government, National and State, during the last 25 years seems to have been to decide rate questions in the great majority of cases in such a way that rates have rarely been advanced but generally have been reduced, and to introduce rules, regulations, and methods that not only increase expenses, but serve to confuse and discourage railroad owners and managers and to tempt them to say, as the fidler said in the mining camp, 'Please don't shoot for I am doing the best I can.'

"I am not contending at this time that this policy was, or is, wrong or that control and restraint by governmental authority should be less, although something could be said about that great question.

"I do, however, want to make a plea that, coupled with restraint and control, there should be protection to the owners of railroad securities."

I submit that position is hardly fair. Practically, rates are just about what they were five years ago. There has been more or less adjustment and getting them into line. It is expenses that have gone up, and in that respect the people have suffered fully as much as the roads, and just now the cry is to raise the rates, which, in effect, is another raise in the cost of living.

And Mr. Elliott is unfair in not giving the Government credit for what it has done during the past 10 years in saving the railroads from themselves. Saving them by stopping their payments of rebates and issuing of passes; these two items saving them scores of times the amount they may have lost by reduction of rates.

When a company in the shape the New Haven was last July will pay out some millions of dollars by declaring a dividend that they had not earned and pay it to these very stockholders that Mr. Elliott pleads so plaintively for and further authorize a payment of $150,000 to shut the mouth of a man that has done them harm; isn't it a very bad case of special pleading?

I have seen the statement published that the present board of New Haven own or represent one-third of the outstanding stock of the company. If so, that ficticious dividend was largely for their own personal benefit. They walked off with one third of the total amount.

Some time ago, and during the period Mr. Elliott names of unfortunate governmental supervision, the stock of New Haven was quoted as high as 2.50. During the month of November it sold as low as 75. That represents the way New Haven shareholders have fared, as used by the company.

Because it was a rainy Sunday, Skinney Williams concluded to go to Sunday school. There he ran against the proposition that "God could do anything."

Skinney didn't believe it, but it was such a novel idea he took it into consideration. After due deliberation, his chin set very square, he broke out, "It isn't so; he just can't make Bill Jones's mouth any bigger without first setting his ears back."

Possibly Skinney hit on the solution here. First, set the ears back and then it may be able to accomplish what before was impossible.

Can we consider the elimination of Mr. Mellen as setting back of one ear. But Skinney said "ears." How about your Mr. Mellen's coassistants during the past several years. As before noted, with two or three exceptions, the 25 or more remain just as before.

Now, a word as to Government ownership. President Elliott don't want it. Neither do I, and I believe a very large majority of the thinking people of the country think the same way.

There is a question as to whether we have a Government with which it would be advisable to trust such a responsibility.

If we had plenty of Goethals and Gorgases it would be different, but have we? We have an Interstate Commerce Commission which is simply magnificent, but it took 25 years to whip it into any shape.

Its first 20 years of life—well, that experience we would do well to forget—and even a couple of years ago there was one of our characteristic attempts to cut its claws, but fortunately we happened to have a Supreme Court that finally woke up, and I wonder if those chumps in the commerce court know yet what hit them.

On the other hand, we have a Congress that, in some respects, it is doubtful if anyone is proud of. Twice in the extra session just closed they have done their best to give civil service a very black eye, and should a million and a half to two million railway employees be brought within the reach of their claws—forget it.

Now, to get down to our knitting. President Elliott's idea that it is either a liberal increase of rates or Government ownership is practically the general opinion of the entire country, and, aside from some interested railroad people, both are dreaded, the one almost as much as the other.

Is there no other alternative and a better method? I think so, and have for some time been mulling over in my head an idea that seems to me to be feasible, and if it should strike others so I would like to see it discussed.

Among other features is one that I consider of great importance.

By the term "Government ownership" we mean merely railroads. That would leave entirely out of the question all such matters similar to that of the American Locomotive Co., referred to earlier, and incidentally hundreds and thousands of a similar character, and this plan is intended to cover all corporations. There were two or three quite young children who had an exceedingly exaltedly high opinion of Uncle Jack. What he couldn't or didn't do wasn't worth considering. Hence Mary, greatly insulted and with flashing eyes and clenched fists, came to her mother, after an encounter with a playmate, with the inquiry, "Mother, couldn't Uncle Jack make a watch if he only had the tools and knew how?" For the moment we will cut that problem in halves, and later, if we conclude we "know how," perhaps we can figure out some method to find the tools. I propose to attempt to set up before you a skeleton which will enable you to form a good idea and determine if it is possible and practicable; if so, then we can go on and put flesh on the skeleton and give it a fair trial.

First. Draw a line and put on one side what we may term interstate corporations and on the other side State corporations. While, perhaps, after reading further it will be easier to tell where to draw this distinction, we ought to be able to get a fair idea here.

Take the New York Central. Unless it happens to be a branch running to the coal mines, about which I am a bit hazy, that road is entirely within the State of New York. Still it has large interests outside, and should the proposed merger with the Lake Shore go through, of course the result would be interstate.

Then there are the various subcompanies that are a part of the road or system. Take union depots. Chicago is something of a railroad point, but I believe there is but one line there that maintains its separate passenger depot—the North Western.

Some score or more of lines find accommodations in a half a dozen or more union depots, each one owned by a depot company, all or practically all of the stock of which is owned by the various companies it accommodates.

While all of the property of these depot companies is not only in Illinois, but also in Cook County of that State, it is quite a question in the working out of this scheme if it would not be well to class such companies as interstate, in order to deal with them in connection with their owners who are clearly interstate.

This question settled we can get to work on our main scheme.

There should be added to our Government equipment a new department, to be known as the department of corporations. A new cabinet official added to the President's official family and known as the secretary of corporations.

Some half a dozen years or so ago, as the result of much work and investigation, there was evolved a comprehensive plan for the reorganization of our Postal Service. The matter either fell through or possibly is still lingering along waiting for Congress to get around to it.

I mention it merely to take advantage of one item of that proposed plan. It provided for an official who, under the general orders of the Postmaster General and under the title of superintendent of posts, was to have entire executive charge of our postal machinery and operations.

In the plan under consideration there should be such a place provided, the appointment, of course, to be made by the President, by and with the advice of the Senate; but I deem it very important that certain restrictions should be imposed from the very start.

The incumbent should be named on absolutely nonpartisan grounds and his tenure of office not limited to the ordinary four years. If any limit, save for life or during good behavior, name it at least 10 years.

If we get a good man in, and get him educated to the wants of the place, hold onto him as long as you can.

Recently Secretary McAdoo has been quoted as saying he was in search of a $25,000 man to take the $10,000 place in charge of the Income Tax Bureau.

We will want a $25,000 man for our superintendent of corporations, and can well afford to pay him the $25,000 he is worth—if he is the man for the place. And just here and and aside, recently ex-President Mellen has done two things I want to commend him for—one is to have refused to accept $30,000 backsheesh voted him by the directors of New Haven, confirming the belief of a great many of us, that the offer of it was simply a bribe to compel him to keep his mouth shut; and the second was to state unreservedly—if quoted correctly—that the railroad president that accepted or was paid more than $25,000 per annum for his services was being grossly overpaid.

I believe in paying for brains, but here as elsewhere there is a limit, and it seems to me that for personal services there are not to-day in this entire country as many men as you have fingers on one hand that are honestly worth more than that figure. Once in a great while there is a Napoleon Bonaparte or a Harriman, but we have altogether too many imitations who can not wear those men's hats, and it is even a question if we want them.

If Senator Root eight or nine years ago could afford to throw over his shoulder an offer of a retainer fee of $100,000 a year to accept the portfolio of Secretary of State at a compensation of $8,000, there is some hope that we may be able to get the man we want at such a figure as we can afford to pay.

If we could draft, say Secretary Lane for instance, the plan would score a success from the start. If it is pleaded he can not be spared where he is, why, we had better take his twin brother. What's that you say? He hasn't got a twin brother? Well he ought to have—how could he have been so careless?

With that place filled we are ready for the next step.

Require all corporations on our interstate list to take out their incorporation papers from the General Government, and under such just laws and enactments as may be provided, and this means such corporations are to be under the General Government supervision in all respects save what may be termed police supervision in the various States where they may operate.

At once on receiving their incorporation papers the new company must issue, in the name of the Government, a certificate of their capital stock, full paid and nonassessable, say, in the case the total is 10,000 shares or less, this certificate is to be for 100 shares.

If the corporation is of United States Steel size, 2,500 shares, and on an agreed schedule between these two extremes.

This contribution is to be considered as a fee, as the regular fee now exacted by all of the States when issuing such papers.

This certificate will give the Government an absolute ownership of that amount in the company, and to that extent and no further shall we have Government ownership.

And now—and here is the kernel of the entire matter—this certificate shall distinctly and positively provide that the Government shall be entitled to and shall have one director on the board of directors, and the superintendent of corporations shall ex officio be that director, to be represented by proxy, as stated later.

The entire country shall be divided up into districts or zones, on such a plan as may best be worked out to best promote the object; but, for our present purpose, let us assume it has been divided into zones with, approximately, 100 corporations in each.

To each of these zones there shall be assigned what we may call a chief examiner, in general charge of that zone and the direct representative and executive of the superintendent.

Under this chief examiner there shall be, say, ten (more or less, as the circumstances may demand) assistants, to be termed examiners, and who may be considered analogous to our present bank examiners.

They must be high-grade or first-class men in every particular, experts, and, in the light of some recent developments, I would strongly urge that the civil-service law be invoked and made mandatory in the organization of this corps. We don't want a single man in the lot who can not pass the necessary examination, no matter how good a politician he may be, and even the fact that he was an "original Wilson man" might possibly be waived.

Under the direction of the chief examiner in charge, these 10 examiners shall be assigned to the various corporations in a manner that shall best cover the field.

Of course, it must be strictly provided that the examiners shall not in any manner whatever be interested, directly or indirectly, in any of these corporations. They will be paid regular salaries by the Government, and be prohibited from receiving any favors, tips, etc., whatever.

In case, as is sometimes done, companies pay their directors $10 or $20 to induce them to attend their meetings, our examiner shall draw his stipend with the rest and promptly turn it over to the proper Government representative.

Let me go further. Let us invoke the Army method. Our individual examiner is expected to be strictly on his honor in this respect. He is a representative of the Government in this matter, and is a gentleman, and he is expected to act as a gentleman, and the least deviation from that rule results in his leaving the service that very same day. Let us consider the movement of an individual examiner. He attends the meetings of the directors of his assigned corporation; has, under any instructions he may have received from his superior officers, a vote the same as any other director; he is expected to be an expert in all legal matters concerning that corporation, and will advise and counsel, and, if necessary, insist that the laws in question be fully complied with.

At the conclusion of each meeting he will make, through his chief examiner to the superintendent at Washington, such a report of what was done at that particular meeting as the superintendent may prescribe.

If the company is of an industrial character and only current trade matters and, perhaps, trade secrets are considered, the report will be very brief and of a confidential nature. If, on the other hand, it is, say, a railroad or a corporation with a large amount of securities on the market, and the matters discussed are of a financial nature, say, a new proposed issue of securities, or, for instance, such a matter as one of the trifling matters referred to in our earlier referred to reference to the American Locomotive Co., where the president, although drawing a salary of $50,000, was in the habit of, whenever business was a trifle better than usual, would vote to himself and some of his particular circle a good, healthy percentage, or, as he styled it, a commission on such business, why, our examiner would not only fight it tooth and nail, but would report it in full to Washington, and all such reports would be considered public documents and open to the inspection of anyone desiring to see them, in addition to whatever action the superintendent would feel called on to take with such report as a basis.

All financial matters of corporations with stocks or bonds on the market should be considered open to the inspection of any interested parties, and in the method herein outlined the reports so obtained and spread on record would possess the merit of reliability.

Of course, our examiner would represent his chief as proxy. In effect it would be the actual Government director as present, and here is another of my especial points, our examiner should be considered as the direct representative of the minority stockholders, a very respectable class in numbers, but in a large majority of cases receiving no consideration whatever, or if they do, it is to be plucked by the dominating element.

Our man would at all times be at the service of any of these minority stockholders—give them, or, on request, obtain for them any desired information regarding their interests, and, in brief, see that they were as thoroughly represented and protected as the big boss himself.

If outsiders were considering the matter of investing in that particular line of securities, he could give them desired information—not advice, but facts. Anyone to-day proposing to purchase a particular bank stock will have no trouble in learning just what its "book value" is and ascertaining definitely. Why not pass this on to some of our other investments?

Our particular man may be assigned to certain definite companies or may be shifted from one to another as circumstances may warrant. If on a regular assignment and for any unforeseen reason—sickness or detained on other duty—the chief in charge will simply call on some other available man to cover the meeting of to-day. In theory it is the superintendent who, although actually sitting in his chair in Washington, 500 miles away, but who is also here at this particular meeting, and will actually know every bit of business transacted a few hours later.

Remember, the corporation will be required under the strictest rules to give notice of any and all proposed meetings a reasonable or specific time before, so that there will be no reason whatever why our director will not be represented, or in case it should happen to be impossible to make a particular appointment—sickness, too many calls at a particular hour—our man could go to-morrow, and from the minute book learn just what was done and make his report.

It will be assumed in case of such a contingency it would be the unimportant meeting that would be slighted and he would be sure to be at the one where a vote might be necessary.

In the daily paper of current date I find the following:

"Boston, November 21.—Reorganization of the New Haven & Hartford Railway Co. to meet the requirements of the Sherman anti-trust law was to-day discussed by the directors of the road at their monthly meeting. Chairman Elliot said that no demand had been made upon the New Haven by Attorney General McReynolds to hasten its reorganization. He said that he had assured the Attorney General an investigation would be made to see what could be done to solve the problem, and that the committee of directors had been working hard to this end."

Now, assume that our plan was in working shape when this New Haven muddle came up. The Government would already have had a representative on the ground, but with two or possibly more departments of the Government interested, and, of course, working together, would it not tend to simplify matters to select the particular man best suited to the occasion and have him assigned to this particular case and give his entire time to it, if necessary receiving additional assistance, and, being a party on whom the Government could absolutely rely, would it not tend to bring all matters to be adjusted to a focus earlier and more satisfactorily than by our present awkward methods?

The first part of this year when the Department of Justice had the Union-Southern Pacific dissolution merger matter in hand, would it not probably have been worked out to a satisfactory solution with the right man representing the Government in constant contact with the other side in half the time and work than that actually used? With the Government actually interested on both sides, as they would be, there could be no possible objection to their being represented in the negotiations on the other side, and, if the other side was honest in its desire for adjustment of the matter in controversy, they would not have the slightest grounds to object, and if it should happen that they should not be honest, why the Government would then have the whip hand, and any objection would be useless, and not being honest only act against them and so probably obviate the unnecessary work any way.

Again, could a more simple or more effective method be devised to give the Government an immense amount of information which it is eminently desirable and necessary they should have, and, to go back to our last phrase, if the other side was honest there would be no possible objection to their having, and if not honest, all the more reason why they should have it.

If it was Government ownership, so far as the railroads are concerned, we would have it, and what possible objection can there be to our going a step further and obtain it from all corporations.

So far as what we may call close corporations, practically partnerships but for some benefits to be obtained by corporation and with the stock all in the hands of two or three persons, or possibly all in the hands of a single family, and not on the market or for sale, and no part of the companies' plan to make the stock as stock valuable in itself, why, the oversight or supervision would be only perfunctory, and as before, if honest, there could be no possible objection, but it would most likely be considered as a clean bill of health.

Now, of course, in such a matter there are details without number to be worked out and considered, but, with the additional statements, the plan outlined refers to interstate limits only. Should the General Government adopt and put it in effect, it would naturally follow that with some slight modifications it could and should be adopted by the various States for their local corporations.

One thing should be insisted on, the corporation doing business in one State should be incorporated in that State.

We have had quite enough scandals resulting from "New Jersey" corporations. The Southern Pacific, with tracks in some six or eight States, but with not a foot of track within 500 miles of Kentucky, goes there for its corporate papers simply because for a liberal fee it can obtain privileges that none of the States in which it operates, and the people with whom it is to deal, will concede to it.

And in addition to requiring State companies to be born at home, these 48 States of ours should get together and jointly agree on and adopt the same corporation laws, and so obviate the reasons and necessity for going abroad for your franchises.

When not otherwise engaged with meetings, etc., our man should busy himself making good his title of examiner. He should have access to all the books and records of his companies, and it should be a part of his duties to see that such books and records were correctly and honestly kept and showed the actual standing of the company.

He should be considered as an actual director of the company and be constantly on the job.

I read in an article discussing financial matters that approximately at least one-third of the number of individual stockholders of American Sugar Refining, Pennsylvania Railroad, and New Haven are women.

If that statement is anywhere near correct, will not our man, as director in their behalf, have his hands full, and more than full?

Referring to women and some others of the minority individual stockholders in a certain company of the modern sort then under discussion and criticism, a profane friend of mine very tersely and accurately stated the situation by saying, "They might as well be in hell without claws." Oh, there is plenty of good hard work cut out for our man, and work that it is absolutely necessary that should be done.

I am not a prophet nor the son of a prophet, but I sometimes like to imagine what the situation will be when once revolutionized, as it should be, and the changed relations there will then be between the outside stockholders and the inside gang as now. It reminds me of that old, old historic story of the encounter between Silas Slocum and the Forty Thieves of Ali Baba's Arabian Nights time, and if I had the least idea it would be safe to repeat that hoary old chestnut, I should feel tempted to do so. I'll tell you for once in my life I'll make a desperate attempt to break into good company and join with President Eliot in invoking the good offices of the mining-camp fiddler and get him to beg, "Don't shoot, for I am doing the best I can," and venture it.

What's that you say, "Forty Thieves?" Oh, no; I am not going to refer to the directors of the New Haven; of course not; don't imagine it for an instant. Besides, there are only some 25 of them.

"Bill," says the schoolboy to his chum, "lend me your knife." "I can't," says Bill, "because I hain't got none, and besides, I want to use it myself."

Let's see. Silas used to live at Skaneateles, wasn't it. Anyway, it was in some good seaport up State. Well, after digging his 'tater crop, he concluded to take a little passa down to New York for a change of air and scenery. Sauntering up Broadway, passing Niblo's Gardens, he ran up against the gorgeous bills announcing the performance of "The Forty Thieves, the most stupendous extravagance of the season—the Forty Thieves." "By gum," says Silas, "I'll see that if it takes a leg."

Now, Silas was something of a sport. Always took in all the good shows up in Skaneateles and always paid the regular fee of 25 cents, unless it happened to be something a bit off color and consequently the charge would be only 10 cents. This though must be a topnotcher, so digging up his quarter he marches up to the ticket window, and throwing down the coin with all the nonchalance of a Gates, he calls for a good front seat.

"One dollar," barked the pirate in the box office.

"What's that?" gasped Silas.

"One dollar," sharper than before.

Dazed, Silas staggered back and stared. He looked the man over, stem to gudgeon, fore and aft and athwartships, then with a sigh of comprehension he reached forward and pushed the despised coin with a "Keep it, mister, I don't want to see the other 39."

Now that we have adopted the good habit of going back to President Eliot's quotation, let us keep it up and note what he says as to "the policy of the Government, State and National, during the past 25 years," etc., as to control.

At the beginning of this period of 25 years ago there must have been at least a dozen railroads in receivers' hands, and the same will be found to be true for the succeeding 10 years or so.

Then a let up came, and 10 years ago, and after the Government had got this criticized policy well underway, the number of roads in hock was about none. Five years ago there was not a single one there, nor three years ago. Then that old derelict Wabash couldn't keep its nose above water and went under. Last spring Frisco, under the circumstances noted at the beginning of this writing, followed suit and that is the entire number of roads in trouble to-day as compared to at least a dozen—probably more—25 years ago, to which date Mr. Eliot calls our attention. Is that a very bad showing for a policy that Mr. Eliot takes such decided objection to? And will anyone, particularly Mr. Eliot, say, if our proposed plan had been in full operation the past dozen years and a Government director sitting on Chairman Yocum's Frisco board of directors and reporting regularly to Washington as this fictitious debt of $40,000,000 was being systematically loaded on that unfortunate concern that it would have been in trouble to-day?

Would it not have locked that stable door before the horse was stolen?

That is one of my strongest features—prevent the wrongdoing is a thousand times better than attempting to punish after it has been done, and if your party is dishonest and proposing to rob you, nine times out of ten, if he knows the sheriff is right at his elbow, will he not stop and take another think before surely running his head into the noose?

Now, with one word more I shall drop this particular line. As before stated, our Interstate Commerce Commission is one of the very few lines in which we have made a very great success. It took us a long time to do it, but we thereby received a good education, and I can see no reason why we can not benefit by our early mistakes there, and get this branch of our Government in working shape very quickly and avoid the blunders made there.

If we do equally well here, as we are now doing there, it would promptly settle for once and all the uestion of Government ownership.

I think I have outlined my plan sufficiently plain so that it will be understood, and a fair idea of it and its plausibility had.

So far, the scheme is entirely my own, but I want it criticized and others to say if it appear possible and practicable. Is there any reason why it can not be made to work. If not, then it should be in order to get busy and whip it into shape.

What more I have to say here will be on the general situation and only incidental to this particular plan.

Now, a word as to Government ownership. If it should really come just imagine what a stir up there would be? All of the present securities of the roads called in and disturbing all present investments and trusts; probably the Government would issue bonds for the purchase of the roads; if so, being a Government issue it would be on a lower basis of interest than now prevailing, and in general it would be an awful mix up in financial matters, and would extend over years before the readjustment could be complete. The absolutely unavoidable loss and consequent suffering that would ensue, possibly, you think you can imagine, but I would rather have your opinion at the end of that period—if you manage to live through it, which an immense number of you would not do, and solely by reason of the trouble that would unavoidably ensue.

It is bad enough as it is. From anything worse may the good Lord deliver us. The coming inventory or physical valuation of our roads will, of course, throw much light on the situation, and after it is taken and the outstanding securities checked up against the roads, there is very likely to be some surprises. With Mr. J. J. Hill's view that the country is water-logged with bonds, and bonds of all sorts and descriptions, paper that goes by the name of bonds, because that word is printed thereon when the word "scraps" would be far more appropriate.

In any event a balancing off and finding out "where we are at" will not be an unmixed evil, and possibly it may enable us to account for the reported very low water in our Great Lakes and some of our principal rivers, as well, and again, possibly, we may be able to get a line on and a fairly accurate reason for the drought of last summer in Kansas and Nebraska with the resulting serious injury to the corn crop.

From my limited reading I think it can safely be claimed that from the experience abroad, Government ownership of railroads is far from being a success, and in many if not a majority of cases the word "failure" would be much nearer the truth, and as between our rushing into something of that kind, and utterly in the dark as to results, on the one hand, and the people—everybody going down into their pockets and paying out $10, of which the railroads would receive about one—on the other, is it not just ordinary common horse sense to first look around for some practicable way to avoid both of these evils and find a substitute, and to that end I propose this plan for your consideration and discussion.

Since writing the foregoing more history has been made. The brief investigation into the "Frisco" trouble develops the fact that under our very peculiar methods of legal procedure one of the receivers had been an active member of President Yoacum's syndicate, which in some measure at least was responsible for the trouble that that road is in; consequently Mr. Receiver steps down and out, and New Haven for the first time in 40 years passes its dividend.

At the annual dinner of the Railway Business Association in New York last week this sentiment was proposed:

"Here is to business and government. May business be conducted so fairly and humanely that government need not concern itself with business, except to be sure that nothing is done to disturb or hamper it."

That exactly and tersely puts it in plain English.

Could a better method be devised than that proposed: First. Inform government when business was being "so conducted," and consequently "not concern itself"; and second, be so advised as to the actual situation where it was necessary that government "should concern itself."

With a Government director on the New Haven board the past 10 years would it not be probably a certainty that its Christmas dividend would have been paid as usual?

With this plan in force in the various States is it not probable many or most of our mining-stock swindles of the past would have been eliminated?

And in the Eastern States would this not likely prove a far better blue sky law than anything now on any statute book?

—

SECURITY WAREHOUSE & ELEVATOR CO.,
St. Louis, Mo., December 24, 1913.

EDGAR E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I am inclosing you herewith an article by the writer, which appeared in the St. Louis Times Tuesday, December 23, 1913, which I trust you will find time to read carefully.

I am pleased to note an expression made by President Wilson in his address after signing the currency bill, which is quoted as follows:

"It is so obvious that it ought not need to be stated that nothing can be good for the country which is not good for all the country. Nothing can be for the interest of the country which is not for the interest of everybody."

It is evident that only by the adoption of a single standard for measuring the rates will all the people be served equally.

Yours, truly,

F. L. WALLACE.

—

SINGLE STANDARD RATE BEST WAY OUT OF TANGLE—F. L. WALLACE SAYS IT WOULD DEPRIVE SOME OF SPECIAL PRIVILEGES, BUT WOULD RESULT IN GENERAL GOOD.

One of the great questions agitating the public mind to-day is that of railroad rates. The sufficiency of existing rates to furnish funds with which properly to maintain and operate the railroads of the country is very important, but should not be the only consideration, as their equity between commodities, individuals, and communities is, in fact, of equal, if not greater, importance.

Recent developments showing gross mismanagement on the part of the railroad officials have strengthened the public mind in a well-defined opinion that the managements, not the rates, need supervision. Undoubtedly the earnings from some of the rates and divisions now in use are insufficient, many others too high, and all are discriminative in some regards, being unfair either to the railroads, because they are too low, or to some of the public who are adversely affected. At the same time there is no definite relationship existing between the various

rates now in use, because the railroads have been for years, and still are, laboring under the false delusion that they must make low rates and extend special privileges to some individual, class, corporation, or community, and to do that they tax some other business or community with an excess of cost to make good their losses on shipments handled on these low rates.

Consider the earnings of any line between certain junction points and compare the revenue as shown on shipments originating in some preferred territory passing over this intermediate line and delivered to some other preferred territory beyond its line with the earnings on like shipments from various other less favored points of origin and destination when passing over the same intermediate line as well as with the earnings contemplated on like shipments for local traffic, and the divisions of through rates which the many transit and milling in transit privileges authorize, when legitimately used, and the weakness of the present system will be clearly shown.

Analyzing the evidence given by the railroad officials in the coal-rate case being heard by Commissioner Harlan will clearly indicate the conditions which surround every other set of rates in use by the railroads of the United States. The evidence given by the assistant general freight agent of the Southern Railway, as published in the St. Louis Times, to the effect that their tariffs in some cases show an earning of 3.9 mills per ton-mile and ranging up to 10.92 mills per ton-mile in other cases, brings out strongly the need of a single standard by which to measure the rates to be charged for a specific kind of service. The evidence in this case by the general freight agent of the Mobile & Ohio Railroad indicates that their rates are made not on a basis of the service performed, but for accommodation purposes, showing favoritism as a prime factor used by this company in determining their rates.

The act to regulate commerce is predicated upon a condition which regards neither individuals, localities, nor corporations with special favor, and presumes that the rates now established, or to be established, have been or will be made with a view of profit to the corporation on each individual shipment, and one that is extended to all persons, corporations, and communities in an equal manner. Furthermore, the law contemplates rates based on the long and short haul clause, and this feature of the law should be enforced, * * * order that a simple system of through rates and routes might be established to cover the whole country.

A single standard does not mean that a specified rate per ton-mile would apply in every case, but that each railroad should establish a single set of rates to apply between the extreme points of their line, and framing all the intermediate rates to conform to the long and short haul clause of the law. The rates should furnish sufficient earnings to cover legitimate operating and maintenance expenses and pay fair dividends on the real valuation of the property, and when once established would remain in force indefinitely, probably never would be changed. The only changes that would be made would be in a classification, which in a short time would become so fixed that neither classification nor tariffs need ever be tampered with. The result would be largely reduced cost to the railroads for clerical work, printing and distributing the tariffs, and auditing work, to say nothing of causing many other economies which would, in a short time, create a fund sufficient for dividend purposes.

Contemplating these matters, it is evident that a flat raise of 5 or 10 or more per cent in the existing rates would not correct the discriminations now prevailing, and which result in so much justifiable dissatisfaction to the public generally. In fact, a raise of this character would only stimulate the aggrieved interests to renewed opposition.

The adoption of a single standard would deprive some favored interests of their special privileges, but it is manifestly evident that its adoption would result in the greatest good to the greatest number. Traffic moving under this system would follow the course of least resistance, and this simple system would eventually settle the deep-waterway question and in many other ways advance the interests and welfare of the country at large beyond the fondest expectations of our most enthusiastic citizens.

This does not mean the passage of new laws, but simply the enforcement of the law as it now stands.

F. L. WALLACE.

RAPID CITY, S. DAK., *October 20, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Inclosed find protest and argument against advance in any rates in this territory. I had but little time or but little data out here so far from all records from which to compile these facts but think you can verify them all from your records there. I only had about 1½ days in which to do the work after finding that the reductions applied to this territory.

Yours, respectfully, W. H. TOMPKINS.

FILED FOR THE HEARING OF NOVEMBER 24, 1913.

INTERSTATE COMMERCE COMMISSION.

Brief and argument by W. H. Tompkins, representing shippers in territory northwest of Chicago.

Without access to the really important records and reports that are available at your offices in Washington, and having but very limited time to present the facts in, I wish to state some of our objections to any raise whatever in railroad rates in the territory north and west of Chicago, and particularly in western South Dakota.

The question can probably be best considered under three divisions:

First. Objection to any advance in through rates.

Second. Objection to any advance in local rates.

Third. Local rates are discriminatory and to a certain extent prohibitory, and should not be raised, but given a substantial reduction.

The roads covering practically our whole territory are the Chicago, Milwaukee & St. Paul and the Chicago & North Western, and therefore, it is with these, including the Puget Sound line, that we will attempt to prove our contentions. As we understand it, the contention of these roads is, that because of increase wages, higher prices of supplies, and to install needed improvements and facilities, that more revenues are necessary.

Is it absolutely certain that a raise of rates will increase that revenue? If it is true that there is a fixed amount of business that must be moved this would be true, but where the business is stagnated by almost prohibitive rates, as is the case with our western South Dakota lumber, stone, lime, stucco, and class rates, would they not tend if raised to reduce revenues?

In support of the contention that higher rates would probably mean less revenue, I would refer you to the fact that the Iowa rate law was approved April 5, 1888, but the commission rates were not made effective until the latter part of 1889, and let us see how these so-called confiscatory rates affected the railroad business of Iowa. For the purpose of comparison I will quote the figures for the three years before and the three years after they became effective. From July 1, 1889, to June 30, 1892, the gross railroad earnings of the Iowa roads, which for three years had been at a standstill, increased and were $7,000,000 more in 1892 than they had been in any year previous to 1889. The figures are:

Year ending June 30, 1887	$37,539,730
Year ending June 30, 1888	37,295,586
Year ending June 30, 1889	37,469,276
Year ending June 30, 1890	41,318,133
Year ending June 30, 1891	43,102,399
Year ending June 30, 1892	44,540,000

The net earning per mile of the Iowa roads for the year ending June 30, 1889, were $1,421, and for the following year $1,821, or $400 per mile more. Ex-Governor Larrabee has the following to say in reply to the criticisms of the railroads:

"No further vindication of the Iowa law is necessary. The figures show plainly that the lowering and equalizing of the rates not only increase the roads' business and income, but also the net earnings."

I wish to call your attention to the fact that between June 30, 1906, and June 30, 1912, the capitalization of the Chicago, Milwaukee & St. Paul was increased from $229,688,200 to $501,000,254, or more than double. The mileage in that time increased from 7,043.54 miles to 7,281.02, or 237.48 miles. The new road was almost all South Dakota prairie road, that required no costly right of way, and could not have cost to exceed $18,000 per mile to build and equip, or about $4,274,000. Putting it in another way, their annual reports show that for their entire line their capitalization was raised from $32,474.89 per mile in 1906, to $68,809.07 per mile in 1912. Now, this money was not required to pay losses from operating as their report also shows that they passed money to the surplus fund, which grew in that time from $33,789,997.76 to $42,931,524.69, notwithstanding the fact that for 1910 the surplus of this company was $50,546,541.28. Their report shows surplus for 1911 of $897,824.40, but instead of that being added to their surplus for the former years, they return for 1911 a surplus of only $49,278,507.91. Again the next year, 1912, their report returns a surplus for the year of $9,930,446.04, but the total surplus is reduced from $49,278,507.91 to the $42,931,524.69 above mentioned. In 1897 when this company owned and operated 6,142.64 miles of main track their surplus was at that time $8,509,718.85. They are now only operating 17 per cent more of road and why should they require 500 per cent more surplus?

Conditions are practically the same on the Chicago & North Western Railway, except that their capitalization has not increased in the amazing proportion that the other line has, but it is enough to make it a certainty that it is an inflated capitalization, it having been raised from $35,920 per mile in 1906 to $48,653 a mile in 1912. Their surplus has been added to each year and has grown from $13,956,820.30 in 1906 to $34,186,372.05 in 1912. It has been impossible to keep the surplus down, even though such efforts as building the Pierre and Rapid City line, a North Western extension from Pierre to Rapid City, a distance of 165 miles, was resorted to and paid for from their surplus fund. You will find in the report of the Pierre, Rapid City & North Western for 1912 that it is stocked at $60 per mile, or $10,000 for the entire line, and has no funded debt. This road is a well-constructed line, and cost not less than $16,000 per mile to build and equip. They are, however, not reporting as the law requires, and are evidently withholding the figures for the purpose of further juggling the capitalization of the Chicago & North Western, of which they are a part.

This enormous increase in capital stock and funded debt have not come from expenditures for equipment or maintenance of way and structures, for their reports show that the Chicago & North Western has charged up to the operating expense account $91,944,815.48 for these purposes for the years of 1907, 1909, 1910, 1911, and 1912. (I have no annual report for 1908, so that is not including any of my calculations.) The Chicago, Milwaukee & St. Paul, for the same period, also reported expenditures of $81,422,743.96 for the same purposes. They report their surplus as having increased from $38,862,000 in 1907 to $47,960,000 in 1909. They, in this time, increased their capitalization from $36,082 per mile, on the entire line, in 1907, to $51,668 per mile in 1909, or in two years. This is an increase of $15,585 a mile on their entire line, or $117,406,000. In this time their report shows an increased mileage of 27.19 miles. The amount of $15,585 per mile that was added to our South Dakota capitalization in those two years would, at that time, construct and equip every mile of road that the Chicago, Milwaukee & St. Paul has in the State in as good shape as it was at that time. The people of the Northwest saw no improvements nor expenditures that could have absorbed that, or any considerable part of it, in that time; and while the expenditure of that sum of money should be easily explained by that company, if properly made, we do not wish to have to submit to the proposed advances in rates until some of these matters have been explained to your satisfaction.

Without doubt every dollar of capital stock of the railroads touching South Dakota, where said line is only a part of any of the large systems, is pure water, and cost the company making the extension nothing whatever except funded debt. I would not make this assertion without some evidence to substantiate it, and for that evidence I would state that among the records of the State railroad commission is the sworn testimony of Will Sterling, given at the hearing in the railroad commissioners' office at Sioux Falls, in June, 1897. Mr. Sterling was then general attorney for the Fremont, Elkhorn & Missouri Valley, a branch of the Chicago & North Western, and his statement was, that every dollar of the Fremont, Elkhorn & Missouri Valley Railway stock, something over $30,000,000, was owned by the Chicago & North Western Railway, and that it cost them nothing whatever, but was regarded of the value of about $38,000,000, as it was then paying 5 per cent dividends. He stated that the road was bonded for enough to build and fully equip it, that being nearly $21,000,000. We find that the two great railroad systems that furnish most of the South Dakota mileage and are paying interest and dividends on a continuously increasing capitalization of fully three times what our South Dakota roads are really worth, and yet passing to the surplus account about $5,000,000 a year, insist upon our paying about three times as much as they are getting for similar service in Iowa. It would seem from this that no matter to what extent the business of the roads may increase, a reduction of rates may be prevented by the issuance of more bonds and the issue of more stock on which dividends are to be paid.

As to our local rates being discriminatory and unjust, all that I think is required on our part to show that is to submit a small portion of the different mileage schedules of the same corporations used in different sections of a prairie country, and but a short distance apart. I submit the following comparison as between Iowa, eastern South Dakota, and western South Dakota:

Eighty miles.

	First class.	Second class.	Third class.	Fourth class.	Fifth class.
Iowa	$22.40	$19.00	$14.90	$11.20	$7.80
Eastern South Dakota	33.30	27.90	22.32	16.65	13.05
Western South Dakota	45.00	39.00	34.00	29.00	27.00

	Class A.	Class B.	Class C.	Class D.	Class E.
Iowa	$8.20	$7.80	$6.70	$5.60	$4.50
Eastern South Dakota	13.05	11.70	9.90	8.55	6.75
Western South Dakota	23.50	17.50	14.00	11.00	7.50

One hundred and twenty miles.

	First class.	Second class.	Third class.	Fourth class.	Fifth class.
Iowa	$27.20	$22.40	$17.40	$13.30	$9.60
Eastern South Dakota	40.50	34.20	26.55	20.25	16.65
Western South Dakota	60.00	52.00	45.00	36.00	32.50

	Class A.	Class B.	Class C.	Class D.	Class E.
Iowa	$10.40	$9.30	$8.00	$6.70	$5.40
Eastern South Dakota	16.65	13.95	12.15	10.35	8.55
Western South Dakota	28.50	22.50	19.00	14.00	9.50

Lumber schedule.

Per 100 pounds for 120 miles:
- Iowa $6.70
- South Dakota 14.00

For 300 miles:
- Iowa 10.00
- South Dakota 23.00

As a comparison, we will take the fifth-class rates for the 80-mile haul, and we find the Iowa rate to be 7.8 cents per 100 pounds; eastern South Dakota rate, 13.05, nearly double the Iowa rate; western South Dakota, 27 cents, nearly four times the Iowa rate, and more than double the eastern South Dakota rate. I wish also to call your attention to the fact that the lumber rates are the same for South Dakota, east and west of the Missouri River, and I would ask if lumber can be hauled as cheaply west of the river as east of it, why other classes of freight can not be, and is not this prohibited by the statute which makes it unlawful for any common carrier to make or give any preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatever; or to subject any particular person, company, firm, corporation or locality, or any particular description of traffic to any prejudice or disadvantage in any respect whatever? The difference on lumber is about the same as on the other classes between Iowa and eastern South Dakota, only no difference is made west of the river on lumber, except by the Chicago, Burlington & Quincy Railroad, which is a mountain road. This same difference is also shown on cattle, mules, and sheep, the rate being about the same west as east of the river. And I submit to you the proposition that if, in any territory, where easily constructed and operated prairie roads must charge such enormous prices as are charged in western South Dakota if the said roads were not "improvidently constructed."

As further evidence in support of our claim that rates are both high and discriminatory in this territory, I would refer you to some of our lumber rates in comparison with those in more favored localities—rate being in cents, 100 pounds, carload lots. Pacific coast towns to Minneapolis, 1,923 miles (more than one-half mountain road, hard to construct and to operate), 45 cents; Rapid City to Minneapolis, 596 miles (all prairie road), 42 cents; Hammond, La., to Minneapolis, 1,300 miles, 31 cents; Beaumont, Tex., to Memphis, Tenn., 550 miles, 14 cents; Rapid City, S. Dak., to Valentine, Nebr., 242 miles, 20 cents. Similar comparisons can be shown in many other places, and these are only cited as examples.

I now wish to refer you to the annual reports of these railroads before named, and show from them the facts as they present them from their record. As we all know, the easiest part of the Chicago, Milwaukee & Puget Sound Railway line to build and to operate is the eastern end of that line that runs through South Dakota, North Dakota, and eastern Montana, the balance being mountain road, but we find from their 1912 report made for South Dakota, a copy of which should be on file in your offices, that the average receipt per ton per mile for moving freight on their entire line was 0.00883, but the average receipt per ton per mile in South Dakota (intrastate) was 0.03083, or nearly four times as much. We also find by the same report that operating expenses per mile of road for the entire line is $4,620.32, but for South Dakota the operating expense per mile of said road is only $3,409.33; operating expense per train-mile, entire line, is $1,51243; operating expenses per train-mile South Dakota, $1.42582. In the report of the Chicago, Milwaukee & St. Paul for the same year the average receipts per ton per mile, entire line, is 0.00839, and for South Dakota (intrastate) 0.02289. The operating expense per mile of road, entire line, is $6,356.08, and for South Dakota, $3,010.90; and the average amount received for each ton of freight, entire line, is $1.61107; and for South Dakota (interstate) it is $2.80137, and this notwithstanding the fact that the interstate shipments must be for much shorter distances; the Chicago & North Western's report for the same year shows receipts per ton per mile (entire line), 0.00907; and for South Dakota (intrastate) 0.02604 (operating expenses per mile of road and per train mile not given for South Dakota by this company, except proportional). The report of the Chicago, St. Paul, Minneapolis & Omaha for 1912 shows average receipts per ton per mile (entire line) 0.00868; average receipts per ton per mile, South Dakota (intrastate), 0.05344; (mileage in South Dakota, this line, 88.20 miles). The Great Northern, with a mileage in South Dakota of 262.36 miles, shows for 1912 average receipts per ton per mile of 0.00769, but for South Dakota (intrastate) 0.07054, or nearly 10 times their average for their entire line.

I next wish to call your attention to how rapidly conditions are changing in this territory, and that a rate that might have been considered reasonable a few years ago, might be wholly out of proportion now. We find that for 1907 the gross earnings of the Chicago, Milwaukee & St. Paul, entire line, was $60,548,000. They were, for 1909, $59,897,000, a falling off of $651,000, or about 1 per cent. In this same time, however, they were, for South Dakota, in 1907, $4,865,000, and in 1909, $6,049,000, or an increase of $1,184,000, or about 24⅜ per cent. The operating expenses for South Dakota only increased from $3,806,000 to $4,123,000, or $317,000, about 8⅜ per cent; yet operating expenses were less on the entire line by $669,000 or nearly 2 per cent. Earnings increased in South Dakota in two years 24⅜ per cent, but operating expenses only increased 8⅜ per cent. On the Chicago & North Western line I will omit the gross figures and only give the per cent of increase. The earnings for South Dakota for two years increased $617,000, or 21¼ per cent, while operating expenses only increased 6⅜ per cent. This shows how rapidly conditions are changing in this State. As further example of these changing conditions I would cite you to the fact that since 1895 and 1896 the Chicago, Milwaukee & St. Paul gross revenues in this State have increased fully 400 per cent, while their mileage has only increased 40 per cent. Ten years ago nearly all of our railroad west of the Missouri River was mountain road, and they were most likely justified in having a mountain road rate, but now conditions are changed, and 70 per cent of the railroad west of the Missouri River is prairie road, but they still maintain these original high mountain road rates, and we earnestly protest against any advance whatever in rates that we now believe to be unjust and unreasonably high.

Respectfully submitted.

W. H. TOMPKINS.

—

NEW YORK, *January 27, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Remove the fast-freight lines, which are operated in the interest of a few, and there will be no occasion to advance freight rates.

Over 8,000 cars are on the New York Central & Hudson River Railroad under the name of "Merchants' Despatch," and many thousands of cars known as "Star Union" are on the Pennsylvania Railroad.

Their profits come out first, their privileges are many, and all at the expense of the stockholders.

Very truly, yours,

SAML. CRUMP.

—

PORTLAND, ME., *February 4, 1914.*

CHAIRMAN INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: Noticing in the press that the railroads are asking for permission to raise rates, I think possibly I can give you an idea of where some of their money goes. I have no fact that I can swear to, although morally certain that parties are getting rebates.

There are large egg handlers at Abilene, Kans., that I am quite certain have received rebates in one form and another for the past 18 or 20 years, I think, of late years, in the form of damage to eggs in shipment. If you will send men competent to go through the books of the auditors, especially of the Northern Railroad at Kansas City, you will no doubt be able to find that the damage allowance amounts to about the same per car lot. The rebates to the people at the point mentioned has made them rich.

The most of these people ride on free transportation in some form. Also, I am quite sure this same condition exists all over the State of Kansas, and before any increase in freights are allowed this ought to be inquired into. While working in an egg-packing warehouse five years ago I kept my eyes open. The railroad agent would come in and say, "Where are your bad eggs?" He would be pointed to a number of cases piled out. Then he would go out. These eggs pointed out where no different from 500 or 600 other cases piled in the same room.

You find this a prolific field, once you get a lead.

Yours, etc.,

R. N. CURTIS.

—

CINCINNATI, OHIO, *February 9, 1914.*

GEORGE B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: Referring to the investigation that is now being conducted by the commission under I. and S. Docket No. 333, regarding rate increases in the official classification territory, the railroads ask the shipping public to pay increased freight rates, aggregating between $45,000,000 and $50,000,000 annually, and justify the increase by the claim that they can not continue to operate under present rates without danger of bankruptcy, or, at least, without inability to give efficient service or keep their roads up to the proper standard on account of lack of credit, thereby curtailing their purchases of necessary equipment and material.

We desire to call the attention of the commission to several ways in which we think the carriers could practice economy, and believe that much could possibly be saved in these directions toward making up to the railroads the $45,000,000 or $50,000,000 annually which they claim it is necessary for them to have. It may be that these matters have already been suggested to the commission, but on the chance that they have not been brought to your attention, we respectfully beg to submit them for your consideration and investigation if you deem it best, and even if they have been brought to your attention before, we feel that they are of sufficient importance to justify a reconsideration.

First, expensive passenger terminals: We are heartily in favor of improvement in terminal facilities, but we respectfully suggest that, if the railroads are so hard up as they would lead the shipping public to believe, they are not justified in spending so many millions of

dollars as they have spent in the past for building extensive passenger terminals in various large cities in our country. It is true that these terminals are beautiful and very convenient to the public, and we enjoy them ourselves when we have occasion to pass through such cities, but beyond being an ornament to the particular city in which they are located, or an advertisement of the particular railroad that erects them, they can not be productive of revenue, but merely take up many millions of dollars. If the railroads could afford to stand these many millions for erecting beautiful and artistic edifices, they should certainly be entitled to credit for their efforts in helping to beautify the city, but if done when the railroads are nearing bankruptcy (so they say) we think that in cases where new passenger terminals are necessary that the garment should be cut to fit the cloth, and an equally convenient but much less expensive terminal should be made, and the balance should be turned in to help pay for the new rails and equipment that they say they so badly need, but can not float stock or bonds to pay for.

Second, up-town ticket offices: The railroad companies maintain ticket offices at their passenger stations for the sale of both railroad and Pullman tickets, but in all cities of any size and consequence so-called "up-town ticket offices" are also maintained. The latter are almost invariably located in the heart of the business portion of the city, on streets where rents are of the highest, and usually in the most modern sky-scrapers, and, not satisfied with being located in the more expensive buildings in the city, they occupy the corner room on the first floor if possible. Such offices are usually fitted up with mahogany furniture and marble floors and trimmings, and while they are without doubt a credit to the community, it seems to us that if the railroads really desired to practice economy here is an opportunity where hundreds of thousands of dollars, if not millions, could be saved by doing away altogether with these "up-town ticket offices" and selling their tickets at the depot, or if, in their desire to accommodate the public, they consider that the public demand convenient facilities up town for securing transportation and sleeping-car reservations, the result could be just as easily attained by locating their "up-town ticket offices" in less expensive quarters or by maintaining a joint city ticket office, as they do in union depots. As a matter of fact, if they maintained a joint city ticket office, it could be located on any by-street and at a very reasonable expenses for rent. There would be no question but what the public would turn into a street a few steps farther around the corner if there was only one office. These "up-town ticket offices" are not a source of revenue except as they enter into competition, one line with another, and while there may be reasons why they should be kept separate, there is certainly no reason why they should always be located in the most expensive quarters in the city. Nothing whatever is gained, as one road usually has practically as elaborate quarters as another, and therefore if all of these offices were maintained in a more economical way the same result would accrue in the end to all.

As we stated before, some of these ticket offices are a credit to the railroad company and city, but they are a luxury as now maintained rather than a necessity, and if the railroads are as hard up as they claim and can unite in efforts to secure an increase in freight rates, they should be able to easily get together on a question of economy such as this and save hundreds of thousands of dollars annually that they are now practically wasting on these beautiful, but more ornamental than necessary, offices.

Third, automatic stokers on locomotives: A large number of freight and passenger locomotives are fired and stoked by hand, although the locomotives otherwise are models of the latest mechanical and engineering skill. The average manufacturing plant has installed automatic stokers and self-feeders. Even many of the older plants have been remodeled with such improvements. No manufacturer would consider his boiler room up to date without automatic stokers, and, while the railroads claim to be up to date, and in fact are up to date in many other things, they are still using old-style methods of firing engines by hand, with a corresponding waste of fuel, which would amount in the aggregate to a very fair portion of the sum that the railroads now claim is necessary for them to have to continue operating efficiently. Granting, for the sake of argument, that the railroads need more money for the purchase of equipment, rails, etc., why not attain the same end by reducing the operating expenses instead of increasing the gross revenues?

The advertisement of one company in a recent number of the Railway Review says that one locomotive fired by their stoker is doing passenger work which formerly required two shovel-fired locomotives. The railroads claim that they have practiced economy, but here is one case where they could save a very neat sum in the loss of fuel. We understand that there are at least four or five automatic stokers of approved design and that are practical, and we suggest that your commission ascertain why the railroads have never generally adopted any of those designs and made an effort to stop this waste of fuel. Certainly it can not be possible that railroads or those controlling them are interested in increasing the consumption of coal. If not, then why should not the carriers, if they are sincere in their claims that they are practicing economy, put some of these devices into general use; and if they are not desirous of practicing economy, then why should the shipping public at large be asked to contribute an additional $50,000,000 annually under such circumstances?

Feeling that your commission desires to get to the bottom of this matter, we offer the three suggestions mentioned above for your consideration, and if they are of any service to your honorable body in your investigations or tend to throw any light on the subject, then this letter will have served its purpose.

Yours, very truly,

THE GLOBE SOAP CO.,
FRANK VAN SLYCK, *Traffic Manager.*

—

NEW YORK, *February 13, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: In view of your examination of the New York Central & Hudson River Railroad Co., with reference to an increase of its freight rates of 5 per cent, I want to call to your attention the speech of F. W. SIMS, reported in the CONGRESSIONAL RECORD of February 6, 1914, at page 3208. And what Congressman SIMS says about the New York Central & Hudson River Railroad Co. is quite true about all the roads running out of New York.

As a citizen I would like to know what it means that the railroad companies have the audacity to apply for such an increase in freights when, as a matter of fact, every road leaving New York has a large amount of stock which originally was without any capital behind it; and if they can not carry freight without an incerase, it is simply because their stock was originally nothing but water, and the bonds covered the whole investment; and they have sold the stock, which had little or no foundation in values, and now seek to recoup by an increase of freights. Citizens like myself, who have no interest in the matter, are looking on with deep concern at the action of your commission.

Respectfully, yours,

FRANKLIN PIERCE.

—

SYRACUSE, N. Y., *February 16, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We trust you will not grant any increase freight rate to the railroads.

We are burdened all we are able to bear. When we found our inventory in November, 1913, showed us a loss for the first time, we took off our coats and went to work.

Let them do the same.

Yours, truly,

T. H. APPLEBY & Co.

—

HELENA, MONT., *April 5, 1914.*

LOUIS D. BRANDEIS, *Washington, D. C.*

SIR: A vote of those who have to "pay the freight" would soon settle the question of a 5 per cent advance.

For 15 or 20 years the railroads have set the pace for reckless expenditure and more than reckless management. Now, when they allege shortage of revenue, we are asked to help them out. No; let them meet the case as all others must.

Starting with the cutting of the Union Pacific melon and ending with the exposé of St. Paul's book and account system the plain folks have nothing to expect from the roads.

We had hoped to see the less-than-carload rates on a basis of, say, 35 per cent of carload rates. We had expected to see the classification cut to at least one-third of its present limit.

We had thought of a commission to pass on every issue of bonds and stock.

We expected to see the small cities and towns on about the same footing as terminal cities; but all things point to the advantage of the big business interests, and the little ones are expected to take what is left over. We might cut loose from jobbers and retail merchants' associations if only the railroads would do the fair thing. All this and more will come some day, but I hope in the present fight you and your friends will carry the case through and win for those who in the end have to pay.

W. PASSAVANT.

—

PHILADELPHIA, PA., *February 28, 1914.*

CHAIRMAN OF THE INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: While your honorable body is considering the arguments for and against railroad-rate increases allow me to suggest that you inquire into the need, both on the part of the railroad and the public, of freight solicitors and the good, if any, resulting therefrom.

What is the duty of a frieght solicitor? Is it not to influence the routing of shipments by his line rather than by some other line, and in the achievement of his purpose has he helped the public in any way? Surely he does not increase the volume of traffic, but merely diverts from one possible route to another certain competitive business.

A shipper soon learns the route or road which renders the best service and will route via the line which produces the results most favorable to the broadening of his business, regardless of the importunities of the solicitor.

On inquiry, I have learned that freight solicitors are looked upon by many large shippers as a nuisance, and that time given to the hearing of their claims is practically lost. Would not all the railroads be as well off, and all the shippers, too, if all freight solicitors were withdrawn and the routing of all shipments left entirely to the merits of the several lines? If they were withdrawn, possibly business would be more equally distributed among the competing lines, and the weaker roads, which need more business on which to build up their properties, might obtain a larger proportion than under the existing system.

Suppose all these men were withdrawn and every shipper were left to exercise his own volition in this matter, and this money were spent along educational and other advertising lines, for instance, in bringing to the attention of manufacturers the advantages of factory sites, to the populace the advantages of home sites, and to the tillers of the soil information which would enable them to produce larger and more lucrative crops in each of the respective railroad territories, would not the expenditure in the long run be more profitable to each road, its stockholders, and the public?

There appears to be no distinct need of freight solicitors while the expansion of the publicity department is justifiable.

Yours, very truly,

W. B. TANNER.

—

EN ROUTE, NEW YORK CENTRAL, BOSTON & ALBANY,
AND MICHIGAN CENTRAL RAILROADS.

DEAR SIR: In going over Interstate Commerce Commission list of questions, I wonder how the officer making the oath will know answer to question 63. Should not each officer listed in question 5 make an affidavit that he does not, directly or indirectly, receive any income or gift, or any members of his family likewise? Also, if interested, how much was paid for such interest and the income therefrom?

I am in the supply business, and the amount we have to pay officers of railroad companies should belong to us, and we could then sell goods cheaper.

This road is pretty rough, probably because the "brass collars" have been too busy grafting.

Yours,

L. J. SMITH.

—

CHICAGO, ILL., *March 1, 1914.*

LOUIS D. BRANDEIS, Esq.,
Washington, D. C.

DEAR SIR: I have endeavored to keep in touch with the lines of argument presented by those who have appeared before the Interstate

Commerce Commission, advocating a continuance of the favors to the few who have for many years been granted terminal service at the expense of the trunk lines, because they, the shippers, their principals, have private sidings adjacent to trunk or belt lines here in Chicago or elsewhere. I notice a rather large delegation is from this gateway. They have not apparently appeared before the commission with as full knowledge as they should have of the effect which their theories have upon an unprejudiced mind, the outside country, the laboring people, or trunk lines. I have for 20 years been instrumental in using my efforts to some considerable success in locating large shippers on outside territory, and I do not now share the opinions of the traffic club representatives or others that a reasonable charge for service, for switching, spotting cars, etc., will cause congestion at this or any other gateway, but the contrary.

The present practice is surely radically wrong, preferential, and expensive for the trunk lines, and favorable only to the belt lines, and the favorably located industries. Moreover, the recent practices of the belt-line owners in building for or financing plants on their sidings places beside the burden of the absorption less value on the trunk line right-of-way locations which, were the charges made to follow the goods, would be more valuable, sought for, and shortly help both trunk line and adjacent landowners, and would more equalize the industrial real estate situation. I observe you say the whole country is tremendously interested; quite true, and the reasonable charge should be put into effect immediately. I think you are right. The great packing interests here and at other gateways have their cars spotted, switched, empty or loaded, at the ultimate expense of the trunk lines. They report great prosperity; not so with the burden carriers. This a single example. I take the position that if the free service as now extended is eliminated throughout the United States, that instead of causing congestion at Chicago and other gateways, that industries will spread out, seeking suburban and rural locations, and a step in the right direction to the end that concentration, congestion, heavy burdens to railroads and the plain people will be relieved, therefore a blessing instead of an evil; or as some prejudiced traffic managers of industries have stated it, the change from free service to a charge on the goods is a step backward. I do hope that the Interstate Commerce Commission will refuse to see it in this light.

Yours, very truly, F. W. MCKINNEY.

Home address, 5720 Woodlawn Avenue.

—

PHILADELPHIA, *March 5, 1914.*

Mr. GEORGE B. MCGINTY,
Secretary of the Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The absence of protestants at the meeting of the Interstate Commerce Commission held at the New Willard Hotel on February 28, at 10 a. m., on stone, marble, and granite, was no doubt caused by the expense entailed upon an individual in a business that, according to United States reports, 90 per cent of the stone-quarrying trade do a business of less than $5,000 per annum, with few or no trade organizations. "It is well known that stone has suffered severe competition for several years past from various types of cheaper structural materials and a large number of owners of small quarries who were accustomed to quarry stone for foundation and rough rubble work have closed their quarries on account of lack of demand, this stone having been replaced by brick and cement." (Stone Industry in 1912, Dept. of Int., U. S. Geol. Surv.)

Qurries that supply the railroads with ballast or iron mills with flux have rates from 30 to 50 per cent less than on building stone and have no reason for complaint. Quarries that shape the raw material into sizes ready to go into the building pay the same freight rate on the cut-stone weight as on rough, thereby having an advantage of from 30 to 50 per cent. They also have no reason for complaint. And we might go down the list and come to favoritism and to those that take advantage of the fourth section and water competition; but with 90 per cent of the trade in small hands and no organizations, it is too much for one or a few individuals to fight. We do not protest so much against the 5 per cent advance as against the inequality of rates. Building stone is loaded to full capacity of car; it is a cheap material—the average price about 55 cents per ton—and should have the same rates on a mileage basis as fluxing stone. At the present time there is no basis for rough stone rates; for a 100-mile haul the rates will vary from 40 cents to $1 per ton of 2,000 pounds. To a particular point in Delaware (not water competition) a quarry 246 miles distant has a rate of $1 per ton, while a quarry only 85 miles away is charged $1.05. Our business is too small to employ a Mr. Glasgow to fight our battles, and with such variations in rates the decrease in the number of quarries is easily explained, and we can see only a uniform mileage basis or a sectional grouping to correct the present abuses.

We are also interested in the shipment of rough stone from Kentucky, Indiana, and Ohio to eastern points. Rough and cut stone take sixth class or higher, and on that account is throwing the cut-stone work away from the cities to the quarries. The difference in weight in favor of cut stone is fully 30 pounds to the cubic foot, which gives an advantage on a $5 per ton rate of about 15 cents per cubic foot. Rough stone is loaded heavier than cut stone. Other materials from the above States to eastern points have lower rates. Supplement 25 to Interstate Commerce Commission No. A 11481 Louisville & Nashville quotes on rough stone to Philadelphia 25½ per 100 pounds, asphalt $3.40 per 2,240 pounds, or 15.18 per 100 pounds. Asphalt is bulkier than stone, and we can not understand why rough stone, on account of its small value, does not carry the lowest rate.

The writer attended the meeting called for last Saturday, hoping that some one else would present the above facts and that he could second same.

Yours, very truly,

FRANK WILLIAMSON.

—

PRIVATE OFFICE, HOTEL ANSONIA,
New York, March 2, 1914.

Mr. LOUIS D. BRANDEIS,
Special Attorney Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: I have read your articles published in the newspapers on the economy and economical management of railroads with a great deal of interest and admiration. But it has occurred to me that a very important side of the management of the railroads, which is the financial end, has been greatly abused and mismanaged.

The credits of the railroads wasted, with the idea of never paying off their loans or liabilities, they keep on borrowing until their credit is exhausted.

Why not try to remedy this feature and make provision for the future and not let the future take care of itself?

With this idea in mind I thought that the Adler partial-payment instalment bonds would correct this evil. My plan is for the railroads to issue their bonds or notes as follows:

Say, a $1,000 bond, bearing 4 or 4½ per cen interest for a given number of years, and in addition to their interest pay off each year 1 or 2 per cent of their principal until the loan is partly or entirely paid off; thus, the investor receives each year a greater amount of money, while the railroad is yearly reducing its liability and increasing its credit. This does away with the present method, which pays excessive commissions and large bonuses to bankers and money lenders every time they renew their loans, and the railroad keeps increasing its liabilities.

Inclosed please find booklet explaining my method.

Thanking you for a reply, with your criticism,

Very respectfully, yours,

IRWIN V. ADLER,
Hotel Ansonia, Broadway and Seventy-third Street,
New York City.

[Inclosure.]

THE ADLER PARTIAL PAYMENT INSTALLMENT BONDS, NOTES, AND LOANS.

[Copyright, 1914, by Irwin V. Adler.]

The Adler partial payment installment bond, note, or loan is a new method of issuing a registered or a negotiable bond, note, or loan to an investor, with a fixed yield or income coupon attached, figured on the par value for a given number of years, with an additional attached coupon calling for a given amount to be paid off annually on the principal.

This additional coupon pays off and reduces annually the par value or face value of the bond, note, or loan by the amount which it calls for, which amount is printed on each additional coupon, with the date when it becomes due and the place where it is payable.

Thus reducing the amount, or par value of the bond, note, or loan at maturity, to the company, by the total sum of the additional coupons of the annual yearly payments deducted from the par or face value.

The investor or holder of any of this form of securities receives each year from the company a fixed amount of money or income; that is, the fixed interest plus the amount that the company pays off each year on the bond, note, or loan. As an example: Turn to the table which shows a $10,000 bond, note, or loan figured at 6 per cent per annum, with an additional coupon for $400 to be paid off annually; thus the investor receives his fixed 6 per cent interest coupon, which is $600, plus the annual payment installment coupon, which is $400, making a total income to the investor of $1,000 each year on his original investment of $10,000, which does not vary for the life of the bond, or until the bond matures; thus, if the bond, note, or loan matures in 10 years the investor will receive $1,000 each year for 10 years, and at the end of 10 years the company, or debtor, will redeem the bond, note, or loan for $6,000.

If the life of the bond is 20 years the investor will receive $1,000 each year for 20 years, and at the end of the 20 years the company, or debtor, will redeem the bond, note, or loan for $2,000; thus the investor will have received, at the end of 20 years, 20 yearly payments of $1,000 each, making $20,000, and will still have his bond, note, or loan, which is redeemable at a value of $2,000, making a total that he will have received of $22,000 on his original investment of $10,000.

This example only shows the fixed interest at 6 per cent and the annual partial installment coupon of $400 payment. The fixed interest rate and the amount that the partial payment installment coupon calls for can be computed for any fixed amount desired.

By referring to the table attached hereto it shows:

(1) By the first column of figures the number of years or the life of the bond, note, or loan, which is shown from 1 year to 25 years, under the heading of "Years issued." If it is desirable to have a longer life you can figure any number of years from 1 to 100 years.

(2) The second column of figures show the par or face value of bond, note, or loan at the end of the different years of maturities with the additional installment coupon deducted.

(3 and 4) The third and fourth columns of figures show the fixed interest rate the bond, note, or loan pays annually.

This table shows only the 6 per cent rate, but in order to find any given rate other than the 6 per cent, divide the income yield in the sixth column of figures to the investor by 6 and multiply the remainder by the desired rate.

(5) The fifth column of figures show the amount to be paid off each year by the company, or debtor, on the bond, note, or loan by the partial payment installment coupon, thus reducing the par or face value of bond, note, or loan by the amount of each annual installment coupon each year, which is shown in column 2 by the amount of payment made in column 5, plus the number of years until the bond, note, or loan matures.

(6) The sixth column of figures, under the heading of "Income yield to investor," shows the investor what his income yield is equal to on the principal at that time for each different year.

The sum of the different yields in this column, divided by the number of years the bond, note, or loan runs, will give the investor the average income yield.

(7) The seventh column of figures, under the heading of "Extra cost of interest to the company," shows the extra interest rate that the company or debtor loses by reason of the extra annual installment coupon payment to the investor. The total sum of this column of interest divided by the number of years the bond, note, or loan runs will give the average cost of interest to the company.

This form of securities will appeal to the investor, as he will be certain of a fixed amount of money which he will receive each year for the life of the bond, note, or loan issued, and the amount of money he receives under this form of securities is greater than any other form, with the least risk; or, expressed in another way, he is buying a fixed income for a stated number of years and still has part of his principal back at the end of the period.

The table shows the partial installment payment coupons for $400 each, to be paid off each year, in addition to the fixed interest rate of 6 per cent which the bond, note, and loan bears. These coupons can be paid off in any fixed amount desired.

This form of security may bear any fixed rate of interest that the debtor wishes to pay.

LEHIGH STONE CO.,
Kankakee, Ill., March 7, 1914.

Mr. LOUIS D. BRANDEIS,
Care Interstate Commerce Commission, Washington, D. C.

DEAR SIR: Since making my letter of 27th ultimo, suggesting zone bases for basing freight rates, it has occurred to me that this method could also be used at terminals. Terminal zones could be established at larger centers and a charge made based on an average cost within such zones. The terminal-zone rate could be added to line rate.

Respectfully submitted.

Yours, very truly, M. J. EDGEWORTH.

—

LIBERTY-NASSAU BUILDING CO.,
New York, March 9, 1914.

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: I want to call your attention to the utterly unfair character of the Pennsylvania Railroad report for 1913 just issued by President Rea.

From beginning to end there are constant references to the poverty of the railway, the necessity for its independent control of its actions, and for an immediate raise in freight rates. Repeated statements are made of heavy expenditures for increased wages, yet it is stated that the last increase amounts to $730,000 per year, or only one-half per cent on the freight revenues. It is further stated that the 1913 operating expenses increased $11,349,000, whereas the increase should not have exceeded $6,500, and the inference is forced that this $4,850,000 added increase was caused by the wage increase and could only be covered by the 5 per cent rate increase asked for.

And yet in the entire report as published there is not one reference to the disastrous floods in the spring of 1913, in which it was semi-officially stated the damage and losses on the entire Pennsylvania system were over $12,000,000, and on the lines east of Pittsburgh, the territory covered by this annual report, over $6,500,000. In other words, much more than the entire increase complained of resulted from the great flood losses and not from the increased wages, yet not the slightest reference is made to that flood. It seems to me that attention should be called to this evidently intentional omission.

Yours, truly,

JOHN V. HOGAN.

—

MARCH 4, 1914.

LOUIS D. BRANDEIS, Esq.,
Care of Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: As pertinent to the proposition to allow the carriers a 5 per cent increase in rates, I make the following suggestions:

The lighterage allowances in New York Harbor are out of all proportion to the service rendered and to the through rate. For example, an allowance of 4½ cents per hundredweight is paid to Jay Street Terminal (a copartnership composed of the partners in the firm of Arbuckle Bros., sugar refiners) for terminal services, at what was formerly the private dock of Arbuckle Bros., on shipments westbound to points west of the western termini and on consignments eastbound from the same points. For this service Arbuckle Bros. furnish the docks and equipment, and operate a lighterage and floatage service at their own expense and risk to and from their docks to the rail termini on the New Jersey shore, at St. Georges, Staten Island, and Sixtieth Street, Manhattan. The rate to such points as Youngstown, Ohio, is 17 cents, and out of this rate the Pennsylvania Railroad pays the Jay Street Terminal an allowance of 4½ cents for terminal service and a 3-mile floatage—nearly 25 per cent of the entire through rate. Again, out of a 13-cent rate to Syracuse the carriers allow 3 cents per hundredweight to Arbuckle Bros. As approximately 40 per cent of westbound shipments consist of sugar, whereof Arbuckle Bros. contribute a large proportion, it is obvious that the question involves more than a disproportionate payment for terminal services, but, as bearing upon the particular question now under discussion, I suggest that if the carriers would readjust their lighterage allowances the immediate saving would go a long way toward removing the necessity for a 5 per cent increase.

Again, the rate on sugar from Pacific coast points to Chicago has heretofore been the same as that to Missouri River points, viz, 60 cents per hundredweight. The western carriers have applied to the commission to suspend the fourth section in order to permit a rate of 46 cents to Chicago, as against 60 cents for the short haul. The carriers conducting that part of the long haul eastbound, which lies between the Missouri River crossings and Chicago, are precisely the carriers which, among others, apply now for a 5 per cent increase on westbound rates. It is hardly necessary for me to point out the inconsistency in squealing for a 5 per cent higher rate from the Atlantic seaboard and at the same time begging the commission for permission to reduce the rate from the Pacific coast nearly 25 per cent.

If the foregoing interests you I shall be very glad to furnish such other figures as you may require along these lines.

Respectfully, yours,

ERNEST A. BIGELOW.

—

WAMEGO, KANS., *April 2, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We as a business firm in this part of Kansas strenuously object to the proposed raise in freight rates which is now being considered by the railroads and the commission. It surely seems out of line that the railroads would ask a shipper to stand some of the charges they are endeavoring to tack on the present charges. Where we have elevators along the lines to load their stuff, how much better it is for them to have us load in that manner than to load by wagons anywhere along the sidetracks. If there is any extra charge, it should be put on to the man who does not load from an elevator, since the railroad gets the biggest benefit. The writer has worked for railroads as agent for eight years and knows a little of their petty extravagances which might be stopped instead of adding additional hardships upon shippers.

We trust you will use your best efforts to handle our interests.

Yours, very truly,

WAMEGO SEED HOUSE & ELEVATOR,
Per J. O. ROSS, *Secretary.*

—

MEMPHIS, TENN., *April 1, 1914.*

Mr. LOUIS D. BRANDEIS,
Counsel Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We note with great interest press report under date of March 28, of your report in opposition to the proposed 5 per cent increase in railroad freight rates, and beg leave to congratulate you upon the manner in which you have evidently succeeded in digging out some of the expenses of traffic incidental to both its cost and unfair discriminations.

We feel particularly interested in the results that shall accrue from your presentation of this matter, as the carriers of this territory, as well as other, are operating, soliciting, and securing traffic upon practically the same basis as those indicated and set forth in the press report of your report.

Especially are these conditions true, as applied to the cotton trade of this territory; Memphis, Tenn., its center, being the largest inland cotton market in the world. At this point, one of the most extensive compress companies and organizations of this character in the country exists. It is owned and controlled by factors, buyers, and sellers of this market—all operatives in and shippers of cotton.

For the patronage of these shippers the carriers are paying in practical rebate, by financial protection of the compress company, and by paying to it guaranteed compression rates and excessive remunerations for cost of services rendered, all of which must be a considerable charge against the profits of transportation.

Mr. R. N. Trezise, agent of the Interstate Commerce Commission, made some investigations into and report of conditions existing here to the commission, during the latter part of December and early part of January, which report we believe you should find interesting in connection with the investigations you are making.

Yours, very truly,

MEMPHIS COMPRESS CO.,
By WALTER H. HARRISON, *President.*

—

GULF COMPRESS CO.,
Memphis, Tenn., April 1, 1914.

[Memorandum for Mr. Harrison.]

Your attention is called to the inclosed clipping, taken from the Commercial Appeal of March 29, 1914. This reminds me of the correspondence you have recently had with the Interstate Commerce Commission and with President Markham, of the Illinois Central Railroad, with reference to the carriers' system of handling cotton at Memphis.

I am referring particularly to an allowance of 10 cents per bale made by the Illinois Central and Yazoo & Mississippi Valley to the so-called Memphis Terminal Corporation, a public compressor and warehouseman at South Memphis, said allowance to cover the cost of unloading, etc. At my plants and yours we are required to perform the identical, or at least, I would say, substantially the same service, and for which we receive no allowance or compensation whatsoever. In other words, the Illinois Central and Yazoo & Mississippi Valley pay the Memphis Terminal Corporation 10 cents per 100 pounds for compressing cotton, plus 10 cents a bale for unloading it, etc., whereas you and I have to unload it free of charge. It is true we are allowed the same rate of charges for compression.

Again, the rate of compression that you and I are receiving is not guaranteed to us, whereas the contract of the Illinois Central and the Yazoo & Mississippi Valley, if not some of the other lines, does guarantee the compression rate to that institution, thus eliminating the possibility of competition in so far as our efforts are concerned.

I have underscored that part of Mr. Brandeis's remarks which it seems to me must have been written especially for the Memphis cotton situation.

C. C. H.

FREE SERVICE CUTS REVENUES OF ROADS—LOUIS BRANDEIS FILES STATEMENT AGAINST HIGHER RATES—RECEIPTS ARE ABSORBED—BRANDEIS DECLARES THAT FULLY 25 TO 50 PER CENT OF INCOME OF ROADS IS ABSORBED BY FREE SERVICE FURNISHED.

WASHINGTON, *March 28, 1914.*

Louis D. Brandeis, counsel for the Interstate Commerce Commission in opposition to the proposed 5 per cent increase in railroad freight rates, to-day submitted a statement showing that free services rendered shippers by railroads in classification territory result in serious depletion of the revenues of the roads.

The special free services under consideration by the commission were free storage, free warehousing, free loading and unloading of cars, free lighterage, free elevation of grain, and various other free terminal services.

Mr. Brandeis asserted that the cost to the railroads of these free services was so great as to absorb from 25 to 50 per cent of the freight receipts, and in certain instances more than the entire receipts were absorbed, resulting in a substantial cash loss to the road.

Mr. Brandeis stated that in Philadelphia shippers "who choose to patronize certain warehouses designated by the Pennsylvania Railroad have their freight unloaded from the cars, stored for days, and then carried to the wagon free of expense to the shipper, the expense of the operation being borne by the Pennsylvania Railroad. This free service cost the Pennsylvania Railroad at Philadelphia through three of the four subsidized warehouse companies $282,261 in the year ended June 30, 1913."

WAREHOUSE DISCRIMINATION.

He pointed out that unless the freight passed through these warehouses the road made no allowance to the shipper for loading, unloading, or warehousing.

"Besides the discrimination between the shippers there is, furthermore, a discrimination between warehousemen," Mr. Brandeis asserted. "The provision on the part of the railroad appears to be strikingly improvident from whatever point of view it may be regarded. Why should the Pennsylvania Railroad throw away money in paying for that service which other warehousemen would perform without pay from the railroad because of the storage charges paid by the consignee?"

Instances were cited showing that the Pennsylvania Railroad carried freight on which the free service cost was so great that the service "might as well have been presented as an instance of free transportation, because the cost exceeded the total freight charge received."

Mr. Brandeis urged that a discontinuation of free services to certain shippers, or a reasonable charge for them, would vastly increase the revenues of the roads.

—

BALTIMORE, MD., *April 1, 1914.*

THE INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: Having been in business for the past 25 years I take the liberty to write to you and ask you not to give the railroad companies permission to increase their freight rates, for the reason this would add to the already high cost of living. The railroad companies can exist if they are economically managed. So far as laying off men is concerned, they will soon tire of this way of bluffing. This is done for effect by the Wall Street crowd for stock-jobbing effect.

Very respectfully,

H. D. EIDMAN & BRO.

—

JOHN C. HADDOCK & CO.,
New York, March 31, 1914.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: The New York Times has taken occasion quite frequently in severely abusing and condemning your body. These attacks are becoming somewhat regular and more emphatic from time to time. It is needless to say that in a large city like New York, and with the reputation that this paper has had for some time, that the public is taking note of these continued criticisms, and while they may admire the courage of the New York Times, the fact that they are being misled does not occur to them. These attacks are evidently inspired by the publicity bureau of the railroads, and it is disgraceful that such conditions should exist, for with the record that the commission has made, it should not be subject to such needless abuse.

It is very evident that in the efforts of the railroads to obtain any increase in rates of transportation, that the general public is not aware of the tremendous issues of stocks and bonds that may have taken place in the past 15 years, to say nothing of the tremendous increases in the gross earnings of some of these roads. These tremendous increases of stocks and bonds have brought about a situation where in some instances the fixed charges and the dividend requirements are unusually heavy, and if this constant issuing of new securities is to go on at the same rate as it has in the past, there is no telling what the railroads may require within the next 10 years.

Furthermore, why it should be necessary for the Baltimore & Ohio to own $30,000,000 of stocks of the Reading Co., or why it is that the Pennsylvania Railroad should own stock of the New York, New Haven & Hartford, the Norfolk & Western, the Long Island, and the Southern Pacific Railroads are matters that really should be looked into. It is very evident that in acquiring securities of these other roads the parent roads have been obliged to issue securities of their own in order to raise the necessary funds. In the case of the Pennsylvania Railroad Co., they state in their annual report that the securities held by their company on December 31, 1913, at a valuation of $333,960,825, produced a direct income during the year of $14,940,670. This makes a net return of 4.47 per cent. Through what method of financing these securities were purchased the writer is not familiar, but it is very evident that the admitted net return on these securities is not equal to the dividend rate that is being paid, and which is expected by the stockholders of the company. The following comparisons, as between 1898 and 1913, are rather striking as related to increases in stocks and bonds, as well as the increases in gross and net earnings, and in the light of the plea that is being put up by the railroads, it would indeed be interesting to note what has become of the proceeds of these stock and bond issues, and also the net results of the increased earnings.

	1898	1913
Chesapeake & Ohio R. R.:		
Outstanding capital stock	$60,547,400	$62,797,000
Funded debt	65,564,554	167,120,176
Gross earnings	11,788,557	35,085,278
Net earnings	3,806,250	11,483,392
Fixed charges	3,187,741	8,184,889
Baltimore & Ohio R. R.:		
Outstanding capital stock	105,000,000	210,886,144
Funded debt	185,500,000	358,403,256
Gross earnings	27,722,787	101,556,132
Net earnings	8,336,768	32,114,389
Fixed charges	8,147,727	18,780,138
Lake Shore & Michigan Southern:		
Capital stock outstanding	50,000,000	50,000,000
Funded debt	47,084,000	169,406,167
Gross earnings	20,738,900	55,490,512

Net earnings	10,032,119	32,095,396
Fixed charges	6,112,481	23,173,158
Norfolk & Western R. R.:		
Outstanding capital stock	87,213,500	123,133,300
Funded debt	48,222,700	111,657,320
Gross earnings	11,236,123	4,739,920
Net earnings	3,382,987	16,930,981
Fixed charges	2,239,443	5,824,340

[1] Notes due May, 1914.

The anthracite coal-carrying roads, with one or two exceptions, have shown but a very small increase in capital stock and bonded indebtedness. In fact, in some instances it shows a decrease, but this particular group stands out prominently as against all of the eastern roads. The anthracite coal roads have prospered probably to a greater extent than any other group of railroads in the United States, and their assets, as represented by their holdings in coal properties, have never been substantially determined, but it is evident that the concealed assets of the anthracite coal roads are very great. The profits through monopoly rates in anthracite transportation charges account for the remarkable showing of this particular group of railroads.

Yours, very truly,

EMIL W. KAHN.

W. N. WHITE & CO.,
New York, March 31, 1914.

SIR: In June, 1910, the Journal of Commerce published some comments of ours on the subject of railway rates.

I inclose a copy, and think it might be very useful at the present time.

Yours, faithfully,

W. N. WHITE.

[Inclosure.]

FEDERAL ACTION ON RAILWAY RATES.

NEW YORK, *June 2, 1910.*

EDITOR OF THE JOURNAL OF COMMERCE AND COMMERCIAL BULLETIN:

SIR: In connection with the above, some remarks of mine concerning matters in the West may prove interesting at the present.

Last year I superintended the packing and loading of some 300 cars of apples in California for New York and European trade. The freight charges on each car from coast to coast cost $320 per car, freight being reckoned at 1 cent per pound.

These goods were all loaded in a small town some 65 miles south of San Francisco, on the Southern Pacific Railroad.

This business started in that district in 1885 in a small way, growing from a few cars per year to 2,850 cars in 1909 from this one station. The Southern Pacific and the Santa Fe control the trade so far as California is concerned, but after it leaves California many railways are after the business. The Chicago & Northwestern, Union Pacific, Colorado & Midland, Denver & Rio Grande, and many others want part of the haul. Previous to the Elkins law if one had a number of cars and would give them exclusively to these subsidiary companies, one would get a drawback of $15 to $20 per car. They sent men to canvass the shippers, kept him posted when it passed certain points, and when the cars would arrive in New York. They said: "Thank you; we will do our best to give you satisfaction."

Now, I contend, and I believe that every right-thinking man will do the same, that these railways were not doing all this for fun, but for profit. They got $20 a ton for hauling these goods, on which the cost to them was no more than if they were hauling coal at $5 a ton. Under the Elkins law (conceived by the late Mr. Cassatt to consolidate and benefit the railways, not the public) this allowance has been stopped; so that at the present time everyone is under an agreement to charge $20 a ton.

While superintending this work this year I was interviewed by the Santa Fe, Union Pacific, Chicago & Great Western, Pere Marquette, New York Central, Delaware, Lackawanna & Western, Erie, Great Northern, and Northwestern Pacific, all wanting parts of the goods from Omaha or from Portland. Some railways not only sent their special canvassers, but after the first refusal their district manager came specially to see if he could not surely get the business. On two occasions these district managers stayed overnight at the local hotel to try to win out. "Hail fellow, well met, I have come down on purpose to see you, and I must have some of your goods."

To the Santa Fe, who kept a man on the ground every day, I asked: Where do you take over these cars from the Southern Pacific? Reply:

Stockton or Mohave. What percentage of this freight do you get from these points? Reply: Seventy-six per cent. What is the local freight from this point to Stockton? Reply: Sixteen per cent. If I ship these goods local to Stockton, will you charge me 76 per cent, the same as you get on through bill of lading? If so, you can have the goods (this meant a saving of 8 cents per 100 pounds, or about $7,500 on the lot)? Reply: We can not do it; we are under an agreement to charge the same price.

To the Great Northern and Northern Pacific: What would you pay Southern Pacific when they hand you the goods at Omaha or Portland? Reply: Forty-eight cents per 100 pounds. Then all you get from Portland is 52 cents per 100 pounds? I am prepared to give you a quantity from Portland and beyond; will you carry them for 52 cents? Reply: No; our price is the same as here, $1 per 100 pounds.

Canadian Pacific: Yes; we will carry your goods to the coast, Montreal, or St. John, New Brunswick, for $1 per 100 pounds, either via Minneapolis or Chicago. Hundreds of miles farther than any of the others.

Colorado & Midland and Denver & Rio Grande: You take possession of the goods at Omaha. You get 52 per cent for your part of the haul to the coast. There are 4,000 carloads of apples in Colorado this year, hundreds of miles nearer the coast than Omaha. If I give you some from here, will you carry goods from Colorado for the same price—52 cents for 100 pounds? Reply: Very sorry we can not do it; our price from there is $1 per 100 pounds.

I again ask, were these men after me for fun or for profit. I reiterate the statement that it cost no more in motive power to draw these carloads of apples than it does carloads of coal, and then the railway takes the same time in transporting them—18 to 21 days. One is charged $5 a ton and the other $20.

I notice many of the dailies this morning speak of the downward prices of some of the railway shares. Well, lots of those shares are water. Ten to fifty million at one stroke. They never had any value except in imagination and combination, and to my mind I have given some data why this combination should be broken up.

Yours, faithfully,

W. N. WHITE & Co.,
76 Park Place.

—

MILWAUKEE, *March 30, 1914.*

Mr. L. D. BRANDEIS,
Care of Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: You will notice from inclosed clipping, which appeared in the Chicago Tribune, that the publicity department of the railroads are making false statements regarding conditions. The railroads within the last few months have placed more orders for equipment than ever before, the Union Pacific placing an order for 540 engines.

If the railroads would take out their bouquet rates, viz, rates established account friendship, they would have no trouble to pay dividends on present rates. Take copper rates from Houghton to Michigan, they are the lowest of any rates, and a carload of copper is worth a fortune. The large industrial firms, especially so-called trusts, engage traffic officials of eastern lines who are known as mixers to take charge of the traffic departments. He will then invite his former railroad friends to dinner and in that way arrange for rates on copper, structural iron, sugar, meat, beer, etc. For that reason these articles are carried at the lowest rates.

The false statement made by the St. Paul road officials, as developed by your commission, shows what little reliance can be placed on their statements. Millions have been lost in last year by the stockholders of the Wabash, Rock Island, New Haven, etc., and the same thing will happen with the St. Paul road, and the Government has found no way to protect the investing public from false statements made by railroad officials. When a small merchant obtains a loan from his local banker on a false statement he must serve a term in prison, while the railroad official who causes the loss of millions escapes this punishment, and continues to draw a salary of $50,000 a year for placing a road into the hands of a receiver. The writer has had years of experience in both traffic and operating departments of various roads and know conditions as you have shown them to be entirely correct. Railroads have increased rates within the last year by changing minimums, classifications, etc., and in that way deceived the commission. Asbestos articles have been changed to a higher classification.

The track elevation in Chicago by the Chicago, Milwaukee & St. Paul, costing about $5,000,000, was placed under their operating expense, when it should have been considered a construction expense, all with the idea of influencing your commission, account of decreased earnings, to obtain increase in rates.

All this panic talk by railroads appearing in newspapers last few months originates by the publicity department of the railroads.

Yours, truly,

X.

[Inclosure.]

ORDERS 540 LOCOMOTIVES—UNION PACIFIC TO EXPEND $1,300,000 FOR ADDITION TO ITS ROLLING STOCK.

NEW YORK, *March 27.*

The Union Pacific Railroad Co. has ordered 540 locomotives from the Lima Locomotive Corporation, calling for the expenditure of $1,300,000.

—

ROADS DROP MEN BY THOUSANDS—DRASTIC RETRENCHMENT BEGUN BY ALL OF THE PRINCIPAL EASTERN LINES—SLACK BUSINESS THE CAUSE.

NEW YORK, *March 26.*

Adverse State legislation, general uncertainty, and business constriction have compelled the important railroads of the eastern part of the United States to adopt a drastic policy of retrenchment.

As a consequence, on such great lines as the Pennsylvania, the New York Central, the New York, New Haven & Hartford, the Central Railroad of New Jersey, the Lehigh Valley, and others, thousands of men have been laid off in every department; more thousands of maintenance men, operating men, and men in all other departments have been put on part time.

Through trains and local trains have been eliminated from schedules and freight trains by the score.

The effect of this has been noticeable also by the car equipment and all other companies, the prosperity of which depends upon the railroads. The car companies, it was said to-day, have either laid off or are working 70 per cent of their men on part time. The rail manufacturers are in a similar predicament.

The situation has not developed suddenly, it was said to-day, but has been developing for months. If anything, it is a little brighter now than it was two or three months ago.

There are more inquiries now for equipment than there were in January, although there are not enough to warrant full time for any establishment manufacturing freight cars especially.

The causes are manifold. There is a falling off in business, in the first place, and in the second, the adverse legislation in various States has no increased operating expenses that former conditions can not be maintained. One illustration given to-day was that passenger agents reported the Florida passenger trade this year to be 40 per cent less than it was last year.

The new commuters' rate law just passed by the New York Legislature affords an illustration of how the gross income of roads can be affected. The law takes $100,000 a year out of the treasury of the New York Central Railroad alone. The full-train crew law costs hundreds of thousands of dollars, while the freight-rate decision of the Interstate Commerce Commission and the wage decision were far more expensive. In the face of these factors, with business at a minimum, there was nothing else to do but retrench.

The Pennsylvania Railroad to-day admitted that since the last weeks of 1913 it has laid off 15,000 of its 140,000 employees and is going further. Forty thousand more, or one-third of the entire force, have been put on part time. East and west the system has been compelled to lay off through trains and local trains, both passenger and freight. As it stands now, it expects to close down its great repair shops at Altoona, Pa.

The passenger service naturally has suffered most in the new policy. A railroad lives upon its freight and it has suffered less, but every department has felt the knife. All improvements and extensions have been stopped, and it was announced that not until the management sees something promising ahead will these improvements be resumed. Until that time not a cent will be spent upon anything that can be postponed.

According to Pennsylvania officials, the full-train crew laws of New York, Pennsylvania, and New Jersey have thrown many men out of jobs. The laws compel useless men to be carried on every train, which, under the circumstances, compels the railroads to lay off many men who otherwise might be retained.

—

1209 EIGHTH AVENUE,
Altoona, Pa., March 30, 1914.

LOUIS BRANDEIS, Esq.,
Washington, D. C.

DEAR SIR: If you desire the facts in regard to the laying off and discharge of men by the Pennsylvania Railroad Co. you can obtain some very useful information by having your investigator look into matters here.

You'll find the largest March in freight traffic in company's history; you will find power in use in a dangerous condition; you will find hundreds of engines out of service on account of your inspectors; and you will find that instead of repairing these engines for use that company is discharging mostly "piece-work" men, who are paid only for work done, and not saving the company one cent. A few salaried men have been let out, but only a few.

I do not pretend to know the cause of this conspiracy among the employers of labor, not being an employee or a union man; but cause there is, even if there is no just reason, and your honorable body should secure the facts, with a view to quick exposure and remedy.

I am convinced that if your body had true facts that company would quickly "retrench" from their position, for I believe that in addition to fighting the new union here they are bluffing your commission.

I trust that you will take steps to obtain these facts and force correction and remedy at once. I am,

Respectfully,

C. J. WEBB.

—

JAMES W. HOUSTON Co.,
Pittsburgh, March 26, 1914.

LOUIS D. BRANDEIS, Esq.,
Washington, D. C.

DEAR SIR: We have watched your course for a long time with genuine admiration, and it has inspired confidence both in your ability and integrity. It is for this reason that we write you with reference to the pending petition of the railroad companies for an advance in freight rates.

Our position, and we believe that of shippers generally, is that the railroads should be granted a reasonable advance in freight rates, if upon thorough investigation that should be found really necessary.

But before any advance is granted, in justice to shippers and to the public, the following conditions should be imperatively required:

1. Eliminate all sinecures. You, of course, know better than we do the extent of this abuse. Railroad officials have imposed on stockholders and on the public by giving positions to which large salaries are attached to favorites who are utterly incompetent.

2. Abolish antiquated methods and adopt scientific, up-to-date methods. The remark has frequently been made that if private business enterprises were conducted in the same way that the railroads conduct their business the inevitable result would be bankruptcy.

3. A radical change in the treatment of employees. The cooperation of the employees should be encouraged. If this policy were generally adopted and the railroads had the hearty cooperation of their hundreds of thousands of employees, that in itself would mean a vast saving through increased efficiency and through a reduction in the number of accidents.

4. Ready obedience to law and the elimination of all crooked and corrupt practices.

The railroad people are going to extremes in their efforts to influence public sentiment, regardless of the rights of the public or of justice to their employees. In this section they are laying off many trains and reducing the hours of work in shops and elsewhere, in the hope that the people, driven to despair, will generally say, "Let the railroads have the advance."

They are also apparently trying to create the impression through the newspapers that President Wilson favors the advance in freight rates.

We sincerely hope that these schemes of the railroad people will not succeed, and that the issue will be decided solely on its merits. We feel sure that your splendid management of the case will contribute powerfully to this end.

Very respectfully,

JAMES W. HOUSTON Co.,
JAMES W. HOUSTON, *President.*

M. & C. MAYER,
New York, June 30, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: In reference to application made by railroad companies for privilege to advance freight rates, and which privilege was denied by your honorable body in 1911, and now the same application, I understand, is up again. In your denial it was suggested that "even though a necessity had been established for increasing rates, it was doubtful if the plan proposed was the right way to raise additional revenue." I have had several calls lately by the representative of one of our largest railroads who asked my views as to the renewed application, merely to get opinions of the merchants and shippers whether they feel that the companies are entitled to an advance in consideration of increased cost, etc., which can not be discussed in this letter.

I have suggested to their representative and put the matter before you also that while the majority of merchants no doubt believe that the companies are entitled to some advance, it ought not be radical. My idea is in this form:

That all bills of lading should carry value of the shipment, and as the companies are called upon to make good all losses, let them add to the present freight rates now in force a certain per cent; say one-fortieth or one-twentieth of 1 per cent. This is a nominal per cent, but in the great aggregate of freight moved it might work out. It could be given a trial for six months on one-twentieth of 1 per cent, and if it aggregated a larger sum than was anticipated it could be correspondingly reduced.

As an illustration: A case of cotton hose with a value of $75 from here to Chicago, at the 75-cent rate (it may weight only 125 pounds) would pay a total freight of 90 cents. This same case might be sent with a better grade of hose and worth $500, the weight would not exceed 120 to 130 pounds, yet in the event of loss the company for the same charge of 90 cents in each instance would be called upon to pay two vastly different amounts; so, why not allow them an insurance per centage on the value of the shipment as given on the bill of lading. At one-twentieth of 1 per cent the $75 case would pay a freight charge of 94 cents, 4 cents additional; the $500 case would pay $1.15, or 25 cents additional. The difference between the two charges, 21 cents, represents an insurance for difference in value. It is nothing more than a carrier's premium, if you choose to put it in that form.

I have no desire to take up any more of your valuable time in this matter, merely want to give you an idea that has come to me in this case that might be worked out and help solve the solution to the satisfaction of all concerned.

In conversation with the railroad representative I mentioned this matter, but have not idea, of course, whether the same has or will receive consideration, merely offering it for what it is worth.

Very respectfully,

CHARLES LEVINSON.

—

LITTLEFORD, JAMES, BALLARD & FROST,
Washington, D. C. June 23, 1913.

Hon. E. E. CLARK,
Chairman Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: With the hope of contributing an humble part to the solution of the pending question of an investigation of the advance of rates in official classification territory, I am taking the liberty of inclosing you memorandum which assumes the form of several queries.

I am inclosing seven copies, so that each member of the commission can have a copy if, in your judgment, they should be so distributed.

I am sending copies to Mr. Hugh L. Bond, jr., Mr. George F. Brownell, Mr. Clyde Brown, and Mr. George Stuart Patterson.

Yours, truly,

FRANCIS B. JAMES.

[Inclosure.]

In conjunction with Interstate Commerce Commission Docket No. 5860 (rescinded), the following queries suggest themselves:

I. Is there anything upon which an investigation can be predicated?

II. The first part of the order in the foregoing matters reads as follows:

"First. Do the rates of transportation now imposed by common carriers by railroad in official classification territory yield an adequate net return?"

The query presents itself whether this proposition raises a determining issue.

The query further presents itself whether an order, if any, should not be substantially as follows:

"Is the entire schedule, scheme, or fabric of rates in official classification territory just and reasonable to both carrier and shipper, i. e., does said entire schedule or scheme or fabric of rates in official classification territory yield the carriers a fair return on the value of the property devoted to the public service?"

III. The second part of the order in the foregoing matter reads as follows, to wit:

"Second. If not, what plan shall be adopted to increase such transportation charges?"

The query presents itself whether this would take the general management of the railroads out of their own hands. Interstate Commerce Commission *v.* Chicago Great Western Railway Co. (March 23, 1908, 209 U. S., 108).

The query further presents itself whether an inquiry should be restricted to increased transportation charges as a means of increasing net returns, because the public should be left free to point out other remedies.

IV. Section 6 of the act to regulate commerce and acts amendatory thereof and supplementary thereto on the subject of change of rates contains a proviso as follows:

"*Provided*, That the commission may, in its discretion, and for good cause shown, allow changes upon less than the notice herein specified, or modify the requirements of this section in respect to publishing, posting, and filing of tariffs, either in particular instances or by a general order applicable to special or peculiar circumstances or conditions."

If the commission is to enter into an investigation, the query presents itself whether the commission should not first require the carriers to specifically set forth the concrete increases so that concrete shippers may know the concrete amounts proposed to be charged on concrete commodities between concrete shipping points. The query presents itself whether the commission then, in its own discretion, will dispense with the publishing, posting, and filing of such tariffs as set forth in the proviso to section 6 of the act to regulate commerce pending an investigation.

—

THE LARROWE MILLING CO.,
Detroit, Mich., June 6, 1913.

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

SIRS: I have noticed that the carriers are desirous of obtaining permission to make a 5 per cent increase in their rates. I do not wish to go on record, either personally or as representing this company, as being in any way in favor or opposed to the increase, believing that the matter can safely be left to the judgment of the commission, but I desire to call your attention to one feature of freight rates that never seems to be referred to, which is the very low export rates that the carriers make on grain and grain products, cotton, and possibly other articles.

I have never been able to satisfactorily determine why the carriers could afford to carry grain from Chicago to New York for 13 cents per 100 pounds when they have to charge 17½ cents and more for local delivery, especially when the New York basis is made applicable to points interior some 200 or 300 miles. For instance, to ship a carload of grain from Chicago to Middletown, N. Y., the carriers will charge 3 cents or 4 cents per 100 pounds more than to ship to New York for export, where they incur lighterage and give a certain number of days free storage and insurance. The loss in revenue during the course of a year by charging these low rates must be enormous, and, unless there is some good reason for it, I think the carriers should be invited to charge the same rate on export products as they do for domestic delivery, and see if they can not thereby secure sufficient revenue for their needs.

I am aware of the reasons that were formerly advanced for low export rates, but think, if you would investigate these reasons, you would find that they no longer hold good. The cost of our grain in Europe is based on the home market, plus rail charges, plus ocean charges. It used to be that our home values were based on the foreign values, less the cost of transportation, but I think that nowadays the situation is reversed; the foreigner has to pay our market price, plus the transportation charge.

We have an enormous crop of corn in this country, of which only a very small percentage is exported; the export market does not control the value of our corn crop, it is the domestic demand that makes the market, and the foreigner pays our price, whatever it is. Similarly this is also true to a considerable extent in wheat. Very often the foreigners are entirely out of the market for a number of months, then if there is a great weakness in this country they will come in and buy, but the weakness is primarily due to local conditions.

The big controlling factor nowadays is the ocean freight. You are, of course, aware of the extremely high ocean rates that have prevailed for several years past. These steamship lines have grown very rich by their ability to extort outrageous rates, and these very high ocean rates are the best kind of an argument for insisting that the rail carriers charge sufficient freight rate for export shipments, and make the foreigner pay as much for getting his grain carried as the domestic merchant pays. If the commission were to-day to order export freight rates on grain cut in half you would probably find that immediately the ocean rates would go up to a similar degree. These ocean carriers charge all the traffic will bear; they are charging prices that several years ago would not have been thought possible. It used to be said that the steamers carried grain merely as ballast and made no profit on it. That can hardly be said any longer. I believe that if the carriers were to charge the same rate on export grain as they now charge on domestic grain it wouldn't affect one iota the amount of money that the farmer would get for his product; it would either result in the foreigner paying more for his grain or else the ocean carriers being obliged to take less for their end of the traffic. I understand that some of these low rates to the Atlantic seaboard are put into effect in order to get business away from the gulf ports, but this reason would not prevail if the carriers serving the gulf ports would also raise their rates. It isn't fair to the domestic consumer to make him pay a higher freight rate because the carriers put in unreasonably low rates for the benefit of the foreigner. This is especially true when the carriers declare that they are not earning enough money on the present scale of rates.

Respectfully, yours,

CHARLES STAFF.

—

TOPEKA, KANS., *April 14, 1914.*

Hon. G. B. MCGINTY,
Secretary Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: We understand there is a concerted effort on the part of the carriers to obtain advances in the rates on such articles as we are handling; this they may need, but we very much doubt it. However, if you find they are entitled to an advance it is our opinion that the advance should be uniform so as to place all articles of similar product under the same rate and not discriminate between lumber in the rough or manufactured into the various grades of finished materials.

We believe that if something could be done to remedy some of the troubles connected with delayed shipments, switching, and demurrage, it would do more to relieve conditions than anything else, cars coming by the way of Kansas City that should come through in 24 to 36 hours often take from one to two weeks, and cars from the West that should come through in two to three weeks often take as many months, and the same mismanagement is shown at division points in the switching of cars. Very frequently when we are in a hurry to get cars they are allowed to stand for days before they are spotted for loading or unloading, while we are allowed only two days in which to unload them, although as it often happens they bunch them and run several cars in at once.

Many of the cars are now so large that when loaded to full capacity as the carriers require they can not be unloaded by the dealer in the time allowed.

Carriers should not be allowed to charge for switching and spotting of cars, as they get their pay in the freight paid.

Yours, truly,

GILLETTE & NICHOLSON,
L. A. GILLETTE.

PHILADELPHIA, *April 13, 1914.*

Hon. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Your very courteous reply to the letter sent you by our friend Mr. William B. Lawall, of Oak Lane, this city, must be our excuse for addressing you at this time. The inclosed literature may contain some hint that will be of service in the campaign you are conducting in behalf of the people. For the people must eventually pay the 5 per cent increase if granted. Your suggestion that the railroads inaugurate true economies is the right remedy.

Yours, very truly,

THE WESTMORELAND CHEMICAL & COLOR CO.,
HENRY C. STEWART, *President.*

P. S.—The transportation of copperas to Philadelphia is largely against the current of trade; but this is unavoidable.

As we were the originators in the United States of the business of manufacturing oxide of iron from copperas, there was nothing for us to do except bring copperas here, Philadelphia being our home and New Castle the point of production of the basic chemical.

H. C. S.

—

FLINT, MICH., *April 13, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: Referring to printed circular herewith inclosed, it appears to us that if, as stated in this circular, the railroads can handle 8,000 pounds of freight alone in a car by itself at the less-than-carload rate and make a satisfactory profit thereon, then in that case they surely have no legitimate cause for complaint of present existing rates, for the reason that the great bulk of their shipments consists of full carloads at carload rate, which costs no more to handle and pay the carriers an average of more than three times the amount of money which they receive for carrying 8,000 pounds over the same territory at less-than-carload rate.

We freely admit that there are problems connected with transportation with which we are not familiar, the unfolding of which might cause us to see this matter in a different light, but as regards the demands (?) of the railroads for increased rates at present time, we are convinced that said demands are simply a last effort on their part to "holdup" a long-suffering people, and we believe that the discharge of employees, the canceling of train service, and the support the railroads are receiving from certain "big interests," included in which are many influential newspapers, is a "frame up" arranged especially for the purpose of forcing your commission to grant them the right to put their hands into the pockets of the people and illegally abstract therefrom money in the guise of higher freight rate to which they are in no sense entitled.

It has come to our notice that President Wilson is of the opinion that the railroads should be granted the 5 per cent advance in rates which they desire, and with all due respect to the President and our sincere appreciation of the great work he has already accomplished, we will venture to say that he has not had actual practical experience in dealing with railroads in a commercial way, otherwise he would withhold his opinion until your commission had ample opportunity to make all necessary investigation, for this decision of yours means, if favorable to the railroads, that many millions of dollars will be transferred annually from the people, who are already bitterly complaining, to the coffers of railroads for the purpose of paying salaries of certain officers that are out of all proportion to services rendered and dividends on stocks that represent many times the actual physical value of the property.

In conclusion, will say we have faith in your commission. We believe that politics, lobbyists, "big business," a subsidized press, nor popular clamor will swerve you one iota from a decision that will be based on righteousness and justice, and if said decision should be favorable to the railroads, we will be content in the belief that your investigation developed actual facts and conditions that will warrant the resulting decision.

Cordially,

MOFFETT & SONS,
Per SAM'L MOFFETT.

[Inclosure.]

Service is the watchword of modern business. You must give service. We must give service. Will you help us help you?

The railroads have recently adopted a plan of giving better service to their customers by what is called their package-car service. This means that when there is sufficient revenue in a less than carload shipment to make it profitable, the railroads will put it in a car and handle it through to destination without transfer, giving it the same expedited service that carload shipments receive.

They figure that 8,000 pounds of less than carload freight will produce sufficient revenue to justify handling in this manner.

Think what this means!

When sending us your next less than carload order make it weigh 8,000 pounds. We will place it in a car at our factory, and it will reach you in better condition and as quick as a carload shipment.

We save nothing in freight charges, as the less than carload rate applies on such shipments, but we save time in making deliveries, and this in an important item.

Won't you give this a trial? The first order will demonstrate the advantages of this method of handling your orders.

Remember we guarantee to give you carload service.

"Quality counts."

E-Z OPENER BAG CO.,
Decatur, Ill.

—

UHRICHSVILLE, OHIO, *April 10, 1914.*

DEAR SIRS: I am not now and never have been in the employ of the P. C. C. & St. L. R. R. Co., but was told incidentally a few days ago that there was 19 foremen in the Dennison roundhouse now, and that under the former master mechanic there was only 4. If this is true and there are now 15 more salaried men who do no work than there was a few years ago and no corresponding increase in number of workmen, such things over the entire Pennsylvania system would mean a great cost and some of it might be eliminated. I am friendly with the railway company and do not care for any notoriety in this connection, so will not sign my name. If this information aids any in reaching an understanding with the railroads I shall be glad.

Loyally,

———.

ELBERT & CO.,
New York, April 10, 1914.

Mr. LOUIS BRANDEIS,
Special Counsel Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: In the matter of the present application of the eastern railroads for a horizontal increase in freight rates, it may be of some slight service to you if I point out that the revenues of the railroad are considerably cut into by the practice of many of them to give the eastbound shipments of large industrial companies practically the "right of way" over everything else, to the great prejudice of the smaller shippers, who are interested in getting single carloads through from the West. It would seem to me that in giving unduly quick transportation to these preferred shippers, the general freight service of the railroads and their ability to handle the single carloads of smaller shippers is greatly handicapped, so that the conclusion lies very close; that in handling the shipments for these preferred shippers the railroads lose almost as much through the interference with other freight as they receive from these large shippers.

I have lately had some correspondence with one of the eastern railroads regarding the slowness of my shipments, and I then pointed out substantially what I have stated above. The railroad demanded proof of my assertions. Of course, I am no lawyer and can not spend my time hunting up proofs, but it occurred to me that in some way or other the present communication may be of interest to you.

Yours, very truly,

A. ELBERT.

—

WASHINGTON, D. C., *April 9, 1914.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: In solving the question of granting an advance of freight rates to the east and west lines of railways, now pending before you, I wish to respectfully invite your attention to some history relative to the principle upon which the freight rates of the east and west lines have been made and maintained and the spirit that has actuated those in whose behalf they have been made and maintained and the general results upon the commerce of our country. In 1898 there was a very large per cent of the export wheat of the country going out at the Gulf ports, threatening the supremacy of the northeast Atlantic ports as centers for the export of grain. To meet this emergency the Produce Exchange of New York City called upon the exchanges of Chicago, Buffalo, Boston, Baltimore, and others to send delegates to a conference to be held in New York City to take into consideration how to avert the disaster of the loss of the export-grain trade to those interests. The conference was held, and the program outlined to reach the desired ends as set forth in a series of resolutions was:

First: They declared that the business of exporting grain from the northeast Atlantic ports was menaced by ruin, as well as all other businesses allied with the export-grain business of those ports owing to the unjust and unwarrantable grain rates that had been put in by north and south railway lines from centers of grain concentration in the West to the Gulf ports.

Second. They declared that the northeastern ports were entitled to the grain business, because they had originated and developed it.

Third. They called upon the managements of the east and west lines of railways to make and maintain freight rates that would hold the export-grain business in the channels that it had previously occupied and pledged them their support.

Fourth. They appointed a committee to look after and secure the objects set forth in the resolutions and to otherwise labor in behalf of the interests represented in the conference.

The foregoing were the salient points. I write from memory, but an exact copy of the resolutions should be had from the secretary of the Produce Exchange of New York City, under whose auspices the conference was held. The differential freight rate on wheat put in by the north and south railroad lines from Omaha to the Gulf ports as against the rates to the northeast Atlantic ports was 4 cents per hundred pounds. The northeast ports declared if there was more than 1 cent per hundred pounds differential it would seriously distress their business.

Suppose the stage coaches, oxcarts, and flatboats had said to the steamboats and railways, "We have an established business with which you must not interfere."

That the sickle, scythe, and cradle makers had said to the manufacturers of mowing machines and reapers, "We have an established business with which you must not interfere."

That the manufacturers of candles and lamps had said to the introducers of gas and electric lights, "We have an established line of business with which you must not interfere."

And that they had been maintained in such sayings by the powers that be. What would have been the status of our civilization? We think that the United States Supreme Court has justly held that a railroad has a just right to make and maintain freight and passenger traffic rates that will give fair returns on the money invested in railway properties. But to build railways at right angles to the drainage of the Nation, as the east and west lines are built, and have to bridge numerous large creeks and immense rivers and cut down hills and tunnel mountains costs about twice as much as to build railways with drainage of the country to the Gulf ports, and to satisfy sectional pride and facilities must put millions upon millions of dollars in single depots and other extravagant equipment. Therefore, other things being equal, the east and west lines must charge higher traffic rates to pay an equal interest and dividend on the money invested in them than the north and south lines have to charge on the money invested in them.

The price the producer receives for wheat is fixed by its export price, if the north and south railroad lines are coerced into charging 2½ cents per hundred pounds more on wheat than they are willing to handle the business for, and they were so coerced. Then, it means a loss of 1.6 cents per bushel to the producers of wheat on every bushel grown in the country, and if the average wheat crop in the country is 16.5 bushels per acre, as established by the Agricultural Department, then it means an average loss to the producer of 26.4 cents on every acre of land planted to wheat in the country; and if money on farm mortgages can be had at 5 per cent, then it means that every wheat farmer in the Nation must pay a tribute or donation to the east and west railroad lines and to the northeast Atlantic ports annually what would pay the interest on a $5.28 mortgage per acre on his wheat land, or decreases the earning value of his wheat land $5.28 per acre.

The winter and spring wheat crop of the country is annually an average of about 850,000,000 bushels, equal to 510,000,000 hundred-

weight; at 2½ cents per hundred, equal to $13,750,000 capitalized on a 5 per cent basis and it will pay interest on $255,000,000, which at $4,000 per mile will pay for annually 63,750 miles of excellent macadamized roads for the wheat-growing States. Such is the annual tribute of the wheat farmers of the country to the east and west lines of railways, to say nothing of the corn and other produce growers and consumers of the West and Southwest.

We respectfully request that you examine the respective freight rates on cotton goods between Boston and Meridian, Miss., and Chicago and Meridian, practically the same distance. We submit, what is the necessity of developing new ports, or the cheaper construction of north and south lines of railways, if the producers of the country are not to profit by them, so as to enable them to receive their legitimate profits and more successfully engage in international commerce? The farmer, miner, and manufacturer of the West and South desire that their products shall take the routes to the world's markets on the lines that will pay them the best profits. Grant to the east and west lines the increase in freight rates they pray for, if in your judgment it is the best thing to do. Let them indulge the pride and convenience of their patrons with magnificent depots, trains, and rapid and frequent service if they demand them, but do not link them to the north and south lines and force the people of the West and South to contribute to the luxuries of the North and East, and be themselves deprived of what their labors justly entitles them. Let those who dance pay the fiddler. Do not permit the east and west lines to coerce the north and south lines into putting in and maintaining traffic rates that will keep the commerce of the country on the east and west lines. The laws of gravity, economy, justice, and the general welfare of the Nation demands that a large portion of the Nation's commerce should be handled on north and south lines.

Respectfully submitted.

J. S. DAUGHERTY,
Houston, Tex.

—

INTERSTATE COMMERCE COMMISSION.

DEAR SIRS: In the newspaper reports of your investigations of increase of freight rates great stress seems to be made by the corporations that high wages are the cause, etc., but I fail to see any reference to high salaries, or the holding and drawing of additional high salaries from two or more jobs at the same time. These same officials would under no circumstance whatever permit any one of their employees to draw wages from more than one job.

Furthermore, why should there be such great discrimination in classes—that permits the one who pushes a pen to receive large pay and the one who pushes a pick to only receive enough to barely keep alive?

Respectfully,

A WORKMAN.

—

INTERSTATE COMMERCE COMMISSION.

GENTLEMEN: You might be interested to know that the interests owning the roads force upon the roads materials such as rails, cars, engines, building materials, and the hundred and one things they, the interests own (for the purpose of keeping mills and plants going, so as to keep up stock values) that roads really do not need—good rails, etc., scrapped, that this stock manipulation may be kept up. An investigation on these lines will prove this. The subserviency of the managers of these public utilities is almost pitiable. They are ordered to do these things against their better judgment, and then must come before you and shield their bosses. As to economy of large engines and heavy steel cars, you will see in Railway Age advertisements of Baldwin and American locomotives from week to week setting forth savings effected in hauls. In steel cars, you can get data from railway companies, from catalogues of steel car companies showing great economy in their use, or, better still, have them testify. There are instances where roads have held new locomotives for six months idle; no use for them during past three years.

—

COLUMBUS, OHIO, *April 8, 1914.*

SECRETARY INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIR: With reference to the matter of the application of the various roads for 5 per cent increase in freight rates, we beg to say that we do not see why, in the name of common justice, any such rate increase should be given them, unless they are able to give stronger reasons for it than they have to date. The thing uppermost in our minds is that if the railroads would practice the same sort of economy that the average business house is compelled to practice these days there would be no real necessity for asking for the increase.

The average railroad to-day seems to be the dumping-ground for all the relatives of the president and the chairman of the board and so on, and the salaries paid the various men occupying these positions by reason of their relationship or friendship for the powers that be within the managing heads of the various organizations are not justified by reason of any ability on their part and any cause for their being employed. The manner in which the average railroad purchases its supplies and the exorbitant prices paid for a number of the same, the lack of systematic business methods in various departments, the unsystematic control of the yards and expense in handling freight in their antiquated method are all causes for their inability to meet the interest charges on the watered stock that is now out on their roads. However, when it comes to the question of charging for the placing of cars upon private tracks this is a subject which we believe is capable of having more than one side to it, and would say that the taking of a car, billed to a house, out of the railroad yards and onto a private track relieves the congestion of all the large cities and is a distinct benefit to the public at large; also giving more free play to cars to be transferred from one road to another.

We do not see that there is any discrimination when private track is served in this fashion, as they are subject to the usual demurrage charges, and make it much better and more convenient for the average shipper who does not have a private track to be able to get his cars in the general yards. We do not think that the placing of a car on a private track, where the railroad companies would permit it without charge, is a discrimination in any sense, and we believe that it is a distinct benefit both to the railroad, to the consignee, and to the shipping public in general by reason of the facts above stated. There are, however, certain special services that should not be given without charge, such as spotting of cars, etc., while we may have been benefited to some extent in the past by reason of this, we believe that any special service of this character should be charged for.

Yours, respectfully,

THE LIVINGSTON SEED CO.

CHICAGO, *November 22, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

DEAR SIRS: Why not allow the desired increase of rates to the railroads with a proviso that, within six months, all railway officials and their relatives dispose of their holdings in concerns that furnish supplies, materials, and equipment to the railroads.

Yours, truly,

W. R. BETHAM.

—

NEW YORK, *October 21, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We ask for permission to present before your honorable board evidence to prove that the railroad companies, and in particular the Baltimore & Ohio Railroad Co., while proposing to increase the freight rates to the extent of 5 per cent has, at least, in some cases increased these rates proposed to you on the tariffs issued October 14, 1913, 6 per cent and more than 20 per cent.

We can not hand you complete statement immediately, for the reason that we are not yet in possession of all the printed tariffs, and all we ask is to grant us sufficient time, so that we may compare the statement and prove the correctness of our position. We claim that contrary to public declarations, the Baltimore & Ohio Railroad is increasing its rates in some instances to more than 5 per cent, which is done possibly accidentally, but possibly under the belief that the shippers will not follow the calculations.

We do not mean that the 5 per cent increase in the freight rates is proper, but on the contrary we think that these increased freight rates will interfere with the export of American merchandise. This, however, is a matter separate and distinctly different from the increases above 5 per cent of which we spoke before.

We would request your honorable commission to suspend the new freight rates as proposed by the railway companies for a time sufficiently long enough to give the shippers a chance to file the objections, and will be thankful to receive your early reply.

Yours, very respectfully,

ATLANTIC EXPORT CO.,
J. B. BAERMANN, *Vice President.*

—

MOUNDSVILLE, W. VA., *October 18, 1913.*

INTERSTATE COMMERCE COMMISSION,
Washington, D. C.

GENTLEMEN: We have just recently been furnished with Baltimore & Ohio issue tariff—I. C. C., No. 12329, which cancels I. C. C., 11047, and which goes into effect November 15, 1913.

The writer desires to call your attention to the advance from here to Bellaire, Ohio, 25 cents to 35 cents per ton, which is two-fifths or 40 per cent over the present rate, and various other points, such as Bridgeport and Martins Ferry, Ohio, as much as 16⅔ per cent, and still other points ranging very much above 5 per cent.

The tariff is not on the lines of the statement that Mr. Willard, president of the Baltimore & Ohio Railroad made to the public a few days ago while in Chicago.

The writer believes that about 5 per cent will not be objectionable, and will with the general increase in business be sufficient to meet labor increases which are now in process of adjustment.

Until reductions in tariff has been made shall be glad to hear that you have suspended it.

Respectfully,

THE MOUND CITY SAND CO.,
By A. J. JONES, *Secretary.*

—

WASHINGTON, D. C., *April 14, 1914.*

Hon. JUDSON C. CLEMENTS,
Washington, D. C.

MY DEAR JUDGE: With respect to application of the eastern lines for a 5 per cent increase in rates, I have, of course, been interested in this matter from a general public standpoint, and in view of the wide publicity given the case on behalf of the carriers in an apparent effort to have the matter decided by accelerated opinion, it seems the duty of those having even limited knowledge of interstate commerce matters to voice their opinion.

Without having the record before me and judging from published statements, I have not yet seen any valid reason assigned for the increase in rates.

The first consideration is that the Interstate Commerce Commission has not authority under the present law to grant a general or blanket increase any more than it has to order a general decrease. I believe as far as it can go is to find the facts presented, and if the reason shown by the carriers is financial need only—and the reasonableness of the rates involved is to be disregarded—the commission should make its recommendations to Congress. The matter seems to have been made political by the pressure sought to be brought, and under such circumstances the responsibility should be political.

As I view the proceeding, it is laying the foundation for the Government to authorize a minimum rate of return on both bonds and stocks under any and all conditions and including all water and discounts. It is a far-reaching policy that should be authorized only after thorough investigation and inaugurated with every one's eyes wide open.

I have felt that the commission would grant the increase if it had power, and valid reasons were shown to it, and likewise refuse the advance if its power would not permit, or if a sufficient reason were not shown. I do not see how the rates can be declared reasonable at an unknown advanced figure without having the individual rates under the fullest consideration.

Sincerely, yours,

FRANK VAN SANT.

—

MARCH 12, 1914.

Mr. LOUIS D. BRANDEIS.

MY DEAR SIR: In combating the increase of freight rates I have not seen any effort made to force the officers of the road to abandon the free transportation of officers and employees and their families, not only over their own roads but over foreign roads.

Also the matter of salaries of officers, where a road is composed of a number of smaller roads, but operated either through ownership of stock or by lease; is it not generally the case that the organization of the operated road is kept up, and the officers of the operating road are

the officers of the leased road, and also draw salaries for both positions, although it is practically all one company?

Respectfully submitted.

WM. B. LAWALL,
Oak Lane, Philadelphia, Pa.

—

SAN FRANCISCO, *April 22, 1914.*

Mr. WINTHROP MOORE DANIELS,
Care Interstate Commerce Commission,
Washington, D. C.

DEAR SIR: The subsidized press is determined to have the Interstate Commerce Commission grant the eastern railroads the 5 per cent increase in freight rates. Of course, you and I know that if there was no Wall Street there would have been no such demand; consequently the incentive for the demand is Wall Street.

Wall Street has never produced a new dollar nor added a new idea to the world—she simply lives out of the other fellow's pocket—her production is mostly watered stocks and degenerates.

The yearly dividends on watered stocks alone amount to 25 per cent of the average yearly income of every workingman. The dividends on the Steel Trust stock alone—all water—add 10 per cent yearly rental to every occupant of Class A buildings for the structural steel alone.

The Reading Co., a holding company, earned 30 per cent last year on its stock—originally all water—and yet is asking for increased freight rates for the railroad company which it owns.

Wall Street will die a natural death if nothing is done to stimulate it, as the new currency bill will keep most of the surplus funds away from Wall Street, where it is now used to float their watered stocks or loaned on such stocks within 10 per cent of their so-called market value.

If the heads of the different railroads asking this increase would devote their time and energy to running the railroads on their merits instead of hovering over the stock ticker there would have been no necessity for the increased freight rates. They are hardly sincere in their pessimistic reports to the Interstate Commerce Commission, when at the same time they are giving out tips to their personal friends to buy stocks.

It is to be hoped that you will use your efforts to continue the investigations until the truth is arrived at, even if it takes another year, as it would be very unjust to the public to increase the cost of living fifty or one hundred million dollars per year because the railroads are not economically or efficiently managed.

Yours, very truly,

W. O. MANSON.

[Inclosure.]

FERTILIZER MEN SEEK RELIEF—THEY TELL EXAMINER GARY OF UNJUST FREIGHT RATES.

Protests of the Merchants and Manufacturers' Association of Baltimore, alleging unreasonable and unjust rates on fertilizer material from Baltimore to points on the Cape Charles Railroad, were heard before Examiner Gary, of the Interstate Commerce Commission, in Washington yesterday.

The rate on this road on fertilizer is $2.50 (fish, $2) a ton in carload lots and $5.75 a ton in less than carload lots. Both of these rates were declared unreasonable.

Preceding the hearing on the fertilizer rates, the complaint of the Dixie Manufacturing Co., of Baltimore, against the Pennsylvania and other railroads was heard. The case involves the classification of dust-collecting systems, and attorneys for the Dixie Co. asked that the classification be so changed as to give relief from the alleged exorbitant rates.

The Baltimoreans who attended the session were A. E. Beck; M. T. Lynch, vice president and treasurer of the Dixie Co.; Roland Reese; and Caleb Kirby.

—

BALTIMORE, MD., *December 5, 1913.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

DEAR SIR: Another pronounced case of the injustice perpetrated upon the fishermen by the railroad company dominating the peninsula of Maryland and Virginia. The rich fertilizer manufacturers of Baltimore can ship a carload of their product to the end of said peninsula by way of Wilmington, Del., for $37.50.

Fishermen have to pay $1.80 a barrel, or $18 a ton, from a point some 70 miles nearer—i. e., Wachapreague—say, $360 a carload. Value of a carload of fertilizer at destination is about $500, so that about 7 per cent is the rate which shippers have to pay on a profitable article. One-half of the price is the average profit on fertilizer, which is made for about $15 a ton cost.

An average car of fish sells in Baltimore at about $40 a ton, or about $4 per barrel, $800 per 20 tons. Value, $360; freight charges 45 per cent on a commodity that yields the fishermen not over 20–25 cents a barrel.

Some 25,000 tons of fertilizer is shipped to the section referred to. The freight at $2.50 per ton reaching about $62,500.

From Wachapreague about 6,000 barrels of fish are shipped to New York, at a cost of approximately $15,000.

The average market price in New York is $4 a barrel, or $24,000 for gross tonnage, $15,000 for freight, leaves $9,000 to the fishermen.

Double tariff on fertilizer. Reduce on fish.

One hundred and twenty-five thousand dollars charged fertilizer men would represent 14 per cent on value. Seven thousand five hundred dollars on fish would give 30 per cent of value of shipment.

A. W. LYMAN.

—

WANTS THE CITY MAN TO PAY 1 CENT A QUART MORE FOR HIS MILK.

EDITOR OF THE SUN.

SIR: In your issue of November 21 you had an article headlined "The price of milk to stay." I would like to ask a little space in your valuable paper to give a few reasons from a milk shipper's standpoint why the price of milk should advance. It has been shown by an accurate count of 10 dairy herds that the average cost of producing a gallon of milk is 17½ cents per gallon, and the shipper pays 2 cents freight and receives 20 cents for four months and an average of 17 cents for eight months. So you see we are selling it at a loss.

Now, a few reasons why it costs this price to produce milk: A cow that could be bought for $50 10 years ago would cost $100 to-day. Bran sold then at $12 per ton and now $28. Cottonseed meal then $16, now $33. Gluten then $17, now $33. The price of labor has advanced in the same proportion, and inferior and scarce at any price. Compare the price of beef, pork, and eggs with the price 10 years ago and the present price. And, now, my city neighbor, look over these comparisons and I think you will agree that the country dairymen are very reasonable when they ask you to pay 1 cent a quart more for your milk.

I. W. HEAPS.

PYLESVILLE, MD., *November 24.*

—

ILLUSTRATE NEW RATES—RAILROADS SHOW HOW 5 PER CENT RAISE WOULD WORK—FREIGHT ON ARTICLES GIVEN—STEADY DROP IN TRANSPORTATION TARIFFS AND HIGHER COST IN OPERATING EXPENSES ALSO CITED.

WASHINGTON, *November 30.*

Pamphlets setting forth in simple words and by concrete illustrations the railroads' case for 5 per cent increase in freight rates, showing the cost on many articles in wholesale shipments, were received to-day by ever member of the House and Senate.

Some of the points made in the pamphlet showing the amount of increased traffic, are as follows:

The increased freight on 1 pound of sugar between New York and Chicago, 1,000 miles, will be 0.015 of a cent; on a barrel of flour, 2¾ cents; on 1 pound of butter, 0.038 of a cent; on 1 pound of coffee, 0.016 of a cent; on 1 bushel of potatoes, 1 cent; on 1 dozen eggs, 0.057 of a cent; on 1 pound of dressed beef, 0.025 of a cent; on a suit of clothes 6½ cents each; on underwear, 1 cent a suit.

Concrete illustrations are also given of the amount of freight now collected on given articles in wholesale shipments as follows:

Railroads now carry one pair of shoes 1,025 miles for 2$\frac{3}{5}$ cents, or 166 pairs of shoes the same distance for the price of one pair, $4.

One suit of clothes is now carried 1,000 miles for 6$\frac{4}{10}$ cents, or 220 suits the same distance for the price of one suit, $15.

One negligee shirt is carried 1,000 miles for nine-tenths of a cent, or 111 shirts are carried the same distance for the price of $1.

One derby hat is carried 1,000 miles for 2 cents; one hammock, for 4 cents; one shotgun, for 7½ cents.

The circular also says:

"Despite the increased efficiency and added value in the service by the nation-wide extension and expansion of our railroad systems, freight rates in the whole country have steadily dropped from 1½ cents a ton per mile in 1880 to three-fourths of a cent per ton-mile. Part of the continuous decrease in freight rates is due to competition and partly to orders of the several commissions charged with rate-making powers. Rates are at a point where, in many instances, the carriage of certain freight is not profitable to the railroads. Despite the rigid economy in operation the expense of moving freight has advanced in the last few years. A general readjustment of rates that will enable a proper service to be maintained is a present necessity. Wages for all classes of employees are higher, terminal facilities cost far more, equipment and supply costs have increased. Every item of cost entering into freight carrying has notably increased while the rate per ton-mile has decreased."

—

BALTIMORE, MD., *December 2, 1913.*

MY DEAR MR. BRANDEIS: From the Sun, through which the railroad companies are trying their cars before the public, along with other newspapers, I clip the inclosed, which enables me to draw a rather important lesson in equity by inequitable rates not necessary by any proper standard of values.

I take the following articles referred to in the printed plea presented to the people:

Beef.—On which freight is paid by the board of trade, calls for 3½ per cent of the value of commodity.

Clothing.—On which deliveries are customary between great cities. Therefore freight is paid by the rich makers of clothing who encourage and employ sweatshops call for one-half of 1 per cent on value shipped.

Shirts.—Manufactured by rich and powerful corporations all over the country call for a tariff that is only about nine-tenths of 1 per cent, usually paid by shippers.

Shoes.—Are carried 1,025 miles for about 2 cents per pair, average value $4, or one-half of 1 per cent, freight paid by manufacturer.

Another view:

Fish.—Always consigned to commission men, freight charged the fishermen from Maryland and Virginia coasts to New York, one-third the distance in the cases noted on other commodities, rates call for $2.25 per barrel; value average, $4.50 per barrel; carriage costs, 50 per cent.

Flour.—Chicago to New York. Freight paid by mill owners, always rich and able to pay charges. Tariff about 10 per cent of value at source.

Potatoes.—Average value $2.50 per barrel. Tariff calls for $1.10, or 45 per cent.

Milk.—Average value 15 cents per gallon. Tariff, short distances, 2 cents per gallon, about 15 per cent of value.

Sugar.—Value, $27 per barrel. Tariff, about 3½ per cent.

Why so low a rate on commodities that are controlled by corporations? Why so high a rate on commodities produced by farmers and fishermen? The conclusion is obvious.

Suggestions: Advance rates on beef, clothing, shirts, and shoes, also sugar. Reduce rates at least one-half on fish, potatoes, and milk. Equalization fixed by experts. Let this method be applied to steel, ore, coal, oil, beer, whisky, confectionery, tobacco, cigars, and these highly remunerative lines assessed a fair rate; others let down to a fair rate. Then no call will exist for the 5 per cent advance.

Yours, truly,

A. W. LYMAN.

BALTIMORE, MD., *November 26, 1913.*

Mr. LOUIS D. BRANDEIS,
Boston, Mass.

MY DEAR SIR: Thinking that good old feast day of New England will be observed by you at home I venture to suggest that some memoranda be prepared by you looking to a detailed statement of the many economies that might be instituted by the several railroad companies, according to your assertion that "a million a day" could be saved by "efficient and economical" administration made some time ago.

In the hope that one or two points that may help you in this line will be welcomed permit me, sir, to call your attention to certain points in connection with the Baltimore & Ohio Railroad ownership of large tracts of unproductive land near Baltimore. A large number of old and dilapidated buildings in the business center of the city, valuable and desirable to devote to commerce and industry, but suffered to remain year after year either tenantless or rented for a song for

small dealers to conduct business of no importance or actually disreputable purposes—saloons, etc. To hotel properties located at various points where, for some purpose difficult to understand, money is doubtless lost year by year, and still the properties kept. This great corporation can not give any reason why a body of land worth $300,000 to $500,000 to develop should be rented for a song to a nursery for growing trees on. It can not possibly explain why entire blocks of rookeries should remain unproductive and a menace to the city when they could sell out at a very large price and have the money in hand for operating expenses and add to "net income."

This great corporation is bled freely, sir, to furnish and maintain costly drawing-room cars for individual officials' use every time they go out to "inspect" the lines or for other purposes, and a great annual outlay must be met simply for operating these costly palaces on wheels for a few men. The revenue, which is of so much importance, can be largely augmented and many profit-earning cars can be operated for the money used to keep up these luxurious moving showrooms which are extravagantly wasteful. If you can elicit from Mr. Willard or his subordinates information which will place a value upon these wasteful uses of the corporation's money and the failure to use profitably vast capitalization funds sunken in real estate you will bring out much that is purposely kept hidden. Then, too, this corporation is relieved from taxation very largely in Baltimore, this exemption amounting to over $500,000 a year—equal to a 4 per cent dividend on $12,500,000 of bonds. In effect this places the Baltimore & Ohio Railroad in a favored class, which should by all means be considered in granting the 5 per cent increase which is asked for this in common with the other lines of the United States should it be granted. This amount of capital used as the average industrial corporation uses capital intrusted to the management for profitable use and "increment" should yield about 13 per cent per annum, $1,625,000 a year, or an increased net operating income of 5 per cent upon $23,247,000, "net revenue" for 1913.

It is my belief, my dear sir, that the Baltimore & Ohio Railroad can well afford to give Baltimore the taxes due to it—$500,000; can afford to continue its business on the present rates maintained, or even less; can continue to raise capital at a fair rate by reason of "cutting out" waste; can pay dividends on its stock and interest on its bonds and earn surplus, by the use of the commonest principles of economy forced upon industries; by eliminating barnacles hanging upon its administrative and executive armor plates, and cutting out perquisites and unnecessary emoluments to high officials, don't you?

Yours, most truly,

A. W. LYMAN.

BALTIMORE, MD., *December 11, 1913.*

Mr. LOUIS D. BRANDEIS,
Washington, D. C.

MY DEAR SIR: The newspapers are giving large space to the railroad companies now, and the prominent officials are trying their case before the public. A most excellent thing, as many things they unexpectedly admit show weak spots in the armor hitherto deemed impregnable.

The shrewd agency that inspired the article I hand you herewith did not see that a notoriously extravagant corporation, as well as a most wasteful and ambitious one, would only succeed in corroborating a strong suspicion in the public mind that matters would speedily adjust themselves if honesty, efficiency, and industry were adopted in the management of that company in place of the opposite qualities.

I note especially that the sale of certain property is recommended in this article to enable the corporation to increase "cash" assets.

Very truly, yours,

A. W. LYMAN.

BALTIMORE, MD., *December 15, 1913.*

MY DEAR MR. BRANDEIS: Had the railroad commissioners' report in the Boston & Maine proposition been rendered thus: "We are clearly of the opinion that a readjustment of rates should be made whereby valuable and profitable commodities shall be charged as much proportionately as low priced and very unprofitable articles in place of general advances without regard to values," then a much fairer and more acceptable change, so far as the public is concerned, would take place. Can you not see the application? In Maine we have the tremendously profitable business of seed potato raising, pursued as a special calling, and the profits of such a business are so great that the 500,000 or more barrels annually produced and sold to other States can afford to pay an extra rate. Immense quantities of lumber and wood, in shape, is shipped at exceedingly low rates. Wood pulp forms a very considerable portion of the Maine shipments, and tanbark interests, that can well afford to pay largely increased rates, may be assessed such a sum as will enable the more unprofitable lines or commodities to be shipped at lower rates.

If the Boston & Maine Railroad Co. is in a condition bordering on bankruptcy, extravagance, and waste under incompetent management must be to blame as the commissioners charge.

Let the present management call upon stockholders to make good this deficit, which is not the shipper's fault, or let the road be sold at the best attainable price it will bring. The moral effect will count. I learned only recently that the average cost of shipping automobiles a thousand miles or so, is $25, five or six in a car. Let this most profitable industry be made to pay $50 in place of $25, and the railroads would receive a more just and equitable share of profits. An inquiry, based upon justice and equity, would throw upon shoulders fully able to bear the proposed advances, leaving the poorly paid and neglected interests in better shape. Equalize the tariff now notoriously discriminative, and no 5 per cent advance will be required.

Yours, truly,

A. W. LYMAN.

[Inclosure 1.]

RATE ADVANCE FAVORED—RAILROAD COMMISSIONERS REPORT ON BOSTON & MAINE PROPOSITION—ADVISE SAFEGUARDING PUBLIC—WOULD ALLOW INCREASE ONLY UPON ASSURANCE THAT THE MONEY WOULD BE PRUDENTLY EXPENDED.

BOSTON, *December 14.*

"We are clearly of the opinion that there should be a substantial advance now, provided that such additional revenue can be obtained without imposing upon the public unjust and unreasonable transportation charges, and provided further that some assurance can be given that the money will be prudently expended in the public interest." This is the declaration of the conference of railroad commissioners upon the proposition of the Boston & Maine Railroad to increase its rates.

The report of the conference, which was made public to-night by the Public Service Commission, is signed by Charles A. Prouty, of the Interstate Commerce Commission, and members of the Massachusetts, Vermont, New Hampshire, and Maine Public Service Commissions.

"Counsel for the company," says the report, "claimed that such increase would amount to $5,000,000 a year. To this we do not assent. It can not be known until the property is once more effectively and properly operated and until its leasehold lines have been valued how much the advance should be."

The commissioners also say that past mismanagement is responsible for much of the road's present difficulty.

The commissioners of the northern New England States conferred with Commissioner Prouty in order that uniformity of opinion and action might be established between the Federal board and the State boards. The Interstate Commerce Commission has no authority, however, to approve a schedule of rates until the railroad has first filed its schedule, which must then be examined and corrected by the commission. To-day's report, therefore, has no official standing, but merely reflects what the commissioners believe is the most advisable thing for the railroad to do. In part, the report says:

BANKRUPT ON PRESENT BASIS.

"The Boston & Maine Railroad, upon the basis of its present rates, is bankrupt. For the year ending June 30, 1913, it had remaining, after the payment of its fixed charges and its taxes, $49,000. In point of fact dividends aggregating 3 per cent upon the capital stock were paid during the year, but they were not earned. Comparing July, August, and September of the present year with the corresponding months for the year 1912, we find a decrease in net operating revenues of $687,000.

"From an analysis of comparative figures the commissioners estimate that the income of the railroad from operation for 1914 probably will fall at least $1,000,000 short of what it was in 1913, while charges will materially increase. On this subject the report says:

"'It now appears probable that for the year 1914 the road will lack, if no increase in rates is allowed, $2,000,000 of sufficient income to pay its taxes, its interests, and its fixed charges, without the payment of any dividend upon its capital stock. This deplorable showing is in part due to the mismanagement of the company.'"

The Boston & Maine, it is pointed out, has outstanding $27,000,000 of short-time paper, of which $20,000,000 was used to purchase stocks. The buying of these stocks, the report declares, "was utterly unnecessary and ill advised, and the consequences of these transactions ought not to be visited upon the rate-paying public.

COMBINATION WAS DISASTROUS.

"The attempt of the New York, New Haven & Hartford Railroad Co. to acquire a control of the Boston & Maine system and combine that system in operation with its own proved disastrous, and the effect is still obvious in the operating cost of the Boston & Maine Co."

The commissioners believe it inadvisable to increase long-distance rates, as such action would increase the transportation cost to New England manufacturers without increasing the costs to competitors in other parts of the country. Class and commodity local rates, it is explained, ought to be dealt with first.

While recommending an increase in rates, the commissioners add:

"Clearly no increase in rates should be allowed until it is made reasonably certain that the revenues of this company will be prudently expended in the public interest."

—

BALTIMORE, MD., *December 10, 1913.*

MY DEAR MR. BRANDEIS:

I had occasion recently to ascertain the cost of shipping partly finished lumber (hardwood), such as oak and other hardwood barrel staves and heading, elm hoops, etc. A carload of such goods sent from northern New York to city of New York, valued at some $500, goes for a 10½ cent rate per 100 pounds, minimum 30,000; or say, $45 per car. Barrel makers and other users of hardwood do not require so low a rate, about 9 per cent of value. They can easily stand a much larger tariff, while potatoes, fish, etc., do need as low a tariff as can be given them.
